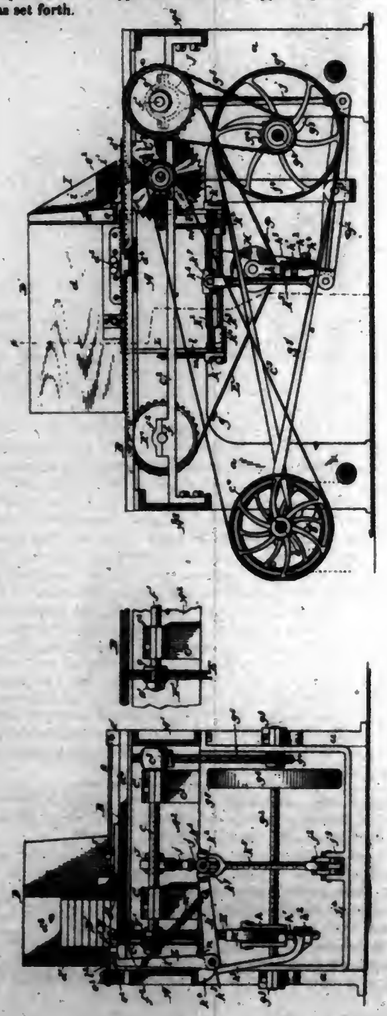
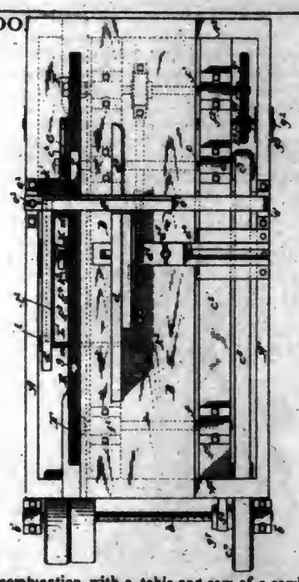
Claim.—1. A car-axle lubricator consisting of a single grooved cylinder supported by a yielding spring-frame and adapted to be constantly held in rolling contact with the axle, and in combination therewith a spring-impelled collar at the back of the journal-box for preventing waste of the lubricant, substantially as described.

2. In a car-axle lubricator, the combination, with a single spring-impelled lubricating-roller, of a wiper consisting of the jaws H, pivoted at their bottoms and provided with the tips *h'*, of leather or other

399,899.



suitable material, at their tops, and held in close and yielding contact with the axle by the spring-arms *g*, substantially as described.



3. A wiper for car-axles, consisting of two curved jaws, H, pivoted at their bottoms and supported adjacent to the axle by the yielding spring-frame G, said jaws provided with the slots h^4, substantially as described.

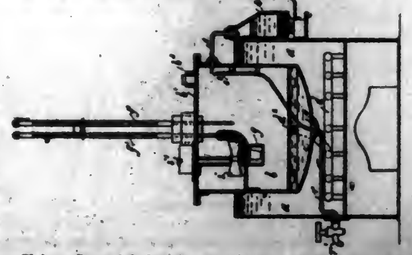
399,900. SAWING-MACHINE. RICHARD H. HOYT, Buffalo, N. Y., assignor of one-half to Hobart B. Loomis, same place. Filed May 8, 1888. Serial No. 273,171. (No model.)

Claim.—1. The combination, with the supporting-frame, table, and saw of a sawing-machine, of a board-receptacle and an end gage-bar, *c*, pivoted at one end to said supporting-frame and made vertically adjustable at its opposite end on the supporting-frame, substantially as set forth.

399,900

2. The combination, with a table and saw of a sawing-machine, of a board-receptacle arranged in front of said saw and having its end wall vertically adjustable, a yielding presser-foot secured to said rear wall and arranged adjacent to said saw, and an endless feed-chain, whereby the boards are successively fed under said end wall and presser-foot to said saw, substantially as set forth.

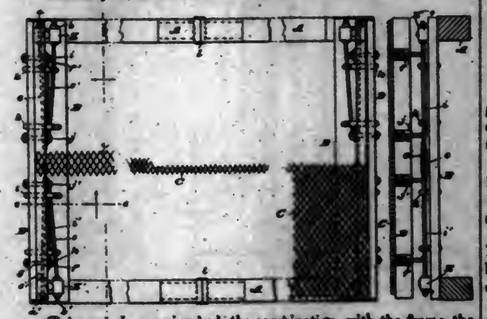
3. The combination, with the table and saw, of a board-receptacle arranged on said table, a side gage, a laterally-movable aligning frame, whereby the boards are successively moved against the side gage, and a feeding device whereby the boards contained in the receptacle are successively fed to the saw, substantially as set forth.



4. The combination, with the table and saw, of a board-receptacle having one of its side walls laterally adjustable on said table, a laterally-movable aligning frame, whereby the boards contained in the receptacle are successively moved against one of the side walls of said receptacle, and a longitudinal feeding device, whereby the boards contained in the receptacle are successively fed to the saw, substantially as set forth

5. The combination, with the table and saw, of a board-receptacle arranged on said table in front of said saw, a laterally-movable aligning frame, L, actuating-arms k k', and springs connecting the actuating-arms with the laterally-movable frame L, substantially as set forth.

6. The combination, with the table B, saw C, and the board-receptacle D, of a laterally-movable aligning frame, L, actuating-arms k k', springs m m', connecting the actuating-arms with the aligning frame L, and whereby the latter is moved in one direction, and studs n n, arranged on the arms k k', and whereby said aligning frame is moved in the opposite direction, substantially as set forth.

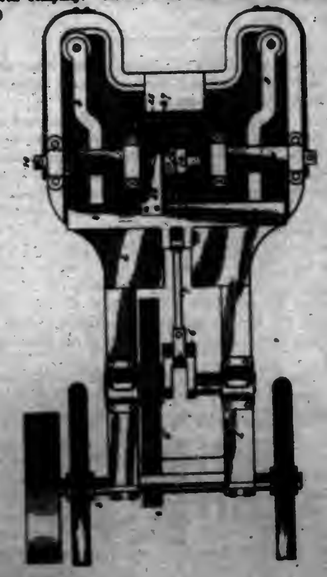


7. The combination, with the table B, saw C, and receptacle D, of a longitudinal feeding device, E, moving in said receptacle, a laterally-movable aligning frame, L, actuating-arms k k', connected yieldingly with said aligning frame, a rock-lever, j^3, connected with said actuating-arms, and an eccentric whereby the rock-lever j^3 is actuated, substantially as set forth.

399,901. INHALER. EMIL JAHR, Berlin, Germany. Filed June 13, 1888. Serial No. 277,090. (No model.)

Claim.—In an inhaler, the combination of the water-boiler *a*, in which the air-reservoir *b* is placed, with the spray-pipes *c*, and the double branch pipes a^2 b^2, with the india-rubber pipe *h*, arranged as described, whereby the air enters the spiral tube *d*, is warmed therein with steam and the desired medicament, and is finally drawn off through the double branch a^2 b^2, substantially as described.

399,902. SPRING-BED. FRANK M. JEFFERY, Jersey City, N. J. Filed July 25, 1888. Serial No. 280,969. (No model.)



Claim.—1. In a spring-bed, the combination, with the frame, the fabric for supporting the bedding, and the end bars on said fabric, of the torsional springs secured at one end to the frame and having on their other ends upright spring-arms attached at their tops to the said end bars and carrying the latter, the torsional bodies of said springs being arranged substantially parallel with said bars, as set forth.

2. In a spring-bed, the combination, with the frame, the fabric for supporting the bedding, and the end bars on said fabric, of the torsional straining-springs secured at one end to the frame and having at their other ends spring-arms which carry the end bars on the fabric, and the tension-regulators for said springs, said tension-regulators being mounted on the bed-frame and the ends of the respective springs being set in sockets in the same, substantially as set forth.

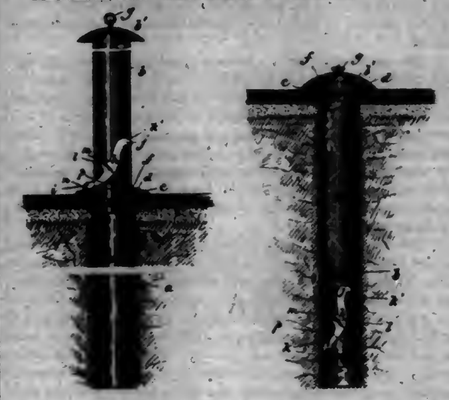
3. The combination, with the bed-frame, the fabric for supporting the bedding, and the end bars on said fabric, of the main torsional springs provided with spring-arms attached to said end bars, the auxiliary torsional springs provided also with spring-arms attached to said end bars, and tension-regulators for said springs mounted on the bed-frame, said regulators comprising a socket-piece rotatively mounted in a block and provided with a socket which receives the squared end of the spring, a square to receive a wrench, and a brake to prevent backward rotation, as set forth.

4. The combination, with the frame and fabric, C, of the end bars, D, on the fabric, the torsion-springs *e e'*, provided with upright spring-arms *f f'*, the plates A, and the eyebolts *g*, which pass through said plates and the members of the bar D, as set forth.

399,903. DEVICE FOR UPSETTING AND BENDING METAL. MARTIN KENNEDY, Hopewell, Ill., assignor to the United States Rolling Stock Company. Filed Oct. 6, 1888. Serial No. 287,367. (No model.)

399,908.

Claim.—1. The dies 11 and 12, having in their opposing faces the grooves 16 and cavities 17, in combination with the plunger 24, the die 11 having also the cavity 15 and hole 28, and the die 12 having the punch 20, substantially as described.



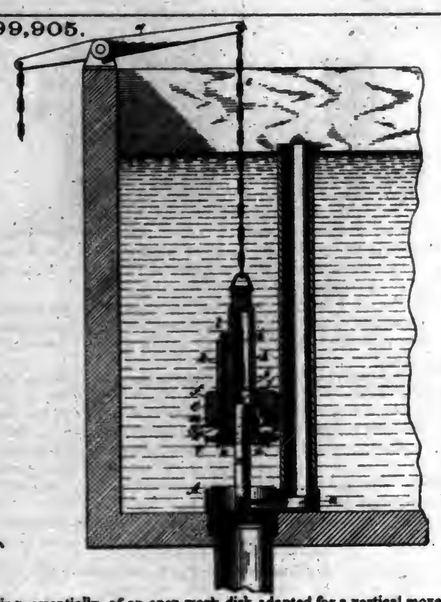
2. The dies 11 and 12, having in their opposing faces the grooves 16 and cavities 17, the die 11 having also the cavity 15 and groove 14, in combination with the plunger 24 and the arm 23, substantially as described.

3. The dies 11 and 12, having in their opposing faces the grooves 16 and cavities 17, in combination with the plunger 24, the die 11 having also the cavity 15, the hole 28, and the cleaner 29, and the die 12 having the punch 20, substantially as described.

4. The dies 11 and 12, having in their opposing faces the grooves 16 and cavities 17, the die 11 having also the cavity 15, hole 28, and groove 14, and the dies 12 having the punch 20, in combination with the plunger 24 and arm 23, substantially as described

5. The combination of the die 11, having the cavity 15 and the groove 14, with the die 12 and the arm 23, substantially as described.

399,904. HITCHING-POST. BYRON G. KNAPP, Sandy Hill, N. Y. Filed Jan. 21, 1889. Serial No. 296,904. (No model.)



Claim.—The combination, in a hitching-post, of a tubular sheath adapted to be set in the ground, a flange or shed surrounding its upper extremity, an annular bead upon the upper surface of said flange, a tubular post arranged to slide vertically within said sheath, said post having perforations in its opposite sides, a gravitating locking-latch pivoted off the longitudinal center of the post, said latch having a recess in its lower end, and a cap upon the top of the post, said cap being provided with an annular recess upon its under surface to receive the bead upon said flange, all arranged and adapted to operate in the manner and for the purpose substantially as described.

399,905. WATER-CLOSET VALVE. EDWIN L. KNIGHT, Springfield, Mass. Filed Jan. 14, 1889. Serial No. 296,250. (No model.)

Claim.—1. The combination, with a valve-seat and a guiding-spindle supported therefrom, of a valve comprising two members, the upper of which consists of a body and an upwardly and downwardly projected hollow spindle open from its bottom, the bore of which is of two diameters, substantially as described, and having a laterally and downwardly extending passage, *k*, and a lifting-abutment, *l*, on said lower spindle-extension, and the lower member consisting, essentially, of an open-work disk adapted for a vertical movement with relation to said lower spindle-extension, substantially as described.

2. The combination, with a valve-seat and a guiding-spindle supported therefrom, of a valve comprising two members, the upper of which consists of a body and an upwardly and downwardly projected hollow spindle open from its bottom, the bore of which is of two diameters, substantially as described, and having a laterally and downwardly extending passage, *k*, and a lifting-abutment, *l*, vertically adjustable on said lower spindle-extension, and the lower member con-

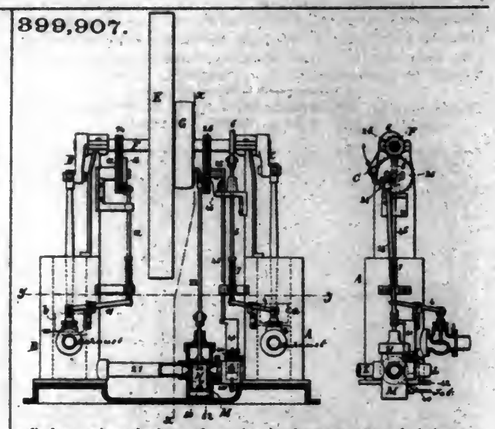
399,905.

sisting, essentially, of an open-work disk adapted for a vertical movement with relation to said lower spindle-extension, substantially as described.

3. The combination, with a valve-seat and a guiding-spindle supported therefrom, of a valve comprising two members, the upper of which consists of a body and an upwardly and downwardly projected hollow spindle open from its bottom, the bore of which is of two diameters, substantially as described, and having a laterally and downwardly extending passage, *k*, and a regulating-screw therefor, and a lifting-abutment, *t*, on said lower spindle-extension, and the lower member consisting, essentially, of an open-work disk adapted for a vertical movement with relation to said lower spindle-extension, substantially as described.

4. The combination, with the valve-seat and a guiding-spindle supported therefrom, of a valve comprising two members, the upper of which consists of a cylindrical body recessed on its under side, having an upwardly and downwardly projected hollow spindle the bore of which is of two diameters, substantially as described, and having a lateral and downwardly extending passage, *k*, and the lower extension of the spindle screw-threaded and provided with an apertured abutment-nut, *t*, and the lower member consisting of a sleeve, a concentric collar, and radial connecting-arms *p*, and the said collar provided with a washer, *q*, attached at and extending outwardly from its edge, substantially as and for the purpose described.

5. The combination, with the valve-seat and a guiding-spindle supported therefrom, of a valve comprising two members, the upper of which consists of a cylindrical body, *f*, recessed on its under side, and an upwardly and downwardly projected hollow spindle open from its bottom, the bore of which is of two diameters, substantially as described, and having a lateral and downwardly extending passage and an adjusting-screw therefor, and provided with the apertured adjustable abutment-nut, *t*, and the lower member consisting of the sleeve *m*, the collar *n*, flanged and screw-threaded, and the connecting-arms *p*, and the washer *q*, and nut *s*, combined and operating substantially as and for the purpose described.



399,906. PROCESS OF REFINING WOOL-FAT. HUGO W. LANGBECK, Loughton, County of Essex, England. Filed Aug. 27, 1888. Serial No. 283,963. (Specimens.) Patented in England Sept. 2, 1886, No. 11,192.

Claim.—The process herein described of treating wool-fat to produce unguent or lubricant material, which consists in separating the fatty acids from the raw material by a solvent, treating the residue while in a melted or dissolved condition with prussiate waste by stirring it together with the same for a lengthened period, then dissolving the purified fat and removing the prussiate waste, and finally separating the solvent from the purified fat, substantially as described.

399,907. GAS-ENGINE. SAMUEL LAWSON, New York, N. Y., assignor to himself and Alonzo T. Welch, same place. Filed Feb. 6, 1888. Serial No. 263,140. (No model.)

Claim.—1. The combination, in a gas-engine with the separate

399,907.

cylinders and an ignitor, of a valve having ports for admitting gas and air, and pipes connecting said valve with each of the cylinders and forming a passage-way between the two cylinders, whereby the ignited gases of one cylinder can ignite the gases of the other cylinder, substantially as specified.

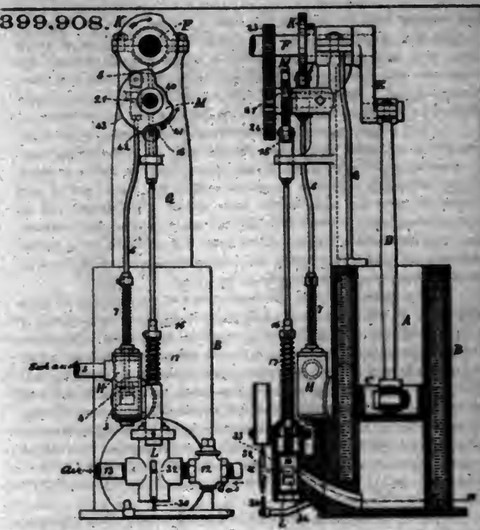
2. The combination, with the two cylinders, pistons, connecting-rods, cranks, and shaft in a gas-engine, of two discharge-valves, one to each cylinder, and mechanism for opening one of the valves during each descent of the piston, and mechanism for opening the other valve during every second descent of its piston, the pipe connecting the two cylinders, air and gas inlet pipes, and a valve at the junction of such pipes, and an ignitor, and mechanism for moving the same, whereby the gases in one cylinder are compressed before being ignited, and in the other cylinder there is a minus pressure for drawing in the flame, substantially as set forth.

3. The combination, with the cylinders A and B and the connecting-pipes 20 and 21, of the valve N and valve-case M and air-inlet and gas pipes, such valve N having ports that admit the air and gas to pass in and to commingle and to pass to the respective cylinders, and a second set of ports to allow the ignited gases in one cylinder to ignite the gases in the other cylinder, substantially as set forth.

4. The combination, in a gas-engine, with the cylinder and air and gas inlet valve, of a case having ports and a stationary burner, a tubular cut-off or ignitor having ports and adapted to form a chimney for the burner, and mechanism, substantially as specified, for moving the same within said case, substantially as set forth.

5. The combination, in a gas-engine with the cylinders and air and gas inlet valve, of a case, 42, having ports and a stationary burner, 40, a tubular cut-off or ignitor, 41, adapted to move within the case and having ports, a spring, 44, for elevating the ignitor, and a rod, 45, and cam 46, for depressing said ignitor, substantially as and for the purposes set forth.

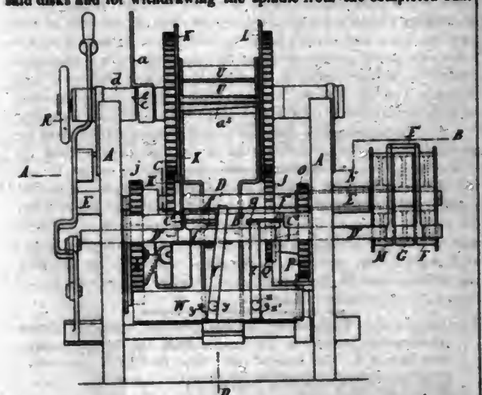
399,908. GAS-ENGINE. SAMUEL LAWSON, New York, N. Y., assignor to himself and Alonzo T. Welch, same place. Filed Aug. 4, 1888. Serial No. 281,997. (No model.)



Claim.—1. In a gas-engine, the cylinder, piston, crank, and crank-shaft, and the escape-valve, cam, and rod for operating the same each revolution of the crank-shaft, in combination with the valve-case, air and gas supply pipes, and the ignitor, and a tubular valve having a single compartment closed at both ends and having ports for the admission of air and gas, and holes for the passage of the flame, and mechanism, substantially as specified, for reciprocating the valve once to each two strokes of the cylinder, substantially as set forth.

2. The valve 15, air and gas pipes, valve-case, and ports, in combination with the cylinder A, piston, connecting-rod, and crank, the cam M, having the respective surfaces 40 41 43 and the projection 42, for causing the igniting-openings to coincide, and the spring 17, for moving the valve in opposite directions to the cam, substantially as set forth.

3. In a gas-engine, the combination, with the valve-case, air and gas supply pipes, and the ignitor, of a tubular valve having a single compartment closed at both ends, and having ports for the admission



399,908.

of air and gas and holes for the passage of the flame, substantially as set forth.

399,909. MACHINE FOR FORMING BALLS OF FIBER OR SLIVER. WILLIAM B. LEE, Bradford, County of York, England. Filed Mar. 22, 1888. Serial No. 268,119. (No model.) Patented in England Aug. 27, 1887, No. 11,068.

Brief.—The invention resides in the mechanism for reducing the speed of revolution of the winding-disks after the ball of sliver has attained a certain size, and in the mechanism for easing back one of said disks and for withdrawing the spindle from the completed ball.

Claim.—1. In a machine for forming balls of fiber or sliver, the combination, with the disks K L, provided with gear-teeth, of a driving-shaft having pinions gearing with the teeth of said disks, a pulley rigidly mounted on said shaft, a sleeve loosely mounted on the said driving-shaft and having a pulley and a pinion mounted thereon, and intermediate reducing-gear connecting said sleeve-pinion with one of the pinions on the main shaft, substantially as described.

2. In a machine for forming balls of fiber or sliver, the combination, with disks K L, of a driving-shaft operatively connected with said disks, a pulley rigidly connected to said shaft, a pulley loosely mounted on said shaft, reducing-gearing connecting said loose pulley and the shaft, a sliding rod and a belt-shipper connected thereto, a spring, A', a bell-crank lever, X, and the tripping-arm Y, connected to said lever, substantially as described.

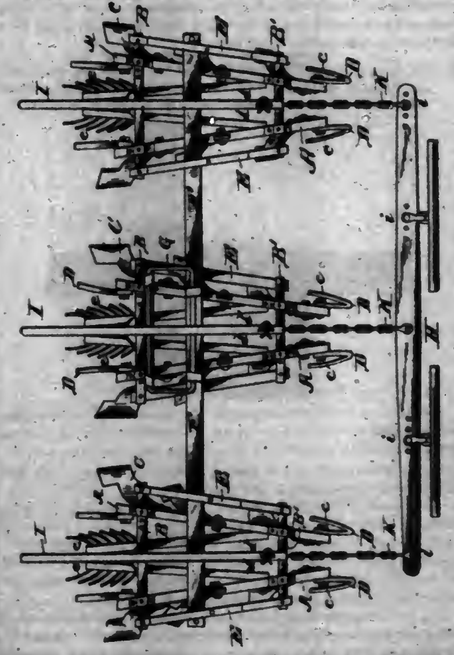
3. The combination, with the disks K L, of a driving-shaft operatively connected therewith, a sliding bar, and a belt-shipper mounted thereon, spring A', bell-crank lever X, and tripping-arm Y, connected with said bell-crank lever, substantially as described.

4. The combination, with the disks K L, of a driving-shaft operatively connected with the same, fast pulley F and loose pulleys G M on said shaft, reducing-gearing connecting said loose pulley M with said shaft, a sliding rod, a belt-shipper connected thereto, springs A' and F, adapted to move said rod in opposite directions, bell-crank lever X, and tripping-arms Y and Z, of different lengths, connected with said lever, substantially as described.

5. The combination, with a driving-shaft, of a sliding rod provided with a belt-shipper, a spring adapted to move said rod in one direction, a retaining device for said spring, a cam, and gearing for actuating it connected with the driving-shaft, and devices connecting said cam with said spring, whereby the said spring is moved to a position to effect the proper movement of the belt-shipper when released from its retaining device, substantially as described.

6. The combination of the driving-shaft, a sliding rod provided with a belt-shipper, a spring adapted to move the rod in one direction, a lever engaging said spring, and a wheel provided with a cam in gear with the driving-shaft for moving the lever and spring in the opposite direction, substantially as described.

7. The combination, with a driving-shaft, of a sliding rod provided with a belt-shipper, a spring adapted to move said rod in one direction, a lever engaging said spring, a wheel provided with a cam in gear with the driving-shaft and having a flange on its periphery broken away at one point, an arm pivoted on the said lever and engaging said flange, and a tripping-arm for said spring, substantially as described.



8. The combination, with the bearing *d*, of the disk K, provided with the sleeve *b*, mounted in said bearing, and the spindle a^3, longitudinally movable in said sleeve *b*, the said sleeve and said spindle being provided the one with a groove or gain and the other with a spline engaging the same, substantially as described.

9. The combination, with the bearing *d*, of the disk K, provided with the sleeve *b*, mounted in said bearing, the spindle a^3, longitudinally movable in said sleeve, the said spindle being screw-threaded at its outer end, and a hand-wheel, R, substantially as described.

10. The combination, with the bearing *d*, having its inner end provided with notches, as described, of the disk K, journaled in said bearing, and the lever *a*, provided with projections corresponding with the recesses in the bearing *d*, mounted on the journal of disk K, substantially as described.

11. The combination, with the spring-bar F', of the lever J', provided at its outer end with an incline, the shaft provided with the arm K', lever L', and devices connecting it with said shaft, substantially as described.

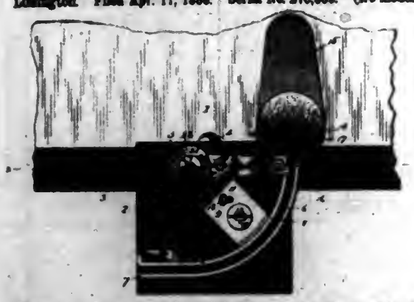
399,910. CULTIVATOR. AMOS LEWIS, Tarkio, Mo. Filed Aug. 3, 1888. Serial No. 281,909. (No model.)

Claim.—1. A cultivator-blade consisting of a bar portion to be attached to a beam and a dirt-moving portion forming a continuation of the bar portion and extending downward and rearward and then outward and having its outer portion extending upwardly, rearwardly, and inwardly, the share or front side of the bar being provided with a cutting-edge, whereby the earth is passed from the share side across

the dirt-moving portion to the bar side and is thrown inwardly to the corn by the rearwardly and inwardly extending edge, substantially as set forth.

2. In a cultivator, the combination, with a pair of rearwardly and outwardly diverging beams, of two or more cultivator-blades carried by each beam, each blade being formed in one piece and comprising a bar portion and a dirt-moving portion, the bar portion being secured to the beam so that the dirt-moving portion will extend downward and outward and continue outward and upward and backward and inward at its rear outer edge, whereby the dirt is thrown inwardly, as described, and the bars of the succeeding blades pass in the furrows formed by the dirt-moving portions of the preceding blades, as set forth.

3. In a lister-cultivator, the combination, with two or more cultivator-sections provided with slotted side beams, of a transverse connecting-bar extending across the sections and through the slotted side beams to connect the sections together and allow independent movement of the same, substantially as described.



4. In a lister-cultivator, the combination, with the plow-beams, of a pair of guides adjustably secured to the same and curving forwardly and then rearwardly and downwardly, forming guiding edges or runners, having their lower ends bent outwardly to hold the cultivator in the center and cause it to follow the line of the list, substantially as described.

5. In a gang-cultivator, two or more cultivator-sections, each adapted to straddle a row, in combination with a rigid transverse connecting-bar extending across and loosely joining the sections together, and one or more links loosely joining the bar and one or more of said sections to allow independent vertical movement of said bar and section or sections, substantially as set forth.

6. In a gang-cultivator, the combination of one or more cultivator-sections, a transverse connecting-bar, a link loosely securing the bar to the central section, and side beams on the other sections, through which the bar loosely extends and in which it is confined, substantially as set forth.

7. In a gang lister-cultivator, the combination, with the cultivator-sections, each having guides running in the lists to hold the sections in the same, of a doubletree extending the distance between the sections, a vertically-adjustable draw-bar carried at the forward portion of each cultivator-frame, draft-chains directly attaching the doubletree to the lower ends of the draw-bars, and a rigid transverse connecting-bar loosely connecting the sections to allow variations of each section from the line of draft and yet prevent the same from overturning, substantially as set forth.

399,911. COMPOSING-STICK. FRANK J. LUDINGTON, Waterbury, and HENRY C. LELAND, New Haven, Conn.; said Leland assignor to said Ludington. Filed Apr. 17, 1883. Serial No. 270,889. (No model.)

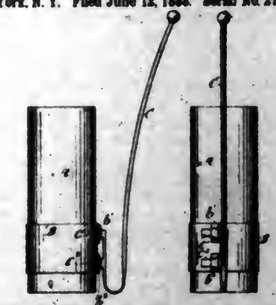
Claim.—1. In a composing-stick, the combination, with a base-plate provided with means for securing it to a printer's case, and formed with a channel for supporting a row of type, of a flaring type-receiving mouth-piece at the end of said channel for guiding the type into said channel, substantially as described.

2. In a composing-stick, the combination, with a base-plate provided with means for securing it to a printer's case, and formed with a type-channel for supporting a line of type, of a flaring type-receiving mouth-piece arranged at the end of said channel, and a yielding and movable follower arranged in said channel for supporting the outer end of said line of type, substantially as described.

3. In a composing-stick, the combination of a type-channel, a spring-actuated movable follower fitted therein, and a concaved mouth-piece having its end converging to an inlet-opening which registers with the end of said type-channel, and formed with a vertical wall opposite the inner end of said channel, substantially as described.

4. In a composing-stick, the combination of a base-plate provided with a mouth-piece having an inlet-opening, with a partly-curved rigid flange or wall and with a stud or pin, a correspondingly-curved movable flange or wall provided with an extension or foot which projects horizontally from its concave side and is formed with two slots arranged in a radial line to the curve of the type-channel, one of which slides over said stud or pin, a set-screw which projects through the other slot into said base-plate and acts to adjustably hold said movable wall, and a spring-actuated follower fitted in the type-channel formed by said rigid and movable walls, substantially as described.

5. In a composing-stick, the combination of a partly-curved type-channel, a concaved mouth-piece formed with an inlet-opening communicating with the inner end of said channel, with an incline or bevel along its bottom, and with a vertical wall at the lower end of said incline or bevel and opposite the inner end of said channel, and an arm concentrically pivoted with the curved portion of said channel, and provided with a follower on its outer end, which is fitted within said channel, and with a spring for forcing the same toward the wall of said mouth-piece, substantially as described.



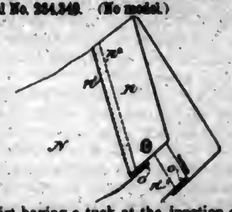
6. In a composing-stick, the combination of a partly-curved type-channel, a mouth-piece at one end thereof, which is formed with a vertical wall and with an incline or bevel in its bottom, a screw arranged concentrically with said type-channel and formed with a collar or flange and with a cylindrical head, a sleeve surrounding said screw and formed with a reduced upper end, an arm provided with an eye arranged upon the reduced end of said sleeve and secured thereon by said collar or flange of said screw, and provided with a follower at its outer end, which is fitted within said type-channel, and a helical spring, which is secured at one end in a perforation in the head of said screw and at the other end to a pin or stud upon said follower-arm, substantially as described.

7. A composing-stick provided with a type-channel having a general curvilinear shape, and formed of two flanges or walls having a straight portion at one end of each and a mouth-piece at the other end, the inner wall being formed with a vertical slot or aperture in its straight portion and with a guide finger or bar upon the upper edge of said straight portion, which projects over said slot and a short distance above the same, and with a follower-arm, which is pivoted concentrically with said channel and formed with a follower fitted therein and capable of passing out through said vertical slot or aperture, substantially as described.

8. In a composing-stick, the combination of a base-plate provided with a concaved mouth-piece having an inlet-opening at the converging lines of its sides, a flat vertical face at one side of said opening, and a curved rigid flange or wall which extends from the other side of said opening, a curved flange or wall which is adjustably secured to said base-plate for regulating its distance from said rigid flange or wall, and provided with a laterally-projecting lip which abuts against the flat face of said mouth-piece, substantially as described.

9. A composing-stick provided with the base-plate 2, having the generally-curved rigid wall 6, having the straight portion 7 and the concaved mouth-piece 14, formed with the bevel or incline 17, and the vertical wall 18, the generally-curved adjustable wall 8, having the straight portion 31, the slot or aperture 32, the guide finger or bar 33, and the horizontal extension or foot 9, formed with the slots 10 and 11, arranged in a radial line to the curve of the type-channel, the stud or pin 13, the set-screw 12, the post or screw 21, the sleeve 22, the follower-arm 23, formed with the follower 23', and the helical spring 27, substantially as described.

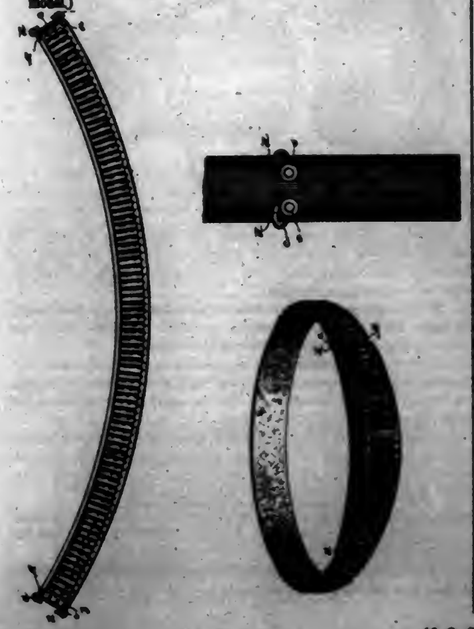
399,912. WICK-ADJUSTING MECHANISM. CHARLES H. LYMAN, Ansonia, Conn., assignor to the Ansonia Brass and Copper Company, New York, N. Y. Filed June 12, 1888. Serial No. 276,813. (No model.)



Claim.—In a wick-adjusting mechanism, the combination of the ring, adapted to engage a wick and provided with a loop, and a resilient rod turned upwardly at its lower end, and having a tongue extended laterally from said turned-up portion to engage the loop of the ring, substantially as specified.

399,913. SLEIGH-KNEE. TABOR G. MANDY, Stoughton, Wis. Filed Dec. 22, 1883. Serial No. 294,968. (No model.)

Claim.—1. A sleigh-knee constructed with a flat top provided with a central groove and two arms, the center portion of which is formed with a strengthening-ridge terminating in a tongue resting upon the top of the runner, the sides of the arms being bent down to form flanges terminating in lips which rest against and are secured to each side of the sleigh-runner, substantially as described.



2. The combination, with a sleigh-knee constructed with a flat top provided with a central groove and two arms, the center portion of which is formed with a strengthening-ridge terminating in a tongue resting upon the top of the runner, the sides of the arms being bent down to form flanges terminating in lips which rest against and are secured to each side of the sleigh-runner, of a U-shaped bolt which fits in the central groove in the top and engages the cross-tie under the said flat portion, substantially as described.

399,914. SHIRT. SIMON MILLER, Philadelphia, Pa. Filed Sept. 1, 1888. Serial No. 284,349. (No model.)

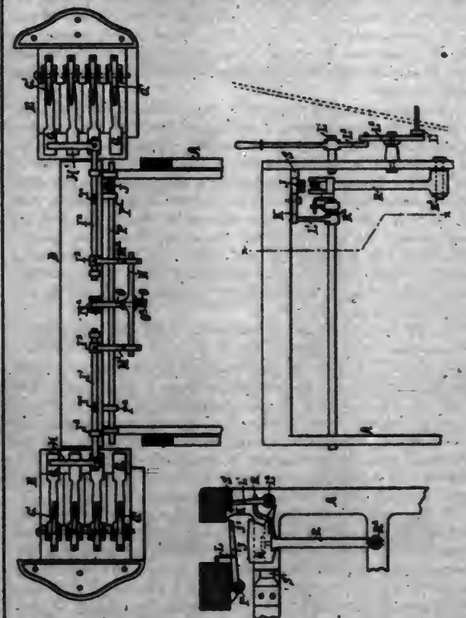
Claim.—A shirt having a tuck at the junction of the sleeve and wristband, consisting of a portion of said sleeve folded under the wristband and concealed thereby and secured in place by a continuous line of stitching, whereby when said stitching is broken away the sleeve will be lengthened to the extent of the folded tuck, substantially as described.

399,915. FASTENING FOR CARTRIDGE AND OTHER BELTS. ARMON MILLS, U. S. Army. Filed Dec. 15, 1888. Serial No. 293,758. (No model.)

Claim.—1. A belt or band having upon its body a transverse rib or shoulder provided at one or both ends with double hooks adapted to catch over and embrace the opposite edges of the body of the belt and to bring up against a rib or shoulder upon said body, substantially as set forth.

2. A belt having thimbles or pockets upon its body for the reception of cartridges, and provided at one or both ends with a double hook adapted to catch over and embrace the opposite edges of the body of the belt and to enter the space which separates contiguous pockets.

3. A belt having thimbles or pockets upon its body for the reception of cartridges, and provided at one or both ends with a swiveled double hook adapted to catch over and embrace the opposite edges of the body of the belt and to enter the space which separates contiguous pockets.



399,916. BELT FOR HOLDING CARTRIDGES AND CARTRIDGE-MAGAZINES. ARMON MILLS, U. S. Army. Filed Dec. 15, 1888. Serial No. 293,760. (No model.)

Claim.—The combination of the pocketed belt, the magazine or cartridge-receptacle, and the magazine-fastener composed of two members, of which one is carried by the magazine and the other by the belt, substantially as and for the purposes hereinbefore described.

399,917. STOP-MOTION FOR LOOMS. JOHN J. MCCOSKER, Providence, R. I., assignor of one-half to John J. Shanahan, same place. Filed Nov. 3, 1887. Serial No. 254,616. (No model.)

Brief.—By means of the devices set forth in the claims the loom is stopped either when both of the operative shuttle-boxes are full or when both of them are empty.

Claim.—1. The combination, as hereinbefore set forth, with the lay of a loom and the drop-boxes at the respective ends thereof provided with swells, of the independently-movable detector-fingers appropriate to engage the swells thereof and mounted on independent rocking shafts, the inner ends of which rocking shafts are provided with arms, a lever mounted on the rocker and connecting the arms of the two independent rock-shafts, the rocker, the stop-motion rod, and devices connecting said rocker with said rod, whereby the loom may be stopped when the detector-fingers assume certain predetermined positions, substantially as and for the purpose herein described.

2. The combination, with the lay of a loom, the drop-boxes provided with swells, the independently-movable detector-fingers, the detector-shafts for the fingers, the arms attached to the detector-shafts, the rocker, the connecting-lever mounted on said rocker and operated by the said arms, and the stop-motion rod provided with the stop-finger and connected to the said rocker by the link, of the push-piece or vibrating arm constructed to operate a shipping device, substantially as herein described.

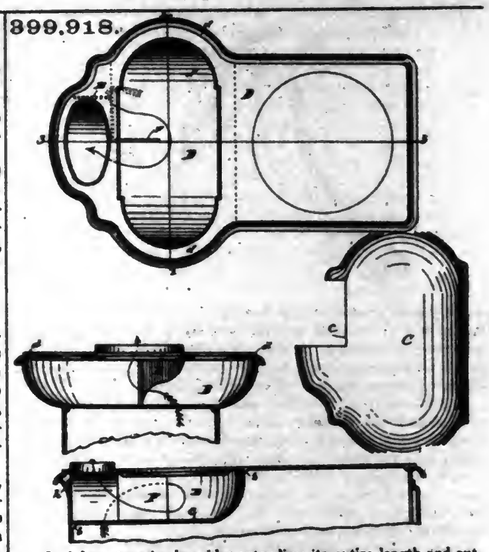
3. The combination, as hereinbefore set forth, with the lay and the drop-boxes therefor provided with the swell-fingers, of the independently-movable detector-shafts, each provided with a detector-finger for engaging the swells of the respective drop-boxes, a stop-motion rod and the rocker connected therewith and operating the rod, the connecting-lever swiveled to the rocker, and the arm rigidly mounted on each detector-shaft and loosely connected with the respective ends of the connecting-lever, substantially as described.

4. The combination, as hereinbefore set forth, with the lay D, provided with the drop-boxes E, having the swells G, of the independently-movable detector-fingers H and H', the shafts I' and I², the arms M' and M², the connecting-lever N, the rocker O, and the stop-motion rod P, connected therewith and provided with the stop-finger J, the push-piece K, vibrating arm R, and the devices operated thereby, whereby the loom may be stopped when the detector-fingers and stop-finger are similarly deflected, substantially as herein shown and described.

5. The combination, as hereinbefore set forth, with the lay D, having the drop-boxes E, provided with the swells G, of the independently-movable detector-fingers H and H', engaging the sets of swells of the respective drop-boxes, the rocking detector-shafts I' and I², upon which the said respective detector-fingers are mounted, the stop-motion rod P, and the pivoted rocker O, connected therewith and actuating the same, the connecting-lever N, swiveled to the rocker O, and the arms M' and M², intermediate the respective detector-shafts I' and I² and the ends of the connecting-lever N, substantially as and for the purpose herein described.

6. The combination, as hereinbefore set forth, with the lay, the drop-boxes therefor, and the swells, of the independently-operating detector-shafts I' and I², provided with the detector-fingers H and H', respectively, and having the arms M' and M² mounted thereon, respectively, the stop-rod P, the pivoted rocker O, and the link O² and bar P', intermediate the stop-rod and the rocker, and the connecting-lever N, swiveled to the rocker and engaging with its ends the said arms M' and M², respectively, substantially as and for the purpose herein described.

7. The combination, as hereinbefore set forth, with the independently-movable detector-shafts I' and I², provided with the detector-fingers H and H' and the arms M' and M², respectively, of the stop-rod provided with the hooked stop-finger J, the pivoted rocker O, and the link O² and bar P', intermediate the said rocker and stop-rod, the connecting-lever N, swiveled on rocker O and engaging with the ends the said respective arms M' and M², the shipper-shaft L², provided with the turn-bar R² and the shipper-arm L', the pivoted push-piece K, for engaging the said shipper-arm, and the vibrating arm R, provided with the hooked head Q and having the hooked extension R', for engaging the turn-bar R², substantially as and for the purpose herein described.

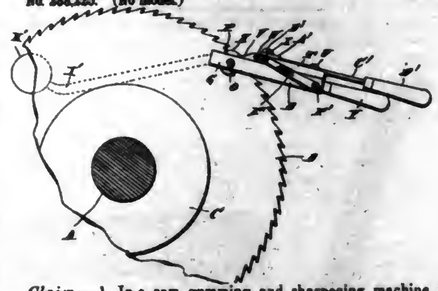


8. The combination, as hereinbefore set forth, with the independently-movable detector-shafts I' and I², provided with the detector-fingers H and H' and the fixed arms M' and M², respectively, of the stop-rod P, provided with the hooked stop-finger J, the pivoted rocker O, and the link O² and bar P', intermediate the rod P and rocker O, the connecting-lever N, swiveled on the rocker O and engaging the arms M' and M², respectively, the shipper-shaft L², provided with the turn-bar R², and the vibrating arm R, having the hooked head and provided with the hooked extension R', for engaging the bar R², substantially as and for the purpose herein described.

9. The combination, as hereinbefore set forth, with the independently-movable detector-shafts I' and I², provided with the detector-fingers H and H' and the fixed arms M' and M², respectively, of the stop-rod P, provided with the stop-finger J, the pivoted rocker O, and the link O² and bar P', intermediate the rod P and rocker O, the connecting-lever N, swiveled to the rocker O, the shipper-shaft L², provided with the shipper-arm L', and the pivoted push-piece K, engaged by the finger J, substantially as and for the purpose herein described.

399,918. COMBINED BOX AND COOKING STOVE. JOHN MCMASTER, Dayton, Ohio. Filed Aug. 31, 1888. Serial No. 284,235. (No model.)

Claim.—1. A stove having substantially flat sides and ends, the sides cut away at their upper edge to provide for a heating-chamber, and a plate of greater width than the body of the stove, forming the front and sides of said chamber, with a flat stove-top covering the entire stove, substantially as set forth.



399,918.

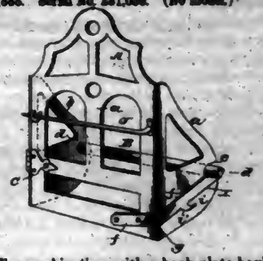
2. A box-stove having sides extending its entire length and cut away, as at *a*, in combination with a plate resting on said cut-away sides extending laterally beyond the same, and having its sides and front turned up to form walls for the heat-chamber, and a flat stove-top of irregular width to cover said heat-chamber and the front of the stove, substantially as set forth.

3. In a box-stove having a heat-chamber formed therein separate from the stove-body, the following elements in combination: straight sides cut away along their upper edges, as at *a*, a plate with upwardly-curved front and side portions wider than the stove-body and resting on the cut-away side portions and flush on top with the uncut edge thereof, said plate having an opening, as *e*, for the passage of heat into the heat-chamber, a flat stove-top covering the entire stove, and plates to direct the heat into the body of the heat-chamber, substantially as set forth.

399,919. MACHINE FOR GUMMING AND SHARPENING GIN-SAWS. TURNER H. NANCE, Talladega, Ala. Filed Oct. 10, 1888. Serial No. 288,225. (No model.)

Claim.—1. In a saw gumming and sharpening machine, the laterally-movable punch pivoted directly on the body or frame, and having its outer cutting end beveled on its upper side to form a cutting-edge, substantially as described.

2. In a saw gumming and sharpening machine, the punch having the gage V clamped to one side and movable toward and from the cutting-point of the punch, substantially as described.



3. In a saw gumming and sharpening machine, the laterally-movable punch pivoted on the body or frame, and the screw G', engaging the upper side of the cutting end of the punch to prevent the latter from rising, substantially as described.

4. In a saw gumming and sharpening machine, the punch pivoted directly to the frame or body and laterally movable thereon, the operating-cam bearing on one side of the punch, and the spring bearing on the opposite side thereof, substantially as described.

399,920. FINISHING COMPOUND FOR PLASTERED WALLS. THOMAS J. HEAVITT, Austin, Tex. Filed Aug. 17, 1888. Serial No. 282,980. (No specimens.)

Claim.—A finishing compound for plastered surfaces, consisting of glue, gum-arabic, and glycerine, as and for the purposes set forth.

399,921. SPOOL-HOLDER. THOMAS W. HORTON, Shamokin, Pa. Filed July 25, 1888. Serial No. 281,080. (No model.)

Claim.—1. The combination, with a back plate having a fixed wing at one side and a hinged wing at the other side, of a spool-supporting rod fixed to one wing and means upon the other wing for engaging the rod, whereby the said wings are held in closed adjustment, substantially as set forth.

2. The combination, with a back plate having a fixed wing on one end and a hinged wing on the other end, one of said wings having a notch in its edge and a spring projecting yieldingly over an edge of the notch, of a spool-supporting rod fixed to one wing, its other end being adapted to enter the notch in the other and be held therein by the spring, substantially as set forth.

3. The combination, with a back plate having a fixed wing on one end and a hinged wing on the other end, one wing having a notch in its edge and a spring beveled at the end projecting partly over the notch, said spring having a knife projecting therefrom, of a spool-supporting rod fixed to one wing, and adapted to enter the notch in the other wing and be held therein by the spring, substantially as set forth.

4. The combination, with a back plate, a wing fixed to one end, and one hinged to the opposite end, the rigid wing having a notch in its edge, of a spool-supporting rod fixed to the hinged wing, with its free end in position to enter the notch in the edge of the other wing, a spring secured to the back plate and bent around the fixed wing, so as to project partly over the notch therein, in order to hold the spool-supporting rod therein, a knife on this spring, and a pin hinged to the back of the back plate, for the purpose substantially as set forth.

5. The combination, with frame, a device to pin the frame on the person of a user, a fixed wing having a notch, and a hinged parallel wing, of a spool-supporting rod fastened by one end to the hinged wing and adapted to enter the open notch in the fixed wing, a plate-spring which latches over the spool-supporting rod, and a thread-cutting lip or ear formed on the spring latch-plate, substantially as set forth.

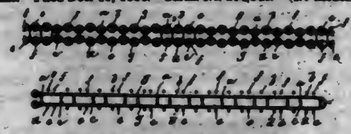
399,922. LUNCH-HEATER. TIMOTHY O'MAHONY, Felton, Cal. Filed Dec. 1, 1888. Serial No. 292,431. (No model.)

Claim.—1. The cylindrical heater constructed of sheet metal and having an open top, and provided with inwardly-projecting arms for supporting the dinner-pail, and notched lugs for connecting with studs on the pail, as shown and described.

2. The combination of the pail having laterally-projecting studs with the heater having vertical notched lugs and supports for said pail, substantially as shown and described.

399,923. PACKING CARTRIDGES FOR TRANSPORTATION AND DISTRIBUTION. THOMAS C. ORMSBY, Worcester, Mass. Filed Dec. 19, 1888. Serial No. 294,045. (No model.)

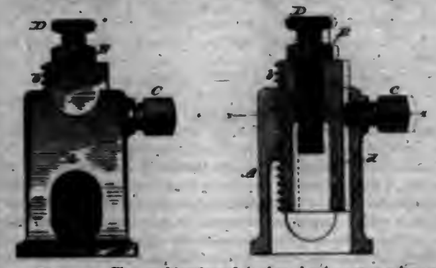
Claim.—The herein-described method of packing cartridges for transportation and distribution, consisting in first storing the cartridges



399,928.

in belts or bands provided with pockets closed at one end, each cartridge being placed in its own pocket, so as to be isolated from others on the same band, and then packing said bands in a suitable box or receptacle, with the heads of the cartridges in one band opposite the closed ends of the pockets in the next adjoining band or bands, whether in the same row or pile or in contiguous rows or piles, substantially as hereinbefore set forth.

399,924. CARTRIDGE-BELT. THOMAS C. ORMSBY, Worcester, Mass. Filed Dec. 19, 1888. Serial No. 294,046. (No model.)



Claim.—A cartridge-belt composed of multiply fabric, provided with cartridge-pockets integral therewith formed by the plies and closed along one edge of the fabric, as hereinbefore set forth.

399,925. IRONING-BOARD. HENRY C. PERRY, Coffeyville, Kans. Filed June 26, 1888. Serial No. 278,163. (No model.)

Claim.—The combination, with the board B, hinged at one end, and the transverse cleat *b*, secured to the under side of said board, of the inclined leg hinged to the under side of said board between its hinged end and said cleat, with the hinged end of said leg bearing against the under side of the board and against the inner edge of the cleat, substantially as and for the purpose described.

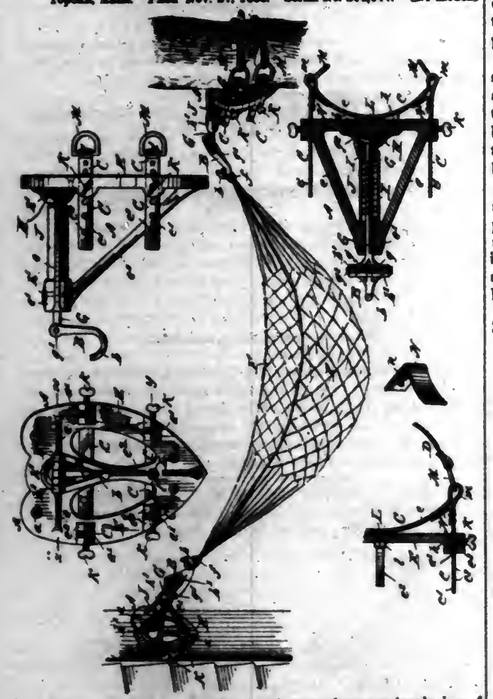
399,926. MACHINIST'S BLOCKING. CHARLES H. POLLARD, Middletown, Conn., assignor of one-half to Edmund S. Stiles, same place. Filed Feb. 11, 1888. Serial No. 263,259. (No model.)

Claim.—1. The combination of the base having an opening vertically through it, one wall of the base roughened, a set-screw through the opposite wall of the base, a slide arranged in the opening of the base, its face roughened corresponding to the roughened surface of the base, the said set-screw arranged to bear upon the back of the slide and hold the roughened surfaces of the base and slide in engagement, the width of the slide being less than the distance between the

face and screw side of the opening in the base, substantially as described.

2. The combination of the base A, having an opening vertically through it, one wall of the opening roughened, a set-screw, C, through the opposite wall, a slide, B, arranged in the opening of the base, its face roughened corresponding to the roughened surface of the base, a screw arranged to bear upon the back of said slide to engage the base and slide, the slide less in width from its roughened surface to the back than the corresponding width of the opening in the base, and a screw, D, adjustably set into the upper end of the slide B, substantially as described.

399,927. SPREADER AND STOPPER FOR BOTTLES. ELTWEED POMEROY, Newark, N. J. Filed Jan. 23, 1888. Serial No. 297,846. (No model.)



Claim.—1. A combined spreader and stopper for liquid-receptacles, having a slit across the truncated top of the spreader, for the purposes set forth.

2. A combined stopper and spreader for liquid-receptacles, having a slit across the truncated top of the spreader and provided with strengthening ridges or ribs around said slit, for the purposes set forth.

3. A combined spreader and stopper for liquid-receptacles, having a slit and strengthening ridges or ribs around the same, said slit and ridges extending across the top and part way down the opposite sides of the spreader, substantially as and for the purposes set forth.

399,928. HAMMOCK-SUSPENSION DEVICE. JOHN D. PRITCHARD, Topeka, Kans. Filed Nov. 27, 1888. Serial No. 291,977. (No model.)

Claim.—1. The combination, in a hammock-suspension device, of a bracket, a shaft journaled thereto, a hook connected to the shaft and adapted to support the hammock, and a spring connected to the hook-shaft and its support and adapted by its reaction to swing the hook and hammock, substantially as herein set forth.

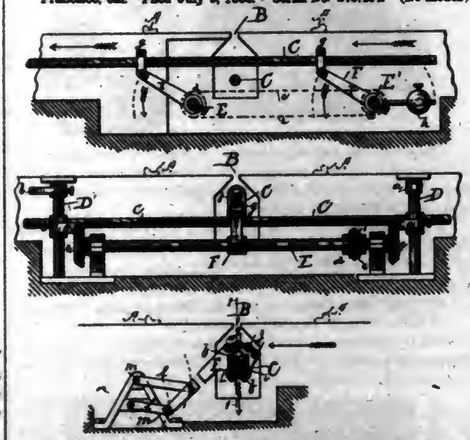
2. The combination, in a hammock-suspension device, of a bracket, a shaft journaled thereto for axial movement, and a hook pivoted to the shaft for swinging movement endwise of an attached hammock, substantially as herein set forth.

3. The combination, in a hammock-suspension device, of a bracket, a shaft journaled thereto for axial movement, a hook pivoted to the shaft for swinging movement endwise of an attached hammock, and a spring connected to the hook-shaft and its support and adapted by its reaction to swing the hook and hammock sidewise, substantially as herein set forth.

4. The combination, in a hammock-suspension device, of a bracket comprising a plate, E, having arms c c^2 c^3 and a bearing, c', a shaft journaled at its outer end in the bearing c' and having at its inner end a semi-spherical head, a corresponding cupped bearing on the bracket-plate, a hook, B, pivoted to the outer end of the shaft, and a spring, I, connected to the shaft and its cupped bearing, all arranged substantially as herein set forth.

5. In a hammock-suspension device, the combination, with a bracket-support, of a horizontal shaft journaled thereto for axial movement and having a forked outer end, and a hook adapted to sustain a hammock and having a bifurcated or branched upper end hinged or pivoted to the forked end of the shaft, substantially as herein set forth.

6. In a hammock-suspension device, the combination, with a bracket or plate sustaining a hammock-supporting hook, of one or more clamp-plates having a central portion adapted to a tree or post, and end parts passed outward through the bracket or plate, fastening devices for the ends of the clamp-plates at the bracket-plate, and cords, straps, or bands connected to the clamp-plate and adapted with said plate to suspend a hammock from a tree or post, substantially as herein set forth.



7. In a hammock-suspension device, the combination, with the main bracket-plate having slots a' and removable tree or post clamp-plates having bent perforated end parts adapted to the slots, of retaining-screws K, fitted in pairs of lugs on the plates and in the outer lugs of the pair of lugs by a screw-thread, and in the inner lugs and in the clamp-plate holes by plain parts k, substantially as herein set forth.

8. In a hammock-suspension device, the combination, with the main bracket-plate having slots a' and retaining screws or pins in said slots, of removable tree or post clamp-plates having bent perforated end parts adapted to the slots and to receive the retainers, and detachable bolt or screw fastenings connecting the centers of the clamp-plates to the main bracket-plate, substantially as herein set forth.

9. In a hammock-suspension device, the combination, with the slotted main bracket-plate, of tree and post clamp-plates held thereto and having bent ends entering the main plate-slots, and reteiners for the plates at said slots, said plates having loop-strap eyes m at their bends, and strap or cord loops M in said eyes, of guards N, held at the plate-bends to retain the loops M in the eyes m, substantially as herein set forth.

10. In a hammock-suspension device, the combination, with the main bracket-plate sustaining a hammock-supporting hook, of clamp-plates C, formed with central and end parts, c c' c', the latter passed through slots of the bracket-plate, bolts or detachable fastenings holding the center of the clamp-plates to the bracket-plate, screws K, connecting the plates C adjustably to the main plate, and cords or straps D, connected to the clamp-plates, substantially as herein set forth.

399,929. CABLE-RAILWAY CROSSING. GUSTAVE PROVOST, San Francisco, Cal. Filed July 9, 1888. Serial No. 279,464. (No model.)

Claim.—1. In a crossing for cable railways, the combination of the shafts D D', upholding reciprocating arms a b, which are set in such a way that while one of said arms lies across the path of the actuating car-grip the other is parallel thereto, the bevel-gears e e, the shafts E E', the sprocket-wheels d d, the endless chain c, the depressing-levers F, and the adjustable counterpoise A, substantially as described.

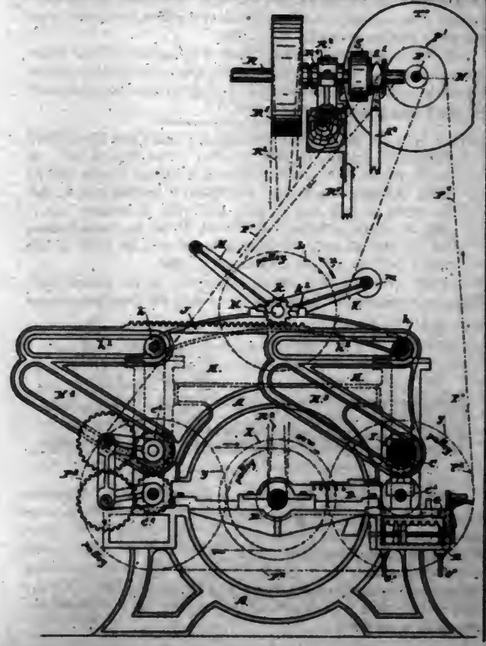
2. The depressing-levers E, provided with anti-friction rollers f with concave surfaces, set in an independent frame, g, jointed to the end of said levers and clutching the cables C, substantially as shown for the purpose specified.

399,930. DIE FOR FORGING THE FOLLOWERS OF EXTENSIBLE RAILWAY-CAR PLATFORMS. JAMES RESLEY and CLARK BURNHAM, Buffalo, N. Y. Filed Dec. 8, 1888. Serial No. 292,908. (No model.)

Claim.—1. The herein-described dies, consisting of a lower die having a flat face, d, provided with a circular shaping-cavity, d', and an upper die having a recess, e, and shaping-cavities f f, arranged in said recess, substantially as set forth.

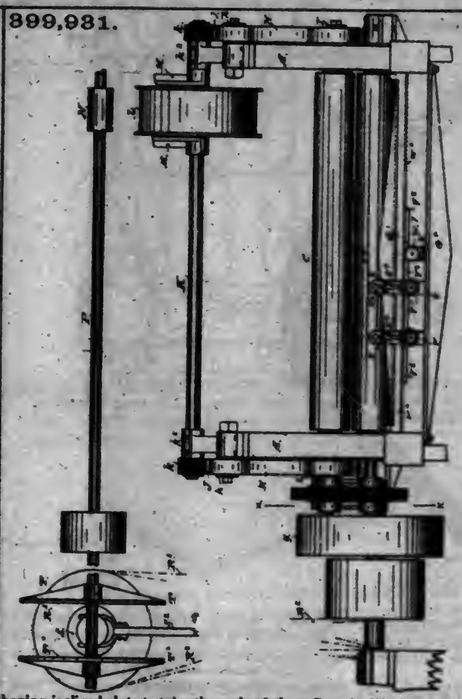
2. The herein-described dies, consisting of a lower die having a flat face, d, provided with a circular shaping-cavity, d', and an upper die having a recess, e, and shaping-cavities f f, arranged in said recess, and projections g g, arranged in said recess on the inner sides of the shaping-cavities f f, substantially as set forth.

3. The combination, with the lower die provided with a recess, h, a rectangular shaping-depression, i, and a semicircular cavity, j^3, of the upper die provided with a similar recess, j, shaping-depression j', and cavity j^3, substantially as set forth.



4. The combination, with the lower die provided with a flat face, d, having a circular shaping-cavity, d', and with a recess, h, shaping-depression i, and semicircular cavity j^3, of the upper die provided with a recess, e, and shaping-cavities f f, arranged above the flat face d, and with a recess, j, rectangular shaping-depression j', and cavity j^3, corresponding to the similar parts of the lower die, substantially as set forth.

5. The combination, with the lower die provided with an anvil, l, having a circular opening, l', of the upper die provided with two parallel cutters, k k, and with cavities n n, substantially as set forth.



399,931. GANG-EDGER. HERBERT C. ROSS, San Francisco, Cal. Filed Jan. 5, 1888. Serial No. 259,922. (No model.)

Claim.—1. In combination with the feed-rolls of a gang-edger, the sliding plate or frame H, having inclined slots H^3 H^4, in which the ends of the upper feed-rolls are set, the rack J, pinion-shaft K, geared into said rack, a driven shaft, P, and mechanism, substantially as described, by which the pinion-shaft is connected with and disconnected from the driven shaft, to actuate the same and move the slides, as set forth.

2. A feed-roll-lifting mechanism consisting, essentially, of the slotted frames H, mounted for rectilinear movement, as described, and

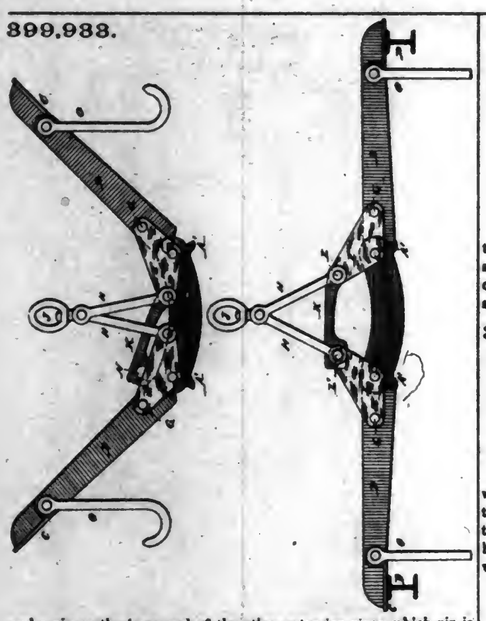
399,931.

having inclined slots to take the ends of the rolls to be lifted, a shaft, K, carrying pinions engaging racks on said frames, a driven shaft, P, capable of reversible motion, and mechanism, as a belt and a pulley, and a tightener-pulley which is adapted to connect and disconnect the pinion-shaft to and from the driven shaft, substantially as hereinbefore described.

3. The feed-rolls and the sliding plates H, having inclined slots which are adapted to engage the ends of a roll to be lifted and mounted for rectilinear movement, as described, and mechanism, in combination therewith, actuated by or from a driven shaft, by which said plates are moved and the rolls raised, substantially as hereinbefore described.

4. The combination of the sliding frame H, having inclined slots H^3 H^4, the feed-rolls, the upper of which have rollers I I that rest in the inclined slots, the pinion-shaft K above the frames, having pinions that engage racks on frames H H, the overhead reversible shaft P, the pulley L on shaft K, connected by belt with pulley N on shaft P, the belt P^x, carried from shaft P, for driving the feed-rolls of both sets, the friction-disks T and T^x, fast on shaft P, the driving-shaft R, and the friction-wheel S thereon, which is capable of lateral movement, as described, to bring it in contact with one or the other of said disks, substantially as described, for operation as set forth.

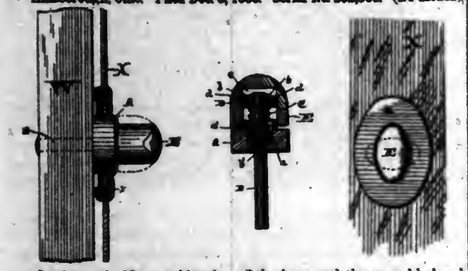
399,932. PAVEMENT. FREDERIC C. ROSS, Morristville, N. J., assignor to Ivan Provaznik, Philadelphia, Pa. Filed Aug. 10, 1888. Serial No. 282,494. (No specimens.)



Claim.—A paving material composed of natural bituminous sandrock—that is, a sandstone or sand naturally impregnated with bitumen in such proportions as to adapt it for paving purposes without any special treatment affecting its composition—in combination with resin incorporated therewith, substantially as set forth.

399,933. DEVICE FOR SPREADING CARCASSES. GOTTLIEB P. SCHMIDT, Schmiedeberg, Saxony, Germany. Filed Aug. 17, 1888. Serial No. 283,089. (No model.) Patented in Germany Dec. 11, 1886, No. 40,402.

Claim.—1. In a device for spreading carcasses, the combination, with a center piece, of levers pivoted to the ends of the same, extension-pieces secured to the levers and pivoted on the center piece, and a swivel-eye connected by links with the inner ends of said extension-pieces, substantially as shown and described.



2. In a device for spreading carcasses, the combination, with a center piece, of a lever pivoted to each end of the same, an extension-piece connected with the inner end of each lever and pivoted to the center piece, a swivel-eye connected by two links with the adjacent ends of the extension-pieces, a locking-lever pivoted to the inner end of one extension-piece and provided on its swinging end with a notch,

399,933.

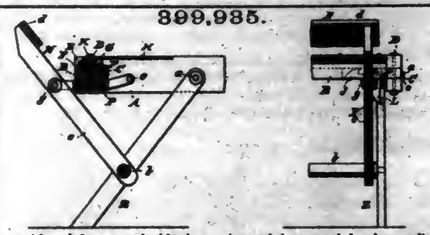
and a pin on the inner end of the other extension-piece, which pin is adapted to pass into the notch of the lever, and hooks on the swinging ends of the levers, substantially as shown and described.

399,934. CARRIAGE-CURTAIN FASTENER. SAMUEL P. SCOTT, Hillsborough, Ohio. Filed Dec. 3, 1888. Serial No. 292,500. (No model.)

Claim.—1. The combination of the base and the movable head having a closed bore, with the pin provided with lugs on its end, the collar on said pin secured in the bore of the head, and the controlling-spring, also concealed in said bore, all substantially as described.

2. The combination of the base and pin attached thereto having lugs on its outer end, with a movable head having a closed bore, the collar placed on said pin and secured in the bore of the head and provided with slots engaging the lugs, and the coiled spring surrounding the pin and bearing against the collar and the base, substantially as described.

3. The combination of the base having a central shouldered bore, the pin passed therethrough and secured thereto, the coiled spring, and the collar on said pin, with the movable head having a closed bore covering the ends of the pin and spring, and in which the collar is secured, all substantially as described.

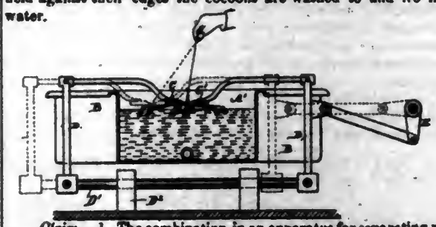


4. The combination of the base A, having a central opening and an annular flange, as described, the pin secured thereto having lugs on its upper end, and the coiled spring surrounding the outer portion of the pin, with the slotted collar D, playing on said pin, and the head E, having a bore in which collar D is seated and fitted over the end of the pin, substantially as described.

5. The combination of the base A, having a central shouldered opening and flange, *a'*, and the pin B, projecting through and secured to said base, and having lugs *b b* on its outer end, with the coiled spring C, the milled and notched collar D, and the head E, having a closed bore, *e*, all constructed and arranged substantially as described.

399,935. FOLDING COT. CHARLES T. SHEAR, Utica, N. Y. Filed Aug. 25, 1888. Serial No. 283,739. (No model.)

Claim.—The combination of the side bars, the pivoted legs applied thereto, the end frame pivoted to said legs, the braces pivoted



399,935.

to said end frame and side bars, the end bars, and hooks applied to said end bars, said end bars being connected to said side bars, and said catch-hooks engaging with said braces when the cot is extended, substantially as specified.

399,936. APPARATUS FOR SEPARATING WASTE FLOSS FROM COCOONS. EDWARD W. SERRELL, Jr., New York, N. Y. Filed July 11, 1887. Serial No. 243,973. (No model.) Patented in France Mar. 14, 1887, No. 182,100; in Italy Mar. 17, 1887, XLIII, 162; in England Apr. 27, 1887, No. 6,121; in Belgium Apr. 27, 1887, No. 77,229; in Germany May 6, 1887, No. 42,313; in Spain June 30, 1887, No. 6,909; in Turkey July 20, 1887, No. 85; in China Dec. 15, 1887; in India Dec. 20, 1887, No. 205, and in Austria-Hungary Feb. 6, 1888, 36/143.

Brief.—The apparatus consists of plates supported above the water of the basin, against the edges of which plates, at a point near the surface of the water, the cocoons to be cleaned are held. To these plates motion is imparted, so that when the ends of the silk are held against their edges the cocoons are washed to and fro in the water.

Claim.—1. The combination, in an apparatus for separating waste floss from cocoons, of a hot-water basin and guides or plates, against which a portion of the floss is held, and mechanism for giving to the plates a reciprocating motion, so as thereby to move the cocoons in the water and detach the floss, substantially as specified.

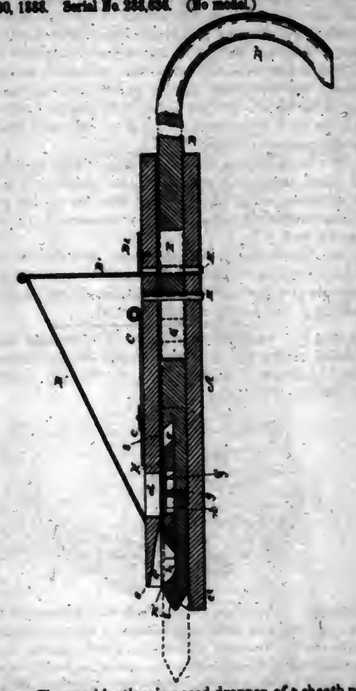
2. The combination, with the basin A B and the guides C C, of supports for the same passing above the edge of the basin and holding them in the required position in relation to each other, leaving a free passage from one end to the other of the said guides for the passage of the waste floss, substantially as specified.

3. The combination, with the basin A B, guides C C, and framework for the same, of mechanism, substantially as specified, for imparting to the guides the requisite motion during the operation of separating the floss, substantially as specified.

399,937. APPARATUS FOR REELING SILK FROM THE COCOON. EDWARD W. SERRELL, Jr., New York, N. Y. Filed Sept. 10, 1887. Serial No. 249,291. (No model.) Patented in England June 30, 1887, No. 9,374; in France June 30, 1887, No. 184,834; in Belgium June 30, 1887, No. 78,006; in Italy June 30, 1887, XLIII, 483; in Germany July 19, 1887, No. 43,568; in Turkey July 30, 1887, No. 86; in Austria-Hungary Nov. 15, 1887, No. 2,322/37; in Spain Nov. 30, 1887, No. 7,233; in India Mar. 7, 1888, No. 243, and in China Apr. 5, 1888.

Brief.—The invention resides in the devices for automatically filling with cocoons the magazines for reeling silk from the cocoons.

Claim.—1. The combination, in a filament-supplying apparatus, of a charging-basin containing water to float the cocoons, a wheel for giving motion to the water, a pipe or false bottom for the return of the water, and a magazine having pockets into which the cocoons are floated successively by the action of the water, and mechanism, substantially as specified, for discharging the cocoons from the magazine, and a reeling-basin into which such cocoons are discharged, substantially as set forth.



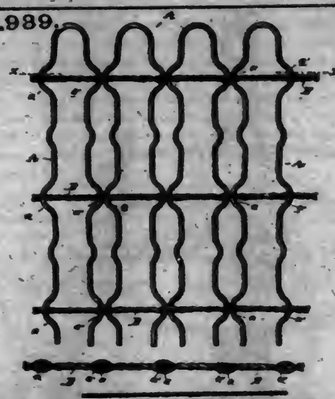
2. The charging-basin 5, to contain water in which the cocoons are floated, in combination with the pipe 11, for conveying a supplemental current of water, the return-channel below the false bottom 9, for the water, a casing, 6, a motor, 7, for causing the water to circulate, and a magazine into which the cocoons are floated, substantially as set forth.

3. The revolving wheel or motor 7 and the charging-basin 5, near one end of which the motor-wheel is placed, a case for said motor-wheel having an opening at 8, a false bottom, 9, beneath which the water returns to the motor-wheel, a pipe, 11, having openings for the supplemental currents of water, and a magazine near the other end of the basin and containing pockets into which the cocoons are floated, substantially as set forth.

4. The combination, with the reeling-basin and filament-supplying device, of a charging-basin for receiving the cocoons, a magazine for receiving the cocoons in the charging-basin, mechanism for giving motion to the water in the charging-basin to float the cocoons into the magazine, and mechanism for delivering the cocoons successively from the magazine into the reeling-basin, substantially as set forth.

5. The combination, with the magazine having pockets, of the toothed wheel 17, a catch-lever, 19, for holding the magazine, the revolving shaft 16 and pin 22, for moving the lever 19 and unlocking the magazine, the tooth 24, for turning the magazine, the spring *s* and arm 26, for raising the cocoon from the upper pocket in the magazine, the cam 28, for giving motion to the arm 26, the dome 30 and arm 31, and the mechanism for moving the same to project the cocoon into the reeling-basin, substantially as set forth.

399,938. HAND SEED-PLANTER. JAMES R. SHAW, Bishopville, S. C., assignor of one-half to Lauchlin McKinnon, Lynchwood, N. C. Filed Oct. 20, 1888. Serial No. 288,636. (No model.)

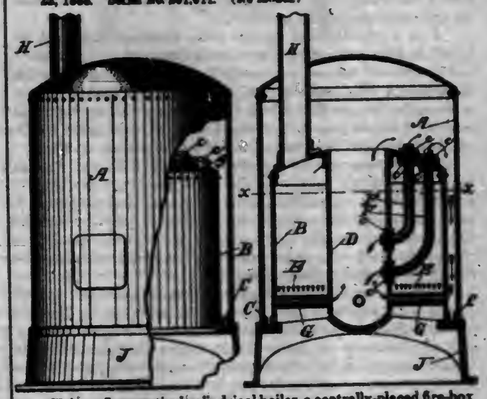


Claim.—The combination, in a seed-dropper, of a sheath provided with a hopper, a flaring discharge-passage, *d'*, a discharge-aperture, *d*, a sliding cut-off therefor, and an extended foot, *c'*, a staff or dropper-rod, D, recessed, as described, and provided in this recess with a double-beveled adjustable and slotted cut-off, the plate n^3, for closing the slot in this cut-off, the said staff having slots E G, the removable pin H, and the double-beveled nose, all constructed and adapted to operate as specified.

399,939. FENCE. EDWARD P. SHELLABERGER, Beaver Falls, Pa. Filed Jan. 17, 1889. Serial No. 296,609. (No model.)

Claim.—As an improved article of manufacture, a fence composed of hair-pin-shaped pickets having the opposing limbs of independent pickets provided with corresponding bends or curves, and longitudinal cables having their strands embracing the said bends or curves in a single twist, substantially as hereinbefore set forth, for the purpose described.

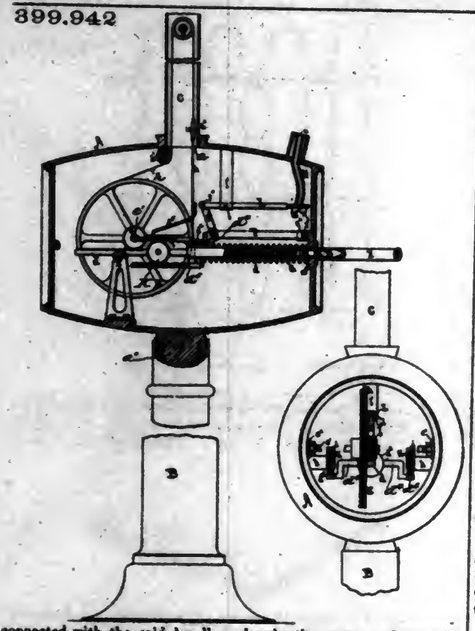
399,939.



399,940. PAD FOR CONVENIENCE IN HANDLING AND PICKING UP COINS. ALBERT H. L. G. ALSTORPH, London, England. Filed Nov. 16, 1888. Serial No. 291,083. (No model.) Patented in England Sept. 12, 1888, No. 13,222.

Claim.—As an improved article of manufacture, the herein-described coin-mat for show-cases and counters, consisting of a base or foundation piece provided with numerous connected rubber fibers rising therefrom and constituting a continuous cellular absorbent top layer of spongy rubber, substantially as described.

399,941. BOILER. JAMES T. SMITH, Baltimore, Md. Filed Nov. 22, 1888. Serial No. 291,611. (No model.)



Claim.—In a vertical cylindrical boiler, a centrally-placed fire-box having a heater dependent from its crown, combined with a series of water-tubes which connect the side of the said heater with the crown of the fire-box, and another series of water-tubes which unite the lower end of the said heater with the water-space around the said fire-box, substantially as and for the purpose specified.

399,942. COIN-CONTROLLED STRENGTH-TESTER. GUSTAV SCHEDDIN, Philadelphia, Pa. Filed Oct. 15, 1888. Serial No. 288,150. (No model.)

Claim.—1. In a coin-controlled strength-tester, the combination of the two movable handles, one within the other and moving in opposite directions in a parallel plane, a helical spring resisting the movement of the handles, a pair of gear-wheels, racks connected with the handles and transmitting their motion to the wheels, a registering device, and intermediate mechanism controlling the registering device, as and for the purpose set forth.

2. In a coin-controlled strength-tester, the combination of the movable handles, one within the other, a helical spring resisting the movement of the handles, a registering device consisting of a straight vertical scale and a vertically-moving pointer, the gear-wheels and mechanism intermediate the gear-wheels and the register, and rack-

399,942

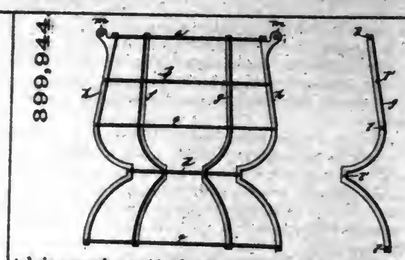
connected with the said handles, whereby the amount of muscular strength exerted on said handles is indicated, as and for the purpose set forth.

3. In a coin-controlled strength-tester, the combination, with the handle D and the handle I, having the rack *i* and the pinion K, of the grooved wheel E and the shaft *e'*, the pinion *e* on said shaft, the idler *k'*, the pulley *c*, the cord A, and the indicator H A^3, all combined for operation substantially as described.

4. In a coin-controlled strength-tester, the combination, with the handle D, having the spring-encircled rod *d*, the rack *d'*, the arms d^4, and the racks d^3 thereon, the handle I, having the racks *i* thereon, the pinions K and *e*, and the conveyer N, of the bent wire d^6, secured in the rod *d*, the pin f^4, the lever L, pivoted on the pin f^4, and the receiver M on said lever L, whereby the wire d^6, striking the pin f^4, will jar the coin off the receiver, as and for the purpose set forth.

5. In a coin-controlled strength-tester, the combination, with the handle D, having the spring-encircled rod *d*, the racks *d'*, the arms d^4, and the racks d^3, the handle I, having the racks *i*, and the pinions K and *e*, engaged by said racks, of the coin-lever L, provided with the ring M, the coin-conveyer N, the said conveyer and ring operating to change the coin from a perpendicular to a horizontal position on said ring, as and for the purpose set forth.

6. In a coin-controlled strength-tester, the combination, with the case A, of the handles D and I, the rod *d*, the helical spring G on said rod, the collar d^5, carrying the forked arms d^6, the racks d^3, *i*, and *d'*, shaft *e'*, journaled in the bosses f^6 and carrying the pinion *e*, and the wheel E, the cord A, the idler *k'*, the pulley *c*, the indicator H A^3, the pipe C, the conveyer N, the lever L, the ring M, the hanger *l'*, the locking-bar F, having the head *f*, the bar *f'*, the wire d^8, the pin f^4, and the upright E', all combined and arranged for operation substantially as described.



399,943. PUNCH. GEORGE W. SOUTHWICK, Stamford, Conn. Filed July 7, 1888. Serial No. 279,201. (No model.)

Claim.—In a combined gage and punch, the combination, with a stock having recesses at one end in opposite edges, a blade held in one recess and projecting from said end of the stock, and a sliding gage-pin in the end of the stock, said sliding gage-pin being located a greater distance from one recessed edge of the stock than the other, substantially as herein shown and described.

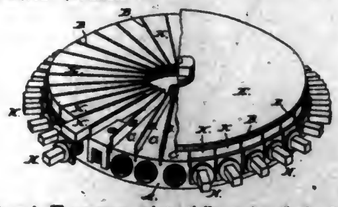
399,944. LANTERN-FRAME. FURMAN D. SPEAR, Brooklyn, N. Y. Filed July 21, 1888. Serial No. 280,632. (No model.)

Claim.—1. In a lantern-frame, a series of three or more horizontal ring-guards, combined with a series of upright guards, the upright guards being locked in place by the ring-guards to form a self-sustaining frame, substantially as set forth

2. In a lantern-frame, a series of three or more notched horizontal ring-guards, combined with a series of upright guards, and the parts being interlocked and arranged or woven together, substantially as and for the purposes set forth.

3. In a lantern-frame, a series of three or more horizontal ring-guards, combined with a series of notched upright guards, and the parts being interlocked and arranged or woven together, substantially as and for the purposes set forth.

4. In a lantern-frame, a series of three or more horizontal ring-guards, combined with a series of upright guards, both being notched and the parts being interlocked and arranged or woven together, substantially as and for the purposes set forth.



5. In a lantern-frame, a series of three or more horizontal ring-guards, of which series the rings are alternately notched on the interior and exterior, combined with a series of upright guards notched on opposite faces, the parts being interlocked and arranged or woven together, substantially as and for the purposes set forth.

6. In a lantern-frame, the combination of three or more flat metal ring-guards and flat metal upright guards, the ring-guards being notched or halved into or upon the upright guards, which are also notched, the parts being interlocked and interwoven, substantially as and for the purposes set forth.

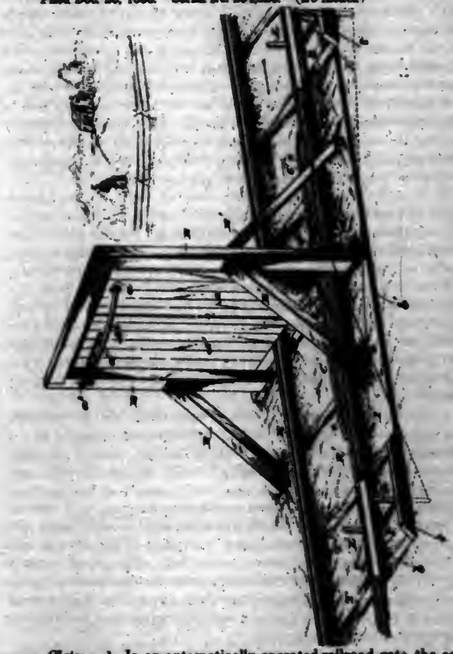
7. In a lantern-frame, the combination of three or more continuous flat metal ring-guards and flat metal upright guards, the ring-guards being notched or halved into or upon the upright guards, the parts being interlocked and interwoven, substantially as and for the purposes set forth.

8. In a lantern-frame, the combination, with three or more horizontal flat metal rings or bands, of flat metal uprights connected with said rings and arranged in planes passing through the axis of the frame, substantially as and for the purposes set forth.

399,945. PROCESS OF MOLDING TYPE-WHEELS AND OTHER CURVED SURFACES. BURNET L. TABOR, Brooklyn, assignor to the New York Stencil Works, New York, N. Y. Filed Nov. 16, 1886. Serial No. 219,014. (No model.)

Claim.—1. The process, substantially as described, of manufacturing a type-wheel or other object having a curved surface bearing characters thereon in relief or intaglio, which consists in filling a series of radial cells formed about the curved or circular surface of a suitable pattern with a plastic composition or molten alloy adapted to conform to the type or other characters on the surface of the pattern, allowing the composition or alloy to harden into blocks in contact with the pattern, so as to retain the impression thereof, withdrawing radially within their cells these sectional mold-blocks far enough to disengage them from the pattern, removing the pattern from between the blocks, moving back the radial mold-blocks to their original positions, casting the material for the finished object in the matrix or recess previously occupied by the pattern, and finally again withdrawing the mold-blocks radially to disengage them from the casting.

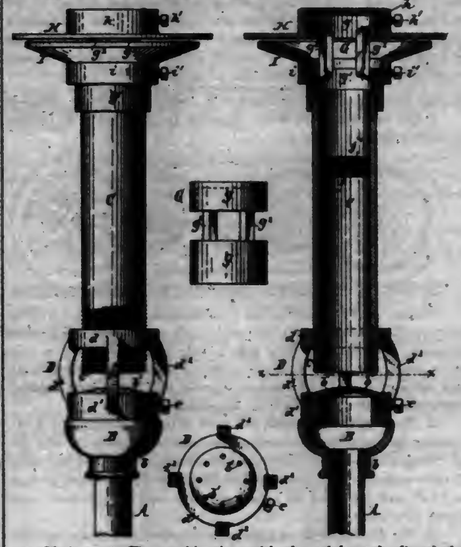
2. The process, substantially as described, of manufacturing a type-wheel or other object having a curved surface bearing characters thereon in relief or intaglio, which consists in filling a series of radial cells formed about the circular or curved surface of a suitable pattern with a plastic composition or a molten alloy adapted to conform to the type or other characters on the said surface of the pattern, allowing the composition or alloy to harden into blocks in contact with the pattern, so as to retain the impression thereof, withdrawing radially within their cells these sectional mold-blocks far enough to disengage them from the pattern, removing the pattern from between the blocks, moving back the radial mold-blocks to their original positions, placing a previously-formed hub or body-piece of smaller diameter than the pattern centrally in the recess encircled by the radial mold-blocks, filling the space between the hub or body-piece and the encircling mold-blocks with rubber, celluloid, or other equivalent plastic compound, subjecting the same to heat to harden the compound, and finally withdrawing the mold-blocks radially from the periphery of the compound device thus produced to permit of its withdrawal from the mold.



399,946. WIRE-TIGHTENER. SHAPLEY P. R. TAYLOR and STEPHEN S. CLARK, Denison, Tex. Filed June 13, 1888. Serial No. 276,963. (No model.)

Claim.—1. The combination, with a bar having a forked end bent to form hooks, as described, of a lever-handle fulcrumed to the bar A and having its end extended between the hooks to form a discharging device for the wire, as set forth.

2. The combination of the bar A, having a longitudinal slot, with knife-edge *k* and forked twisting-hooks *a a*, and the offsetting lever-handle B, having flat portion *b*, with notch or wire-seat *c*, fulcrumed in the slot of the bar A, and having its outer end extended in the form of a prong between the twisting-hooks *a a*, substantially as and for the purpose described.



399,947. RAILROAD-GATE. DAVID C. THOMAS, Trimble, Ohio. Filed Dec. 20, 1888. Serial No. 294,230. (No model.)

Claim.—1. In an automatically-operated railroad-gate, the combination of the doors or gates having a top connection, and one of which has an outwardly-projecting arm from the lower hinge thereof, the rails having slotted bars therein, the levers mounted in said slotted bars and connected to similar levers arranged at a distance from and parallel therewith, the cords or cables running from the outer levers to the arm of the one door, and the metallic strip on the inside of one track-rail attached to levers which are connected to the aforesaid levers, substantially as described.

2. In an automatically-operating railroad door or gate, the combination of the double doors connected to operate simultaneously, one of which has a projecting arm, the slotted bars arranged on each side of the doors in one line of rail, the double throw-levers, one of each pair of which is mounted in said slotted bars, the metallic strip inside of one rail between the throw-levers, attached to and supported by other levers, and the cords or cables connecting the several levers with themselves and the projecting arm of the one door, substantially as described.

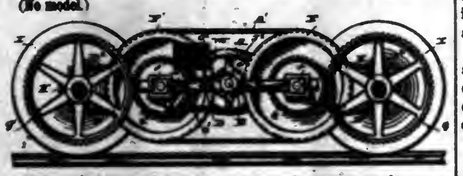
399,948. GAS-BURNER. WILLIAM P. TIBBINS, Buffalo, N. Y., assignor of three-fourths to Martin B. Daly, same place. Filed Jan. 19, 1888. Serial No. 261,250. (No model.)

Claim.—1. The combination, with the mixing-tube C and the open frame or cage G, secured to the upper end thereof and composed of a cap, *g*, a ring, *g'*, and connecting-arms g^2, of an upper deflecting-plate, H, secured to the cap *g*, and a lower deflecting-plate, I, made vertically adjustable on the ring *g'*, substantially as set forth.

2. The combination, with the mixing-tube C and the open frame or cage G, secured to the upper end thereof and composed of a cap, *g*, a ring, *g'*, and connecting-arms g^2, of an upper deflecting-plate, H, secured to the cap *g* by a set-screw, *k'*, and a lower deflecting-plate, I, secured to the ring *g'* by a set-screw, *i'*, substantially as set forth.

3. The combination, with the gas-supply pipe, of a gas-chamber having gas-escape openings, an open frame secured to said chamber, a mixing-tube secured with one end to said frame and made adjustable therein toward and from said gas-chamber, an open frame secured to the opposite end of said mixing-tube, an upper deflecting-plate secured to said frame, and a lower deflecting-plate also secured to said frame and made adjustable thereon toward and from the upper deflecting-plate, whereby the admission of air to the mixing-tube and the size of the flame can be regulated to correspond and produce perfect combustion, substantially as set forth.

399,949. TAKE-UP MECHANISM FOR SEWING-MACHINES. JAKOB TREPP, New York, N. Y. Filed Dec. 4, 1888. Serial No. 292,616. (No model.)



Claim.—1. In a sewing-machine, the combination, with the head, the needle-bar and actuating mechanism for the latter, of a take-up

rock-shaft having take-up and cam-slotted arms, an auxiliary take-up carried by said needle-bar, and a co-operating thread-guide adjustably secured to the face-plate adjacent to said auxiliary take-up.

2. In a sewing-machine, the combination, with the head, the needle-bar, and actuating mechanism for the latter, of a take-up rock-shaft within said head, and having take-up and cam-slotted arms, an auxiliary take-up or slack-controller carried by the said needle-bar, and a co-operating thread-guide secured to the face-plate of the head adjacent to the path of the said auxiliary take-up or slack-controller.

3. In a sewing-machine, the combination, with the head thereof having a face-plate provided with a vertical slot, the needle-bar-actuating shaft, and the needle-bar operatively connected with the said shaft, of a rock-shaft having a swinging take-up arm outside of the said face-plate and a cam-slotted arm within said head, a crank-pin engaging the slot of the last-named arm, and an auxiliary take-up or slack-controller carried by the said needle-bar and extending outward through the said vertical slot in the face-plate.

399,950. FRICTION-GEAR FOR ELECTRIC MOTORS. CHARLES J. VAN DEPOELE, Lynn, Mass. Filed Oct. 31, 1888. Serial No. 289,694. (No model.)

Claim.—1. The combination, with the axles of a car and a motor for propelling the same, of a support for said motor comprising beams extending longitudinally from axle to axle, journal-bearings on said axles, and double-acting spring-connections between the journal-bearings and the ends of said tie-beams, whereby said beams form a spring-supported frame, substantially as described.

2. The combination, with two pairs of carrying-wheels, of a car, a motor for propelling the same, and a frame or support for said motor, comprising a pair of tie-beams extending between and journaled at their ends upon the said axles and carried by double-acting springs, as d^2 d^3, and arranged to sustain opposite ends of the motor and power connections.

3. The combination, with the axles of a car and a motor and connections for propelling the same, of a support for said motor, and connections comprising beams extending longitudinally between said axles, journal-bearings mounted on said axles and engaging the extremities of the motor-supporting beams, and springs connecting the ends of the beams and journal-bearings both above and below the axle, substantially as described.

4. The combination, with the axles of a car-truck and a motor for propelling the same, of a support for said motor, comprising tie-beams, as D D' extending between and springs supported above and below said axles, said tie-beams being provided with bearings for the power-connections between the motor and the axles and arranged to flexibly sustain the motor and connections.

5. The combination, with the separately-movable axles, of a car-truck and a motor and gearing extending between the armature-shaft of the motor and said axles for propelling the same, said gearing including a yielding gear-wheel arranged to accommodate any changes of position in said axles with respect to the gearing, substantially as described.

6. The combination of a truck having separately-movable axles and carrying-wheels, a motor and gearing extending between the armature-shaft of the motor and said axles for propelling the same, said gearing including a yielding gear-wheel, and a frame for supporting the motor and gearing, comprising longitudinally-extending beams attached to and uniting the parts of the gearing and separately journaled at their ends upon the axles of the truck, substantially as described.

7. The combination, with a car having carrying-wheels united by separately-movable axles, of a motor for propelling said car, and power-connections between the armature-shaft and the said axles, and a frame for supporting said motor and connections, comprising tie-beams connected with the motor and journaled at their ends upon the said axles, gear-wheels upon the axles to be driven, and a flexible gear.

8. The combination, with the axles of a car and a motor for propelling the same, of a support for said motor, comprising beams extending longitudinally from axle to axle, said beams being formed of detachable portions, journal-bearings on said axles, and spring-connections between the journal-bearings and the ends of said supporting-beams, whereby said beams form a removable spring-supported frame, substantially as described.

9. A friction-gearing for electric motors, comprising a friction-pinion on the armature-shaft, movable counter-shafts on opposite sides of said pinion, friction gear-wheels adapted to engage the pinion, driving-pulleys also on said counter-shafts, connections between the driving-pulleys and the axle or axles to be driven, and means, substantially as described, for moving the counter-shafts to connect or disconnect the friction-gear.

10. An automatic friction-gearing for electric motors, comprising a friction-pinion on the armature-shaft, movable counter-shafts on opposite sides of said pinion, friction gear-wheels on said shafts adapted to engage opposite sides of said pinion, driving-pulleys on said counter-shafts, connections extending between said driving-pulleys and the axles to be driven, and means for holding the movable friction-wheels in engagement with the driving-pinion with a pressure proportionate to the pull of the motor upon the parts to be driven, substantially as described.

11. An automatic friction-gearing for electric motors, comprising a friction-pinion on the armature-shaft, movable counter-shafts on opposite sides of said pinion, friction gear-wheels on said shafts adapted to engage opposite sides of said pinion, driving-pulleys on said counter-shafts, connections extending between said driving-pulleys and the axles to be driven, and means for holding the movable friction-wheels in engagement with the pinion on the armature-shaft with an adjustable pressure, substantially as described.

12. An automatic friction-gearing for electric motors, comprising a friction-pinion on the armature-shaft, movable counter-shafts on each side thereof, friction-wheels on said counter-shafts adapted to engage the pinion, driving-pulleys on the counter-shafts, connections extending from said driving-pulleys to the axles to be driven, and means for moving the counter-shafts and gear-wheels into or out of engagement with the armature-pinion, substantially as described.

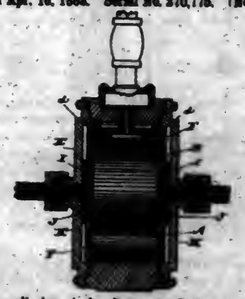
13. An automatic friction-gearing for electric motors, comprising a gear-pinion on the armature-shaft, movable counter-shafts on opposite sides of said pinion, gear-wheels on said counter-shafts adapted to engage with said pinion, resilient spring-belting passing around the gear-wheels and acting to press the same together against opposite sides of the pinion, means for forcibly separating said gear-wheels to free the pinion at desired times, driving-wheels upon the counter-shafts, and connections extending between the driving-wheels and the axles to be driven, substantially as described.

14. An automatic friction-gearing for electric motors, comprising a pinion on the armature-shaft, a pair of hinged counter-shafts arranged on opposite sides thereof, a tie-beam in which the outer ends of the counter-shafts are movably journaled, driving-wheels on said counter-shafts, mechanical connections between said driving-wheels and the axles to be driven, a lever mounted concentrically with the armature-shaft and mechanically connected to the movable ends of the counter-shafts, and means, substantially as described, for forcibly moving the counter-shaft and gear-wheels outwardly and away from the armature-pinion to free the same or toward and into engagement therewith to operatively connect the gearing.

15. A friction-gearing for electric motors, comprising a pinion on the armature-shaft, a pair of hinged counter-shafts arranged on opposite sides thereof, a tie-beam in which the outer ends of the counter-shafts are movably journaled, gear and driving wheels on said counter-shafts, mechanical connections between said driving-wheels and the axles to be driven, a lever mounted concentrically with the armature-shaft and mechanically connected to the movable ends of the counter-shafts, and means, substantially as described, comprising an electric motor and a retracting-spring for forcibly moving the counter-shaft and gear-wheels outwardly and away from the armature-pinion to free the same or toward and into engagement therewith to operatively connect the gearing.

16. A friction-gearing for electric motors, comprising a pinion on the armature-shaft, a pair of hinged counter-shafts arranged on opposite sides thereof, a tie-beam in which the outer ends of the counter-shafts are movably journaled, gear and driving wheels on said counter-shafts, and spring-belts upon said gear-wheels holding them against the pinion, mechanical connections between said driving-wheels and the axles to be driven, a lever mounted concentrically with the armature-shaft and mechanically connected to the movable ends of the counter-shafts, and means, substantially as described, comprising an electromotor and retracting-spring for forcibly moving the counter-shaft and gear-wheels outwardly and away from the armature-pinion to free the same or toward and into engagement therewith to operatively connect the gearing.

17. The combination of a truck having separately-movable axles and carrying-wheels, a motor, and gearing extending between the armature-shaft of the motor and said axles, said gearing including a yielding member or wheel and a frame for supporting the motor and gearing comprising longitudinally-extending beams attached to and uniting the parts of the gearing and separately journaled at their ends upon the axles of the truck.

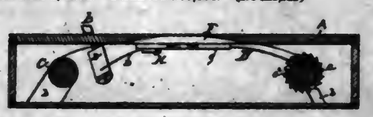


18. The combination, with a car having carrying-wheels united by separately-movable axles, of a motor for propelling said car and power-connections between the armature-shaft and the said axles, and a frame for supporting said motor, and connections comprising tie-beams connected with the motor and journaled at their ends upon the said axles, gear-wheels upon the axle to be driven, and a flexible connection between the gear-wheel on the axles and the counter-shafts.

399,951. BURIAL-CASE. JOSEPH H. WALKER, Grand Rapids Mich., assignor to the Powers & Walker Casket Company, same place. Filed Aug. 1, 1888. Serial No. 281,694. (No model.)

Claim.—In a burial-casket, the combination with the shell or body thereof, of a top panel or cover constructed in two leaves or parts, each leaf hinged at or about its under central portion to a connecting-flap, which flap is hinged to the body of the case, whereby when the casket is closed, but one central joint is exposed, all as and for the purpose described.

399,952. ROTARY ENGINE. CHARLES WARD, Toronto, Ontario, Canada. Filed Apr. 16, 1888. Serial No. 270,775. (No model.)



Claim.—1. A cylinder, A, having ports B C, a curved block between them, and an adjustable block in said curved block, in combination with the piston-head D, having plates E fixed thereto, and wings F, provided with the adjustable blocks *d* and pivoted in said plates, substantially as described.

2. A cylinder, A, having ports B and C, separated by the curved block G, in combination with the piston-head D, the adjustable block in said curved block, wings F, having spindle H, extending through holes made in the plates E, which are fixed to the piston D, the adjustable blocks *d* in said wings, and wipers I, fixed to the spindles H and acting against the cam J, formed on the outer heads, K, substantially as and for the purpose specified.

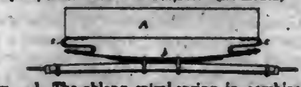
3. A cylinder, A, having ports B and C, separated by the curved block G, having adjustable blocks *g* and *h*, actuated by springs *i* and *j* and designed to press against the piston D, in combination with the piston-head D, wings F, having adjustable blocks *d* arranged within them, as described, and connected to a spindle, H, extending through holes made in the plates E, which are fixed to the piston D, and wipers I, fixed to the spindles H and acting against the cam J, formed on the outer heads, K, substantially as and for the purpose specified.

399,953. CASH-RECORDER. JAMES M. WARNER, London, Ohio. Filed Nov. 2, 1887. Serial No. 253,813. (No model.)

Claim.—1. In a recorder, the combination, with the casing having an opening in its upper side, a glass arranged over part of the opening-rollers mounted in the end portions of the casing, one being removable and the other having a ratchet-wheel thereon, a spring-pawl, as D, constructed of a single piece of metal, one end of which is placed in contact with the ratchet-wheel, the pivoted clasp D', in which the opposite end of the spring is secured, a key on the clasp extending through the casing, the tablet G, removably held below the opening in the casing, and the spring E, substantially as described.

2. In a recorder, the combination, with the casing having an opening in its top and a recess, as F, in the under side of the top of brackets *g*, arranged at the sides of the recess, the tablet G, removably held in the brackets below the opening, the rollers C and C', the ratchet-wheel on one of the rollers, and the pawl and key for actuating the same, substantially as described.

399,954. HINGE-JOINT FOR ELECTRIC BELTS. NICHOLAS WARRELL, Farragut, Iowa. Filed Oct. 17, 1888. Serial No. 288,348. (No model.)

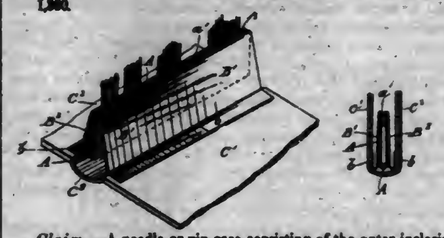


Claim.—1. In an electric belt, a hinge-section made of wire and having the spaced eyes or loops, the cross-bar, and a seat formed at a point in rear of the eyes or loops, and a plate, to which said hinge-section is connected, fitted tightly in said seat, substantially as described, for the purpose set forth.

2. In an electric belt, a plate or element and a hinge-section secured to said plate and having one end thereof extended beyond the plate, said hinge-section having a seat into which the end of the plate or element is tightly fitted, substantially as described, for the purpose set forth.

3. In an electric belt, a plate or element and a hinge-section bent from a single piece of wire and consisting of the spaced eyes or loops, the parallel arms, and a cross arm or bar arranged at one side of said parallel arms and in rear of the eyes to form a space or seat for the reception of one end of said plate, substantially as described, for the purpose set forth.

4. In an electric belt, a plate or element having the perforations *a a'* and *b b'*, and a wire hinge-section having a seat formed between its bars *g g'* and the cross-bar *c* at a point in rear of the loops, said arms *g g'* being passed through the perforations and resting against opposite faces of the plate, substantially as described, for the purpose set forth.

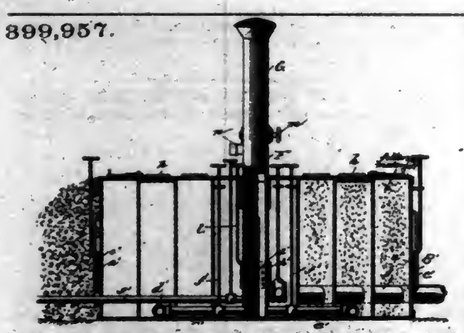


399,955. VEHICLE-SPRING. JEREMIAH W. WETHERILL, Erie, Pa. Filed Apr. 2, 1888. Serial No. 269,234. (No model.)

Claim.—1. The oblong spiral spring, in combination with the body of the vehicle and the semi-elliptical base, substantially as described.

2. The combination of the spiral spring of irregular shape with the semi-elliptical spring and the body of the vehicle, substantially as described.

399,956. NEEDLE OR PIN CASE. RICHARD WERATLEY, Jr., Birmingham, County of Warwick, England. Filed Sept. 24, 1888. Serial No. 286,266. (No model.) Patented in England Jan. 28, 1887, No. 1,360.



Claim.—A needle or pin case consisting of the outer inclosing-casing, the supporting-pieces extending upwardly therefrom, and a pocket for the reception of the needles or pins, said pocket being located between the supporting-pieces, the edges of which are secured to the pocket, substantially as described.

399,957. FILTER. ALFRED WILSON, Allegheny, assignor of one-half to Benj. H. Lightner, Pittsburg, Pa. Filed Mar. 13, 1888. Serial No. 267,004. (No model.)

Claim.—1. A filter consisting of a central chamber, a series of filtering-chambers surrounding the same, a conveyer-pipe communicating with the central chamber, a flushing pipe or pipes also connected with said chamber, a series of pipes communicating with said flushing-pipe and extending to one or more of the outer filtering-chambers, and a perforated ring connecting said pipes, substantially as described.

2. A filter consisting of an inner chamber, filtering-chambers surrounding the same, a perforated ring in the bottom of one of the filtering-chambers, pipes connecting said ring with the inner chamber,

399,957.

valves in said pipes, and a flushing pipe or pipes in communication with said connecting-pipes for supplying the ring or rings with water and a conveyer-pipe, substantially as described.

3. A filter consisting of the central chamber, a series of concentric cylinders surrounding the same, with filtering material between their walls, said cylinders being made perforated, a stand-pipe within the central chamber, a flushing-pipe in connection therewith, distributing-pipes leading from said stand-pipe to the filtering chamber or chambers, and a perforated delivery-pipe connecting therewith, substantially as described.

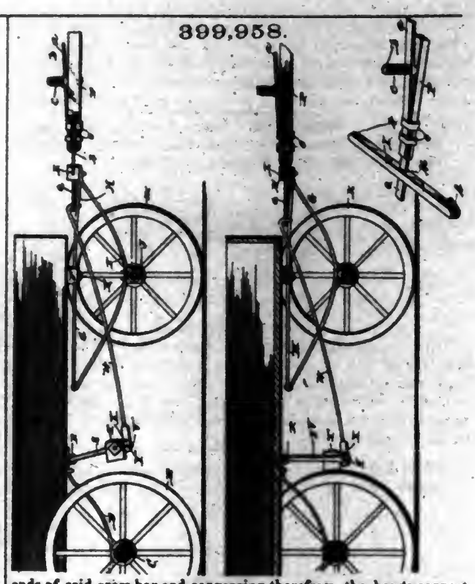
4. A filter consisting of a central chamber, a series of concentric chambers outside the same containing filtering material, a stand-pipe within the inner chamber, a flushing-pipe in connection therewith, distributing-pipes leading therefrom, and a valved passage between the stand-pipe and the inner chamber for flushing the same, substantially as described.

5. A filter consisting of a central chamber, a series of concentric chambers outside the same containing filtering material, a stand-pipe within the inner chamber, a flushing-pipe in connection therewith, distributing-pipes leading therefrom, and a sliding sleeve upon said stand pipe adapted to cut off communication between said stand-pipe and the interior chamber, substantially as described.

6. A filter consisting of a central chamber, a series of concentric chambers outside the same containing filtering material, a stand-pipe within the inner chamber, a flushing-pipe in connection therewith, distributing-pipes leading therefrom, suitable valves in said pipes, and an extension for said stand-pipe having a rose on its upper end adapted to spread the water, substantially as described.

7. A filter consisting of a central chamber, a series of concentric chambers outside the same containing filtering material, a stand-pipe within the inner chamber, a flushing-pipe in connection therewith, distributing-pipes leading therefrom, and an extension for said stand-pipe having a pipe secured thereto adapted to be connected with a source of steam-supply, substantially as described.

8. In the described filter, the combination of the following elements: a central chamber, a series of concentric chambers outside the same containing filtering material, gates in the wall of the outer chamber for the admission of water, a conveyer-pipe provided with a suitable valve extending from the inner chamber to the outside of the filter, a stand-pipe within the central chamber having an extension surmounted by a rose, a flushing-pipe leading from the outside to the stand-pipe, an annular perforated pipe in one of said chambers, distributing-pipes leading from the stand-pipe to said perforated pipe, whereby water forced from the outside through the flushing-pipe will, through the annular perforated pipe, cleanse the filtering material, and a cover for said filter for preventing the escape of the filtering material or other material, substantially as described.

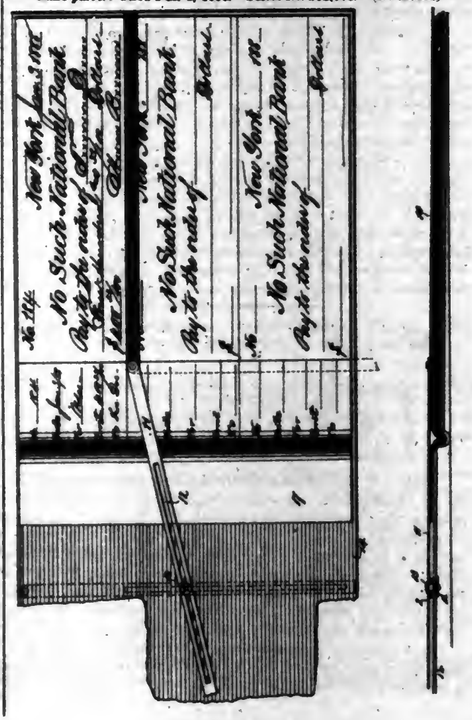


9. A filter consisting of a series of concentric chambers containing filtering material, a conveyer-pipe, and a flushing-pipe with branches to the concentric chambers, and a perforated ring for covering the concentric chamber or chambers, whereby the filtering material is prevented from washing off in the flushing operation, substantially as described.

399,958. WAGON-BRAKE. BENAJAH WILCOX, Woodhull, N. Y. Filed Dec. 11, 1888. Serial No. 293,295. (No model.)

Claim.—1. In an automatic wagon-brake, the combination, with the wagon-body and front axle, of the spring secured to and projected forward from the same, the cross-bar secured to the front ends of said spring, the bands supported by said cross-bar, the tongue supported by the said bands and cross-bar and adapted to move longitudinally, the rock-shaft journaled on the under side of the wagon-body and carrying the brake-shoes, and connections between the said tongue and said rock-shaft, as set forth.

2. The combination of the wagon-body, the springs projecting forward from the front end of the same, the cross-bar secured to said springs, having the central horizontal slot, the braces secured to the



399,958.

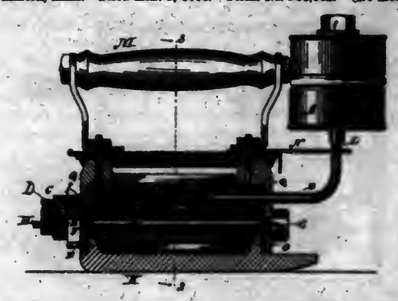
ends of said cross-bar and converging therefrom, the bands connecting the front ends of said braces, the tongue having its rear end mounted in said bands, the strap secured to the tongue and projecting through the slot in the cross-bar, the rock-shaft journaled on the under side of the wagon-body and carrying the brake-shoes and having a depending central crank-arm, and the connecting-rod having its front end pivoted to the strap secured to the rear end of the tongue and its rear end pivoted to the central crank-arm of the rock-shaft, as specified.

3. The combination of the band, the tongue, the headed stud, the lever fulcrumed on said stud, and the spring coiled around said stud and bearing on the lever, as set forth.

399,959. CUTTING ATTACHMENT FOR CHECK-BOOKS. HENRY R. WILSON, Brooklyn, N. Y., assignor of one-half to Chatham F. Bedell, same place. Filed Feb. 1, 1888. Serial No. 262,673. (No model.)

Claim.—1. The combination, with the book, of the strip or bar swiveled thereto, whereby it may be swung or moved in a plane approximately parallel to that of the leaves of the book, and the cutter-arm pivotally connected with the strip or bar, substantially as set forth.

2. In a check-book attachment, the combination, with a spring strip or bar formed with a longitudinal slot, of a cutter-arm pivotally connected to one end of the strip or bar, and a stud or bolt arranged to pass through the longitudinal slot of the spring-strip, said bolt being arranged for connection with a book-cover, substantially as described.



3. The combination, with the cover of a book and a cutter-arm, of a flexible connection pivoted to the arm, swiveled to the cover, and arranged to slide lengthwise on its swivel-connection, substantially as described.

4. The combination, with a book-cover, of a flexible spring-strip formed with a longitudinal slot, a washer arranged between the strip and the cover, a bolt passing through the slot in the flexible strip, the washer, and an aperture in the book-cover, a nut or washer with which the bolt engages, and a cutter-arm pivoted to the spring-strip.

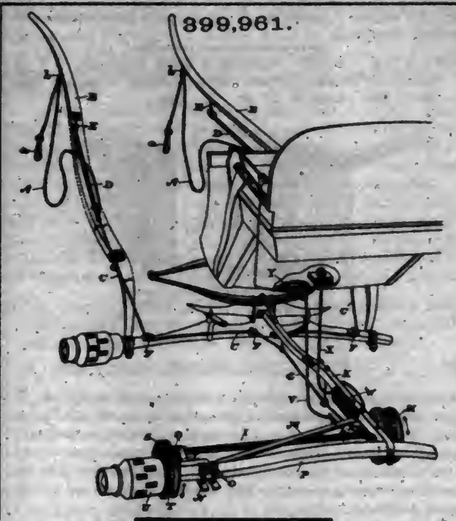
5. The combination, with a book, of the connection-piece supporting a cutter-arm and adjustably connected with said book, whereby it may be moved pivotally or lengthwise, substantially as described and for the purposes specified.

6. As an improvement in check-cutters, a cutter-arm and a support to which said arm is pivoted, the axis of said pivot being approximately at right angles to the plane of the check, whereby the cutter-arm may be set to cut the side or end edge of the check, substantially as and for the purposes specified.

399,960. SAD-IRON-HEATING APPARATUS. JAMES M. WISHART, Marion, Kans. Filed Mar. 3, 1888. Serial No. 266,062. (No model.)

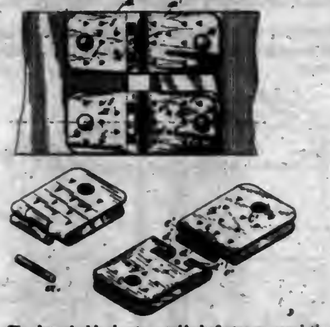
Claim.—The combination, with a hollow cast-iron, of an oil-tank, A, a jointless pipe, B, coiled over a perforated hollow burner and leading from the oil-tank to the gas-receiver, the receiver C, provided with a gas-reservoir, D, and an open recess, F, the adjustable screw-pin H in the receiver to admit gas to open recess F, and the hollow perforated burner G, connected with the receiver at one end in line with the screw-pin and supported by the frame Q at the other, all these parts being joined by screw-connections, so as to be readily attachable and detachable, substantially as set forth.

399,961. DEVICE FOR CHECKING HORSES. FREDERICK T. AIKINS, Toronto, Ontario, Canada. Filed June 23, 1888. Serial No. 277,060. (No model.)



Claim.—1. The L-shaped bracket N, secured to the axle P by the clips Q, and having a slotted passage-way made in it to receive the lever M, which is pivotally connected to the arm L, on the end of which the shaft I is journaled, in combination with a pin, R, fixed in the slot of the bracket N and passing through an elongated slot, *f*, in the lever M, in which detachable blocks *g* are inserted for the purpose of readily altering the position of the fulcrum of the lever, substantially as and for the purpose specified.

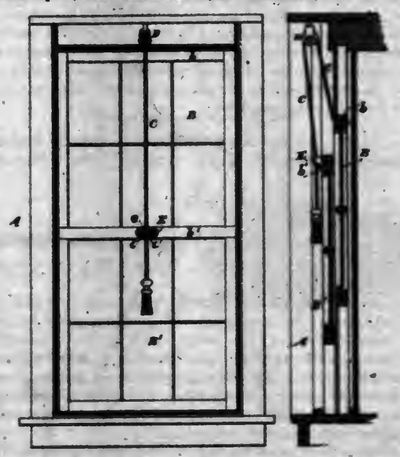
2. The lever M, connected to the shaft I, as described, and having a cord, V, attached for the purpose of operating it, as described, in combination with a spring, Y, connected to the cord V, arranged to hold the said cord so that the portion next to the lever M will be slack when the said lever is locked to the spring-plate W, as specified.



3. The arm L, pivotally connected to the lever M, in combination with the shaft I, passing through a ball-bearing formed in the end of the arm L, and protected by the collars O, fixed to the shaft I on either side of the said bearing, substantially as and for the purpose specified.

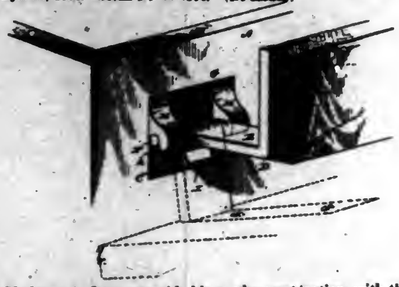
4. The shaft I, journaled on the end of an arm pivotally connected to the lever M, in combination with an L-shaped bracket secured to the axle and carrying an adjustable fulcrum for the lever M, substantially as and for the purpose specified.

399,961.



399,962. BELT-FASTENER. WILLIAM G. AVERY, Cleveland, Ohio, assignor to the W. G. Avery Manufacturing Company, same place. Filed Nov. 12, 1888. Serial No. 290,589. (No model.)

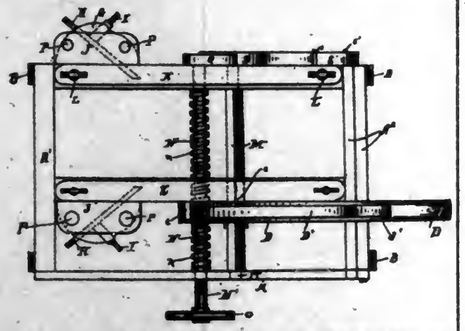
Claim.—The detachable sheet-metal belt-fastener, consisting of the piece A, having a T-slot, and the opposing piece A', having a T-head formed integral therewith, both pieces being provided with inwardly-projecting teeth and rivet-holes, substantially as shown.



399,963. SASH-BALANCE. CLINCY BALDWIN, Tonganoxie, Kans. Filed Apr. 5, 1888. Serial No. 269,696. (No model.)

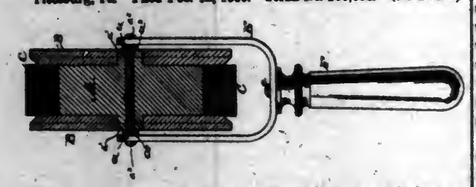
Claim.—In window-sash balances, the clasp E, having the two elastic side pieces, *e' e'*, meeting, or nearly so, at the top, forming a subjacent guide-channel for the cord C, and making an upwardly-taper-

ing intermediate slot, *e*, whereby it may be used in connection with the cord, as set forth.



399,964. HINGE. LAURENCE V. BENET, Washington, D. C., assignor to the Hotchkiss Ordnance Company, (Limited,) of England. Filed Apr. 19, 1888. Serial No. 271,196. (No model.)

Claim.—1. In a separable hinge, the combination, with the T-shaped leaf D, having the pin F, of the leaf G, the knuckles H H, projecting from the face of and curved downward and back to the leaf G, leaving sufficient space between the ends of the knuckles and the leaf for the admission of the pin F, and having enlarged bases with the inner sides perpendicular to the leaf G, substantially as and for the purpose described.



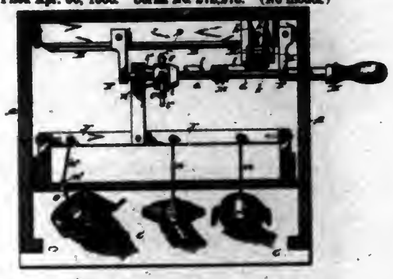
2. In a separable hinge, the combination, with the T-shaped leaf D, having the pin F, of the leaf G, having the curved downward-projecting knuckles H H, for the admission and retention of the pin F, and the stud I, substantially as described.

399,965. STRAP, TRACE, AND LACE TRIMMER AND CUTTER. JAMES BRADLEY, Dundee, N. Y. Filed July 18, 1888. Serial No. 280,348. (No model.)

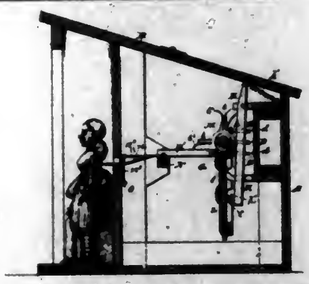
Claim.—In a leather-cutting machine, the adjustable side rails, F, guided by spindles L, joined by cross-bar K, and encircled by spiral springs *l*, in combination with the actuating-shaft M, having cam R, the operating-lever D, the segments E Q, the former of which has teeth *e* to engage lever D', whose bifurcated ends *d' d*[1] serve, respectively, for manual operation and for pivotal connections to the lever D, and block G, having perforations at right angles to each other to accommodate the knife H and set-screw I.

399,966. ROTARY MEASURING-WHEEL. ROBERT J. BUCHANAN, Pittsburg, Pa. Filed Feb. 12, 1889. Serial No. 299,631. (No model.)

Claim.—1. The combination, substantially as hereinbefore set forth, of the frame, its handle, the rotary disk, wheel, or roller pivoted to the frame and having scales of distances marked on its side, and an index or pointer pivoted concentric with the disk, wheel, or roller and weighted and pointed at its lower end.



2. The combination, substantially as hereinbefore set forth, of the frame, the rotary disk, wheel, or roller, the scale marked on its side and near its periphery in accordance with one unit of measure, a second scale or scales within the outer scale divided according to a different unit or different units of measure, and an index or pointer pivoted concentric with the disk, wheel, or roller, having its lower arm weighted and pointed and extending to the outer scale and its upper arm made light, narrow, and pointed, and extending to the inner scale or scales, for the purpose herein specified.



3. The combination, substantially as hereinbefore set forth, of the bushing or core, the circular graduated plates on each side of the bushing and beveled on their inner sides at the periphery, the tire or rim of soft flexible material between the plates and around the bushing or core and extending beyond the edges of the plates, the bosses of the bushing extending centrally through the plates, the axle or shaft, the frame to which it is secured, and an index or pointer pivoted concentric with the circular graduated plates.

4. The combination, substantially as hereinbefore set forth, of the central bushing or core, its laterally-projecting bosses having the extensions a^3, the metallic plates secured to the bushing around the bosses and having their inner sides tapered or beveled, as described, and marked on their outer sides with scales divided in accordance with suitable units of measure, the tire or rim of soft flexible material secured around the bushing and between the plates and extending beyond the outer edges or peripheries of the plates, the frame, its handle, the axle secured to the frame and extending through the bushing and its extensions, and the indexes or pointers pivoted on the extensions a^3.

5. The combination, substantially as hereinbefore set forth, of the disk, wheel, or roller, having a circular scale on its side and around its periphery divided into inches and a circular scale within the outer scale divided proportionately to represent miles, the frame to which the disk, wheel, or roller is pivoted, and the freely-suspended pointer or index adjacent to the disk, wheel, or roller.

399,967. MUSICAL TOY. DANIEL A. A. BUSH, Cheshire, Conn. Filed Apr. 30, 1888. Serial No. 272,273. (No model.)

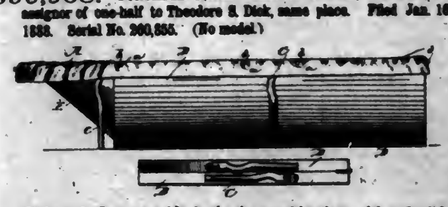
Claim.—1. In a musical toy, the combination, with a series of musical strings, of a rotary striker for setting such strings in vibration, tone-changing mechanism for changing the vibratory length of the strings, jointed automatons, an operating-shaft adapted to be turned by hand, and connection between such shaft and the said striker, the automatons and the tone-changing mechanism, whereby, when the shaft is turned, the strings are set in vibration and automatically changed in vibratory length and the automatons set in motion, substantially as set forth.

2. In a musical toy, the combination, with a series of musical strings, of a rotary head, spring-arms carried by such head and adapted to strike the strings and set them in vibration, mechanism for varying the vibratory length and hence the tone of the strings, and operating-connections for operating the rotary head and the said tone-changing mechanism together, substantially as set forth.

3. In a musical toy, the combination, with a sounding-board provided with frets, a series of musical strings stretched across such board and over the frets thereof, stop-levers to press the strings upon the frets and so vary their vibratory length, cams mounted for rotation in engagement with the stop-levers, which they actuate, and means for rotating the cams, substantially as set forth.

4. In a musical toy, the combination, with a series of musical strings, of a rotatable hub, radial curved spring-arms carried by such hub and each adapted to strike the strings and set them in vibration, mechanism for changing the vibratory length, and hence the tone produced by the strings, and operating-connections for vibrating the hub and actuating the tone-changing mechanism together, substantially as set forth.

5. As a means for causing music-strings to vibrate, a rotatable hub which is provided with radial rigid pins, and radial spring arms or strikers that are partly supported by said pins and have curved outer ends which are adapted to engage with and move over said strings as the hub revolves, substantially as and for the purpose set forth.



6. As a means for causing music-strings to vibrate, a rotatable hub which is provided with radial rigid pins, and radial spring arms or strikers that are partly supported by said pins, and buffers or dampers which are placed between said strikers and the contiguous sides of said pins, substantially as and for the purpose shown and described.

7. A musical toy in which are combined music-strings that are stretched across a sounding-board, a rotatable hub which is provided with radial spring striker-arms, cam-actuated levers that are adapted to press said strings upon frets and thus change their operative lengths, automatons that are adapted to represent the movements of a banjo-player and jig-dancers, and operating mechanism by which all of said parts are actuated, substantially as and for the purpose specified.

8. In a musical toy, the combination, with a series of musical strings, means for automatically striking the same and setting them vibrating, automatic stops or keys for engaging with the strings and changing their vibratory length, an operating-shaft, and connections between the striking mechanism and the stops or keys and the said shaft whereby the strings are automatically struck and changed in vibratory length when the shaft is turned, substantially as set forth.

9. In a musical toy, the combination, with a series of musical strings, means for striking the same and setting them vibrating, stops or keys for engaging with the strings to change their vibratory length, cams for operating such stops or keys, and operating-connections between the striking mechanism and the cams, whereby the said mechanism and cams operate together, substantially as set forth.

399,968. PORTABLE BATH. SANFORD S. BURR, Winnetka, Ill., assignor of one-half to Theodore S. Dick, same place. Filed Jan. 16, 1888. Serial No. 260,855. (No model.)

Claim.—1. In a portable bath, the combination, with a flexible water-proof tub or receptacle, of a support for said tub or receptacle formed of flexible material extending around the bottom and sides of the tub, substantially as described.

2. In a portable bath, the combination, with a flexible tub or receptacle of water-proof material, of a support for said tub or receptacle formed of separable sections divided transversely the length of the tub, and a suitable stay or brace for holding said sections in position, substantially as described.

3. In a portable bath, the combination, with a flexible water-proof tub or receptacle, of a support for said tub or receptacle composed of divided sections of flexible material extending around the bottom and sides of the tub, substantially as described.

4. In a portable bath, the combination, with a flexible water-proof tub or receptacle, of a support for said tub or receptacle formed of flexible material, and a suitable stay or brace for holding said flexible material in position, substantially as described.

5. In a portable bath, the combination, with a flexible water-proof tub or receptacle, of a support for said tub or receptacle formed of flexible material, and a stay or brace for said support consisting of a top frame and suitable legs connected thereto, substantially as described.

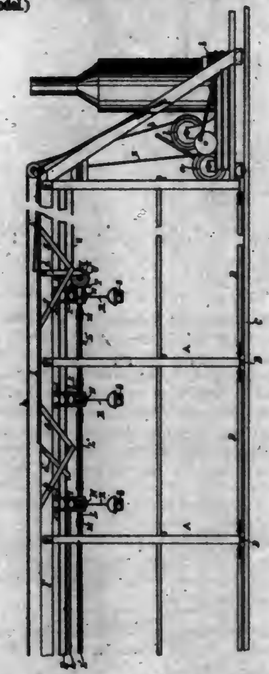
6. In a portable bath, the combination, with a flexible water-proof tub or receptacle, of a support for said receptacle formed of flexible material and comprising one or more body-sections and a head-section, and a suitable stay or brace for holding said sections in position, substantially as described.

7. In a portable bath, the combination, with the flexible water-proof tub or receptacle, of a support for the sides and bottom of said receptacle, said support being formed of transversely-divided sections extending around the bottom and sides of the tub, and a stay or brace for said divided sections consisting of a frame extending around the top thereof and detachably connected therewith, said frame having legs and being provided with suitable means for detachably connecting thereto the flexible tub or receptacle, the said several parts being arranged and combined for relative co-operation, substantially as described.

8. In a portable bath, the combination, with a flexible water-proof tub or receptacle, of a support for said tub or receptacle consisting of the flexible divided end and body sections, and a stay or brace for said sections extending around the upper portion thereof and having legs movably connected thereto, substantially as described.

9. In a portable bath, the combination, with a flexible water-proof tub or receptacle, of a support for the sides and bottom of said tub or receptacle consisting of transversely-divided sections, and a stay or brace for said sections comprising a frame, B, transversely divided and detachably connected with the sections, substantially as described.

399,969. METAL BLANK FOR VEHICLE-TONGUES, &c. CYRUS M. CARNAHAN, Coraopolis, assignor to Charles C. Dickey, trustee, Pittsburg, Pa. Filed June 14, 1888. Serial No. 277,116. (No model.)



Claim.—1. A metal blank for vehicle-irons, consisting of a trough-shaped piece of iron having its sides reflexed inwardly, as at *c'*, substantially as and for the purposes described.

2. A metal blank for vehicle-irons, consisting of a trough-shaped piece of iron having its sides reflexed inwardly, as at *c'*, with the edges of the reflexed sides in contact with the inner portion or base of the trough, substantially as and for the purposes described.

3. A metal blank for vehicle-irons, consisting of a trough-shaped piece of iron having its sides reflexed inwardly, as at *c'*, the inner sides of the reflexed portions *c'* being in contact, substantially as and for the purposes described.

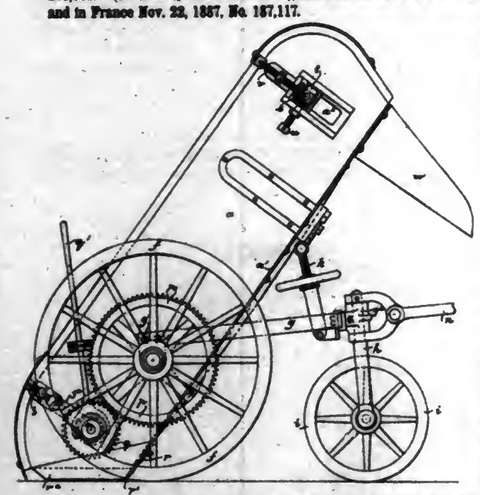
399,970. APPARATUS FOR RAISING AND MOVING EARTH. HOWARD A. CARSON, Boston, Mass. Filed Apr. 2, 1888. Serial No. 269,236. (No model.)

Claim.—1. In an apparatus for raising earth or other material, a train of drums, N, attached to a continuous shaft adapted to travel and hung from rail H, in combination with the ratchet-wheels P and pawls Q, substantially as and for the purpose set forth.

2. In an apparatus for raising and moving earth or other material, a train of drums adapted to travel, secured to short shafts mounted in bearings hung from the track, in combination with short shafts connected to the shafts of the drums by universal joints, substantially as and for the purpose set forth.

3. In an apparatus for raising and moving earth or other material, a train of drums, N, adapted to travel, secured to shafts L, mounted in bearings K, hung from the track H, in combination with shafts L',

connected to the shafts L by universal joints M, bevel-gears T U shaft V, driving-drum Y, and rope Z, substantially as shown and described.



4. The ring-buffers *m*, in combination with the shaft V, carrying the driving-drum Y and bevel-gear U, and the counter-buffers *d*, substantially as and for the purposes set forth.

5. A train of drums mounted upon a shaft and supported in bearings hung from the track, in combination with bevel-gears T U, driving-drum Y, and rope Z, substantially as and for the purposes set forth.

6. In combination with a movable frame supporting a track, a train of drums secured to a shaft mounted in bearings hung from the track, said shafts consisting of sections secured together by universal joints and driven by bevel-gears from a counter-shaft, which is driven by a rope passing around a drum on said shaft, substantially as shown and described.

7. In combination with a movable frame supporting a track, a train of drums secured to a shaft mounted in bearings hung from the track, and driven by bevel-gear from a counter-shaft, which is driven by a rope passing around a drum on said shaft, substantially as shown and described.

399,971. ROAD-SWEEPING MACHINE. WILLIAM T. CARTER and JAMES KEEBLE, Bury St. Edmunds, County of Suffolk, assignors to Albert William Collins, London, England. Filed Apr. 13, 1888. Serial No. 270,532. (No model.) Patented in England Dec. 13, 1886, No. 16,246, and in France Nov. 22, 1887, No. 187,117.

Claim.—1. The combination, substantially as hereinbefore set forth, of the front and rear wheels, the frame connecting them, the inclined box or casing, the axle of the rear wheels to which the box or casing is pivoted, the adjustable support for the front end of the box, the endless series of brushes, the support therefor at the upper end of the casing, the bearing for said support adjustable both longitudinally and laterally, the support for the lower end of the series of brushes, and the bearing therefor adjustable in an arc concentric with the axis of the casing.

2. The combination of the inclined box or case, the endless series of brushes, and the adjustable plate secured to the lower end of the box, substantially as herein set forth.

3. The combination of the inclined box or case, the endless series of brushes within the case, the adjustable plate secured to the lower end of the box, and the flexible lip on the lower end of the adjustable plate, substantially as herein set forth.

399,972. COIN-CONTROLLED TURNSTILE. HENRY CASPAR, New Orleans, La. Filed Jan. 30, 1888. Serial No. 262,490. (No model.)

Claim.—1. The combination, with the turnstile, of a sliding bolt and a sliding frame in the path of the same, the frame having a lug in the line of travel of the bolt and at a distance therefrom sufficient to receive a coin, and a supporting-plate for the coin below the said bolt and the lug, and having an arm projecting in the path of the turnstile, substantially as specified.

2. The combination, with the turnstile provided with a pawl and ratchet, as described, of a sliding spring-actuated bolt having a beveled face in the path of the turnstile, a spring-actuated frame projecting into the path of the turnstile and provided with a lug at a distance from and in the line of travel of the bolt, a coin guide or passage leading between said bolt and the lug, and a pivoted spring-actuated coin-supporting plate below the bolt and the lug and provided with an arm in the path of the door, substantially as described.

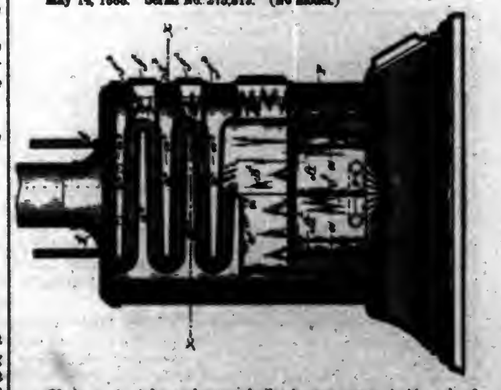
399,973. ROTARY FAN FOR FRUIT-DRIERS. JOHN W. CASSIDY, Petaluma, Cal. Filed Dec. 17, 1887. Serial No. 258,240. (No model.)

Claim.—1. The herein-described improved rotary fan for fruit-driers, having wings B^1, hinged to the vanes at *b b*, substantially as described.

2. The combination, with the fan B, having wings B^1, hinged to the vanes at *b b*, the spindle B^x, mounted in the bearings *d d*, of the bracket D and suitable actuating mechanism for the fan, substantially as described.

3. The herein-described improved rotary fan for fruit-driers, consisting of the fan-shaft and the vanes, which are provided with deflecting-wings that are capable of adjustment to take different angular positions across the circle of rotation of the fan, as set forth.

399,974. BLUING-PACKAGE. THEODORE F. CONKLIN, Chicago, Ill., assignor of one-half to Nathan S. Lappert, same place. Filed Sept. 14, 1888. Serial No. 285,490. (No model.)



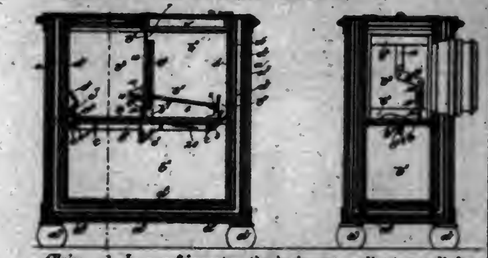
Claim.—1. A package of laundry-bluing consisting of multiple thicknesses of suitable material coated with thick bluing, the bluing being arranged in layers between the thicknesses of material whereon it is applied, the various thicknesses of material and layers of thick bluing being held together and fastened within a receptacle having a water-tight portion to catch the drip, substantially as described.

2. A package of laundry-bluing consisting of multiple layers or thicknesses of suitable material coated with thick bluing, the said bluing being arranged in multiple layers between the material whereon it is applied and permanently held within a suitable water-tight portion to catch the drip, said receptacle being of considerably larger size than the layers or thicknesses of coated material in order to permit the access of water around the edges or surface of the coated layers, substantially as described.

3. A package of laundry-bluing consisting of multiple layers or thicknesses of lamp-wicking or like pervious material coated with thick bluing, the said bluing being arranged in multiple layers between the material whereon it is applied and permanently held within a receptacle having a water-tight portion to catch the drip, substantially as described.

399,975. BOILER. JOHN H. CUNNINGHAM, Chelsea, Mass. Filed May 14, 1888. Serial No. 273,812. (No model.)

Claim.—1. A house-heating boiler in two parts, A A', each of which is integral or in one casting and has horizontal sections of the width of the cavity of the boiler arranged to extend into integral horizontal spaces in the other to form a sinuous flue, all substantially as and for the purposes described.



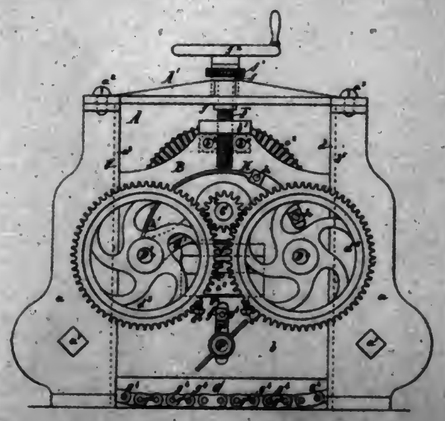
2. The combination, in a heating-boiler, of the parts A A', having thin flat overlapping sections a^3 a^3, and the pipes D D', fastening or securing the two parts together, substantially as described.

3. The combination, in a heating-boiler, of the parts A A', the lower connecting circulating pipe or pipes D, and the threaded inlet projections *d*, extending therefrom, substantially as described.

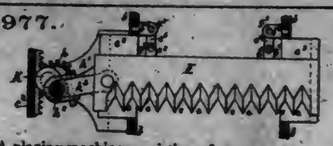
4. In a house-heating boiler, the combination of the part A, having the horizontal flat extensions a^3 and intermediate recesses, the part A', having the horizontal extensions a^3, and the circulating-pipes D D', connecting the parts A A', substantially as described.

5. A house-heating boiler comprising the parts A A', having the flat sections a^3 a^3, arranged to form the sinuous smoke-flue B, and openings *f* in one of the parts A A' to the courses of the smoke-flue, and doors for closing the said openings, substantially as described.

399,976. REFRIGERATOR. NATHANIEL DAVIS, Montpelier, Vt., assignor of one-half to George L. Davis, North Andover, Mass. Filed Aug. 13, 1888. Serial No. 282,565. (No model.)



Claim.—1. In a refrigerator, the body and a division-wall, *b*, to form ice and food compartments within said body, the auxiliary bottom b^3 in said ice-compartment, and passages or ports c b^4 to establish communication between said compartments, combined with valves c^3 and 3, to control said ports or passages, respectively, said valves being connected by the spring-controlled sliding rod c^3, having the projection c^7 thereon, to be acted on by the cam c^8 of the food-compartment door to open said passages when the door is closed, substantially as and for the purpose specified.

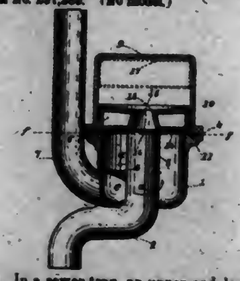


2. In a refrigerator, the body division-walls *b* b^3, forming chambers b' b^3 b^4, and having formed therein ports or passages to establish communication between said chambers b^3 b^4 for the cold air, combined with valves b^3 b^5, to control the ports or passages 7 and b^7, said valves being connected by rods 10 12 and pivoted lever 13, and the projection 15 on said rod 10, and the cam 16 on the door of the chamber b^3, to co-operate therewith, whereby the said valves are opened when the door is shut, substantially as described.

399,977. PLANING-MACHINE. WILLIAM R. DAVIS, San Antonio, Tex., assignor to Phineas J. Davis, same place. Filed June 30, 1888. Serial No. 278,030. (No model.)

Claim.—1. In a planing-machine, in combination, a planing-cutter, a supporting-frame, connections for giving a horizontal oscillatory movement to the cutter over the surface of the material being planed, and a supporting feed-bed, substantially as and for the purpose described.

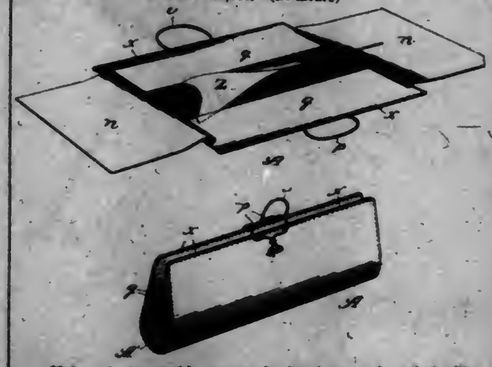
399,977.



2. A planing-machine consisting of a cutter-bar having toothed cutting-edge and oscillating on links having fixed fulcra, and a suitable feed-motion, said cutter having an advancing draw-cut movement while moving sidewise, substantially as and for the purpose described.

3. The combination of a stationary frame having an endless carrier-apron of anti-friction rollers with a vertically-adjustable frame fitted into the stationary frame and carrying the feed-motion, and a horizontally-oscillating cutter-bar, substantially as and for the purpose described.

4. The combination of vertically-adjustable feed-rollers and an oscillating cutter-bar which advances and recedes while moving sidewise back and forth, with an endless apron having horizontal anti-friction rollers and a foundation-plate, substantially as and for the purpose described.

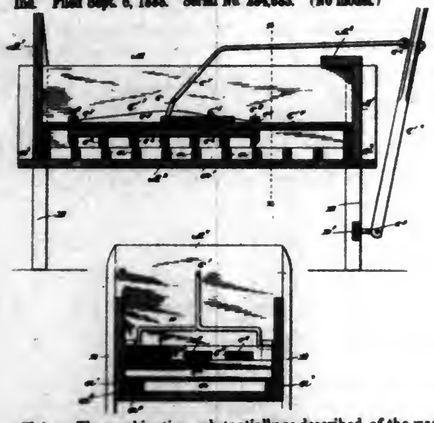


399,978. SEWER-TRAP. DAVID H. DONALDSON, Buffalo, N. Y., assignor to himself and Oliver G. Donaldson, same place. Filed Jan. 23, 1888. Serial No. 267,289. (No model.)

Claim.—1. In a sewer-trap, an upper and lower case secured together gas-tight, in combination with a valve-seat surrounding the upper portion of the lower case, an outlet-pipe projecting up into the lower case and having a valve-seat at its upper end, an inlet-pipe having its opening in the lower part of the lower case, and a valve having a central opening through it, adapted to fit the valve-seats and rise and fall with the rise and fall of the water in the trap, substantially as and for the purposes described.

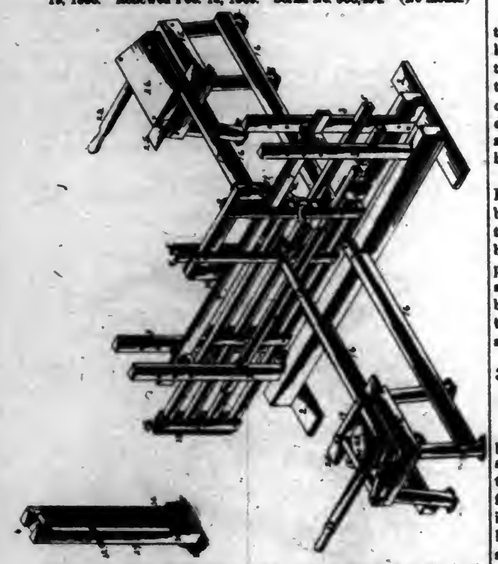
2. A sewer-trap consisting of an upper and lower case secured together gas-tight, the lower case having an outlet-pipe passing up inside substantially even with the top of the same, and an inlet-pipe passing down into the lower side, in combination with a spiral diaphragm surrounding the outlet-pipe to cause a rotation of the water as it passes in, and a valve having an opening through it, adapted to float or rise up as the water passes up into the trap and down through the outlet-pipe, and to drop again to its seat as the level of the water falls below the valve-seat, substantially as and for the purposes described.

399,979. PORTFOLIO. ANNIE G. DYRENFORTH, Riverside, Ill. Filed Jan. 26, 1888. Serial No. 267,636. (No model.)



Claim.—1. A portable receptacle for sheet-music and the like comprising a flexible back or body portion, A', having pockets *g*, opening toward each other and sealed at the lateral edges, and a securing

device upon each outer edge of the back or body portion A', whereby the article to be carried may be inserted at its opposite edges into both pockets *q*, and the opposite edges of the back fastened together without creasing the body portion or the article carried therein, substantially as described.



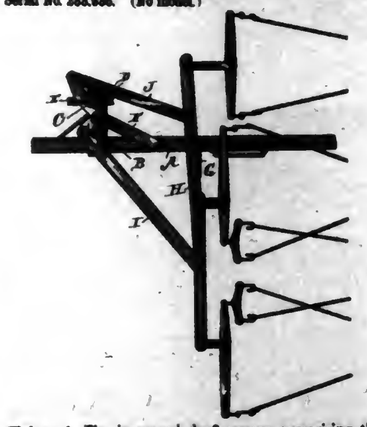
2. A portable receptacle for sheet-music and the like, substantially as described, comprising, in combination, a flexible body portion, A', pockets *q* on one surface toward opposite edges of the body portion and opening toward each other, whereby the article to be carried may be inserted at its opposite edges into the pockets *q*, and the receptacle be bent to cause the edges to approach each other without producing a sharp angle in the body portion or contents of the receptacle, a handle, *e*, and means for securing the edges together, substantially as described.

399,980. WASHING-MACHINE. HENRY H. FISHER, New Paris, Ind. Filed Sept. 6, 1888. Serial No. 284,683. (No model.)

Claim.—The combination, substantially as described, of the washing-box having fixed transverse rubber strips, the reciprocating rubber frame provided with similar rubber strips and having its end pieces mortised, the transverse strips a^3, secured at the ends of the box and extending above the rubber strips, the rack-frame having a central cross-piece and longitudinal bars extending through the mortises of the rubber frame and resting at their ends on the transverse strips a^3 and a handle and connecting-rod for reciprocating the rubber frame

399,981. GATE. MARK W. FOSTER, Pocatonica, Ill. Filed Mar 19, 1888. Renewed Feb. 12, 1889. Serial No. 300,494. (No model.)

Claim.—1. The combination, with a supporting-frame, of a horizontal trackway, a gate having a rail extending rearward of a vertical line drawn at the rear of the points of contact of the gate with the said trackway, and a counter-balance adjustably secured to the rear extension of said rail, substantially as set forth.



2. The combination of a supporting-frame, a horizontal trackway secured in stable adjustment to and made vertically adjustable in its connection with the supporting-frame, a gate supported on said trackway, and a counter-balance secured to the gate at a point to the rear of the points where the gate engages said trackway, substantially as set forth.

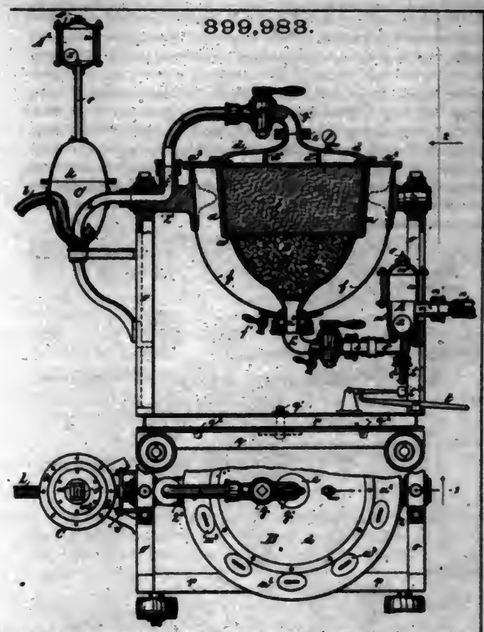
3. The combination of a supporting-frame, a horizontal trackway, a carriage secured to the vertical supports of the gate in stable adjustment and engaging said trackway, the gate suspended from the said carriage, a roller between the vertical supports of the gate to engage the under edge of the trackway, and a weight adjustably secured at one end to counterbalance its opposite end, substantially as set forth.

4. The combination of an operating-lever having a pivotal connection with the pedestal-support, an eccentric and hand lever having a pivotal support within an open frame secured to the operating-lever, and a link-connection of the operating-lever with the gate, substantially as set forth.

5. The combination, with the latch-post, of a gate having a V-formed guide to enter within the latch-post, a vertically-adjustable rod, and a safety-catch to engage the rod, substantially as set forth.

399,982. DRAFT-EVENER. JOSEPH W. GAEBLE, Adair, Iowa, assignor of one-half to Jacob McCarney, same place. Filed Oct. 30, 1888. Serial No. 288,686. (No model.)

Claim.—1. The improved draft-evener, comprising the tongue, the bracket B, secured to the tongue near its rear end, the evener-lever mounted on said bracket, the double-hinge bracket G, pivoted to the tongue in advance of the bracket B, the brace-bar pivoted to the ends of the bracket B, the draw-bars I, extending between one end of the brace-bar and the shorter arm of the evener-lever, and the draw-bars J, extending between the longer arm of the evener-lever and the brace-bar, the said draw-bars being constructed of parallel bars, as set forth.



2. The improved draft-evener, comprising the tongue, the bracket B, secured to the tongue and projecting to one side thereof, the bracket G, pivoted to the tongue and projected to the opposite side, the evener-lever pivoted on the bracket B, the brace-bar pivoted between its ends to the end of the bracket G, the draw-bars I, composed of parallel plates extending between the end of the brace-bar and the shorter arm of the evener-lever, the draw-bars J, extending between the brace-bar and the longer arm of the evener-lever, and the brace extending from the pivot of the evener-lever to the tongue, as specified.

399,983. FILTERING APPARATUS. HEINRICH GERBER and ADOLF WOHLFARRT, Berlin, Germany. Filed Jan. 18, 1888. Serial No. 261,156. (No model.) Patented England June 30, 1888, No. 9,533.

Claim.—1. In a pressure-filter, the shell *a*, having an inwardly-projecting contraction or ledge, *a'*, and with an approximately trumpet-shaped portion between said ledge and the inlet-opening, in combination with a removable receptacle, *b*, containing filtering material, which fits within said shell and rests against said ledge, said receptacle having a perforated bottom and a removable perforated top, a cover, *d*, having an outlet-opening, said cover fitting over the larger end of said shell and bearing against said receptacle, and elastic cushions or props *d'* between the cover *d* and the top of said receptacle.

2. The combination, with a beer-filter, of an air-extractor consisting of a chamber communicating with the pipe or passage through

399,983.

which the beer flows, an outlet-opening at the top of said chamber, and a float-valve within said chamber adapted to rise and close said outlet upon the rise of the level of the beer therein.

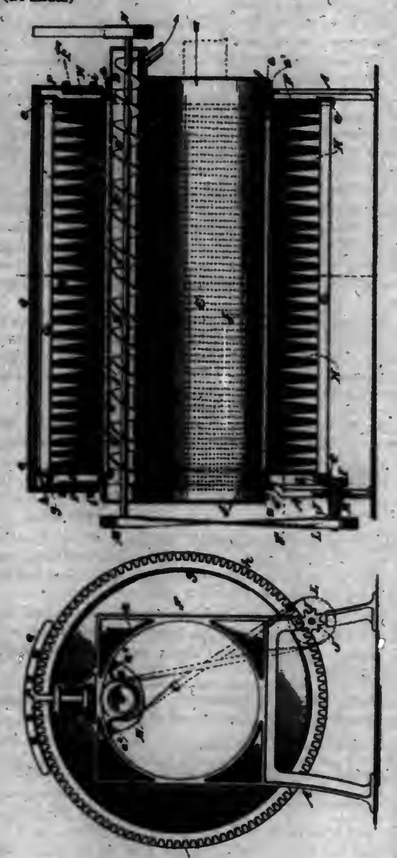
3. The combination, with a beer-filter, of an air-extractor consisting of a chamber in communication with the pipe through which the beer flows, an outlet-opening from the top of said chamber, a lip-valve opening outwardly from said opening, and a float-valve in said chamber adapted, when lifted by the rise of the liquid therein, to close said outlet-opening.

4. The combination, with a beer-filter, of an air-extractor consisting of a chamber in communication with the pipe through which the beer flows, an air-outlet opening from the top of said chamber, and a float-valve in said chamber consisting of an elastic ball adapted, when lifted by the rise of liquid in said chamber, to close said outlet-opening.

5. The combination, with a beer-filter, of an air-extractor for removing the air from the beer before it passes through the filter, consisting of a chamber formed with a beer-inlet at its side, a beer-outlet at its bottom leading to the filter, and an air-outlet opening at its top, and a float-valve in said chamber, consisting of an elastic ball adapted to close either said beer-outlet at the bottom or said air-outlet at the top.

6. In a beer-filter, an air-extractor chamber, an inlet-pipe opening into the same, and an outlet-pipe leading from the bottom thereof, and a float ball-valve which closes said outlet-passage, in combination with an automatically-acting elastic air-outlet lip-valve at the top of said chamber opening outwardly therefrom, the opening to said lip-valve being closed by said float-valve when the liquid rises in said chamber.

7. The combination, with a beer-filter, of an air-extractor for removing the air from the beer before the latter passes to the filter, consisting of a chamber formed with a beer-inlet, an air-outlet at its top, and a beer-outlet at its bottom leading to the filter, a valve in said chamber adapted to close said outlet, a sliding pin beneath said valve and passing out through a stuffing-box, and a lever for forcibly moving said pin against said valve inside the latter.



8. The combination, with a beer-filter, of a foam-destroyer consisting of a closed vessel, the outlet-pipe from the filter opening outwardly into the lower part of said vessel, and an outlet-pipe from said vessel opening upwardly therein.

9. The combination, with a beer-filter, of a foam-destroyer consisting of a closed chamber or vessel, an inlet-pipe connecting said filter with said vessel, the outlet-mouth of said pipe opening into said vessel below the liquid-level thereof, and an outlet-pipe leading from said vessel, with its receiving-mouth below the liquid level.

10. The combination, with a foam-destroyer consisting of a closed vessel, with a beer-inlet pipe opening outwardly in the lower part thereof and a beer-outlet pipe opening upwardly therein, of a pipe extending upwardly from the upper part of said chamber, and an air-extractor consisting of a chamber into which said pipe opens formed with an air-outlet at its top and provided with a float-valve therein adapted, when lifted by the rise of said liquid, to close said outlet.

11. In a beer-filter, an air-extractor chamber, an inlet-pipe opening into the same, an outlet-pipe leading therefrom, and a float ball-valve which closes said outlet-passage, in combination with a sliding pin adapted when lifted to unseat said valve, a retracting-spring for said pin, a treadle, and a hammer pivoted to said treadle and adapted to strike said sliding pin on the depression of the treadle.

399,984. DUST-COLLECTOR. ANTON GERR, Buffalo, N. Y., assignor to Faustin Prinz, Milwaukee, Wis. Filed Aug. 11, 1885. Renewed Apr. 20, 1886. Again renewed June 6, 1887. Serial No. 240,442. (No model.)

Claim.—1. In a dust-collector, a dust-collecting medium composed of brushes for separating the dust from the air, substantially as described.

2. In a dust-collector, the combination of a brush dust-collecting medium and an air-conduit for directing the air to the said medium, substantially as described.

3. In a dust-collector, the combination of a brush dust-collecting medium, an air-conduit for directing air thereto, and a trough to receive dust deposited from the brushes, substantially as described.

4. In a dust-collector, the combination of a brush dust-collecting medium, a conduit for directing air thereto, a clearer for the brushes, and a trough to receive the dust deposited from the brushes, substantially as described.

5. In a dust-collector, the combination of a brush dust-collecting medium, an air-conduit for directing air thereto, a clearer for the brushes, a trough to receive dust deposited from the brushes, and a shut-off opposite to the trough, substantially as described.

6. In a dust-collector, the combination of a brush dust-collecting medium, an air-conduit for directing air thereto, a trough to receive dust deposited from the brushes, and a shut-off opposite to the trough, substantially as described.

7. In a dust-collector, the combination of a brush dust-collecting medium, a conduit for directing air to the dust-collecting surface, a portion of said conduit being perforate and a portion imperforate,

and a trough adjacent to the imperforate portion of the conduit to receive dust deposited from the collecting medium, substantially as described.

8. In a dust-collector, the combination, with a dust-collecting medium, of a conduit for directing air thereto, a portion of said conduit being perforate and a portion imperforate, and a trough at the imperforate portion of the conduit to receive dust from the collecting medium, substantially as described.

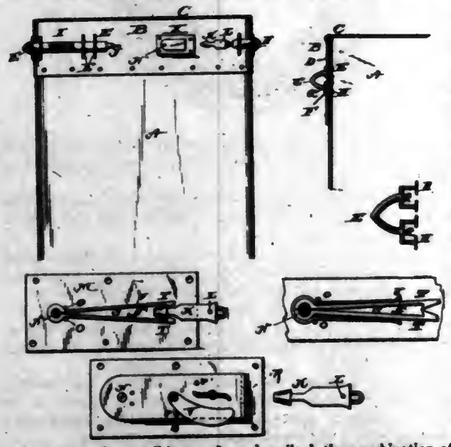
9. In a dust-collector, the combination of a conduit for dust-laden air, a portion thereof being perforate and a portion imperforate, and a trough at the imperforate portion of the conduit having an extension of its sides above the wall of the conduit, substantially as described.

10. In a dust-collector, the combination of a rotating brush-cylinder, a perforated or reticulated conduit within said cylinder for directing air thereto, and a trough to receive dust deposited from the brushes of the cylinder, substantially as described.

11. In a dust-collector, the combination of a rotating brush-cylinder and a perforated or reticulated conduit within said cylinder to direct air thereto, the brushes terminating a distance from said conduit to leave a space between the brushes and conduit, substantially as described.

12. In a dust-collector, the combination of the end frames, the revolving brush-cylinder supported by said frames and having a gear at one end, a perforated or reticulated conduit within said cylinder, a trough to said conduit, a shaft carrying a conveyer in the trough, a gear meshing with the gear of the cylinder, and pulleys and connecting-band for revolving the conveyer and cylinder, substantially as described.

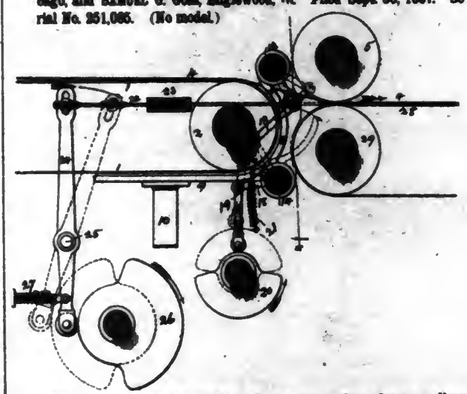
13. In a dust-collector, the combination of the end frames, the revolving brush-cylinder supported thereby, the perforated or reticulated conduit within the cylinder, the conveyer-trough to the conduit, the shut-off above the trough, and the arms connected with the end frames to support the shut-off, substantially as described.



399,985. INTERNASAL TUBE. DAVID H. GOODWILLIE, New York, N. Y. Filed July 28, 1888. Serial No. 281,269. (No model.)

Claim.—1. A nasal intubation-tube consisting of a neck and an enlarged part or bulb of elastic material at one end of the same, and provided with a passage extending entirely through it, substantially as shown and described.

2. As an article of manufacture, the nasal intubation-tube consisting of the neck *a* and the enlarged part or bulb *b* at one end of the same, made in one piece and of elastic material, substantially as shown and described.



399,986. MAIL-BAG FASTENING. JAMES S. GOODWIN, Emerald, Wis. Filed Feb. 6, 1888. Serial No. 263,077. (No model.)

Claim.—1. In a mail-bag such as described, the combination of the staples E, secured in position around the said bag and adapted to extend through perforations provided in the flap, a chain, I, for extending through the said staples, consisting of a number of small chains secured together and the whole covered with a flexible material to prevent the chain catching in the staples, and a lock, X, for securing the ends of the chain together, substantially as described.

2. In a mail-bag such as described, the combination of the staples E, secured in position upon the bag and extending through perforations provided in the flap, a chain, I, adapted to pass through the said staples and provided upon the end with a barbed head, K, and a lock to receive and hold the said head, consisting of two arms, S, the rear ends of which are formed to a semicircle to engage a post, N, upon which they turn, and the front ends are formed to hooks T, the barbs of which meet to close behind any protuberance passed between them, the spring W, passed around the post N outside the arms S and extending along the sides of the same, the pins O O, placed to retain the spring W in position to maintain a pressure upon the arms S, and the double dog U, pivoted between the arms S and adapted to spread the same, substantially as described.

399,987. PAPER-FOLDING MACHINE. FREDERICK L. GOSS, Chicago, and SAMUEL G. GOSS, Englewood, Ill. Filed Sept. 30, 1887. Serial No. 251,065. (No model.)

Claim.—1. In a paper-folding machine, a series of tape-pulleys, as 2, and two series of tapes, as 1 and 4, in combination with movable guides 11 and 13 and a reciprocating folding-blade, substantially as and for the purposes specified.

2. In a paper-folding machine, a series of tape-pulleys, as 2, and two series of tapes, as 1 and 4, in combination with movable guides 11 and 13, a reciprocating folding-blade, and a series of tapes, as 28, substantially as and for the purposes specified.

3. In a paper-folding machine, a series of tape-pulleys, as 2, and two series of tapes, as 1 and 4, in combination with movable guides 11 and 13, sheet-supports 9, and a folding-blade, substantially as and for the purposes specified.

4. In a paper-folding machine, a series of tape-pulleys, as 2, and two series of tapes, as 1 and 4, in combination with movable guides 11 on a shaft, 12, movable guides 13 on a shaft, 14, cam 20, and levers and connecting-bars for operating the guides, substantially as and for the purposes specified.

5. In a folding-machine, two series of tapes, as 1 and 4, and a series of tape-pulleys, as 2, in combination with guides 11 and 13, cam 20, intermediate devices, substantially as described, for operating the guides by means of said cam, a reciprocating folding-blade, lever 24, and cam 26, substantially as and for the purposes specified.

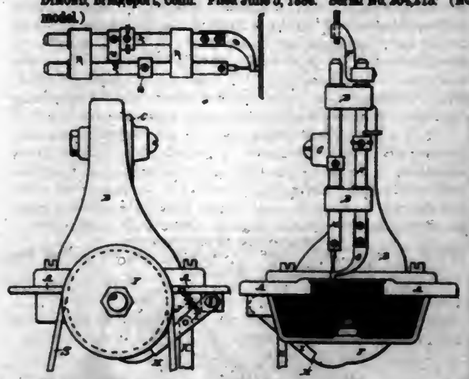
6. In a folding-machine, the combination of tape-pulleys 2, guides 11 and 13, reciprocating blade, devices, substantially as described, for operating the guides which first conduct the forward end of the sheet around the tape-pulley and then are moved out of the path of the folding-blade and the sheet to be folded, devices for operating the folding-blade, substantially as described, two folding-rollers, as 48, a folding-blade, 49, and suitable conducting-tapes, 1, 4, 28, and 50, substantially as and for the purpose specified.

399,988. SHOCK-FORMING TABLE FOR CORN-HARVESTERS. ARTEMUS H. HADLEY, Indianapolis, Ind. Filed Oct. 8, 1888. Serial No. 287,478. (No model.)

Claim.—1. The combination, with the main frame and the cutters of a corn-harvester, of a turn-table mounted on the main frame at the rear of the cutters and arranged to receive the cut stalks therefrom, and a support for the stalks mounted on said turn-table, so as to rotate therewith and adapted to sustain the stalks in an upright position.

2. The combination, with the main frame, the driving-shaft, and the cutters of a corn-harvester, of a circular table mounted on the main frame at the rear of the cutters and arranged to receive the cut stalks therefrom, a support for the stalks mounted on said table, so as to rotate therewith, and intermediate connecting mechanism connecting the table and the driving-shaft, whereby the table is rotated, substantially as and for the purpose set forth.

3. In a corn-harvester, the combination, with the rotating table arranged to receive the cut stalks, of a pair of intersecting arms extending horizontally across the table and detachably supported thereon above its surface, substantially as and for the purpose specified.



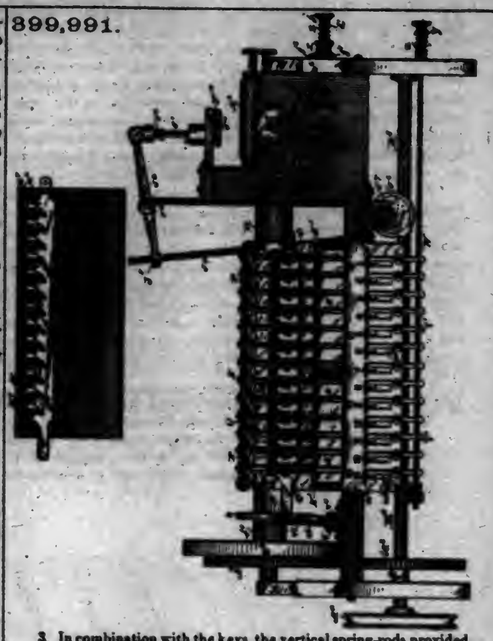
4. In a corn-harvester, the combination of the rotating table and the pair of bent standards mounted thereon and having each a horizontal arm, said arms being arranged to intersect above the center of the table and to interlock at the point of intersection, all substantially as and for the purpose specified.

399,989. METALLIC WHEEL. THOMAS HILL, Quincy, Ill. Filed June 12, 1883. Serial No. 278,796. (No model.)

Claim.—As a new article of manufacture, a metal wheel having the hub and the inner ends of the arms or spokes cast integral and the outer ends of the arms or spokes welded to the inner ends, substantially as and for the purpose set forth.

399,990. SEWING-MACHINE. JAMES A. HOUSE and CHARLES H. DIMOND, Bridgeport, Conn. Filed June 5, 1886. Serial No. 204,313. (No model.)

Claim.—1. In a sewing-machine for flossing, the driving-wheel having a stop-shoulder projecting therefrom, in combination with a pawl pivoted to the bed of the sewing-machine, a spring adapted to throw the extremity of said pawl behind said shoulder, whereby the movement of said wheel may be arrested at a predetermined time, and means—as a treadle-and-rod connection—for disengaging said pawl from said shoulder, substantially as shown and set forth.



2. The combination, with the main driving-shaft, needle-lever, and needle-bar, of the presser-foot and its bar and an upward extension of said presser-foot bar projecting over the needle-bar and adjustable relatively thereto, substantially as described.

399,991. NUMBERING-MACHINE. JAMES D. HUMPHREY, Towanda, Pa. Filed Apr. 4, 1887. Serial No. 233,667. (No model.)

Claim.—1. In a printing and stamping machine, the combination, with the driving-shaft, of a drive-wheel, a sliding collar, and a type-wheel, all on said shaft, and a sleeve over said shaft, connected at its opposite ends to said collar and type-wheel, the said sliding collar adapted to engage with a hub of the drive-wheel, whereby when the shaft is rotated the said remaining parts will also rotate, substantially as described.

2. In a printing and stamping machine, in combination with a rotating shaft, a sleeve on said shaft, a type-wheel carried by said shaft and provided with a hub to which said sleeve is secured, the sliding collar and its hub on the opposite end of the shaft, to which the sleeve is also secured, the drive-wheel provided with a hub having a conical head, and the spring within said sleeve and around said shaft, whereby the said collar is pressed against the drive-wheel and the said cylinder and type-wheel given a rotary movement, substantially as described.

399,991.

3. In combination with the keys, the vertical spring-rods provided with pins, the plate provided with slots through which said pins extend, the toothed bar, the rocking shaft to which said toothed bar is connected, the yoke and its arms carried by said shaft, and the sliding collar, to which is attached the sleeve carrying the pins, whereby the tension of the said sleeve on the driving-wheel is released, substantially as described.

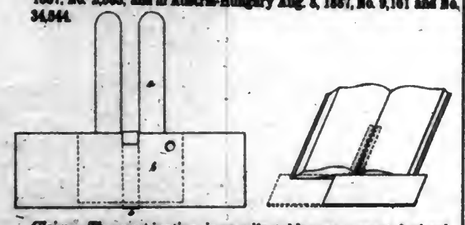
4. In combination with the keys, the vertical rods provided with upper and lower adjustable collars, against which lower collars the said keys bear, the springs on the rods in connection with and between a plate and the upper adjustable collars, and the shouldered levers across the top, whereby the tension of said springs and the force of the keys on said rods and levers can be regulated, substantially as described.

5. In combination with the rotating sleeve provided with the pins arranged spirally, the vertical rods and holding-arms, the plate M, having characters and provided with slots m^2, the keys M', the levers Y', pivoted to plate M and provided with the shouldered and inclined heads, and the horizontal spring-rods W, to which said levers are connected, whereby a key when operated to fix the said sleeve is held at a certain character until released by the pressure of a successive key, or by pressure on the end of the horizontal spring-rod, substantially as described.

6. In combination with the wheel F^2, provided with a number of type and one blank space, a hub, f^2, and a cog, g, and the spindle for turning the same, provided with a cog, h, meshing with cog g, the spring holding device I, consisting of thumb-piece j, spring L, and the plate j' on said spindle, the pointer j^2, and characters printed on the end of the machine around said pointer, corresponding with those on the type-wheel F^2, the said plate j' provided with recesses j^3, corresponding in number with the number of type-spaces in the wheel F^2, and the pin K, projecting from the end of the frame A', whereby the said type-wheel is turned and fixed at the desired character, substantially as described.

7. The independent type-wheels, each provided with a toothed disk, in combination with a shaft on which said wheels and disks are closely mounted, and separate spindles, each provided with a toothed disk to engage with a disk on a type-wheel, whereby each of the type-wheels is separately and independently adjusted, substantially as and for the purpose described.

8. In combination with the adjustable type-wheels, the separate spindles and the toothed disks on the wheels and spindles for adjusting each of said wheels independently of each other, a ratchet on each of said spindles, and a pawl for each ratchet secured to the frame, the teeth of said ratchets corresponding in number to the types in said wheels, whereby on turning a spindle one notch a new number is presented on the type-wheel, substantially as described.

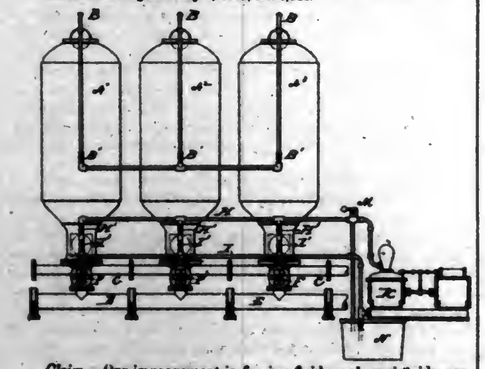


399,992. PROCESS OF MANUFACTURING SING. HENRY A. HERRICK, St. Louis, Mo. Filed Nov. 26, 1888. Serial No. 291,862. (No specimens.)

Claim.—1. The herein-described process of manufacturing zinc, the same consisting in preheating the ore, fuel, and flux separately, as described, then introducing them so heated, together with air, into a reduction-chamber, and therein and at the temperature at which carbonic monoxide reduces zinc oxide combining the ore and carbon monoxide and producing zinc vapor, then conducting the zinc vapor, carbon monoxide—carbonic acid—gaseous current past heated carbon, and reducing the carbonic acid of the current to carbonic monoxide, and then transferring the current to a condenser and liquefying the zinc and discharging the carbonic monoxide.

2. The herein-described process of manufacturing zinc, the same consisting in introducing the zinc ore, fuel, and flux, together with air, into a reduction-chamber, and therein and at the temperature at which carbonic monoxide reduces zinc oxide combining the ore and carbonic monoxide and producing zinc vapor, carbonic monoxide, and carbonic acid, then conducting the zinc vapor, carbonic monoxide—carbonic acid—gaseous current into a separate chamber and into contact with carbon heated, as described, therein, and reducing the carbonic acid of the current to carbonic monoxide, and then transferring the current to a condenser and liquefying the zinc and discharging the carbonic monoxide.

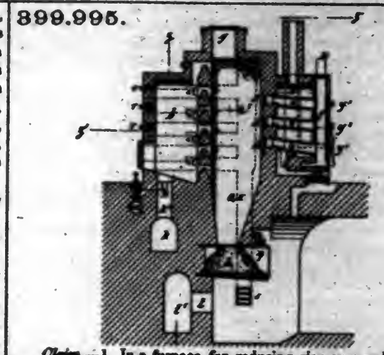
399,993. ADJUSTABLE ARM-SUPPORT FOR BOOK-KEEPERS



RUDOLPH HERTHNER, Halberstadt, Prussia, Germany. Filed Apr. 2, 1887. Serial No. 233,374. (No model.) Patented in Germany Nov. 16, 1886, No. 39,716; in Belgium Feb. 14, 1887, No. 76,246; in England Feb. 15, 1887, No. 2,333, and in Austria-Hungary Aug. 8, 1887, No. 9,161 and No. 34,844.

Claim.—The combination, in an adjustable arm-support for book-keepers, of the bifurcated plate *a*, the plate *b*, with flange and slot *b'*, adjustable laterally on the plate *a*, the metal hoop *c*, connected with the plate *a*, for the purpose of keeping the plate C, and the screw b^3, to secure plate *b* against the bifurcated plate *a*, substantially as described.

399,994. METHOD OF FORCING FLUIDS AND SEMI-FLUIDS BY MEANS OF COMPRESSED AIR.

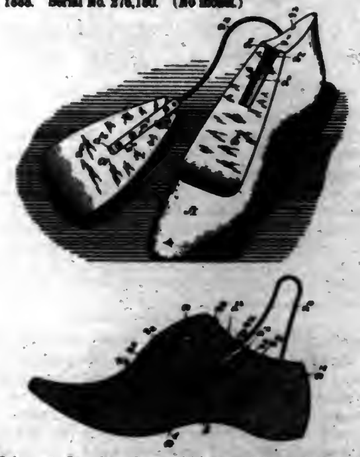


SAMUEL H. JOHNSON and CHRISTOPHER C. HUTCHINSON, West Ham, County of Essex, England. Filed Mar. 8, 1887. Renewed Oct. 22, 1888. Serial No. 288,879. (No model.) Patented in England July 4, 1885, No. 8,141.

Claim.—Our improvement in forcing fluids and semi-fluids, consisting of introducing water under pressure into a vessel containing compressed air, thereby causing the compressed air to pass into another vessel containing the fluid or semi-fluid and to eject the same, this operation being repeated with the same compressed air successively transferred, without being allowed to expand, from the vessel so discharged to another one charged with the material to be ejected, and thus used over and over, so as to avoid the waste of the energy expended in compressing the air, substantially as described.

399,995. FURNACE FOR WORKING ZINC ORES.

LUDWIG KLEMANN, Myslowitz, Prussia, Germany. Filed Dec. 26, 1888. Serial No. 293,756. (No model.) Patented in Germany Apr. 1, 1879, No. 7,411, Sept. 22, 1880, No. 14,497, and Apr. 14, 1885, No. 30,036; in Belgium Nov. 4, 1885, No. 70,726; in England Nov. 3, 1885, No. 13,960, and in France Nov. 4, 1885, No. 173,056.



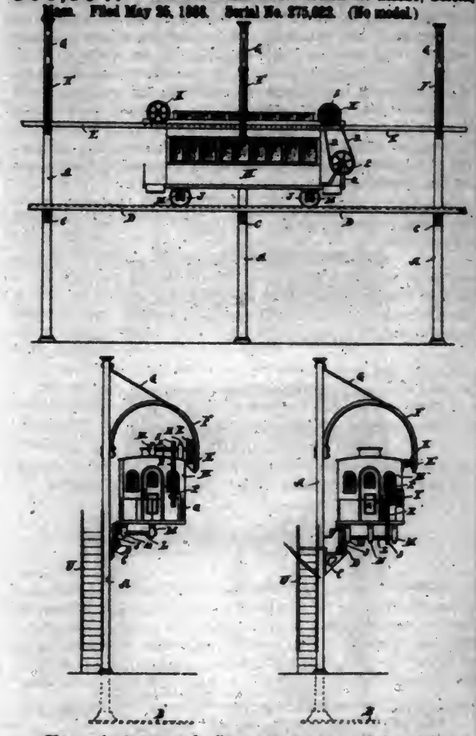
Claim.—1. In a furnace for reducing zinc ores and compounds, the combination of the vertical reduction-chamber *a'*, the combustion-chamber *b*, located at the back of the reduction-chamber and communicating therewith through a vertical row of openings, *c*, the chamber Z, located in front of said reduction-chamber, the vertical row of retorts *e*, supported in the chamber Z and communicating with the reduction-chamber at their inner ends by means of a vertical row of openings, *d*, and at their other ends with a tube, *f*, common to all, said tube *f* communicating at its top with condensing-tubes *f'*, which in turn communicate with the bottom of the chamber Z, substantially as described.

2. In a furnace for reducing zinc ores and compounds, the combination, with a vertical reduction-chamber, *a'*, a combustion-chamber located in the rear thereof and communicating therewith through a vertical row of openings, *c*, and communicating at its bottom with air and gaseous-fuel inlets, a chamber, Z, located in front of the reduction-chamber and having a vertical row of retorts supported therein and communicating with a vertical row of openings in the reduction-chamber, and an air-heating chamber located below and communicating with and closing the lower end of the reduction-chamber, said air-heating chamber being provided with an inlet for introducing air or gas to drive off the residual zinc-vapor, substantially as described.

3. In a furnace for reducing zinc ores and compounds, the combination, with a reduction-chamber, *a'*, a combustion-chamber, *b*, communicating therewith by a vertical row of openings, *c*, and provided with heating-flues *r*, and passages *i*, located in the walls of the reduction-chamber to utilize the surplus gases from the combustion-chamber for heating the reduction-chamber, substantially as described.

399,996. LAST.

JOHN W. LAMPHIER, Lynn, Mass. Filed June 6, 1888. Serial No. 276,180. (No model.)

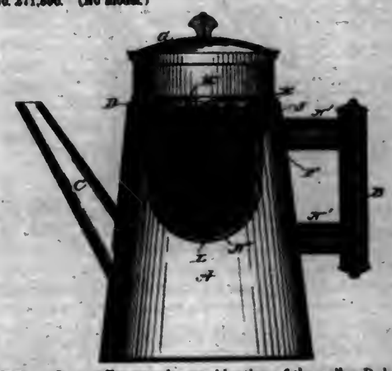


Claim.—1. In a last, the combination of the main part A, having a recess in the upper part of its surface *a'*, extending to the top of the last and having a metal dovetail secured therein, which is provided with the flaring end a^9 and hole a^{14}, with the instep-block *a*, having the metal dovetail tongue a^{11}, the spring latch-plate a^{15}, secured to the tongue and having the pin a^{13} and eye a^{16}, and a cord, a^{17}, preferably fastened to the heel end of the last and extending through the eye and secured to the instep-block, substantially as described.

2. In a last, the combination of the main part A, having a dovetail recess open at its upper end, with an instep-block having a tongue to fit the dovetail recess, a latch for locking the instep-block to the main part of the last, a cord connected with the instep-block and with the latch, and another cord extending from the side of the instep-block to the heel end of the last to fasten the two parts together, substantially as described.

399,997. ELEVATED RAILWAY.

HORACE W. LISSEY, Boston, Mass. Filed May 25, 1888. Serial No. 275,022. (No model.)



Claim.—1. An elevated railway and support consisting of the columns A, arch F, brace G, bracket C, and rails D E, substantially as shown and described.

2. In an elevated railway, a car provided on one side with wheels below the car and on the other side with wheels at the top of the car, in combination with a track or way consisting of a lower and an upper rail, both supported from a single row of columns, substantially as set forth.

399,998. COFFEE-POT.

MOSES B. LORACH, Denver, Colo., assignor of one-half to H. N. Palmer, same place. Filed Apr. 26, 1888. Serial No. 271,896. (No model.)

Claim.—In a coffee-pot, the combination of the collar D, having the inward-projecting flange F formed on its lower end, the concaved plate H, having the opening K and wire loops L, the outward-projecting flange J, adapted to engage the flange F, and the filter-cloth N, arranged beneath the loops L and secured between the flanges F and J, substantially as described.

399,999. INSECTICIDE COMPOSITION.

THOMAS MANARAN, New York, N. Y. Filed Jan. 19, 1889. Serial No. 296,881. (No specimens.)

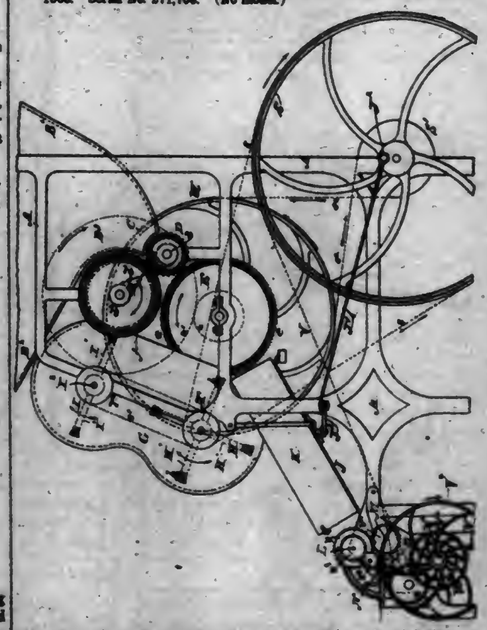
Claim.—A composition for treating paper and other fabrics, which consists of naphthaline, glycerine, and essence of mirbane, about in the proportions hereinbefore set forth.

400,000. METHOD OF MAKING TYPE.

MORTIMER G. MERRITT, Springfield, Mass., assignor, by mesne assignments, to the Farmers Loan and Trust Company, trustee, New York, N. Y. Filed Mar. 24, 1887. Serial No. 232,289. (No model.)

Claim.—The method of making type, which consists in arranging a tapering type-blank in front of a die provided with a sunken character and by pressure or a blow breaking down the blank and causing it to conform to the character in the die, substantially as set forth.

400,001. DIE FOR TRIMMING TYPE.



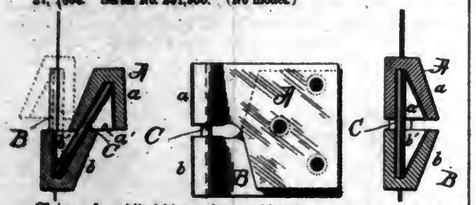
MORTIMER G. MERRITT, Springfield, Mass., assignor to the Yost Writing Machine Company, New York, N. Y. Filed Sept. 10, 1887. Serial No. 249,266. (No model.)

Claim.—As a means for removing surplus metal from type, the combination of a die provided with an opening to receive the shank of a type and a die provided with an opening to receive the bed and face of a type, the said dies being thus adapted to be brought together and enabled to shear or cut off the surplus metal of the type, substantially as set forth.

400,002. MACHINE FOR OPENING, CLEANING, AND GINNING SEED-COTTON.

JOHN R. MONTAGUE, Auburn, N. Y., assignor to the Montague Roller Cotton Gin Company, Toledo, Ohio. Filed Apr. 24, 1888. Serial No. 271,708. (No model.)

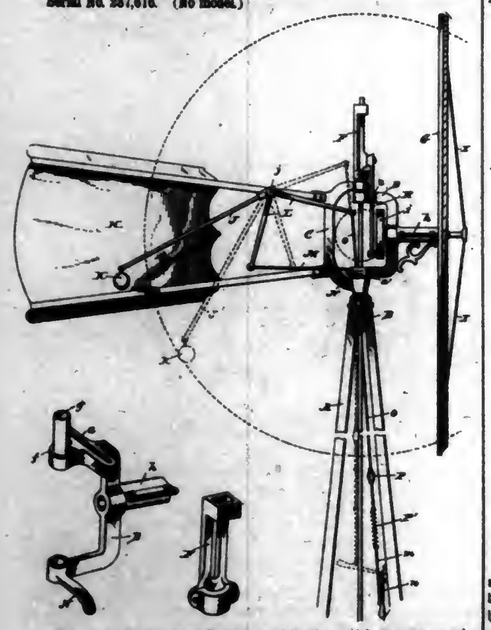
Claim.—1. The combination, substantially as hereinbefore set forth, of the hopper having a discharge-opening, the toothed rollers having a differential speed, means for imparting to said rollers their respective speeds, the feed-roller interposed between the toothed roll-



ers and the discharge-opening of the hopper, and means for driving the feed-roller.

2. The combination, substantially as hereinbefore set forth, of the hopper having a discharge-opening, the lower toothed roller, the upper toothed roller of smaller diameter than the lower roller, means for driving the rollers, the feed-roller interposed between the toothed rollers and the discharge-opening of the hopper, means for driving the feed-roller, the beaters for clearing the toothed rollers, and means for actuating them.

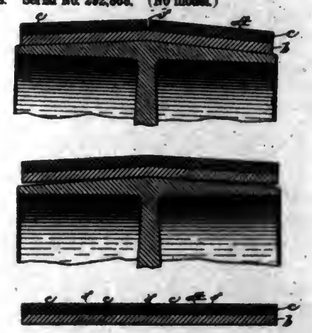
3. The combination, substantially as hereinbefore set forth, of the flattening-rolls, means for actuating them, the ginning-rolls, means for actuating them, the feed-roller having radially-reciprocating ribs to grasp and retard the seed-cotton and insure its regular delivery to the ginning-rolls, means for driving the roll and actuating the ribs, and the separating-block between the feed-roller and the lower flattening-roll.



4. The combination, substantially as hereinbefore set forth, of the ginning-rolls, means for driving them, the flattening-rolls, means for driving them, the feeding and retarding roll interposed between the ginning-rolls and the flattening-rolls, means for driving the feeding and retarding roll, and a table over which the cotton is carried by the feed-roll.

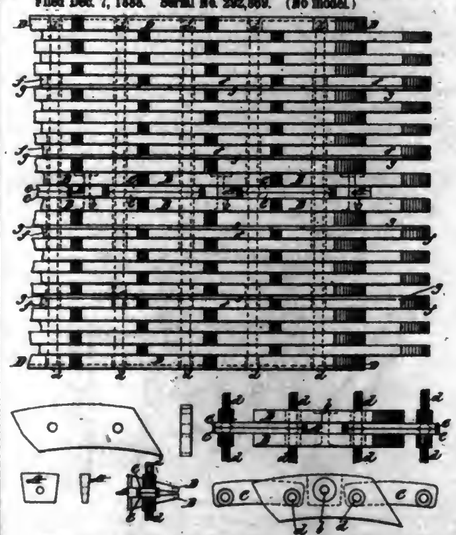
400,003. HINGE. RICHMOND E. HOLLEY, Atlanta, Ga. Filed Nov. 27, 1888. Serial No. 291,965. (No model.)

Claim.—In a blind-hinge, the combination, with the pin C, of the hinge-leaves A B, provided, respectively, with knuckles *a b*, having the oblong tapering recesses *a' b'*, wherein said pin is seated, one side of said recess being parallel to the axis of the hinge and the opposite side oblique thereto, whereby when the blind is open the pin will lean over to the sides of the recess oblique to the axis of revolution of the hinge, as and for the purpose specified.



400,004. WINDMILL. CHARLES R. OLDS, Fairbury, Nebr., assignor of one-half to Hugh R. McEwen, same place. Filed Oct. 9, 1888. Serial No. 287,616. (No model.)

Claim.—1. In a windmill, the combination, with the tower, the wheel, its casting, and the tail-vane, of the lever J, pivoted on the tail-vane and carrying at its free end the weight K, the bell-crank lever L, pivoted on the pivot of the lever J on the tail-vane, the rod M, connected at one end to the wheel-casting and at the other to one end of one of the arms of the bell-crank lever, the lever *n*, pivoted to the tower, the rod O, connected at one end to the other arm of said bell-crank lever, the spring *p'*, connected to the other end of the rod O, and the arm *m*, connecting the other end of the spring with the lever *n*, substantially as shown and described.



2. In a windmill, the combination, with the tower, the wheel, its casting, and the tail-vane, of the lever J, pivoted on the tail-vane and carrying at its free end a weight, K, the bell-crank lever L, pivoted on the pivot of the lever J rigid with said lever, the rod M, connected at one end to the wheel-casting and at the other to one of the arms of the bell-crank lever, the lever *n*, pivoted on the tower, the rod O, connected at one end to the other arm of said bell-crank lever, formed of two parts connected by the turn-buckle P, the spring *p'*, connected to the other end of the rod O, and the arm *m*, connecting the other end of the spring with the lever *n* near its pivot, substantially as and for the purpose specified.

400,005. BELTING. GEORGE F. PAGE, Concord, N. H. Filed Dec. 7, 1888. Serial No. 292,868. (No model.)

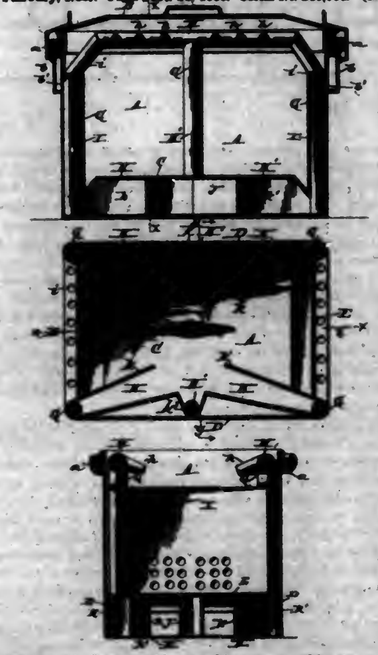
Claim.—A driving-belt composed of a layer or thickness of leather or suitably-prepared rawhide, consisting of a single strip forming the inner or wearing surface or portion, combined with an outer layer or thickness, consisting of two or more independent longitudinal strips of fabric separated from each other on a line or lines parallel with the edges of the belt, substantially as and for the purpose described.

400,006. MACHINE-BELTING. GEORGE F. PAGE, Concord, N. H. Filed Dec. 7, 1888. Serial No. 292,869. (No model.)

Claim.—1. In a leather-link driving-belt, the combination, with a series of links connected together by transverse bolts extending from the outer edges of the belt to its center, of the herein-described flexible or hinge joint composed of links B B, secured together near the center in pairs by bolts or rivets, substantially in the manner and for the purpose set forth.

2. In a link belt, the double washers C, composed of metal or other suitable material, and placed upon the heads of the transverse bolts along the line of the hinge or flexible joint and between the links B B, secured together by the central rivet, *b*, substantially as described.

3. In a link belt, the combination, with the leather links and their transverse connecting-bolts *d*, of the double metal washers *c*, placed over the ends of said bolts upon the outer edges of the belt, substantially in the manner and for the purpose set forth.



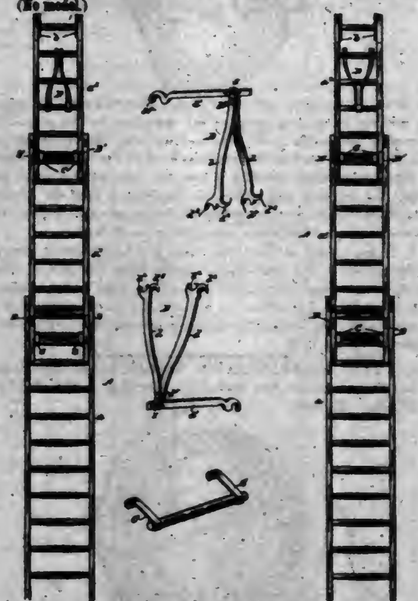
4. In a link belt, the combination, with the leather links and their transverse connecting-bolts, of the equalizing-links *f*, composed of leather or other suitable material, having inserted upon one side a piece, *g*, of metal or other suitable material, said equalizing-links being placed upon the bolts *d* in the main body of the belt, substantially in the manner and for the purpose set forth.

5. A driving-belt composed of links of leather or other suitable material of substantially rhomboidal shape, connected together by transverse bolts, in combination with a hinge or flexible joint, substantially as described, the double washers C, arranged along the line of the hinge-joint, the double washers *c*, placed over the ends of the bolts at the outer edges of the belt, and the equalizing-links *f*, inserted within the body of the belt, all constructed and operating substantially in the manner and for the purpose set forth.

6. In a link belt, the combination, with the usual links of leather or other suitable material connected together by transverse bolts, of links narrower than the thickness of the belt and V shape in form, inserted longitudinally between the outer edges of the belt, substantially as described.

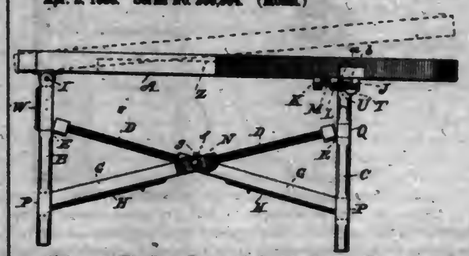
7. In a link belt, the combination, with the usual links of leather or other suitable material, connected together by transverse bolts, of equalizing-links narrower than the thickness of the belt inserted longitudinally between the outside edges of the belt, substantially as described.

400,007. WASH-BOILER. CHARLES R. POOR and GEORGE MARTIN, Fairbury, Nebr. Filed Sept. 21, 1888. Serial No. 285,902. (No model.)



Claim.—1. In a washing-machine, the combination, with the vessel, of the false bottom having corner and intermediate side elevating-pipes, G and K', respectively, the horizontal pipes H H, one on each side of the vessel and having a series of downwardly-inclined discharge-nozzles, *h h*, the partitions *k* and *k'*, arranged to form the converging ducts K for the corner pipes G, the partitions k^2, uniting the opposing ends of the partitions *k'* and forming ducts for the intermediate pipes G, and the divider J, substantially as and for the purpose described.

2. In a washing-machine, the combination, with the false bottom having elevating-pipes and having side and end walls, of the partitions *k* and *k'*, arranged to form converging ducts for the end or corner elevating-pipes, the partitions k^2, uniting the opposing ends of the partitions *k'* and forming ducts for the intermediate elevating-pipes, and the divider J, substantially as described, for the purposes specified.



3. The combination, in a washing-machine, with the false bottom having elevating-pipes and the horizontal discharge-pipes, of the end partitions arranged between the end pipes and having perforations near their lower ends and having ledges at their upper ends, which ledges are perforated, substantially as described, for the purposes specified.

400,008. EXTENSION-LADDER AND SCAFFOLD ATTACHMENT. IRA H. RAGOZ, Wadsworth, Ohio. Filed May 9, 1888. Serial No. 273,298. (No model.)

Claim.—The combination, with an extensible ladder, of the bracket herein described, having the two divergent arms provided with outer double-hooked ends and apertures at their inner ends, the single arm having an outer hooked end and a series of apertures at its inner end, and the bolt passed through coincident apertures of the series thereof in said arms, substantially as shown and described.

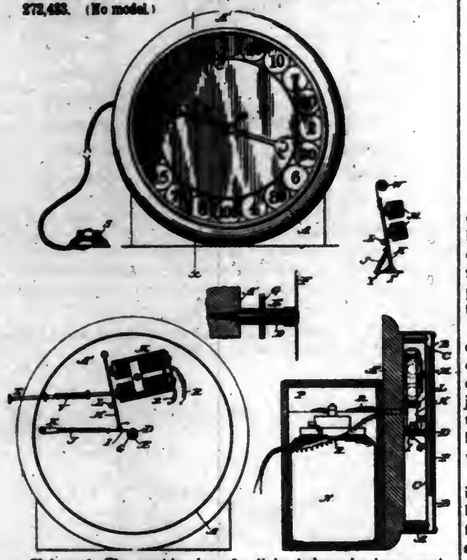
400,009. IRONING-TABLE. ANDREW RIEBEN, Chicago, Ill. Filed Apr. 2, 1888. Serial No. 269,264. (Model.)

Claim.—1. The legs B, provided with the box W and cross-bar P, and the legs C, provided with the cross-bars Q and P, in combination with the small braces D, hinged to the box W and cross-bar Q, and the large hollow braces G, each of which is provided with a rod, H, each of said bars P being provided with a notch to receive the end of a hollow brace, and a staple for the reception and retention of a rod, H, substantially as and for the purpose set forth.

2. The recessed table-top A, provided with the cleats K J, the latter provided with the recess *b*, in combination with the spring-pressed bar L, the legs C, connected by the bars P Q U, the latter provided with the lip *a*, the braces D and G, the braces G having rods H, and the legs B, having box W and cross-bar P, the cross-bar P on each set of legs having a staple, R, substantially as and for the purpose specified.

400,010. PROCESS OF CONVERTING CRUDE IRON INTO MALLEABLE IRON OR STEEL. GUSTAVE L. ROBERT, Stenay, France, assignor to John Wesley Bookwalter, Springfield, Ohio. Filed Nov. 19, 1888. Serial No. 291,128. (No model.)

Claim.—1. The within-described improvement in the conversion of crude iron into malleable iron or steel, consisting in applying a



400,010.

blast of air to the surface portion of a body of molten metal at a maximum pressure at the beginning of the operation for the purpose of overcoming the inertia of the metal and imparting thereto the proper speed of gyratory motion, lowering the level of the blast as the process continues without carrying it into the body of the metal, and varying the pressure and volume of the blast to meet the requirements of the reduction in the combustible elements of the iron and the increased fluidity of the metal, substantially as set forth.

2. In the process of converting crude iron into malleable iron or steel by the action of a blast applied locally upon the surface of the mass of molten metal, varying the level of the blast and the volume and pressure thereof in proportion as the metal increases in speed of gyration and fluidity and as the combustible elements are eliminated, substantially as set forth.

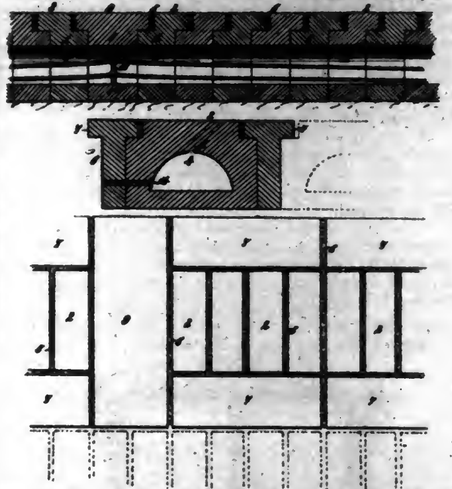
400,011. GAME APPARATUS. THOMAS B. ROGERS, Brooklyn, and SAMUEL H. BARTLETT, New York, N. Y. Filed May 1, 1888. Serial No. 272,483. (No model.)

Claim.—1. The combination of a dial, a balanced pointer revolving over its face, a ratchet-wheel carried by the pointer, an electro-magnet, a swinging lever serving as the armature for the electro-magnet, a pawl pivoted to the free end of the lever in position to strike the ratchet tangentially in the movement of the lever, a battery included with the magnet in an electric circuit, and a switch device for opening and closing said circuit, all substantially in the manner and for the purpose herein set forth.

2. The combination, with the ratchet-wheel G, the swinging lever H, the pawl I, pivoted to said lever in position to be swung by the lever tangentially against the teeth of the ratchet, and the retracting-spring J, attached to the outer end of said pivoted oscillating pawl of a pivoted arm, K, to which the opposite end of the spring is attached for adjustment, substantially in the manner and for the purpose herein set forth.

400,012. TRUCK. BENNET SHANER, Huntington, Ind. Filed Sept. 6, 1888. Serial No. 284,739. (No model.)

Claim.—1. The combination, with the sides and the upright H, of the screw L, having its end secured, and a pawl and ratchet secured to its opposite end, and a plate secured to said upright, through which said screw passes, substantially as described.



2. The combination of the sides A, having ends B and rollers C,

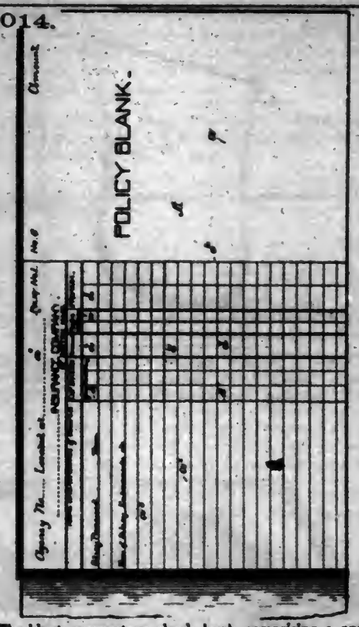
400,012.

the rollers F, the uprights G and H, and the screw L, having a pawl and ratchet secured thereon for turning the same, whereby one of the uprights is moved, substantially as described.

400,013. PAVEMENT OR ROADWAY. HENRY STEINBERG, Washington, D. C. Filed Nov. 20, 1888. Serial No. 291,402. (No model.)

Claim.—1. A pavement composed of a series of rectangular conduit-blocks, each provided with an opening and having an overhanging surface plate or block resting partly upon the adjacent block, in combination with rectangular end blocks having double-flanged surface-plates resting upon the exposed ends of the two adjacent and parallel series of blocks, said end blocks presenting their longer faces to the butts or ends of the conduit-blocks, substantially as described.

2. A pavement or road-bed formed of a series of rectangular conduit-blocks having openings and each provided with a surface plate or block formed on and projecting beyond a portion of the top of the conduit block, a series of end blocks having their surface-plates projecting on both sides of the same and overlying the adjacent ends of two parallel series of conduit-blocks, an interstitial space being left between the adjacent edges of the several surface-plates and packed with a suitable filling, substantially as described.



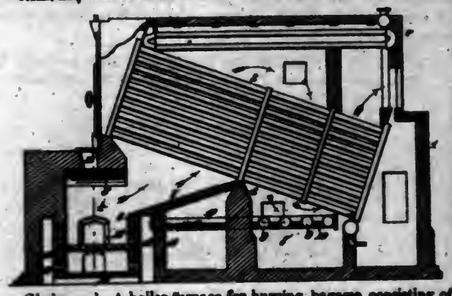
3. In a pavement composed of a series of rectangular blocks having openings forming a conduit, a removable section consisting of a block formed in two parts united by dowels, one of which is separable from the other, said block having a surface-plate projecting upon all sides and resting upon the adjacent blocks, substantially as described.

4. In a pavement, the combination, with two or more parallel series of rectangular conduit-blocks having suitable openings and each provided with a surface plate or block rising from and projecting beyond a part of the top of the conduit-block, of a series of end blocks placed lengthwise between the parallel series, said blocks having surface-plates projecting beyond their longer parallel faces and resting upon the ends of the conduit-blocks in two adjacent series, and removable sections consisting of bottom plates having dowels and body portions having surface-plates projecting on all sides, said blocks being of a size to lie flush with the outer surfaces of the end plates inclosing the conduit-blocks, and an interstitial space being left between the adjacent edges of the surface-plates and filled with a suitable material, substantially as described.

400,014. ACCOUNT-BOOK. REWARD G. STEVENS, Clinton, Mass. Filed Oct. 1, 1888. Serial No. 286,851. (No model.)

Claim.—1. An account or check book comprising a number of sheets or leaves, each of which sheets or leaves comprises the section *a*, which is a blank form or blank paper, and which is detachable from the remainder of the sheet or leaf, and the sections a^1, each of which varies in length from the top of the page downward and in regular order from the first to the last, as and for the purposes described.

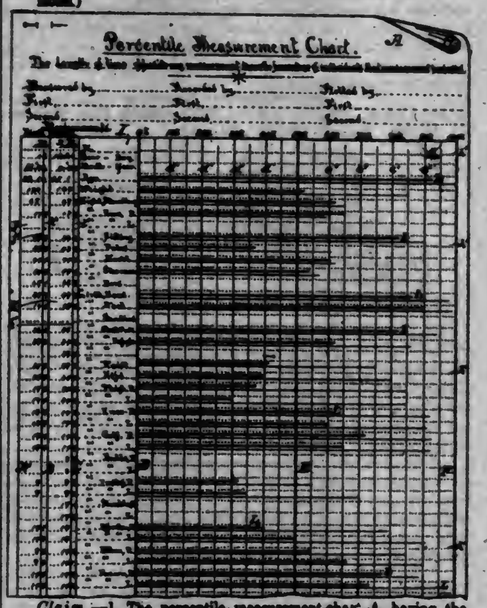
400,014.



2. The blank account or check book comprising a number of leaves or sheets, each of which has the detachable section *a*, and the removable section a^2, and the section a^1, each sheet of the removable section a^2 varying in size and regularly from the first to the last sheet or leaf, substantially as and for the purposes specified.

400,015. LUMBER-RACK. GABRIEL STRECK, Oshkosh, Wis. Filed Oct. 22, 1888. Serial No. 288,771. (No model.)

Claim.—A removable lumber-rack adapted to be placed on a truck or wagon, consisting of a frame, transverse rollers, one of said rollers projecting above the other to support the load and provided with a crank, D, on the end to rotate it, a detent to normally lock the crank, and an adjustable chain and binding-lever to lock the load on the rack, substantially as and for the purpose described.



400,016. BAGASSE-FURNACE. WILLIAM W. SUTCLIFFE, New Orleans, La., Filed Dec. 31, 1888. Serial No. 295,053. (No model.)

Claim.—1. A boiler-furnace for burning bagasse, consisting of the combustion-chamber having a reverberatory arch and extending longitudinally from the front wall of the furnace, the air-blast chambers located, respectively, at the front and rear of the combustion-chamber, communicating by a connecting-passage and provided with tuyere-openings located above and below the fire-grate, a bridge-wall supporting the boiler, a refractory fire-bed inclined from above the rear air-blast chambers to the bridge-wall, an air-heater, and an air-forcer for forcing air through the heater into one of the air-blast chambers, substantially as described.

2. In a bagasse-furnace, the combination, with a combustion-chamber having front and rear air-chambers provided with tuyeres entering the fire-box above and below the grate, said air-chambers connected by a passage beneath the combustion-chamber, of a tube entering one of said air-chambers, passing through the bridge-wall and into a return-heat chamber behind the bridge-wall, manifold pipes connected at one end with said tube and at the other end with an air-pipe, and a blower supplying said air-pipe, substantially as described.

400,017. PERCENTILE MEASUREMENT-CHART. PRESCOTT SWAIN, Indianapolis, Ind. Filed Apr. 26, 1888. Serial No. 271,891. (No model.)

Claim.—1. The percentile-measurement-chart A, having the columns J K, for recording the measurements, and the spaces for indicating by per cent. the relative magnitude of the measurements, with a column of names of the parts measured printed between them, substantially as shown and described.

2. The percentile measurement-chart A, having the two measurement-columns J K, the title-column I, or column in which the names of the parts measured are printed, and per-cent. spaces and lines, with per-cent.-indicating marks or figures at their upper ends, in combination with the horizontal lines L, to indicate the magnitude of the measurements drawn from column I to a space or a line in the body of the chart indicating the per cent. equaled or surpassed by said measurement, substantially as shown and described.

3. The percentile measurement-chart A, having three vertical lines, D E F, thereon, representing the minimum, maximum, and average or mean per cents., as described, with the per-cent. spaces between them, subdivided so that the intermediate per-cent. spaces and lines are equidistant and proportional throughout, substantially as shown and specified.

4. In a percentile measurement-chart, A, having suitable measurement-recording columns, J K, a column representing the names of the measurements, and a series of lines and spaces marked with per-cent. figures to designate the magnitude of the measurements, in combination with a line or lines, L, drawn from and in a line with the different measurements to a line or space in the chart representing the per cent. that measurement equals or surpasses, substantially as shown and described.

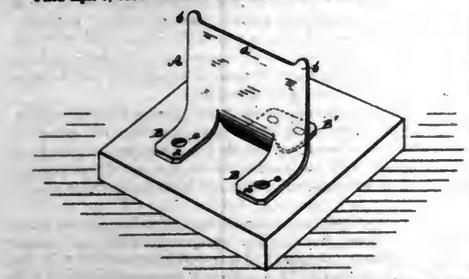
5. The percentile measurement-chart A, having the numbers representing the measurements which occur in the percentile table printed in the body of the chart between the lines D F in the per-cent. spaces, or upon the lines representing the per cents., substantially as shown and specified.

6. A percentile measurement-chart consisting of the printed sheet A, having the two measurement-columns J K, divided to form the decimal-column I', the title-column I, or column in which the names of the parts are printed, the vertical per-cent. lines D E F, and the subdividing lines d' d' at the left and right of the meridian or typical line E, and horizontal lines L, extending from the column I in a line with the names of the parts therein to any per-cent. line or space between per-cent. lines in the body of the chart, substantially as and for the purpose set forth.

7. A percentile measurement-chart, A, having a suitable title thereon, and having the two vertical columns J K divided by the decimal-lines j' k', in which to record the measurements, the column I, having the number, date, age, weight, height, and names representing the kinds of measurements and the different parts of the body measured therein, the heavy vertical per-cent. lines D E F, representing the minimum, the medium or typical, and the maximum per cents., respectively, and the subdividing per-cent. lines d' d' and the per-cent. marks thereon, substantially as shown, and for the purpose set forth.

8. The chart A, having a suitable title and heading, as shown, and ruled or printed to form the two vertical measurement-columns J K, the descriptive or name column I, and per-cent. lines D E F d' d', with the per-cent. figures thereon, the horizontal bisecting lines h', and the horizontal measurement-lines L thereon, substantially as shown, and for the purpose described.

400,018. BUCKLE. SALLIE C. TUCKER, Garnett, Kans. Filed Feb. 17, 1888. Serial No. 264,345. (No model.)



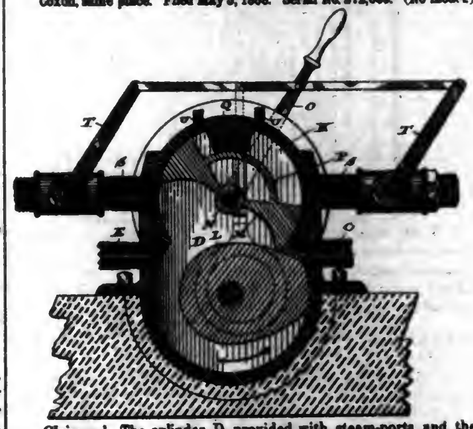
Claim.—1. The combination, with a buckle having passages crossing each other at right angles, an inclined penetrating-point projecting across one passage from the outer wall thereof, and a pivoted tongue for the other passage having a serrated cross-bar at its free end, of the two crossing measuring-tapes passing through said passages one tape being engaged by the penetrating-point and the other by the serrated cross-bar, substantially as set forth.

2. The herein-described buckle, comprising two parallel end loops, one of which loops has an inwardly-projecting penetrating-point, the horizontal connecting-loop connecting the end loops, the cross-bar connecting said end loops below the horizontal loop, and the tongue pivoted on the said cross-bar and extending up to the horizontal loop, substantially as set forth.

3. The herein-described buckle, consisting in the vertical end loops, 40 40, the cross-bar 42, connecting the outer sides of said loops at or near their lower ends, the horizontal loop 44, connecting the outer sides of the loops above said cross-bar and having one of its bars extended to form the penetrating-point 41, and the ⌐-shape tongue 43, pivoted on cross-bar 42, extending up to said loop 44, substantially as set forth.

400,019. FOOT-SCRAPER. WILLIAM H. TYLER, Devil City, Nebr. Filed Apr. 9, 1888. Serial No. 270,069. (No model.)

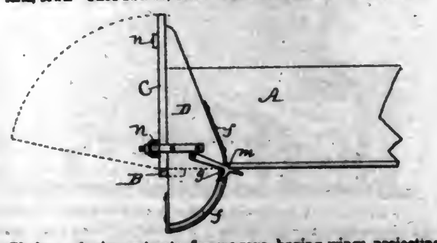
Claim.—As an improved article of manufacture, a foot-scraper consisting of a sheet-metal plate, A, having the scraping-edge a, the rounded ears b b at the ends of the said edge, and the opposing projecting and apertured feet B B', formed from the body of the plate, as set forth.



400,020. SELF-CLOSING TOBACCO-BAG. CHARLES W. VAN ALSTINE, Newton, Mass. Filed Aug. 28, 1888. Serial No. 283,967. (No model.)

Claim.—1. A bag provided with a spring, consisting of coil B arms C, and terminal hooks for said arms, the spring being arranged within the mouth of the bag, for the purpose of closing the same automatically, and the hooks fitting detachably over the edge of said mouth, as set forth.

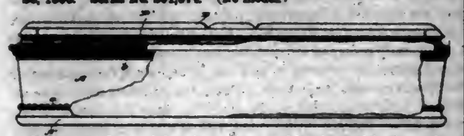
2. A spring provided with the central coil, B, the arms C, extending upward and outward, and the hooks D, having shoulders d, curved proximate parts d', and outwardly-turned tips d^2, all specially adapted, as described, to hold the mouth of a bag together and allow the convenient attachment and detachment of said spring to and from said bag, for the purposes set forth.



400,021. ROTARY ENGINE. JOHN H. VENABLES and JOSEPH HUGHES, Toronto, Ontario, Canada, assignors of one-third to Samuel Coxon, same place. Filed May 3, 1888. Serial No. 272,669. (No model.)

Claim.—1. The cylinder D, provided with steam-ports, and the cylinder K, connected to and forming part of said cylinder D, substantially as described, and provided with exhaust-ports, and the block Q, combined with the piston L, the two-winged cam fitting the cylinder K, and having a curved connection between the wings fitting under the block Q, and a handle to said cam connected with the valves to said exhaust-ports, substantially as described.

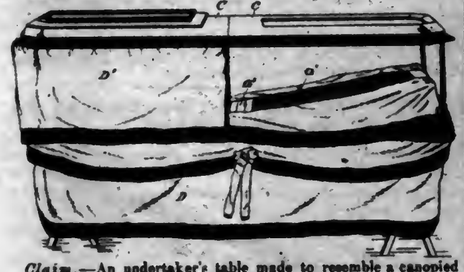
2. A piston, L, carried on the shaft G, within the cylinder D, against the inner surface of which it fits, the steam-ports E, entering the cylinder D immediately opposite to each other, as shown, in combination with the two-winged cam M, fitting the cylinder K and carried on the spindle N, the exhaust-ports S, entering the cylinder K immediately opposite to each other, the curved bridge P, connecting together the two wings of the cam M and fitting against the block Q, and the steam-pipes U, arranged substantially as and for the purpose specified.



400,022. END-GATE FOR WAGONS. BARNEY A. WALTZ, Valeria, Iowa. Filed Dec. 27, 1888. Serial No. 294,223. (No model.)

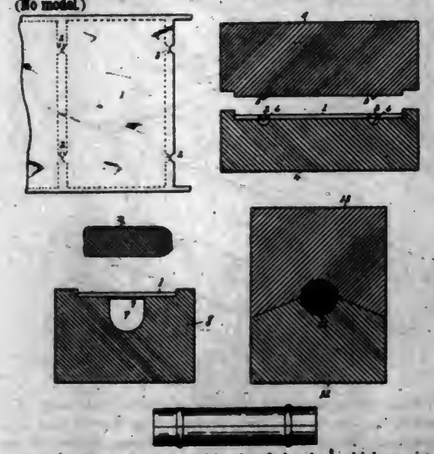
Claim.—1. An end-gate for wagons, having wings projecting forward from its ends and circular slots or bearings at the lower ends of the wings, and hooks pivoted to the outside of said wings, in combination with a wagon-box having a cross-piece at its rear end and bottom to support the end-gate, and a rod or sliding bolts attached to its bottom and extended through the curved slots or bearings in the wings of the end-board, to operate substantially as set forth, for the purposes stated.

2. An end-gate, C, having wings D, provided with curved slots or bearings by means of strap-irons f, in combination with a wagon-box, A, having a fixed cross-piece, B, and sliding bolts g, and hooks m, pivoted to the said wings to engage the said bolts, substantially as shown and described, for the purposes stated.



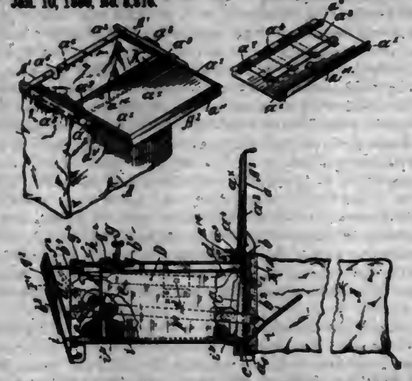
400,023. COFFIN. ADOLPH WERNICKE, Cleveland, Ohio, assignor to the Cleveland Burial Case Company, same place. Filed Nov. 26, 1888. Serial No. 291,874. (No model.)

Claim.—1. In burial-caskets, the combination, with the casket-cover having the usual molding struck along the edges thereof, of a separate molding planted on the edge of such cover, such different moldings being preferably covered with other material than that applied to the casket generally, substantially as set forth.



2. The combination, with the body of a burial-casket, having a base-molding of a different molding planted on the casket next above and apparently forming a continuation of such base-molding, such different molding being preferably covered with different material from that applied to the casket generally, substantially as set forth.

400,024. CANOPY-TABLE FOR UNDERTAKERS USE. MICHAEL R. WELSH, Chelsea, Mass. Filed June 21, 1888. Serial No. 277,789. (No model.)



Claim.—An undertaker's table made to resemble a canopied casket and composed of the hinged and movable top plate, one portion of which is provided with a glass and having legs or supports hinged to said top plate, and draperies adapted to be attached to the top plate to form the sides of the casket, substantially as described.

400,025. METHOD OF MAKING BEADED TUBES. SAMUEL R. WILMOT, Bridgeport, Conn., assignor to the Wilmot & Hobbs Manufacturing Company, same place. Filed Jan. 28, 1888. Serial No. 297,754. (No model.)

Claim.—The method of making beaded tubes, which consists in forming blanks having teats at the edges where beads are required in the finished tubes, grooving the blanks across transversely in the line of the teats, and finally rolling the grooved blank about a mandrel and closing the edges firmly together, the grooves forming the beads in the completed tube and the metal of the teats serving to close the joint tightly at the beads.

400,026. MAIL-BOX AND POUCH. WENZEL WLESAK, Gratz, Austria-Hungary, assignor of two-thirds to Hanns Müller and Max Kalz, same place. Filed Nov. 1, 1888. Serial No. 288,703. (No model.) Patented in France Oct. 9, 1888, No. 196,412; in Belgium Oct. 9, 1888, No. 83,881; in Luxemburg Oct. 9, 1888, No. 1,067; in Norway Oct. 9, 1888, No. 1,067; in Italy Nov. 30, 1888, XXII, 24,197, XLVII, 433, and in Spain Jan. 10, 1889, No. 8,816.

Claim.—1. A mail-box comprising an outer case, a hinged lid, and hinged bottom therefor and having a slot, h, in its front wall, a chamber formed in and communicating with the slot h of said case, said chamber being open at bottom only, locking devices for locking the hinged bottom to the case, and intermediate mechanism controlled by said lid operating to lock said locking devices against operation, as and for the purposes specified.

2. A mail-box comprising an outer case, a hinged lid, and hinged bottom therefor and having a slot, h, in its front wall, a chamber formed in said outer case, open at bottom only and communicating with slot h, independent locking devices for locking the lid and bottom to the case, intermediate mechanism operating to lock said locking devices out of operation, and a locking-bar operating to lock the key for the locking devices of the lid against withdrawal, said intermediate mechanism and locking-bar being controlled by the lid, for the purposes specified.

3. A mail-box provided with a hinged lid and bottom and having on its front wall a support for a time-plate, f, in combination with locking mechanism for locking the bottom to the box, and a locking-lever controlled by said locking devices and by the hinged lid, respectively, to unlock said time-plate from or lock it to its support, substantially as and for the purposes specified.

4. A mail-box comprising an outer case, a hinged lid, and hinged bottom therefor and having a slot, h, and a holder for a time-plate, f, in and on its front wall, respectively, a chamber formed in said outer case open at bottom only and communicating with slot h, locking devices for locking the hinged bottom to the case, a locking-lever operating to lock the time-plate to its holder, the movement of said lever in one direction being controlled by the locking devices and in the reverse direction by the hinged lid, and intermediate mechanism controlled by said lid and operating to lock the locking devices against operation, as and for the purposes specified.

5. The combination, with a mail-pouch provided with a rectangular frame at its mouth, a cover arranged to slide in grooves in said frame, and a lock for locking said cover to the frame, of a mail-box having a hinged bottom and provided with a support for the mail-pouch below such bottom, and a key permanently secured to the box and operating to unlock the cover of said pouch when applied to the support therefor, substantially as described.

6. The combination, with a mail-pouch provided with a groove on opposite sides of the open end thereof, a sliding cover to close said open end, and a lock consisting of a plurality of elastic arms, each carrying a locking-pin adapted to engage holes in a transverse bar at the rear of said open end of the pouch, said cover being provided with slots along its rear edge registering with the free end of the elastic arms, of mail-box provided with a hinged bottom, guide-tongues on opposite sides of said bottom adapted to fit into the grooves in the mail-pouch frame, and a key permanently secured to the front edge of the box, the bit of said key consisting of vertical lugs adapted to engage the slots under the elastic arms of the pouch-cover, whereby when said mail-pouch cover is hooked onto the lugs said cover will be automatically unlocked and prevented from sliding under the box with the pouch, substantially as described.

7. The combination, with a mail-box provided with an aperture in its front wall and with outwardly-projecting tongues or flanges at its lower opposite edges, a hinged bottom for said box, and a locking mechanism for locking the bottom to the box, of a mail-pouch pro-

vided with guide-grooves for the reception of said tongues on the mail-box, and a lug or pin adapted to enter the aperture in the front wall of said box, said lug or pin operating upon the locking mechanism to unlock the bottom when said pouch is slid under the box, as described.

8. A mail-pouch having its open end connected to a rectangular rigid frame whose rear transverse bar is provided with holes a^3 and whose lateral bars have interior longitudinal guide-grooves, a cover for said pouch adapted to slide in said grooves and composed of two plates connected to form an intermediate space, and a rearwardly-extending flange, said flange being provided with a plurality of slots and with a perforation in front of each slot, spring-arms arranged between the two plates, the free ends of which arms project over the slots in the flange, and a pin depending from each spring-arm and projecting through the perforations, said pins fitting into the holes in the rear transverse box of the pouch-frame when the cover is pushed in to lock the latter to said frame, in combination with a mail-box provided with a hinged bottom and with tongues adapted to fit the grooves in the pouch-frame, and means for unlocking the pouch-cover arranged at the lower front edge of the box, consisting of vertical lugs equal in number to that of the spring-arms of the pouch-cover, said lugs fitting into the slots of said cover, substantially as and for the purposes specified.

9. A mail box comprising an outer case provided with a hinged lid and bottom, an inner chamber of less dimension, open at bottom only, and independent locking mechanisms for the lid and bottom arranged in the spaces formed between the chamber and outer case, substantially as described, for the purposes specified.

10. A mail-box comprising an outer case provided with a hinged lid and bottom, an inner chamber of less dimension, open at bottom only, independent locking devices for said lid and bottom, and intermediate mechanism controlled by the lid to lock the locking devices for the hinged bottom against operation, said locking devices and intermediate mechanism being arranged in the spaces formed between the inner chamber and outer case, substantially as described, for the purposes specified.

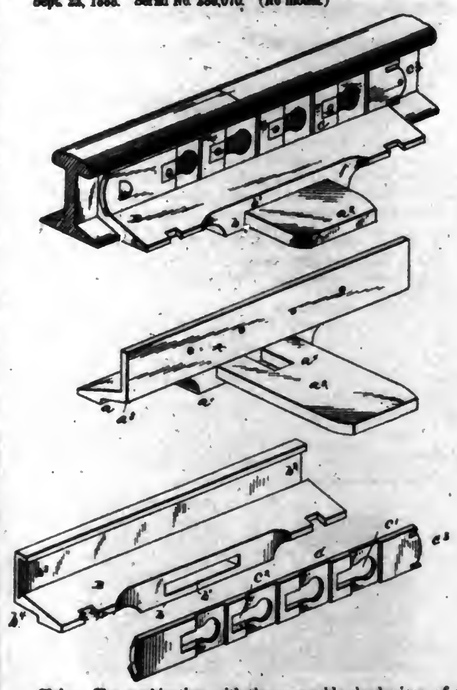
11. The combination, with the hinged bottom of the mail-box, of locking devices comprising an eccentric provided with a peripheral notch, a link connected to the eccentric and bottom, and a locking-lever operating to engage the notch of the eccentric when the hinged bottom is closed, substantially as and for the purposes specified.

12. A mail-box provided with a perforation in and near the lower edge of its front wall and a hinged bottom for said box, in combination with locking devices comprising an eccentric, a link connected to said eccentric and bottom, and a locking-lever one end of which is adapted to engage a peripheral notch in the eccentric when the bottom of the box is closed, the other end of said lever projecting over the perforation in the front wall of the box, whereby said lever may be tripped by the insertion of a pin into said perforation and the bottom of the box unlocked, substantially as described.

13. A mail-box, provided on its front wall with a holder for a time-plate, *f*, and with a hinged bottom, in combination with locking mechanisms for said plate and bottom, comprising an eccentric, a link connected thereto and to the hinged bottom, a locking-lever operating to engage a peripheral notch in said eccentric when the bottom of the box is closed, and a locking-lever having hooked ends, one of said ends projecting over the time-plate when in its holder and the other lying in the path of a pin projecting from the eccentric, whereby when the eccentric is released by its locking-lever and caused to rotate under the weight of the hinged bottom the projecting pin will engage one of the hooked ends of the time-plate-locking lever and tilt the same to unlock said plate, substantially as described.

14. The combination, with a mail-box provided with a hinged lid and bottom, locking devices comprising an eccentric, a link connected thereto and to the hinged bottom, and a spring-actuated lever adapted to engage a peripheral notch in said eccentric when the bottom of the box is closed, of a locking-lever one end of which is arranged to engage the spring-actuated lever and a spring-actuated locking-rod adapted to engage the said locking-lever, the movement of said rod in one direction being controlled by the hinged lid of the box, substantially as and for the purposes specified.

15. The combination, with a mail-box provided with a hinged lid and bottom and with a holder for a time-plate, of locking mechanisms for said hinged bottom and time-plate, consisting of an eccentric connected with the hinged bottom, a spring-actuated lever adapted to engage a peripheral notch in the eccentric when the bottom is closed, and the lever F, having hooked ends f^8 f^{10}, said hooked end f^{10} lying in the path of a pin projecting from the eccentric, and the hook f^9 projecting over the holder for the time-plate, substantially as and for the purposes specified.



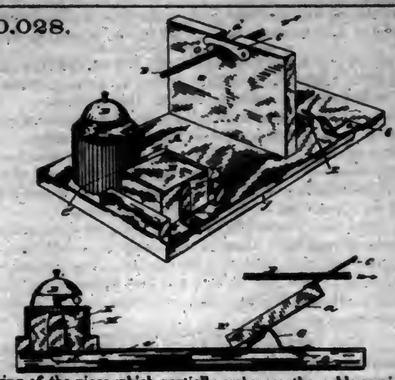
16. The combination, with a mail-box provided with a hinged lid and bottom, a lock for said lid and locking devices for the bottom comprising an eccentric connected with the bottom, and a locking-lever adapted to engage a peripheral notch in the eccentric when the bottom is closed, of the rod b^4 and the spring-actuated locking-bar b^5, connected with said rod, whereby when the lid is unlocked said rod and bar will move upward to lift the lid and lock the key against withdrawal from the lid-lock, substantially as and for the purposes specified.

17. The combination, with a mail-box provided with apertures b^3 in its front wall and with a hinged lid and bottom, and an interior chamber open at bottom only, said chamber being of smaller dimension than the mail-box, to leave space between its front, top, and end walls and the corresponding walls of said box, of locking devices comprising a crank-shaft arranged between the box-lid and top wall of the interior chamber, an eccentric at each end of said shaft, links connecting the eccentrics with the bottom, spring-actuated levers adapted to engage a peripheral notch in the eccentric when the bottom of the box is closed, the lever C, provided with the arms or lugs *c*, projecting through slots at the rear edge of the hinged bottom, and the spring-actuated rod *i*, substantially as and for the purposes specified.

18. The combination, with the mail-box having a perforation, b^3 in its front wall, a hinged lid, a hinged bottom, and tongues b^2 at opposite ends, the eccentric b', connected with said bottom, the locking-lever D, adapted to engage a peripheral notch in said eccentric when the hinged bottom is closed, the foot of said lever projecting in front of the perforation in the front wall of the box, the lever C, provided with an extension, *c*, projecting through slots at the rear edge of the hinged bottom, and the rod *i*, in combination with a mail-pouch having its open end connected to a rigid frame, said frame having guide-grooves in its lateral bars, and pins or lugs a^5 projecting therefrom, substantially as and for the purposes specified.

19. The combination, with a mail-box having a hinged lid and a holder for a time-plate, *f*, on its front wall, of an eccentric provided with a projecting pin, and a locking-lever, F', having hooked ends f^8 f^{10}, pivoted near the lid, said parts being arranged and operating substantially as and for the purposes specified.

400,027. RAIL-CHAIR. ALLEN I. WOLFE, Newbury, Ind. Filed Sept. 22, 1888. Serial No. 286,070. (No model.)

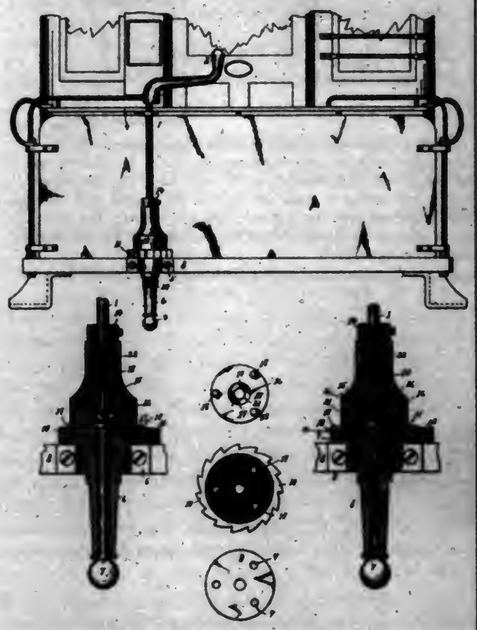


Claim.—The combination, with the removable cheek-piece, of a dovetailed slot cut in one side and designed for the reception of a bar provided with key-hole slots designed to engage the nuts of the bolts for holding the device intact, substantially as described.

400,028. ELECTRIC ALARM-SIGNAL FOR CABLES. WILLIAM H. WOODRING and CLARENCE S. GILBERT, Kansas City, Mo. Filed July 2, 1888. Serial No. 278,009. (No model.)

Claim.—1. In combination, a cable, a swinging piece partially surrounding the cable, a guard pivoted to said swinging piece above said cable, an electric circuit comprising a battery, and an alarm, the swinging of the piece which partially embraces the cable serving to close the circuit, substantially as set forth.

400,028.



2. In combination, a base, a cable, a drop hinged to the base and partially embracing the cable, a guard pivoted to said drop above the cable, a normally-open circuit comprising a battery and alarm, and contact-pieces engaged one with the drop and one with the base and adapted to be brought into contact by the falling of the drop, substantially as set forth.

3. In combination, a drop constructed to partially surround a cable, and a pivoted guard or finger constructed to rest normally over the cable, the said finger having a bearing against the side of the drop in the direction in which the cable moves when the drop is upright and free to swing on its pivot and release the cable when the drop is tilted, substantially as set forth.

4. In combination, a cable, a base, a drop hinged to the base and provided with a recess to receive the cable, a pivoted guard extending over the cable across the recess, an electric circuit comprising a battery and alarm, a spring contact-piece connected with the base, and a contact-piece connected with the drop, the relative positions of the contact-pieces being such that the tilting of the drop in the direction which the cable runs will throw them into engagement, substantially as set forth.

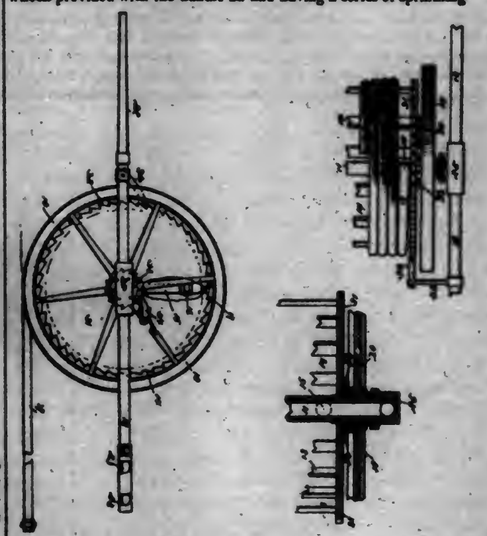
400,029. CAR-BRAKE. BENTON L. WRIGHT, Bridgeport, Conn., assignor of two-thirds to Samuel A. Burns, same place. Filed Dec. 26, 1888. Serial No. 294,631. (No model.)

Claim.—1. The combination, with a brake-staff having cams, and a winding-drum to which the chain is connected, of a winding-sleeve on said staff, which is adapted to engage the drum and is engaged by the cams, so that when the staff is turned forward the sleeve and drum are carried thereby, and when the staff is turned backward the sleeve is raised and disengaged from the drum.

2. In a car-brake, a staff having cams, a winding-drum loose on said staff, and a winding-sleeve having lugs to engage the winding-drum, and inclines and shoulders engaged by said cams and adapted to engage the drum, whereby when the staff is turned forward the winding-sleeve and cone are turned to set the brake, and when the staff is turned backward the winding-sleeve is raised to release the cone, substantially as described.

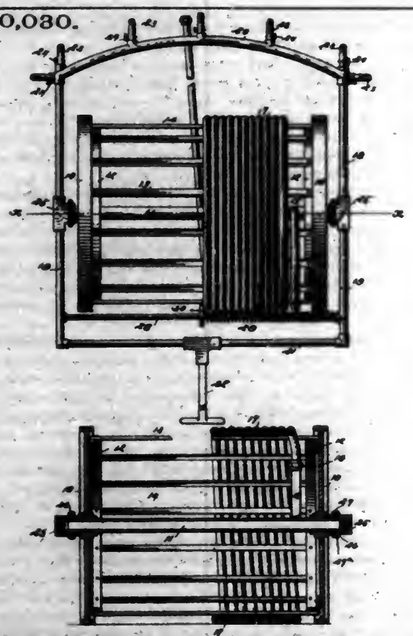
3. In combination, a brake-staff having cams, a winding-drum loose upon the staff to which the chain is connected and which is provided with openings in its upper side, and a winding-sleeve having inclines and shoulders engaged by the cams, and lugs adapted to engage the openings in the drum, whereby when the staff is turned forward the winding sleeve and drum are carried thereby, and when turned backward the winding-sleeve is raised, as and for the purpose set forth.

4. In combination, a brake-staff having cams, substantially as shown, a winding-drum loose upon the staff to which the chain is connected, and which is provided with openings in its upper side, a ratchet having openings adapted to register therewith in one position only, a winding-sleeve having inclines and shoulders adapted to be engaged by the cams, and lugs engaging the openings in the ratchet, and adapted to engage the openings in the drum, whereby when the staff is turned forward the winding-sleeve, ratchet, and drum are carried thereby, and when the staff is turned backward the winding-sleeve is raised and the lugs are disengaged from the drum, leaving the latter free to be turned backward by the tension of the chain.



5. In combination, a brake-staff having cams, substantially as shown, a winding-drum loose upon the staff to which the chain is connected and which is provided with openings in its upper side, a ratchet having openings adapted to register therewith in one position only, a winding-sleeve having inclines and shoulders adapted to be engaged by the cams, lugs engaging the openings in the ratchet and adapted to engage the openings in the drum, and a spring acting to hold said lugs in engagement with said openings, as and for the purpose set forth.

6. The combination, with a brake-staff having cams, a winding-drum loose on said staff and having openings 9, and a ratchet having openings 19, of a housing, substantially as shown, a winding-sleeve within said housing having inclines and shoulders adapted to be engaged by said cams, lugs engaging openings 19 and 9, and a spring bearing against the upper end of the housing and the winding-sleeve, as and for the purpose set forth.



7. A base-plate, a winding-drum journaled thereon and having a flange resting thereon and provided with openings in its upper side, a ratchet having a recess in its under side to receive said flange, and openings 19, in combination with the brake-staff passing through said drum and ratchet, cams upon said staff, a winding-sleeve having lugs to engage the winding-drum, inclines and shoulders engaged by said cams, and a foot-dog adapted to engage the ratchet.

400,030. COMBINED REEL AND SPRINKLER. RICHARD WYLIE, Napa, Cal. Filed Sept. 27, 1888. Serial No. 286,543. (No model.)

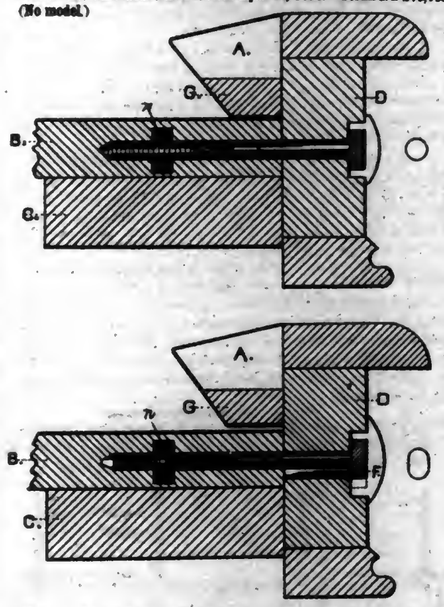
Claim.—1. The combination of the tubular frame mounted on wheels provided with the handle 22 and having a series of sprinkling-

400,030.

sozzles, 23, secured upon its front end, the tubular axle having a tubular connection with the sides of said frame, a reel mounted on the axle, and a hose adapted to be wound on the reel and connecting with the axle, as shown and described, whereby when the machine is pushed or drawn along the passage of water through the axle and frame may be maintained, as specified.

2. The combination of the tubular frame having sozzles at its front end, a tubular axle journaled in said frame and communicating with it, wheels applied to the axle, the reel mounted on the latter, a hose connecting with the axle, a ratchet affixed to the reel, and a pawl pivoted on the frame, and a second ratchet and pawl attached to the wheel hub and reel, respectively, and arranged as shown, whereby when said frame is oscillated vertically the reel is revolved independently of the wheels and the hose thereby wound on the reel, as shown and described.

3. The combination, with a tubular frame, a tubular axle journaled in said frame, wheels mounted upon said axle, and a reel secured to said wheels, of a hose attached to the axle and wound upon the reel, a spring-actuated sliding collar engaging the inner coil of the hose, and sprinkling-tubes attached to the said frame, substantially as shown and described.



4. The combination, with a tubular frame, an axle journaled in said frame and connected therewith, and a reel mounted upon the said axle, of a hose coiled upon the reel and connected with the axle, a transverse bar at one side of the reel, a spring-actuated collar sliding upon said bar and engaging the inner coil of the hose, sprinkling-tubes connected with the frame, and a valve located in said tubes, all combined to operate substantially as and for the purpose specified.

400,031. METHOD OF MOUNTING AND PRESERVING PHOTOGRAPHIC PROOFS AND COPIES. DANIEL K. ZUHWALT, Visalia, Cal. Filed Sept. 13, 1887. Serial No. 249,606. (No specimens.)

Claim.—1. The herein-described improvement in the art of mounting photographic proofs or prints of deeds or other subjects, which consists in placing and permanently uniting two of the same back to back by means of gum or other cement, substantially as set forth, whereby the tendency of the printed sheets to cockle or curl inward toward the albuminized or printed sides is neutralized.

2. The herein-described improvement in the art of mounting and preserving photographic copies of manuscript or printed deeds and other documents, which consists in first placing and permanently uniting two of said copies back to back, and then collecting and binding a number of the same into book form, substantially as and for the purpose specified.

400,032. BILLIARD-TABLE RAIL AND CUSHION. CHARLES G. BROOKWAY, Pine Bluff, Ark. Filed Apr. 14, 1888. Serial No. 270,715. (No model.)

Claim.—The combination, in a billiard-table, with the bed having a horizontal bolt-hole and a stationary nut in the bed with its aperture in line with said bolt-hole, of the vertically-adjustable cushion-carrying rail having a transverse vertical slot, and a bolt passing through said slot into the bolt-hole and nut, whereby the said rail may be adjusted vertically without carrying the bolt and nut with it, substantially as set forth.

PHOTO LITH. NORRIS PETERS WASHINGTON D.C.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE WARD.

Decided March 6, 1889.

1. PRACTICE OF WITHHOLDING NOTICE TO CAVEATORS UNTIL QUESTION OF PATENTABILITY IS SETTLED.

Decision in *ex parte Kenney* (C. D., 1889, 97) considered and modified and the following practice directed: Whenever an application is filed showing subject-matter interfering with any pending caveat, the notice which the statute provides shall be sent to the caveator should be sent at once and not delayed until the invention shall have been favorably passed upon and the application found to be ready for allowance.

2. RIGHTS OF CAVEATOR.

The statute confers no rights upon the caveator, nor does it give him any status in the Office as an applicant. It extends, as matter of grace, to him the right to be notified of the pendency of an application relating to the subject-matter of his caveat. It is not intended that he shall have the benefit of an examination of his caveat before he has filed an application, which substantially results when the notice is withheld until the patentability of the invention of another applicant is determined.

3. RIGHTS OF APPLICANT.

An applicant who has completed his invention and diligently and successfully prosecuted his application for patent ought not to be delayed in the issuance of his patent by a caveator who is under no obligation to be diligent or to file his application for patent.

ON petition.

DISINTEGRATING-MACHINE.

Application of Randolph G. Ward filed February 15, 1888, No. 264,061.

Mr. E. B. Stocking for the applicant.

HALL, *Commissioner:*

A caveat was filed in the Office on June 28, 1887, which was renewed on June 27, 1888. The present application was filed on February 15, 1888, 8 months after the filing of the caveat. It appears that the caveat was overlooked and the application allowed for issue on February 9, 1889, or almost one year and eight months after the filing of the caveat. The second caveat, of June 27, 1888, can in nowise figure in the case, and no further reference need be made to it. Immediately after the application was allowed the caveat was discovered, and on February 12, 1889, the case was withdrawn from the issue in order to take the necessary steps to give notice to the caveator, &c. Thereupon the applicant, having ascertained which claim was supposed to be in interference with the subject-matter of the caveat, filed an amendment eliminating the broad claim for the purpose of avoiding the caveat. This was permitted; but the examiner called applicant's attention to the decision of the Commissioner in *ex parte Roberts*, (40 O. G., 573,) in view of the fact that the eliminated claim, which applicant proposed to present in a subsequent application, was broad and generic, and left in the application only specific claims to the subject-matter. The intimation was of course that the issuing of the patent upon the allowed claims might possibly operate as a bar to the proposed second application. In the meantime applicant, before the notice of the caveat had been given and while laboring under the belief that there was nothing standing in the way of his patent, started for Japan for the purpose of taking out Letters Patent. He had also sent an application to Mexico, intending to take out patents under that government, where the term is but 10 years, as I am advised. In this condition of things, it being apparent that the applicant would be prejudiced whatever course he might pursue, he has presented the present petition, asking to be allowed to reinstate the broad claim which he canceled under the suggestion of the examiner, and that a patent issue to him, notwithstanding the impending interference. I am disposed to grant the request so far as to permit him to amend by restoring the claim. The whole situation has grown out of a mistake on the part of the Office, prejudicial in both directions, and it seems only just that applicant shall be reinstated in this respect. I find myself unable, however, to grant the request that the patent may be issued without reference to the interference.

Under the statute, section 4902, it is provided that a caveat filed in the Office shall be operative for the term of 1 year from the time of its filing, and that if within that year any person filed an application for a patent with which such caveat would in any manner interfere such application shall be deposited in the confidential archives of the Office and notice thereof be given to the caveator, who shall thereupon, if he desired to do so, file his application within 3 months from the time of placing the notice in the post-office, &c. This statute confers no rights upon the caveator, nor does it give him any status in the Office as an applicant. It extends as matter of grace to him the right to be notified of the pendency of an application relating to the subject-matter of his caveat. The caveat is operative for 1 year. This does not mean that the caveator is under any obligation to file an application, nor that he can excuse himself from any lack of diligence in filing it. The operativeness is not upon the caveator, but upon the Office to give the notice required. There is no limitation of the period within which the caveator may file his application, and hence it has been held, properly, that when the application

of another inventor has been filed on the last day of the year within which the caveat is operative, notice shall be issued, and the caveator shall have 3 months thereafter within which to file his application. Although it is true that the caveat is operative for 1 year, and such notice may have the effect of giving the caveator 15 months within which to file his application, so, also, the time may be curtailed the space of 3 months—for instance, were an application filed in the Office later in the day on which the caveat was filed. It must follow, I think, that the provision of the statute which requires the caveator to file his application within 3 months from the date of the notice of an application is rather for the protection of the applicant who has been diligent in filing an application than for the caveator who, as stated above, acquires no right or status as an applicant and is not entitled to be hastened by the Office, that being a matter of his own choice and interest. In other words, when an applicant comes into the Office he ought not to be delayed in the consideration of his application and the issuance of a patent by a caveator unless the caveator shall file his application within the specified time.

In the present case, as stated above, on February 9, 1889, when the application was allowed and passed to issue, a year and eight months nearly had elapsed since the caveat was filed, and yet the caveator had not seen proper to complete his invention and file an application therefor. His caveat was withheld from the public and withheld from the applicant who had completed his invention and who had diligently and successfully prosecuted his application, and now, after this lapse of time, applicant finds his case arrested in order that a caveator who has allowed so long a period to elapse may be notified and have another 3 months within which to file his application. Yet, under these circumstances and in view of the decision of Commissioner Fisher, *ex parte Kenney*, (C. D., 1869, 97,) I find it impossible to afford either of the parties any relief. The notice must be given, if it has not been already, to the caveator, who must be allowed the requisite time within which to file his application, and the interference proceedings must follow if the examiner sees proper to institute them.

I have called attention to the peculiar features of this case with a view to effecting a change in the practice as far as can be done without recommending a new rule upon the subject. In the decision of Commissioner Fisher, to which reference has been made, it is shown that at that time it was the practice of the Office before issuing notice to a caveator to determine the patentability of the invention claimed in the application, and that rule, as I am advised, has prevailed to the present time, although, as shown by the examiner in his report on this application, there is a variance between Rule 196 of the edition of Rules of Practice of March 1, 1884, and present Rule 205. In my judgment, the safer and better practice will be to give the notice contemplated by the statute to a caveator whenever an application of another applicant is filed which shows interfering matter and not wait until the application has gone through an examination and is ready for allowance. An examination of the records shows that as a consequence of the present practice a number of patents have issued pending caveats and other difficulties have arisen. Although hardship would have arisen in any event in the present case, growing out of the fact that the caveat was overlooked, yet I cannot but feel that it would be safer for applicants and for the Office that the notice be issued as soon as it is discovered or ascertained that an application contains interfering subject-matter.

It was suggested by Commissioner Fisher in the case referred to above:

> But it has not been the practice of the Office to give this notice unless the device presented was deemed patentable. In any other case the caveator would be put to unnecessary expense, for the Office would not inform him in advance that the device was not considered novel. Such a notice would, in fact, constitute a preliminary examination.

I have just stated that the statute is not intended to confer upon the caveator any right other than that a notice of a pending application be given him. It is not intended that he shall have the benefit of an examination for his caveat before he has filed an application because another applicant more diligent has completed the invention and filed his application in the Office. When that application is filed in the secret archives of the Office, as the statute contemplates, that applicant takes his chances as to the question of patentability, and I see no reason why a caveator should not be placed in the same position.

Under these circumstances I reach the conclusion that the better practice and a strict and literal compliance with the statute require that upon the filing of an application which it is ascertained contains interfering subject-matter with a caveat the application should be placed in the secret archives and the caveator notified without delay.

ELGES *v.* MILLER.

Decided March 7, 1889.

1. HOW FAR A CAVEAT MAY BE USED AS EVIDENCE OF INVENTION IN AN INTERFERENCE PROCEEDING.

   The statute authorizing the filing of a caveat does not intend to confer upon the caveator any right as an inventor, nor to save him from the effect of negligence or give him any advantage over any other inventor who has conceived the invention and prosecuted his application with diligence. The statute authorizing a caveat does not compel a caveator to file any application. It is not intended as a stimulus to prod and drive him to perfect his invention, nor is it intended to extend the time in any manner within which he may complete the invention; but it simply provides, as matter of grace, that the caveator shall be notified of the filing of any application which comes into the Office within a year, covering the subject-matter of his caveat.

2. SAME.

   The filing of a caveat does not give to the caveator the standing of an applicant with respect to what is called "Constructive Reduction to Practice." The caveat is a procedure kept in the secret archives of the Office and in itself contains no declaration or purpose on the part of the caveator that he will ever complete or finish his invention or give it to the world. The statute does not contemplate that a caveator shall stand as an obstruction to the diligent efforts of other inventors in the same field of art.

MOTION for rehearing.

CIGAR-MOLDS.

Application of Gottlieb D. Elges filed April 30, 1887, No. 236,688. Application of Frederick C. Miller filed January 3, 1887, No. 223,232.

Messrs. Knight Brothers and *Mr. M. F. Halleck* for Elges.

Messrs. Knight Brothers for Miller.

HALL, *Commissioner:*

This is a motion for rehearing of the decision of the Assistant Commissioner affirming the judgment of the Examiners-in-Chief which reversed the decision of the Examiner of Interferences and awarded priority to Elges.

The issues are as follows:

A.

1. A revoluble drum having the cups or members of a cigar-mold arranged parallel with its axis, in combination with the cups or members which are supplementary to those carried by the drum, having hinged connection with said drum.
2. The revoluble drum having the cups of a cigar-mold arranged parallel with its axis, in combination with the complementary cups or members and the arms, each of said arms being connected at one end to one of said cups and hinged at the other so as to be carried by the drum.
3. The combination, with the revoluble drum having the cups or members of a cigar-mold arranged parallel with its axis, of the complementary cups or members, the arms each connected at one end to one of said cups or members and the brackets secured to the drum and to which said arms are hinged.

B.

A revoluble drum having the cups or members of a cigar-mold arranged parallel with its axis, in combination with the complementary cups or members each having at one end hinged connection with said drum, and means for engaging the said hinged members with the members carried by the drum.

Elges conceived the invention, disclosed it to others, made a drawing of it, and filed a caveat fully illustrating and disclosing it on June 14, 1886. This was before Miller had made any conception of the invention. It is fully established that Miller conceived the invention about July 1, 1886, immediately reduced it to practice in an operative machine, and filed his application on January 3, 1887. Elges did nothing more, either to mature the invention or to reduce it to practice until as caveator he was notified by the Office on March 4, 1887, of Miller's application, under the statute relating to caveats. He then filed his application on April 30, 1887.

The Examiner of Interferences awarded priority to Miller. Upon appeal the Examiners-in-Chief reversed his decision and awarded priority to Elges, the caveator. There is no question but that Miller conceived the invention pending Elges's caveat, at once reduced it to practice, and filed his application, so that he must be regarded as the original first inventor, unless Elges can be given the status of priority by virtue of his conception and the filing of his caveat.

In *ex parte Ward*, March 6, 1889, I had occasion to give expression to my views as to the nature and effect of a caveat. I held, in substance, that the statute which authorizes the filing of a caveat does not intend to confer upon the caveator any right as an inventor, nor to save him from the effect of negligence or give him any advantage over any other inventor who has conceived the invention and prosecuted it with diligence under the law. The statute authorizing a caveat does not compel a caveator to file any application whatever. It is not intended as a stimulus to him to prod him and drive him to perfect his invention, nor is it intended to extend the time in any manner within which he may complete the invention; but the statute provides, as a matter of grace, that the caveator shall be notified of the filing of any application which comes into the Office within a year covering the subject-matter of his caveat. It is also true that the filing of a caveat does not give to the caveator the standing of an applicant with respect to what is called "constructive reduction to practice." It has long been the practice in the Office to regard the filing of an allowable application as a constructive reduction to practice, and if a patent issue upon it no other inventor can antedate such patent and application, except by showing an actual reduction to practice of an earlier date. This status is not attained by a caveator. His caveat is a secret procedure kept in the secret archives of the Office, and in itself contains no declaration or purpose on the part of the inventor that he will ever complete or finish his invention or give it to the world, and by adopting such secret procedure it was not intended that he should stand as an obstruction to the diligent efforts of other men in the same field of art.

In this case Elges did nothing more toward completing or perfecting his invention after he filed his caveat, but allowed the matter to rest there. It is suggested by the Examiners-in-Chief that he then completed his invention; but so far as relates to what Elges himself had done this statement is not strictly accurate.

As stated above, the filing of a caveat is not a completion of an invention. It is not constructive reduction to practice, for that is recognized and allowed only to one who comes forward with an application in which he fully discloses his invention and asks that the same should be patented and made public in order that the public may have the benefit of it.

If it be true that Elges had completed his conception of the invention so that he could describe it in a written specification and by drawings, he was in a condition to have filed his application on the date at which he filed his caveat, and that was the proper course for him to have pursued. The fact that he failed to do this indicates a belief, at least, on his part that such was not the case, and in either event it is a necessary conclusion that he was negligent in not then filing his application or doing something toward completing his invention. If his invention was complete, he allowed some eight or nine months to pass without any reason for the delay or any excuse for it, while in the meantime another inventor had conceived and completed the invention, reduced it to practice, and filed his application.

Under these circumstances the motion for rehearing is granted. Inasmuch, however, as all the merits of the case were fully argued before me, judgment is at the same time hereby entered. The decision of the Assistant Commissioner is vacated, and priority of invention awarded to Miller.

GREEN *v.* HALL *v.* SIEMENS *v.* FIELD.

Decided March 6, 1889.

1. EVIDENCE OF INVENTION IN FOREIGN COUNTRY.

   Evidence of invention in a foreign country cannot be received in an interference proceeding unless such evidence is in the form of a publication or patent, or is for the purpose of showing that some one of the contestants is not an original inventor.

2. PRIORITY WITH INVENTOR WHO REDUCES TO PRACTICE.

   The purpose of the law is to benefit the public as well as to protect the inventor, and the inventor who reduces his invention to practice in such a complete way that he at once perfects it as an invention, and at the same time practically demonstrates its utility, is clearly to be preferred to one who merely made hints and suggestions to others and failed himself to act upon them.

3. CONTINUING APPLICATIONS.

A second application cannot legally be considered a continuation of a first or earlier application by the same inventor unless it contains *the same invention*.

4. MODELS NOT EVIDENCE OF REDUCTION TO PRACTICE.

It is well-settled law that a working model, designed and intended as such, is not a reduction to practice. Mere working models, allowed to rest in oblivion for many years, will not prevail to establish priority when application for patent is delayed and not filed until after another and more diligent inventor has entered the same field of invention and established his claim as an independent inventor.

APPEAL from Examiners-in-Chief.

ELECTRIC RAILWAYS.

Application of Geo. F. Green filed May 15, 1886, No. 202,287. Application of Thomas Hall filed July 22, 1885, No. 172,325. Application of Ernst W. Siemens filed October 25, 1884, No. 146,478. Application of Stephen D. Field filed March 10, 1880, No. 4,752.

Mr. R. D. O. Smith and *Mr. G. W. Dyer* for Green.

Mr. E. N. Dickerson and *Messrs. Foster & Freeman* for Hall.

Mr. C. S. Whitman for Siemens.

Mr. F. L. Pope, *Mr. F. W. Whitridge*, and *Messrs. Marble & Mason* for Field.

HALL, *Commissioner:*

The issue in controversy is as follows:

The combination of a stationary dynamo-electric generator driven by a suitable motor, a circuit of conductors composed in part of an insulated or detached section of the line of rails of a railroad-track, a wheeled vehicle movable upon or along said section of track, an electro-magnetic motor mounted upon said vehicle for propelling the same and included in said circuit of conductors, and a circuit-controlling device placed upon said vehicle.

In order to adjudicate the rights of the parties involved in this contest it will be necessary to give an interpretation to the issue, inasmuch as the various contestants have adopted several diverse views of the meaning of the subject-matter in controversy.

The principal points of difference relate to the interpretation of the words "stationary dynamo-electric generator," occurring in the first line of the issue, and the words "circuit-controlling device," appearing in the last line of the same.

A comparison of the different applications, including both their specifications and drawings, will throw important light upon this question, because the intention of the examiner who declared the interference must be construed to have been to follow the rules, and therefore he must have regarded each application as at least exhibiting every element of the invention which he declared formed the basis for the interference.

It is contended by one of the contestants that the term "stationary dynamo-electric generator" cannot be held to include the ordinary magneto-electric generator, but is limited to a special form of self-exciting generator, such as was invented by Siemens and is employed by him and also by Field and Green. This construction does not harmonize with the declaration of interference, for Hall certainly could not be involved if we accept the restricted definition of dynamo-electric generator. Another circumstance which is useful in this connection is the history of the applications, considered individually, before the interference was declared. It appears that Field was rejected upon certain patents and his case appealed to the Examiners-in-Chief, who, in comparing his invention with the references, analyzed the claim to the extent of dividing it into five portions or elements, one of which was a "stationary dynamo-electric generator." The references showed magneto-electric generators and the Board found no fault with their pertinency on this account, but pointed out the difference as consisting in the circuit-controller, which they alleged was the essential feature lacked by the patents cited against the application. Thus we see the patentability of the claim was not made to depend upon a restricted meaning of the term "dynamo-electric generator." Furthermore, some of the highest authorities use the expression "dynamo-electric generator" as a generic one, including all kinds of magneto-generators. This is especially so in the noted work on dynamo-electric generators by Thomson. In view of these considerations I am compelled to hold that the expression is generic and covers all forms of magneto-electric generators.

In regard to the term "circuit-controller" Siemens wishes it to be defined as a device which not only makes, breaks, and reverses the circuit, but also modifies the *current*, as, for instance, in its strength or in other particulars. Such an interpretation would also seem to be antagonistic to the theory of the examiner in declaring the interference, for the reason that neither Hall nor Field has any such arrangement. Besides, this is not the usual interpretation of the expression. At the time of the declaration of this interference it was quite common for circuit-breakers and circuit-makers to be included under the generic title of circuit-controllers, and I see no evidence in the record which leads me to believe that a more narrow definition was intended. In discussing the question of priority I shall therefore consider the term "dynamo-electric generator" as a broad one, designed to include magneto-electric generators, and the term "circuit-controller" as including devices for making and breaking the circuit and reversing the same.

In the view I take of this case it will facilitate the arrival at a conclusion to find the dates of invention which can be allowed Field and compare the dates of his competitors with them. On the 21st of May, 1879, Field filed a caveat which, as I view it, fully disclosed the invention in controversy, and this date may therefore be given him as his date of conception. It appears that this caveat was renewed within the year and a short time after renewal—to wit, on the 10th of March, 1880—Field's application was filed. The testimony also shows that Field's conception was disclosed to Mr. Pope sometime previous to the filing of the application with a view of having him prepare an application, but owing to press of business and other reasons Mr. Pope did nothing with it for sometime. It certainly is clear that no negligence on the part of Field in filing his application is made out, and as under the decisions an application must be held to be a constructive completion of the invention it results that Field is entitled to carry the date of his invention back to the time of the filing of his caveat. It is furthermore proven that in 1881 Field constructed a railway comprising the elements called for by the issue, and that in 1883 still another railway embodying his invention was constructed and proved a commercial success.

Siemens cannot, under the statute, be permitted to give evidence of having invented the subject-matter of the interference in a foreign country, unless such evidence is in the form of a publication or patent, or is for the purpose of showing that some one of the contestants is not an original inventor. It is fairly shown that no one of the opponents of Siemens gained his knowledge of the invention from the efforts of Siemens in a foreign country, and therefore this branch of Siemens's case fails. The date of the publications of Siemens is later than that found as Field's date of invention, and consequently, as between Field and Siemens, Field must be adjudged to be the prior inventor.

Green, at least as early as the winter of 1874–'5, put in operation a kind of electric railroad having some of the features embraced in the claim in controversy, but lacking the dynamo-electric generator. Instead of the dynamo-electric generator Green at this time employed a battery. In 1878 Green operated publicly a larger-sized railroad with car and electrical apparatus, but in this also he employed a battey as the generator. In August, 1879, Green filed an application for a patent upon his electric-railway invention, but in this also he showed a battery as the generator. It is in evidence that at each of these experiments Green suggested that it might be well to use a dynamo-electric generator instead of the battery; yet he seemed merely to have this idea and made no attempt to put it into practical operation. No matter what the difficulties were which influenced him, still all practical manifestations of his invention, both in the form of experiments and in the form of his application, resulted in the illustration of a battery rather than a dynamo. It is true that in the application it was broadly stated that any known and suitable source of electricity might be employed; but the form which he actually did employ up to this time seemed in every instance to be the battery. I do not believe that these mere suggestions to various persons that he might use a dynamo instead of a battery can be taken to indicate a conception of the invention within the meaning of the law, or that it can be accepted as adequate proof of anticipation of inventions like those made by Field and Siemens, the practicability of which was clearly demonstrated by expensive and difficult experiments. The purpose of the law was to benefit the public, as well as to protect the inventor, and the man who reduced his invention to practice in such a complete way that he at once perfected it as an invention and at the same time demonstrated its utility in a practical sense is clearly to be preferred to one who rested in hints or suggestions to others and failed himself to act upon the same. I think Green's application is to be construed in the light of his acts, in consonance with the rule which a learned and eminent justice announced when he said:

Tell me how the parties acted under the contract and I will tell you what they meant by it.

Some years after the filing of his first application Green requested to be included in an interference, but was excluded for the very reason that his application did not contain a dynamo, as originally filed, and that the amendment which brought in such dynamo was improper because it involved new matter. This action was sustained by the Commissioner, and I am unable to concur in the reasoning of the Examiners-in-Chief, who, in the face of this decision, seemed to construe such application as involving an interference and to hold that Green—

Has a right to rest upon that application and the action of the Office upon it as evidence of his having disclosed the invention therein at that time.

In May, 1886, Green filed another application in which a dynamo-electric generator was specifically shown and described: but manifestly, in view of the decision of the Commissioner, before referred to, that the old application did not properly include any such style of generator, this later application is an entirely independent one. I cannot concur in the proposition of the Examiners-in-Chief that "while this last application cannot properly be considered a division of the first, yet it is evidently a continuation of it." Legally it cannot be regarded as a continuation of the first application unless it contains *the same* invention. The earliest date which can be found for Green is May 15, 1886, which is the date of his second application.

Hall, the last party to be considered herein, claims to have made the invention at a very early date and produced certain publications and models as tangible proof of that fact. As to the Hall Exhibit No. 5, it may be said that the illustration is entirely insufficient, for the reason that it contains no intrinsic evidence that the source of electricity operating the electro-magnetic motor was a stationary dynamo-electric machine or a magneto-electric machine. In reference to the various models it must be said that they were not reductions to practice in any proper sense of that expression. It is not merely a question of size, as counsel for Hall ingeniously put it, but a question of design and purpose. Hall's models were illustrative, like drawings. They were intended to exemplify his theories and not carry them into effect. It is alleged by counsel for Hall that these models could be made practically useful for carrying parcels, letters, and the like, and were of a size sufficient to be used upon a railway in a cash-carrier system; but the point is that there is not sufficient evidence that they were intended at the time they were constructed to accomplish these ends. The purposes for which they were sold and the uses to which they were put with Hall's knowledge are not such as would carry out his counsel's theory. Philosophical laboratories and learned professors rather than commercial houses and business men received and employed them. It is well-settled law that a working model, designed and intended as such, is not a reduction to practice. Hall's devices manifestly were mere working models and nothing more. After more than a score of years had passed the efforts of others called to Hall's mind his former experience and he then concluded to file his application and claim the invention as his own.

In the decision of *Gaylord* v. *Wilder* the Supreme Court of the United States have put their condemnation upon a case of a similar character, but much stronger than is the case of Hall, for in the Court case the structure which had been allowed to rest in oblivion for many years was a completed full-size structure

and not a mere illustrative model. I feel constrained to hold that Hall does not anticipate Field.

Judgment of priority must therefore be rendered in favor of Stephen D. Field. I am impressed, however, with the similarity between the invention involved in this interference and that set forth in the British patent to Clark, to which the Examiners-in-Chief have called my attention and which has also been brought before me by certain motions, and I therefore direct the case of Field to be returned to the Primary Examiner, who will consider whether the invention covered therein is patentable in view of Clark's patent, taken in connection with the other state of the art.

There remain to be considered the motions to dissolve this interference on the ground that no interference in fact exists, or that some of the parties were improperly included therein. The remarks I have heretofore made render it unnecessary for me to consider these questions at length. I merely decide that an interference did exist at the time the examiner declared the same and the parties involved were properly included.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court—Southern District of New York.

LEARY *et al. v.* HOHENSTEIN.

Decided February 9, 1889.

LEARY—SHADE OR GLOBE HOLDERS FOR CANDLES—INFRINGEMENT.

Letters Patent No. 257,027, granted April 25, 1882, to David Leary, for an improvement in shade or globe holders for candles, *Held* valid, and infringed by the defendant's device, which is a copy of the plaintiffs', which latter, while not made according to the specific device described in the patent, is equivalent thereto and accomplishes the same result in the same manner.

Mr. H. Aplington for the complainants.
Mr. Louis C. Raegner for the defendant.

WHEELER, *J.*:

This suit is brought upon Letters Patent No. 257,027, dated April 25, 1882, and granted to Daniel Leary, for a shade or globe holder for candles. The defenses set up and relied upon are want of novelty and of patentability. No prior structures are produced or shown by evidence to have existed to bear upon the question of novelty. That defense rests wholly upon an English patent, dated in 1842, to Ward and Freeman, and an American patent, dated in 1868, to William H. H. Hinds, for candlesticks, and an English patent, dated in 1850, to William Henry Jones, and another, dated in 1864, to Henry Charles Stearn and Frank Alexander Steane, for apparatus to prevent candles from guttering. These patents do show parts of Leary's structure, and notably a cap-shaped piece fitting over the upper end of the candle, with a hole for the blaze, to support the structure, and gearing below to keep it upright. But none of them show a shade-holder for a shade above the blaze of the candle, nor anything like his complete apparatus or that would answer its purpose. Therefore he was not anticipated by any or all of them. (*Parks* v. *Booth*, 102 U. S., 96.) These prior patents are also relied upon to limit the field open to Leary, and counsel for the defendant urges, in support of the other defense, that there was no room for patentable invention between them and his shade-holder; that a workman might by the skill of his trade put the shade-holder onto this cap-shade piece. If the candle was to stand unchanged, this would be easier, but there was more to be done than to place the shade-holder upon a permanent standard. The candle must be of material which would melt with heat and be consumed as it melted. The device must be so arranged as not only to hold the shade-holder upright in the beginning, but to maintain it so, and do this by means that would not melt the candle below and weaken and waste it, and would let it melt about the wick and burn. Apparatus which would extend down upon the candle without becoming hot enough to melt it and extend above for the shade holder was to be contrived. This would seem to require calculation and ingenuity beyond that of a mechanic in the mere exercise of his calling. No mechanic or other person appears to have accomplished this before Leary did. When he had done it, his device went into extensive use. This shows that it was wanted, and that ordinary workmanship had not brought it. What he did appears to amount to invention which is patentable.

The patent describes the supports of the shade as being attached to a ring resting about the cap-shaped piece over the end of the candle, and as being attached directly to that piece. Both of the claims include that ring in the arrangement. Neither the plaintiffs' device made under the patent nor the alleged infringement has that ring. Generally a patent for a combination or arrangement of several parts is not infringed by taking less than the whole of them. (*McMurray* v. *Mallony*, 111 U. S., 97; *Voss* v. *Fisher*, 113 U. S., 213.) But taking some of the parts, with equivalents producing the same result for the others, is an infringement. (*Water Meter Company* v. *Desper*, 110 U. S., 332; *Rowell* v. *Lindsay*, 113 U. S., 97.) The cap-shaped piece, with the supports of the shade attached to it, is the equivalent of the same and the ring with the supports attached to that, and accomplishes the same result in the same manner. The plaintiffs' device therefore appears to be made according to the patent. The defendant's device, which is a copy of the plaintiffs', appears for the same reasons to be an infringement.

These conclusions have not been arrived at without noticing carefully the decision upon the motion for a preliminary injunction in this case. (*Leary* v. *Hohenstein*, 32 Fed. Rep., 832.) The case does not appear to have been so fully presented on proofs then as now. The question was somewhat different, and was in some measure reserved to final hearing.

As the case is now understood the patent is valid and the defendant infringes; therefore the orators appear to be entitled to a decree.

Let a decree be entered that the patent is valid; that the defendants infringe, and for an injunction and an account according to the prayer of the bill, with costs.

Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., January 28, 1888.

Hereafter all drafts, bills of exchange, and money-orders sent to this Office must be made payable to the Commissioner of Patents as payee, and all checks must be certified and made payable to the Commissioner of Patents.

BENTON J. HALL,
Commissioner.

NOTE.—A failure to observe this rule compels the return of uncertified checks and paper not payable to the Commissioner and causes delay to parties sending them.

BENTON J. HALL,
Commissioner.

Additional Sub-Classes.

(ORDER No. 536.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., March 16, 1889.

The following additional sub-classes are hereby established in Class 145, Wood-Working Tools:

33. Spiral tool-drivers.
34. Augers, gage attachments.

BENTON J. HALL,
Commissioner.

Publishers' Catalogues.

This Office would be pleased to receive from manufacturers and publishers such catalogues, circulars, price-lists, or other advertisements relating to the sciences and mechanical arts as are published by them for gratuitous distribution; but notice is hereby given such manufacturers or dealers who feel disposed to send their publications that not less than three copies should be forwarded in order that the subjects may be properly indexed, classified, and subclassified in the Scientific Library for convenient and ready reference.

DESIGNS.

18,974 to 18,976, inclusive.—HANDLE FOR BRUSHES, &c.—*Henry Berry*, Shelton, Conn., assignor to *The Derby Silver Company*, same place. Applications filed February 16, 1889. Serial Nos. 300,169 to 300,171, inclusive. Term of patents 7 years.

TRADE-MARKS.

[Certificates of registration of Trade-Marks numbered 8,191 and upward are registered under the act of March 3, 1881.]

16,413.—PAINT RENEWER AND PRESERVER.—*Baker & Co.*, Poughkeepsie, N. Y. Application filed February 2, 1889. Used since August 10, 1888.

"A quadrilateral figure divided into six equal spaces, of which three spaces at one side show bright colors and the three spaces at the other side show respectively the same colors as dull or faded."

16,414.—CONDUCTING-HOSE.—*Stephen Ballard & Co.*, New York, N. Y. Application filed February 15, 1889. Used since December 15, 1888.

"The words 'IRON CLAD.'"

16,415.—ADJUSTABLE SPOUT FOR OIL AND OTHER CANS OR RECEPTACLES.—*George W. Banker*, New York, N. Y. Application filed December 20, 1888. Used since 1881.

"The representation of a portion of a can broken away so as to disclose the spout in one of its positions within the can, the spout being also shown in its other position externally of the can, one or the other of said positions of the spout being shown in dotted or broken lines."

16,416.—CIGARS AND CHEROOTS.—*Emery Bemis, Jr.*, Boston, Mass. Application filed January 7, 1889. Used since September 12, 1873.

"The words 'HARVARD CLUB.'"

16,417.—MINERS' LAMPS.—*Demmler Bros.*, Pittsburg, Pa. Application filed February 19, 1889. Used since 1878.

"The word 'CHIRAY.'"

16,418.—CASED WATCHES.—*Dubail, Monnin, Frossard & Co.*, Porentruy, Switzerland. Application filed December 29, 1888. Used since November 7, 1888.

"The representation of a star and crescent combined with the initials 'D M F & Co.'"

16,419.—RUFFLING FOR GARMENTS.—*Heidelberger, Frank & Co.*, Philadelphia, Pa. Application filed February 16, 1889. Used since 1884.

"The word 'FASHION.'"

16,420.—PHOTOGRAPHIC OUTFITS.—*Edward I. Horsman*, New York, N. Y. Application filed January 2, 1889. Used since December 1, 1886.

"The word 'ECLIPSE.'"

16,421.—BOILED OILS.—*Thomas Hubbuck & Son*, London, England. Application filed June 7, 1888. Used since February, 1887.

"Two concentric circles having between them at the top the word 'HUBBUCK'S,' the circles being broken horizontally by a band."

16,422.—EMBROCATIONS AND PILLS.—*Harriet A. King*, Salina, Kans. Application filed February 2, 1888. Used since September 1, 1888.

"A dark-colored rectangular background containing spots of a different color from the background and resembling fever-sores."

16,423.—INSECTICIDES.—*J. Robt. Moechel & Co.*, Philadelphia, Pa. Application filed February 21, 1889. Used since November 15, 1887.

"The word 'EUODINE.'"

16,424.—COMPOSITION FOR COLORING AND PRESERVING SAUSAGES.—*S. Oppenheimer & Co.*, New York, N. Y. Application filed December 26, 1888. Used since December 10, 1888.

"The representation of a Maltese cross, the word 'SMOKINE,' and the words 'LIQUID SMOKE.'"

16,425.—WHISKY.—*John Power & Son*, Dublin, Ireland. Application filed January 31, 1889. Used since 1791.

"The word 'POWER.'"

16,426.—RUBBER BELTING, HOSE, AND PACKING.—*Revere Rubber Company*, Boston, Mass. Application filed February 20, 1889. Used since January 1, 1869.

"The word 'NEPTUNE.'"

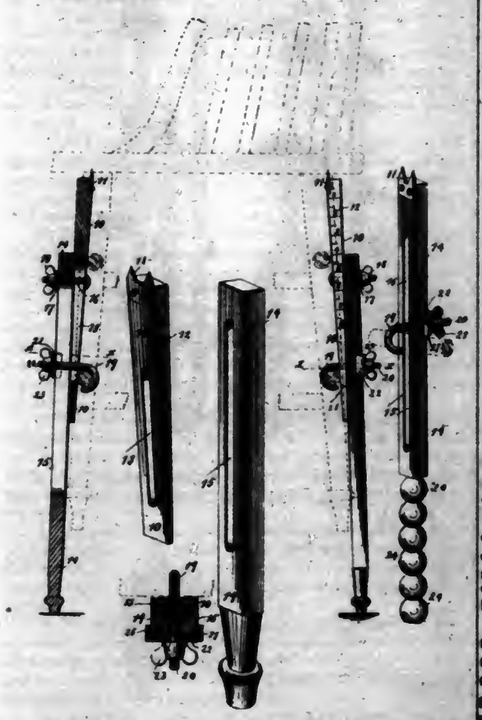
LABELS.

5,854.—Title: "THE MOST VALUABLE MEDICINE YET FOUND."—*Mary E. Chadbourne*, Boston, Mass. Application filed February 12, 1889.

5,855.—Title: "MADAME AGNES' BALM."—*Honora Agnes McAllister*, Albany, N. Y. Application filed February 14, 1889.

5,856.—"SAP MAPLE SYRUP."—*George D. Powell*, Brooklyn, N. Y. Application filed September 28, 1888. (Trade-Mark Registered.)

5,857.—Title: "DR. THOS. WM. SPRANKLIN'S LINIMENT."—*Thos. Wm. Spranklin*, Baltimore, Md. Application filed January 19, 1889.



5,858.—Title: "DR. THOS. WM. SPRANKLIN'S COLIC MIXTURE."—*Thos. Wm. Spranklin*, Baltimore, Md. Application filed January 19, 1889.

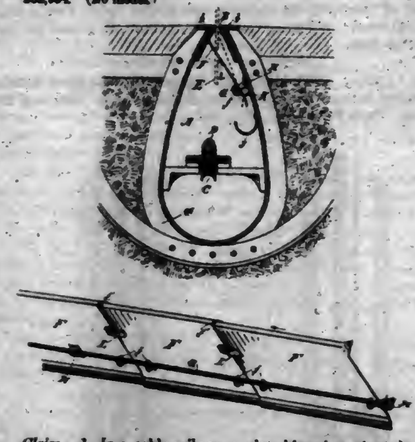
5,859.—Title: "WRIGHT'S MAGNETIC ELECTRIFIER," (FOR A MEDICINE.)—*Frank A. Wright*, Lewiston, Me. Application filed February 6, 1889. (Trade-Mark Registered.)

PATENTS

GRANTED MARCH 26, 1889.

400,033. ADJUSTABLE LEG ATTACHMENT FOR CHAIRS, &c. HABBUCK ALLISER, Rondout, N. Y. Filed June 27, 1888. Serial No. 278,334. (No model.)

Claim.—1. An auxiliary leg for chairs, having penetrating-points at its upper end to engage the seat-frame and a hook-bolt between its ends to engage a chair-round, substantially as set forth.



2. An auxiliary chair-leg formed in two longitudinally-slotted overlapping sections, a transverse hooked bolt passing through said slots to adjust the two sections and secure them to a chair-round, and penetrating-points at the upper end of the upper section, substantially as set forth.

3. An adjustable leg attachment for chairs, consisting of a slotted wedge-block provided with teeth upon its upper end, a slotted auxiliary leg adjustably secured to said block, and a hook provided with a nut and passing through the slots of the block and leg, substantially as shown and described.

4. The combination, with a chair or similar article of furniture, of a wedge-block provided with teeth upon its upper end, auxiliary legs attached to said block, and an adjustable hook adapted to engage a round of the chair, substantially as and for the purpose specified.

5. The combination, with a chair or similar article of furniture, of a longitudinally-slotted wedge-block provided with teeth at its upper extremity, a similarly longitudinally-slotted auxiliary leg adjustably secured to said block, and a hook passing through the slots of said auxiliary leg and wedge-block adapted to engage the round of a chair, and a lock-nut secured upon said hook, all combined to operate substantially in the manner and for the purpose specified.

400,034. TUBE OR TUNNEL PROTECTOR FOR CABLE ROADS. HENRY F. ASCHEIM, San Francisco, Cal. Filed Aug. 16, 1888. Serial No. 282,984. (No model.)

Claim.—1. In a cable railway, a plate hinged or pivoted within the tube or tunnel, to one side thereof, said plate crossing the vertical plane of the grip-slot and resting against the opposite side of the tube or tunnel, substantially as herein described.

2. In a cable railway, a plate hinged or pivoted within the tube or tunnel, to one side thereof, said plate extending at an upward inclination to and resting against the opposite side, whereby when at rest it crosses the vertical plane of the grip-slot and can be moved over to one side of said plate by the passing grip, substantially as herein described.

3. In a cable railway, a plate within the tube or tunnel crossing the vertical plane of the grip-slot and resting against one side of said tube or tunnel, said plate having a hinge or pivot connection with the other side of the tube or tunnel on a line below the center of the plate, whereby it finds its seat by gravity, substantially as herein described.

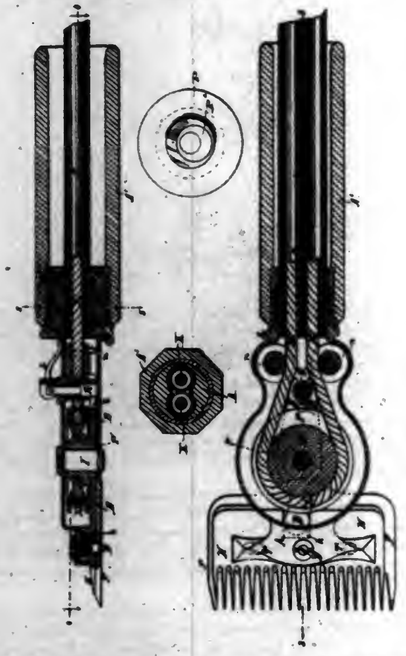
4. In a cable railway, the tube or tunnel having a fixed rod secured to one side thereof, in combination with a plate hinged or pivoted on said rod and crossing the vertical plane of the grip-slot to the other side, where it finds a rest, substantially as herein described.

5. In a cable railway, the tube or tunnel having a fixed rod secured to one side thereof, in combination with a plate hinged or pivoted on said rod on a line below its center, whereby it finds its seat by gravity, said plate extending at an upward inclination across the vertical plane of the grip-slot and resting on the other side, substantially as herein described.

6. In a cable railway, the series of hinged plates within the tube or tunnel and crossing the vertical plane of the grip-slot, said plates having flanges overlapping the edge of the plate adjacent, substantially as herein described.

7. In a cable railway, the series of hinged plates within the tube or tunnel and crossing the vertical plane of the grip-slot, said plates having flanges overlapping the edge of the plate adjacent and having a play in their hinge-connection, whereby only those plates in the vicinity of the passing grip-shank will be moved, substantially as herein described.

8. In a cable railway, the tube or tunnel having the fixed rod, in combination with the series of plates within the tube or tunnel and crossing the vertical plane of the grip-slot, said plates having over-

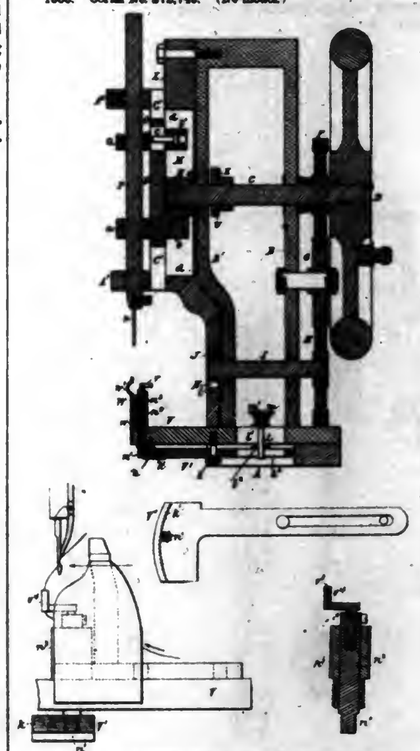


lapping flanges, and the staples or eyes loosely embracing the rod, whereby the plates are hinged thereto, substantially as herein described.

400,035. PACKAGE OF FLY-PAPER. EDWARD F. BAKER, Chicago, Ill. Filed Jan. 24, 1888. Serial No. 261,791. (No specimens.)

Claim.—The combination, with a package of fly-paper, of a spring-clamp consisting of the double end bars, d d d' d', and the side bars, d^2 d^2, running at right angles thereto, the end bars being bent to pass around the back of the package, whereby the same is compressed from both sides on a line between the border of the composition and the edge of the paper, the terminal ends of said spring overlapping and being wired together, as shown, all substantially as and for the purpose set forth.

400,036. ANIMAL-SHEARS. EMILE BARIQUAND, Paris, France, assignor to the Société Bariquand et Fils, same place. Filed Sept. 29, 1888. Serial No. 286,714. (No model.)



Claim.—1. The combination, with a hand shearing-machine having a pulley for driving its movable comb, of a motor having a driving-pulley, an endless cord or belt for transmitting motion from the motor-pulley to the shearing-machine pulley, and a flexible tube or cable extending from one of said pulleys to the other, inclosing the portion of the belt between them, and constructed to resist longitudinal compression between them and serve to hold the pulleys spaced apart and keep the belt taut.

2. The combination, with a hand shearing-machine and a motor, of a flexible tube or cable extending from the one to the other and constructed with two separate tubular conduits, and a cord or belt receiving motion from the motor and transmitting it to the movable comb of the shearing-machine, the one part of said cord passing through one of said conduits and the other part through the other conduit, whereby the portions of the cord moving in opposite directions are separated.

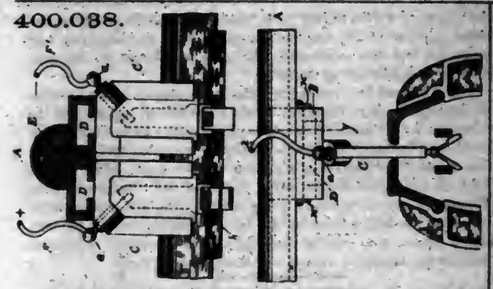
3. A shearing-machine consisting of a handle, a fixed blade or comb, a movable comb mounted to slide against the fixed comb, a rotary pulley having an eccentric boss, a movable lever of the third class having an opening receiving said eccentric boss, connecting at its free end with the movable comb, and slotted at its other end, and a stationary pivot-pin entering said slotted end, whereby the lever oscillates with said eccentric boss and vibrates about said stationary pin.

4. A shearing-machine consisting of a handle, a fixed blade or comb, a movable comb mounted to slide against the fixed comb, a rotary pulley having an eccentric boss, a slotted movable lever arranged to be vibrated by contact with said eccentric boss, connecting at its free end with the movable comb; and a stationary pivot-pin entering the slot in said lever, whereby the lever vibrates about said stationary pin, and a latch for moving said pin out of engagement with the lever, whereby the latter is thrown out of gear and the movable comb is no longer driven.

400,037. SEWING-MACHINE. JONATHAN BARTLETT, Epping, and GEORGE B. WIGGIN, South New Market, N. H., assignors of one-half to John W. Hoard, Providence, R. I. Original application filed July 28, 1887, Serial No. 245,561. Divided and this application filed May 3, 1888. Serial No. 272,746. (No model.)

Claim.—1. In combination with the vibratory frame L, and with a vibratory and reciprocating needle-bar and needle carried by such frame, the lever V', having an interior segmental rack, k', the post n^3, its pinion n', engaging with said rack, and the crank-shaped and tubular thread-carrier v^4, all substantially as shown and described.

2. The combination, with the vibratory frame and with the vibratory needle carried by such frame, of the work-supporting horn, the post n^3, pinion n', crank-shaped tubular thread-carrier v^4, carried by and vibrating with the said frame, devices, substantially as described, for operating said carrier, and the supporting-sleeve n^3, all substantially as shown and described.



400,038. ELECTRIC-RAILWAY PLOW. EDWARD M. BENTLEY, New York, N. Y. Filed Dec. 5, 1888. Serial No. 292,606. (No model.)

Claim.—1. The combination, in an electric railway, of a conduit and supply-conductors therein, with two independent plows for making contact with the said conductors, respectively, and independent sliding bearings for said plows, allowing each plow freedom of lateral movement independent of the other.

2. The combination, in an electric railway, of a conduit and supply-conductors of opposite polarity therein, with two plows, each carrying a contact-surface for engagement with one of said supply-conductors, and independent sliding bearings for each plow, whereby each is independent in its movement of the other.

3. In an electric railway, the combination of a conduit and supply-conductors of opposite polarity therein, with two contact devices

400,038.

engaging with the said conductors, respectively, and extending down into the conduit, and sliding bearings outside the conduit, allowing each contact device a movement independent of the other.

4. In an electric railway, the combination of a conduit and supply-conductors of opposite polarity therein, with two contact devices engaging the said conductors, respectively, and extending down into the conduit, a support therefor outside of the conduit, having transverse guides and sliding connections between the guides and the contact devices, allowing each contact device an independent lateral movement.

5. In an electric railway, the combination of a conduit and supply-conductors of opposite polarity therein, with a vehicle, two insulated contact devices for engagement with the conductors, respectively, and sliding bearings for the same upon the vehicle, allowing each contact device a movement independent of the other.

6. The combination, in an electric railway, of a conduit and supply-conductors of opposite polarity therein, with a vehicle, transverse guides upon the vehicle, and a contact device for engagement with each of said conductors independently movable along said guides.

7. The combination, in an electric railway, of a conduit, conductors of opposite polarity therein, a contact device for engagement with each conductor, sliding bearings therefor, allowing each contact device a movement independent of the other, and yielding electrical conductors extending directly from said contact devices and leading to the vehicle.

8. The combination, in an electric railway, of a conduit, conductors of opposite polarity therein, and a plow for engagement with each such conductor, with a vehicle, transverse guides upon the vehicle, along which the plows have independent movement, and yielding electrical conductors extending directly from said plows and leading to the vehicle.

9. The combination, in an electric railway, of a conduit, a supply-conductor therein, and a vehicle with a single support movably connected with the vehicle, and two contact devices connected to said support outside of the conduit and movable laterally relative to the support.

10. The combination, in an electric railway, of a conduit, supply-conductors therein, and a vehicle with a single support or frame, sliding bearings permitting the same to move relatively to the vehicle, and two contact devices having sliding bearings on the support and in engagement with the supply-conductors.

11. In an electric railway, the combination of a conduit and supply-conductors therein, with a traveling vehicle and a contact device connected thereto, consisting of a supporting-frame having guides thereon at a point outside of the conduit, and contact devices movable independently along said guides and extending into the conduit for contact with the conductors.

12. In an electric railway, the combination of a conduit and one or more supply-conductors therein, with a support connected to a vehicle, guides on the under surface of said support, and contact devices independently movable in said guides.

13. The combination of a conduit, an inclosed conductor, and a transverse guide outside the conduit, with a contact-plow movably connected with said guide and consisting of a guard or frame and a single conductor supported by the frame, whereby the plow may be made narrow and thus pass curves without binding.

14. The combination of a conduit, inclosed conductors, and transverse guides outside the conduit, with two independent contact devices movably connected to the said guides for engagement with the conductors, respectively, whereby the contact devices may be made narrow and pass curves without binding.

15. The combination of a vehicle having transverse guides and supply-conductors of opposite polarity, with an independent contact device for each conductor and laterally-sliding connections between the contact devices and the guides, whereby each device has an independent movement.

16. In an electric railway, the combination of the supply-conductors and an electrically-propelled vehicle, with an intermediate current-collector consisting of the single support or frame, sliding bearings permitting movement of the same relative to the vehicle, and the two contact devices in engagement with the supply-conductors, and having transversely-traveling connections with the support or frame.

17. In a current-collector, the combination of the transverse guide carried by a vehicle, with the frame or support engaging said guide, two guides upon the support, and two contact devices engaging said guides.

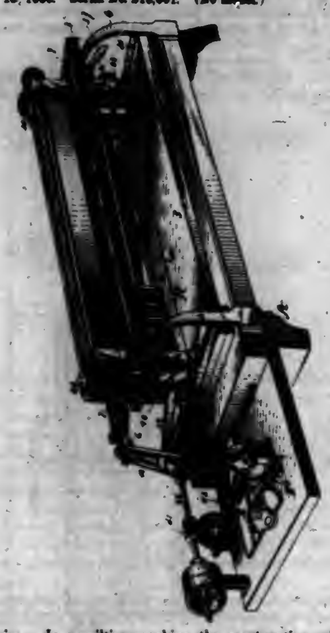
18. A contact-plow for engagement with the supply-conductor inclosed in a slotted conduit, consisting of the traveler adapted to engage a transverse guide, a narrow frame or guard, and a single conducting-core supported and protected by said guard, whereby the plow is adapted to pass curves without difficulty.

19. The combination of a vehicle and conductor inclosed in a conduit, with two contact devices having an independent transverse sliding movement, and each consisting of a frame having depending legs, and a single conductor inclosed in an insulating-panel between said legs.

20. In a current-collector for electric railways, the combination of a support, a guide thereon, and a contact device having a head moving freely along such guide, with a bearing for said contact device independent of the head, and relieving the head of strain.

21. In an electrically-propelled vehicle, the combination of a guide extending over the path of movement of a contact device and embracing the same, whereby the engaging surfaces are protected, with a contact device having a head engaging said guide, and abutting bearing-surfaces upon the guide and contact device, whereby the head is relieved from strains.

22. The combination of the guide, the contact device engaging therewith, and abutting shoulders between the guide and contact device, with the electrical conductors leading from the contact device at the upper end of the same and by the side of the guide.



23. The combination, in an electric railway, of the two contact devices, and suitable guides and connections allowing the contact devices a limited independent sliding movement, and electrical conductors extending directly from the contact devices and partaking of their movement.

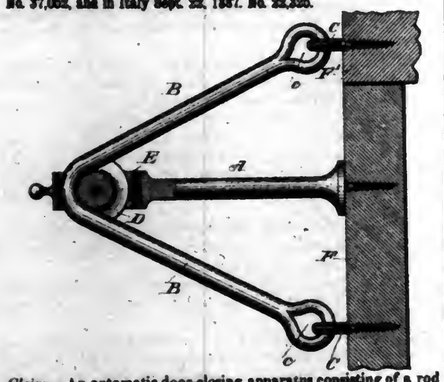
24. In a current-collector for electric railways, the combination of the conducting-strip having an enlarged or broadened bearing, and a contact-shoe connected to said bearing.

25. In a current-collector for electric railroads, the combination of the insulated conducting-strip enlarged or broadened at its lower end, and a contact-shoe pivoted thereto.

26. The combination of the plow extending into a slotted conduit, and a conducting-strip connected to said plow and broadened or enlarged at its lower end, with a contact-shoe attached to said end.

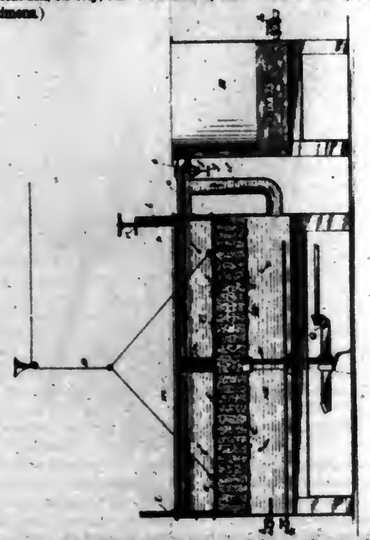
400,039. QUILTING-MACHINE. ARTHUR BECK, Chicago, Ill. Filed Nov. 15, 1886. Serial No. 218,861. (No model.)

Claim.—In a quilting-machine, the combination, with a transverse feed, of two sewing-machines having horizontal and vertically-



reciprocating needle-bars, a bar, E, connected directly to one of said machines and by a pivoted lever to the other machine, and a cam for operating said bar E, in the manner and for the purpose set forth.

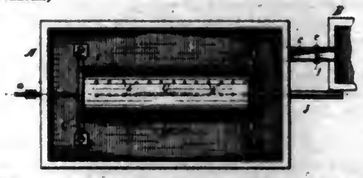
400,040. BUGGY-BOOT. CHARLES A. BEELER, Cincinnati, Ohio. Filed Aug. 17, 1888. Serial No. 282,997. (No model.)



Claim.—In a buggy-boot, the shouldered frame F and its covering C, of any suitable material, in combination with molding M, which embraces the edges of said covered frame, thereby holding the parts firmly together without other aid, substantially as shown and described.

400,041. DOOR-SPRING. EDOUARD BENDER and EMANUEL STEVENS, Brussels, Belgium. Filed Apr. 2, 1888. Serial No. 269,410. (No model.) Patented in Belgium June 25, 1887, No. 77,958; in France Sept. 3, 1887, No. 185,643; in England Sept. 5, 1887, No. 12,014; in Germany Sept. 20, 1887, No. 44,469; in Austria-Hungary Sept. 30, 1887, No. 37,002, and in Italy Sept. 22, 1887, No. 23,325.

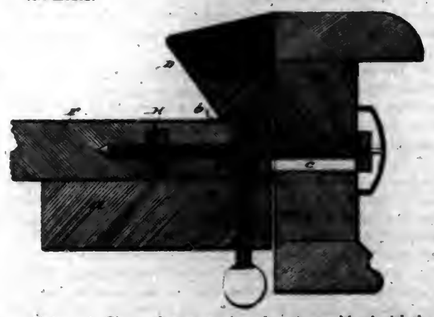
Claim.—An automatic door-closing apparatus consisting of a rod or stem having one end formed for attachment to a door and the other end carrying a pulley, and an elastic cord or similar device adapted to be passed over said pulley and have one end attached to said door and the other end attached to the door-frame, substantially as herein described.



400,042. PROCESS OF PURIFYING PARAFFINE-WAX. JOHN R. BICKNELL, Oil City, Pa. Filed Dec. 2, 1886. Serial No. 220,489. (No specimens.)

Claim.—1. A process for purifying or refining a substance having portions of different fusibility, the same consisting in forcing through the substance a fluid heated to or above the liquefying-point of the softer portions of the substance, simultaneously disintegrating said substance, and then withdrawing the portions liquefied at that temperature, substantially as set forth.

2. A process for purifying or refining a substance having portions of different fusibility, the same consisting in forcing up through the substance a fluid heated to or above the liquefying-point of the softer portions of the substance, simultaneously disintegrating said substance, then gradually withdrawing a portion of the upper portion of said fluid, simultaneously floating off a portion of the substance treated liquefied at said temperature, and gradually introducing beneath the substance the fluid withdrawn and forcing it again through the substance treated, thus causing said fluid to have a constant circulation through the substance treated, substantially as set forth.

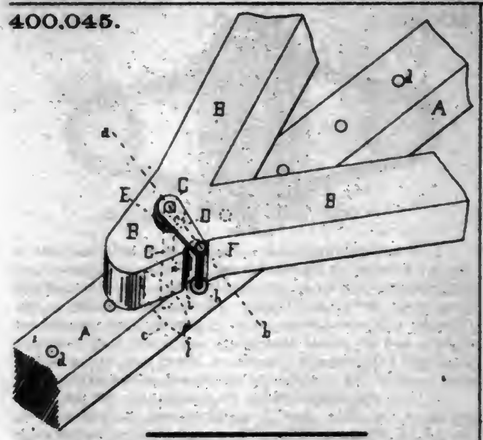


400,043. PROCESS OF PURIFYING PARAFFINE-WAX. JOHN R. BICKNELL, Oil City, Pa. Filed Nov. 21, 1887. Serial No. 255,690. (No specimens.)

Claim.—1. A process of purifying or refining a substance having portions of different fusibility, the same consisting in reducing the substance to a finely-divided condition and then subjecting it to the action of a fluid having a temperature substantially equal to or above the liquefying-point of the softer portion of said substance and below the liquefying-point of the harder portion of said substance, and withdrawing the liquefied portion from the hard portion, substantially as set forth.

2. A process of purifying or refining a substance—such as paraffine or other like substance containing portions respectively of different points of fusibility—the same consisting in reducing the substance to a finely-divided condition and then passing through said substance a fluid having a temperature substantially equal to or above the liquefying-point of the softer portion of said substance and below the liquefying-point of the harder portion of said substance, and removing the liquefied portion from the solid portion of said substance, substantially as set forth.

400,044. BILLIARD-TABLE RAIL AND CUSHION. CHARLES G. BROCKWAY, Pine Bluff, Ark. Filed Dec. 5, 1888. Serial No. 292,746. (No model.)



Claim.—1. The washer or spacing-piece A, combined with the rail E, having cushion D and vertical slot *e*, the slate bed F, nut H, embedded in the same, and the horizontal clamping-bolt B, fastening the rail and slate bed together on opposite sides of piece A, substantially as described.

2. The washer or spacing-piece A, combined with the rail E, having cushion D and vertical slot *e*, the slate bed F, having horizontal bolt-hole with nut H embedded therein, the clamp-bolt B, fastening the rail and bed together upon opposite sides of the spacing-piece A, the wooden frame G, and the vertical set-screw C, tapped through the wooden frame and the slate bed and bearing against the lower side of the cushion, substantially as and for the purpose described.

400,045. WAGON-PERCH-CROTCH COUPLING. THOMAS R. BROWN, Rockwoodtown, N. J. Filed Dec. 15, 1888. Serial No. 293,677. (No model.)

Claim.—The combination, with a wagon pole and crotch, A B, of a headed screw-bolt, C, a nut-arm, D, and a loose stay-bolt, F, for the purpose shown and described.

400,045.

400,046. METHOD OF MECHANICALLY TREATING AND ANNEALING SLAG. ST. GEORGE T. C. BRYAN, Birmingham, Ala. Filed Apr. 24, 1888. Serial No. 271,697. (No specimens.)

Claim.—1. The herein-described process of treating slag mechanically by rotation in a suitable vessel when in a molten state, so as to separate impurities from it through the action of gravity and centrifugal force, and after the removal of such impurities stirring the slag, so as to make the mass practically homogeneous and of uniform temperature and quality, substantially as set forth.

2. The herein-described process of treating slag mechanically by rotation in a suitable vessel when in a molten state, so as to separate impurities from it through the action of gravity and centrifugal force, and after the removal of such impurities stirring the slag, so as to make the mass homogeneous and of uniform temperature and quality, then depositing it in slow-cooling molds for further annealing and toughening it, substantially as set forth.

400,047. METHOD OF TREATING SLAG. ST. GEORGE T. C. BRYAN, Birmingham, Ala. Filed July 25, 1888. Serial No. 280,991. (No specimens.)

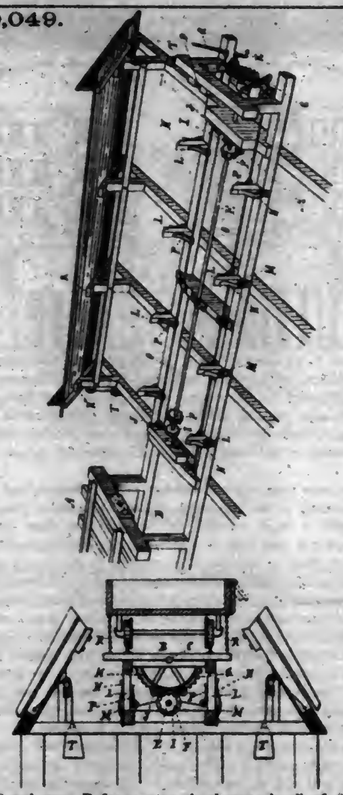
Claim.—1. The method of treating slag herein described, for the purpose of making it cellular, which consists in forcing into it and intimately mingling with it, when in a molten state, carbonic-acid gas and hydrogen gas, substantially as set forth.

2. The method of treating molten slag herein described, which consists in placing carbon, preferably in the form of coke, in a vessel, delivering molten slag therein and forcing steam against the hot carbon for the evolution of carbonic-acid and hydrogen gases, and their distribution through the mass of molten slag to eliminate the sulphur and give the mass a porous structure, substantially as set forth.

400,048. MANUFACTURE OF SLAG. ST. GEORGE T. C. BRYAN, Birmingham, Ala. Filed July 26, 1888. Serial No. 281,094. (No model.)

Claim.—1. As a new article of manufacture, an artificial paving or building block of slag made in part solid and in part cellular, substantially as set forth.

2. The combination, with a cellular artificial block of slag made for paving or building purposes, of a plastic substance or covering forming a bond with the slag by entering its cells, substantially as set forth.

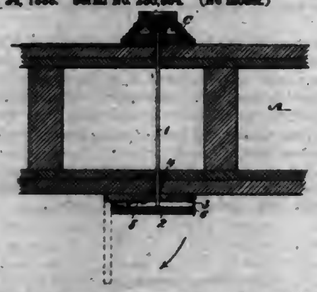


400,049. DEVICE FOR UNLOADING CARS. JOHN L. BRYANT, Hillsdale, Mich. Filed June 16, 1888. Serial No. 277,401. (No model.)

Claim.—1. In a device for unloading cars upon railroad-tracks, the combination of a section of track, pivotally secured at the end of a connecting-track, and gearing for operating and rollers for supporting the pivoted track mounted on the same shaft, substantially as described.

2. The combination with a tilting track and its trunnions, of a semicircular flange and a segmental gear connected thereto, a shaft centrally arranged beneath the same, a gear-wheel meshing with said segmental gear, and a roller on which the flange rests, both gear-wheel and roller being on the same shaft, substantially as described.

3. The combination of the tilting track, two series of movable props beneath the track supporting the same on opposite sides, the

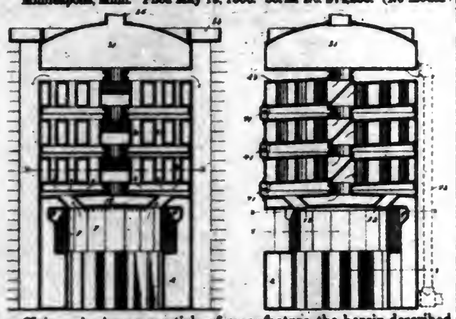


400,049.

shafts O and arms P, for moving simultaneously all of either set of said props, and the central gear-connection for tilting the track in either direction, substantially as described.

4. The combination, with the tilting section of track, of the stationary buffer secured alongside said track and the sliding counterweighted chutes supported thereon, substantially as described.

400,050. ANNUNCIATOR. IRA S. BUNKER, Nevada, Mo. Filed July 24, 1888. Serial No. 280,804. (No model.)



Claim.—1. In an electric annunciator, the combination, with the push-button and rod thereof, of a movable indicating-plate, substantially as described.

2. The push-button C of an electric annunciator, in combination with the rod 1, attached thereto, and the swinging plate 2, secured to a frame adapted to be projected by the operation of said push-button, substantially as described.

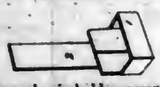
3. An additional indicator for an electric annunciator, consisting of a rod secured thereto and operated by the push-button of the annunciator, and movable plate secured to a frame adapted to be operated by contact with said rod, said parts being combined substantially as described.

4. The combination of a push-button, a rod, a back plate through which said rod passes, a movable plate connected to said back plate and adapted to be operated by the movement of said rod, a spring between said back plate and movable plate, and a catch adapted to hold said movable plate in closed position, substantially as described.

400,051. BOILER. FREDERIC A. CAMP and FREDERIC G. CORNER, Minneapolis, Minn. Filed May 14, 1888. Serial No. 274,253. (No model.)

Claim.—1. As a new article of manufacture, the herein-described heater-section consisting of the outer wall, the top and bottom plates, each provided with a single central opening, a series of flues extending through said top and bottom plates upon opposite sides of said opening, and a diaphragm extending from the top plate on one side of the top opening to the bottom plate on the other side of the bottom opening.

2. As a new article of manufacture, the herein-described heater-section consisting of the outer wall, the top and bottom plates, each provided with a single opening, the two series of flues extending through said top and bottom plates, and the diaphragm extending from the top plate on one side of its opening to the bottom plate on the other side of its opening and between the two inner flues, substantially as described.



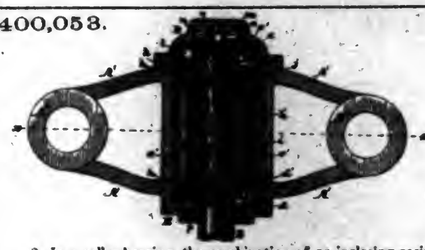
3. The combination, in a heater, of the water-jacket provided with a central single opening, the series of heater-sections, each provided with a single central opening at its top and bottom, and the diaphragm extending from the top of the section on one side of the opening to the bottom of the section on the opposite side, and the threaded couplings connecting said sections and connecting the lower section and the water-jacket, substantially as described.

4. The combination, in a heater of the class described, of the series of sections, each provided with a central threaded opening in its top and bottom and with an inclined diaphragm extending from the top of the section on one side of the opening to the bottom of the section upon the opposite side of the opening, and the threaded couplings securing said sections together, substantially as described.

5. The combination, in a heater of the class described, of a series of sections, each provided with inclined top and bottom walls and with an opening in each of the walls, a diaphragm extending from the top wall on one side of its opening to the bottom wall on the opposite side of its opening, a series of flues extending through each of the sections, and means for securing all of said sections together, substantially as described.

6. The combination, in a heater of the class described, of the series of sections secured together and communicating with each other, each provided with a single central opening in its top and bottom, a diaphragm arranged between said openings and with inclined top and bottom walls forming an upwardly-inclined space from the bottom opening to the top opening, and flues extending through said sections, for the purpose set forth.

400,052. COIN-PACKAGE. GEORGE I. CASTNER, Memphis, Tenn. Filed Dec. 13, 1887. Serial No. 257,796. (No model.)



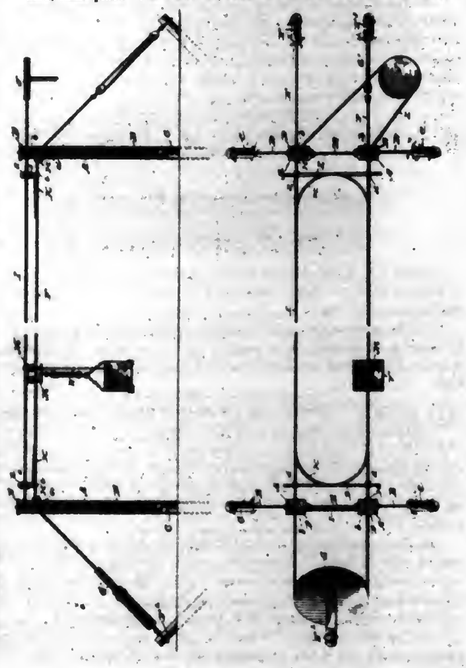
Claim.—1. The improved coin-holder composed of the binding-strip 2 and the holder proper, 1, which is made of a strip whose ends abut each other, the said binding-strip being united to the said ends at right angles to the holder 1, and both the parts 1 and 2 being made of less width than the coins the holder is designed to contain, and the holder proper, 1, being made of less cubical capacity than the largest cross-section of the coins to be contained in it, as shown and described.

2. The combination of a series of binding-strips, 2, a backing-piece, 3, to which they are pasted, and the strip 1, bent, as shown, and pasted to the part 3 at points intervening the binding-strips 2, as specified.

400,053. ROLLER-JOURNAL BEARING. CYRIL B. CHAPLIN, Boston, Mass. Filed Nov. 17, 1883. Serial No. 291,061. (No model.)

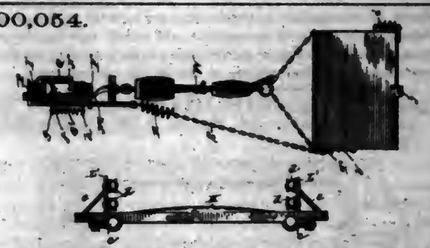
Claim.—1. In a roller-bearing, the combination of an outer casing and a cylindrical bushing divided longitudinally into two parts, the plane of division being oblique to its axis.

400,053.



2. In a roller bearing, the combination of an inclosing casing or box, a roller-carrying frame composed of two annular heads or collars connected together by a series of tie-rods, a series of bearing-rolls lying loosely between said heads or collars, a corresponding number of smaller rolls having frusto-conical bearing ends and arranged one between each two of said bearing-rolls, each of said heads being provided with a corresponding number of curved slots having inclined sides to receive the frusto-conical bearing ends of said smaller rolls.

3. In a roller-journal bearing, the combination, with the axle or journal, of the collars *e* and *f*, secured thereon, the roller-carrying frame *h h h'*, fitted to said journal between said collars and revoluble thereon, the bearing-rollers C C, resting loosely between the heads of said revoluble frame without bearings therein, the smaller rolls, *i*, alternating with said bearing-rolls and having bearings in said heads, and an outer casing or box inclosing the whole and having a cylindrical inner surface upon which the bearing-rollers travel as the journal or axle is revolved.



4. In combination with the axle or journal and the outer casing or box, the annular collar *k*, secured in a fixed position in the outer end of said casing, the collar *e*, secured to the end of said axle or journal and having formed in its inner face an annular groove or pocket, a ball fitted in said groove or pocket and arranged to bear against the collar *k*, and to take the thrust of the shaft or axle in one direction, the cap D, inclosing said collar *e*, the annularly-grooved disk *m*, fitted to a recess in said cap, the steel disk *c'*, set in the outer face of the collar *e*, and a ball or balls interposed between the disk *c'* and the annularly-grooved disk *m*, so as to take the thrust of the shaft or axle in the opposite direction.

5. The combination of the casing or box, the axle or journal, the collars *e* and *k*, the cap D, the disk *m*, the balls *l* and *n*, and the ball-carrier *o*, all constructed, arranged, and operating substantially as and for the purposes described.

400,054. ELEVATED RAILWAY. JOHN R. CHAPMAN, Montgomery, Ala., assignor of two-thirds to Charles P. Ball and Charles T. Pollard, same place. Filed Nov. 13, 1888. Serial No. 290,749. (No model.)

400,054.

Claim.—1. The combination of the upright posts, the tiller-rope passing around sheaves supported by the posts, means for moving said rope, stake-posts to the rear of the upright posts, the track-rope passed around sheaves supported by the upright posts and connected to the stake-posts, means for keeping said track-rope taut, and a carriage moving over said track-rope and provided with a grip clamping said tiller-rope and adapted to be released therefrom to stop the movement of one carriage while the tiller-rope continues to travel to move another carriage, substantially as and for the purposes described.

2. The combination of the upright posts, the traveling tiller-rope supported by said posts, means for moving said rope, stake-posts to the rear of said upright posts, a track-rope in said upright posts and connected at one end of the structure to a stake-post by block and tackle and at the other end of the structure passed around a sheave-block connected to the stake-post, and a carriage moving over said track-rope and provided with a grip clamping said tiller-rope and adapted to be released therefrom to stop the movement of one carriage while the tiller-rope continues to travel to move another carriage, substantially as and for the purposes set forth.

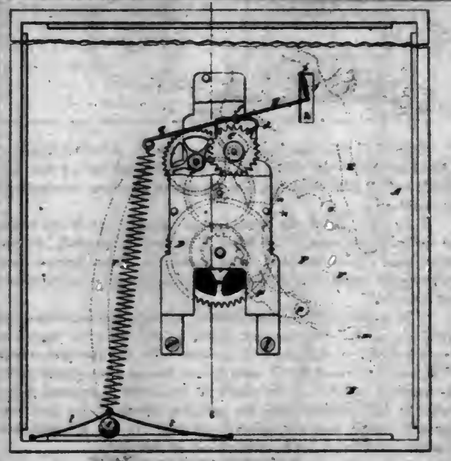
3. The combination of the double elevated track, the traveling tiller-rope, the carriage running upon said track and provided with a grip connecting it with the tiller-rope, the switch-track connecting the two tracks upon which the carriage runs, for the purpose of shifting the carriage from one track to the return track, and a brace connecting the main track and tiller-rope, said brace clasping the tiller-rope and main track on both their upper and lower faces to insure the movement of one with the other and prevent disconnection of either from the other, substantially as and for the purposes set forth.

4. The combination, with the tiller-rope and the main track, of the switch composed of the cross-bar resting upon the main track, the curved track secured to said bar and connecting with the main track, and the upright braces provided with the friction-rolls, between which the tiller-rope passes, substantially as and for the purposes set forth.

5. The combination of the double elevated track, the traveling tiller-rope, the carriage running upon said track, the vertically-moving grip connected to the carriage and adapted to clamp the tiller-rope, the lever connected with said grip to clamp and lock it to the tiller-rope, and the spring connected with the frame and the grip to disconnect the grip from the tiller-rope when the lever is released, substantially as and for the purposes set forth.

6. The combination, with the carriage and spring-actuated grip and lever, of the second spring interposed between the lever and spring-grip to relieve the grip of too sudden application, substantially as and for the purposes set forth.

7. The combination, with the double elevated track, of the switch-track connecting the two tracks and provided with means for connecting the track and tiller-rope, said means embracing both the track and tiller-rope on their upper and lower faces, to hold them together, and adjustable along the length of the tracks, substantially as and for the purposes set forth.



400,055. MECHANICAL TOY. WILLIAM D. CRANE, Hackensack, N. J. Filed Nov. 12, 1888. Serial No. 290,536. (No model.)

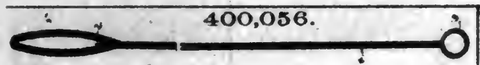
Claim.—1. The combination, with a driving mechanism and a rotary reciprocating arbor, *f*, of the crank *g*, connected with said arbor, and the figure E, pivotally connected with said crank, and the pin *m*, placed higher than the lowest portion of the figure and upon which the figure may strike to be deflected laterally, substantially as described.

2. The combination of a driving mechanism having a rotary reciprocating arbor, *f*, with the laterally-extending crank *g*, having a vertical end part, figure E, horizontal pin *i*, for supporting said figure, and sleeve *j*, carrying said pin, said sleeve embracing the vertical part of the crank *g*, substantially as described.

3. The combination, with a reciprocating figure, E, having jointed lower part, F, that is supported by the figure and free to swing on its pivot, and means, substantially as described, for reciprocating said figure, of the spring *n*, connecting the body of the figure with the pivoted extremity for regulating the swinging movement of the part F, substantially as described.

4. The combination, with a reciprocating figure, having jointed lower part, F, pivotally suspended therefrom, and means, substantially as described, for reciprocating said figure, with the spring *n*, connecting the body of the figure with the pivoted extremity and with the weight *p*, carried by said extremity, substantially as described.

5. The combination, with a driving mechanism and a rotary reciprocating arbor, *f*, substantially as described, of the crank *g*, carried by said arbor, spring *r*, connected with said crank, and the weight *s*, carried by said spring, substantially as described.

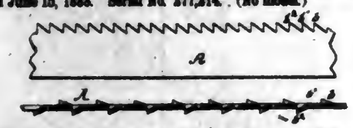


6. The combination, with a driving mechanism and a rotary reciprocating arbor, *f*, substantially as described, of the crank *g*, carried by said arbor, spring *r*, connected to said crank, weight *s*, and cords *t*, all arranged substantially as described, whereby an irregular motion is given to the arbor *f*, substantially as specified.

7. The combination, with a driving mechanism and a rotary reciprocating arbor, *f*, substantially as described, of the crank *g*, carried by said arbor, and a figure, E, pivotally connected with said crank, and of the crank *q* and spring *r*, connected with said crank, and the weight *s* on the spring *r*, all arranged for operation, substantially as described.

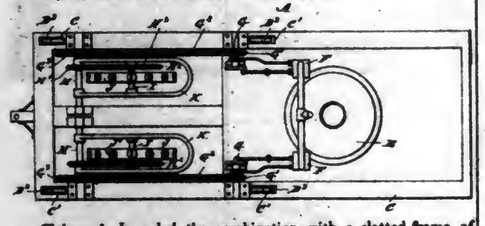
400,056. MEDICATED BOUGIE. THOMAS CERESTY, London, England. Filed Oct. 4, 1888. Serial No. 287,172. (No model.) Patented in England Aug. 23, 1888, No. 12,137.

Claim.—1. A medicated instrument or bougie constructed with a stem, 1, consisting of a straight wire, 2, bent at one end to form a



400,056.

ring-handle, 3, and having a wire, 4, wound around the wire 2, and at its end forming a frame, 5, bulging in the middle and tapering at the ends, substantially as shown and described.



2. A medicated instrument or bougie constructed with a stem, 1, consisting of a straight wire, 2, bent at one end to form a ring-handle, 3, and having a wire, 4, wound about the wire 2, and at its end forming a frame, 5, bulging in the middle and tapering at the ends, which is covered with a medicated composition, 6, forming a head, 7, bulging in the center and having conical ends, substantially as described.

400,057. HACK-SAW. GEORGE H. CLEMSON, Middletown, N. Y. Filed June 15, 1888. Serial No. 277,314. (No model.)

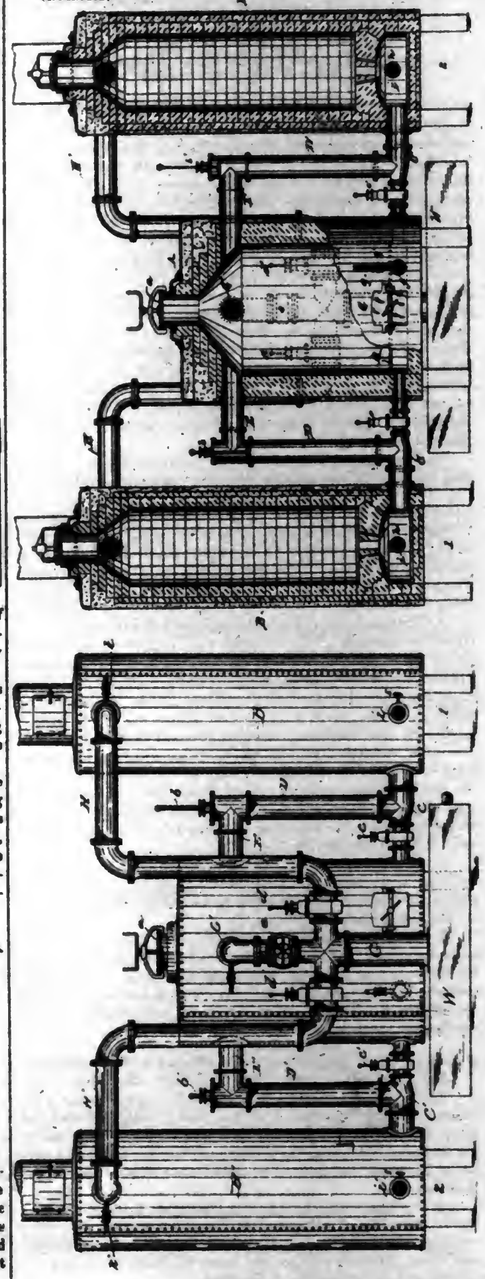
Claim.—As an improved article of manufacture, a hack-saw provided with the teeth b b' b^2, all of the same form and height and having their cutting-edges square, the teeth b' lying in the plane of the blade and the teeth b b^2 set in opposite directions, as set forth.

400,058. STEAM-SLED. JAMES F. COSHIFF, Oconto, Wis. Filed July 24, 1888. Serial No. 280,894. (No model.)

Claim.—1. In a sled, the combination, with a slotted frame, of runners pivoted to the under side of the frame and having their upwardly-curved ends projecting into the slots of the frame, substantially as described.

2. In a steam-sled, the combination, with the shaft H and means for operating the same, of the frame K, pivoted on the shaft, the propeller-wheel I, journaled in the said frame, and means for operating the propeller-wheel from the said shaft, substantially as herein shown and described.

3. In a steam-sled, the combination, with a supporting-frame, the shafts G, provided with sprocket-wheels G', and means for operating the said shafts, of the shafts H, provided with the sprocket-wheels G^2 H', the sprocket-chain G^3, passing over the sprocket-wheels G' G^2, the frames K, pivoted on the shafts H, the shafts I, mounted in the frames K and provided with the sprocket-wheels H^3, the sprocket-chains H, passing over the sprocket-wheels H' H^3, and the propeller-wheels J on the said shafts, substantially as described.

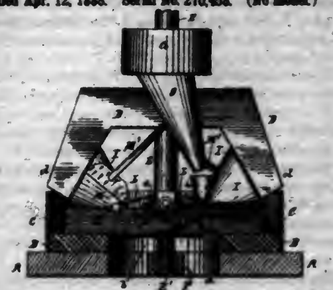


400,059. PAGE-INDEX. JOHN A. COOK, Buffalo, N. Y. Filed Sept. 5, 1887. Serial No. 248,843. (No model.)

Claim.—1. A book having a page-index and page-number combined, substantially as described, the page-numbers of the even series being placed on one side and those of the odd series on the opposite side of the book, said numbers running along the edges of the leaves from top to bottom in multiples of rows, the book being provided with a mark dividing the even and odd series, as and for the object stated.

2. A page-index for books to locate the pages, consisting, essentially, of two divisions, one having a series of even numbers placed upon the left-hand side and the other having the series of odd numbers on the right-hand side, each page-number being placed upon a spot in its respective division other than the top corner of the page and the rest of said page in the index cut away below said numbers, whereby all the numbers in the divisions are exposed to view simultaneously when the book is opened in the middle between the two divisions, said book being provided with a marker indicating the place where the two divisions separate, as and for the purpose stated.

400,060. APPARATUS FOR THE MANUFACTURE OF GAS. WILLIAM M. CONN, Baltimore, Md. Filed Jan. 12, 1888. Serial No. 260,505. (No model.)

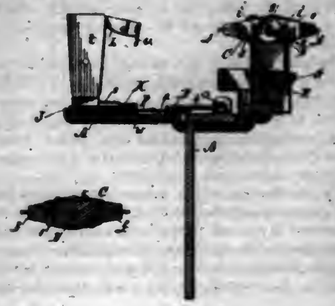


Claim.—1. In combination, a generator, A, provided with a grate, a, and with a steam and air pipe communicating with said generator beneath the grate thereof, and provided, also, with a hydrocarbon and steam supply pipe communicating with the upper part of the generator, a superheater or fixer having a combustion-chamber in its lower part provided with an air-pipe, a steam-supply pipe communicating with the upper part of the superheater or fixer, a pipe, C, connecting said combustion-chamber with the space beneath the grate of the generator and provided with a valve, c, a pipe, D E, having a valve and leading from the upper part of the generator into the combustion-chamber of the superheater or fixer, and an exit-pipe for the superheater or fixer, the parts being constructed and arranged to operate substantially as and for the purpose set forth.

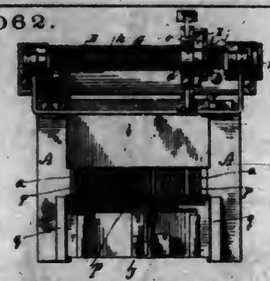
2. In combination, a generator, A, provided with a grate, a, and with a steam and air supply pipe communicating with said generator below the grate thereof, and provided, also, with a hydrocarbon-supply pipe communicating with the top of the generator, superheaters or fixers B and B', each having a steam-supply pipe communicating with its upper part and a combustion-chamber in its lower part provided with an air-supply pipe, pipes C C', connecting the combustion-chambers with the space in the generator beneath the grate, valves in these pipes, pipes D E and D' E', with their respective valves, connecting the top of the generator with the combustion-chambers of the superheaters or fixers, respectively, and an exit-pipe from each of the superheaters and fixers, all substantially as and for the purpose set forth.

3. In combination, a generator, A, provided with a grate, a, and with steam and air supply pipes communicating with said generator below the grate thereof, and provided, also, with a hydrocarbon-supply pipe communicating with the top of the generator, superheaters or fixers B B', each having a steam-supply pipe communicating with its upper part and a combustion-chamber in its lower part provided with an air-supply pipe, pipes C C', connecting the combustion-chambers with the space in the generator beneath the grate, valves in these pipes, pipes D E and D' E', with their valves, connecting the top of the generator with the combustion-chambers of the superheaters or fixers, respectively, an exit-pipe, G, from the top of the generator, having a valve, c, and pipes H and H', leading from the top of the superheaters and fixers and uniting with the pipe G at a point below the valve c, said pipes H and H' being provided each with a valve, all substantially as and for the purpose set forth.

400,061. GRAIN-CRUSHING MILL. JAMES CURTIS, Moscow Mills, Mo. Filed Apr. 12, 1888. Serial No. 270,458. (No model.)



Claim.—1. A grain-crusher feed-box, H, constructed with the hopper A, bearing k', concave projections A^2, and opening A^3, in combination with a grain-crushing roll, I, as and for the purpose set forth.

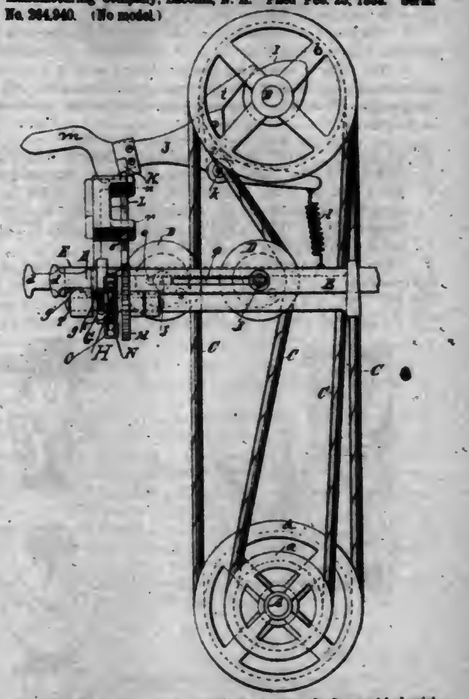


2. In a grain-crusher, an upright shaft, yoke, crushing-rolls, and arms J, mounted on said upright shaft, in combination with the arms L, pivotally fastened to the arms J of scrapers, and feed-boxes pivotally mounted on opposite sides of said arms L, as shown and described.

400,062. TRANSFERRING MECHANISM FOR KNIT WEBS. ALBERT T. L. DAVIS, Lake Village, and GEORGE E. STEVENS, Laconia, assignors to the Pitman Manufacturing Company, Laconia, N. H. Filed Dec. 19, 1887. Serial No. 258,341. (No model.)

Claim.—1. A knocking-on wheel, in combination with a set of transferring-points, substantially as set forth.

400,062.



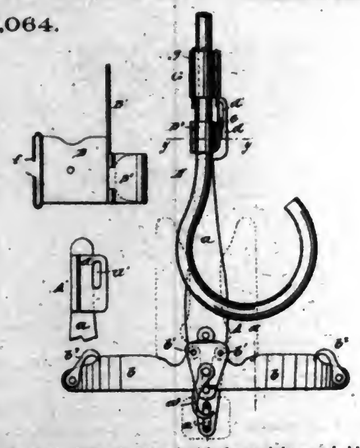
2. In combination with a set of transferring-points, a knocking-on wheel adapted to have a traveling movement along the said transferring-points and means for imparting a traveling movement to the said knocking-on wheel, substantially as herein set forth.

3. A knocking-on wheel having elastically-yielding wings e, in combination with a set of transferring-points, substantially as herein set forth.

4. The combination of a supporting-frame, A, a set, B, of transfer-points a a, a transfer, J, having corresponding points, p p, and guides q q, for holding the transfer in proper position in relation to the said points a a, substantially as and for the purpose herein specified.

5. A transfer, J, provided with a sliding plate, K, having a set of fingers, w w, extending down between the points p p of the transfer, substantially as and for the purpose herein set forth.

400,063. STOP-MOTION MECHANISM FOR KNITTING-MACHINES. ALBERT T. L. DAVIS, Lake Village, assignor to the Pitman Manufacturing Company, Laconia, N. H. Filed Feb. 23, 1888. Serial No. 264,940. (No model.)



Claim.—The combination, with the power-shaft provided with the pulleys a a, driving-shaft B, provided with the pulleys b b and cam I, belts C C, binding-pulleys D D, binder-bars E E, catch-bar G, and lifting-bar H, of the vibratory lever J, actuated by the cam I and provided with the cam K, the pawl L, ratchet-wheel M, sprocket-wheel N, and pattern-chain O, provided with cam projections r r, substantially as and for the purpose herein set forth.

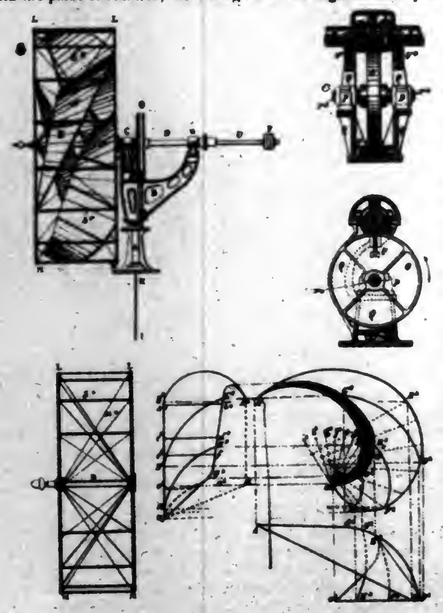
400,064. UMBRELLA-HOLDER. ADOLF DENHARD, Bonn, Germany. Filed Nov. 15, 1888. Serial No. 290,894. (No model.)

Claim.—1. The umbrella-holder herein shown and described, consisting of the main body-frame A, the holder B, attached to said frame, and the clasp G, attached to the umbrella-handle and adapted to be attached to the holder B, substantially as described.

400,064.

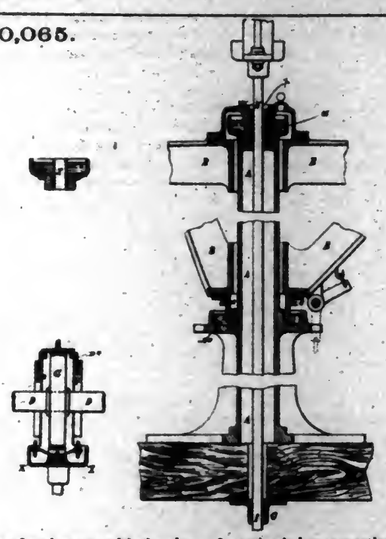
2. The body-frame A, formed with the upright *a* and side pieces, *b b*, in combination with means for attaching the frame to the clothing, and the projection A', and means for holding the umbrella-handle, substantially as described.

3. The upright *a* of the body-frame A, adapted to hold the umbrella, in combination with the hinged side pieces, *b*, and means for attaching the frame to the clothing, substantially as described.



4. The body-frame A, provided with the projection A', and the holder B, applied thereto and formed with the plate B', in combination with the clasp G, having loop g^6, substantially as described.

5. The holder B, adapted to be attached to the body-frame and provided with the plate B' and hook B^2, substantially as described.



6. The clasp G, comprising the two hinged sections *g g'*, one of said sections being formed with the loop g^6, in combination with the upright piece B', attached to a main part of the holder, substantially as described.

400,065. WIND-MOTOR. ALEXANDRE DUMONT, Paris, France. Filed Apr. 14, 1885. Serial No. 162,163. (No model.) Patented in Spain Apr. 4, 1882, No. 3,735; in France Oct. 17, 1882, No. 151,626; in Belgium Nov. 30, 1882, No. 59,735; in England Dec. 1, 1882, No. 5,743; in Germany Dec. 14, 1882, No. 23,934; in Italy Dec. 31, 1882, XXIX, 426, and in Austria-Hungary Oct. 26, 1883, No. 42,864.

Claim.—1. The rotary vane of a wind-motor constructed on the demi-parabola $a^2 b^2 c^2 d^2 e^2 f^2 g^2 h^2 i^2$ and forming the curves $A^2 B^2$ $C^2 D^2$ $E^2 F^2$ $G^2 H^2$, said curves lying in planes that form varying angles with the plane of rotation, the cotangent of the angle formed by the

400,065.

plane of each curve with the plane of rotation being proportionate to the distance between each curve and its center, as specified.

2. In a windmill, the combination of the wind-wheel E and its shaft D, having steel bushing R, with the supporting-roller O, bearings P P, oil-chamber T, containing a wick that contacts the roller O and screws U^6 U^6, whereby the shaft D may be adjusted with relation to the roller O, as specified.

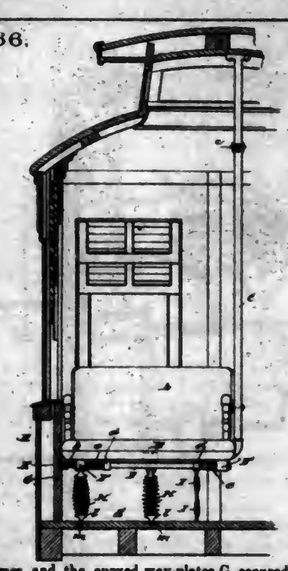
3. The wind-wheel E and its shaft D, combined with the eccentric G, eccentric-yoke D^4, having slots V^2, through which the shaft D passes, roller X, that engages the shaft D to lubricate the same, roller Y, that engages the eccentric G, and rod H I, substantially as herein shown and described.

4. The wind-wheel E and its shaft D, combined with the swiveled supporting-frame B, post A, passing through and supporting the frame B, cap W, secured to the frame B over the post, and the annular step Z, surrounded by the cap W and carried by the post A within its upper end, substantially as herein shown and described.

5. The wind-wheel E and its shaft D, combined with the swiveled supporting-frame B, post A, passing through and supporting said frame, cap W, secured to the frame B, annular step Z, carried by the post A at its upper end and within the cap W, collar a^6 on frame B at a distance below the cap W, and with an annular cavity, A^2, on the post A, into which said collar a^6 dips, as specified.

6. The wind-wheel E and its shaft D, combined with the toothed wheels *l m*, the wheel *l* being driven by the shaft D, and the wheel *m* driven by the wheel *l*, lever-arm *n*, actuated by the wheel *m*, weight *p* on the arm *n*, eccentric G on the shaft D, and rod H I, connected with the eccentric G, substantially as herein shown and described.

400,066. RAILROAD-CAR SEAT. ERIK RENQUIST, Brooklyn, N. Y. Filed Nov. 6, 1888. Serial No. 290,078. (No model.)



Claim.—1. The combination, with a seat having a slide at one end and curved ways in which the slide moves, of a depending swinging support, to the lower end of which the opposite end of the seat is secured, substantially as set forth.

2. The combination, with a railroad passenger-car body, of a series of swinging seats suspended above their own range of motion from or near the roof of the car, one in front of the other, depending supports from which said seats are so suspended, and springs extending from the seats to the floor of the car, tying said seats to said floor and adapted to yield in concert with the swinging action of the seats, essentially as set forth.

3. The combination, with a railroad passenger-car body, of the seats B, the pivoted suspension-rods C at the one end of said seats, connected at their lower ends with said seats and at their upper ends with the car-body at or near its roof, the slides E, provided with rollers at the opposite ends of the seats, and the fixed plates G, constructed to form curved ways and supports for said slides of like radius with the suspension-rods, substantially as specified.

4. The combination, with a railroad passenger-car body, of the swinging supports suspended from or near the roof of the car, the seats connected at one end to the lower ends of said supports, the frames attached to the under sides of said seats, composed of back and front longitudinal rods, D, and cross or opposite end connecting-bars, D', slides E, provided with rollers and attached to the one end

400,066.

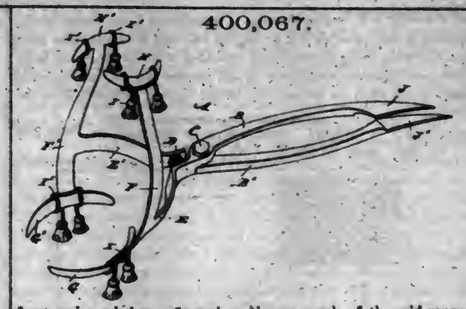
of said frames, and the curved way-plates G, secured to the side of the car and adapted to form a guide and support for the slide E, essentially as described,

5. In a suspended and swinging car-seat, B, the combination, with said seat, apertured lugs or ears *d* on its lower side, and the car-body, of suspension-connections uniting the outer ends of the seats with the car-body at or near its roof, a frame attached to the under side of the seat, composed of longitudinal sliding rods D D, passed through said ears or lugs, cross rods or bars D' D', springs *e e* on the rods D, between the cross-bars and the ears or lugs, controlling the sliding movement of the rods D D, the slide attached to the inner one of said cross-bars, and the curved way-plate G, secured to the side of the car and adapted to form a guide and support for the slide E, substantially as described.

6. In a suspended and swinging car-seat, B, the combination, with said seat and the car-body, of a suspension-connection, C, uniting said seat with the car-body at or near its roof, the frame D D', attached to the under sides of said seat, the slide E, pivoted to the inner end of said frame, the springs *h h*, interposed between said end of said frame and the slide, and the curved way-plate G, secured to the side of the car and adapted to form a guide and support for the slide E, essentially as described.

7. In a suspended and swinging car-seat, B, the combination, with said seat and the car-body, of a suspension-connection, C, uniting said seat with the car-body at or near its roof, and the diagonally-arranged springs I I, uniting said seat with the floor of the car, substantially as shown and described.

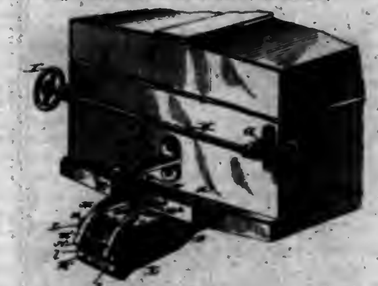
8. In a suspended and swinging car-seat, B, the combination, with said seat and the car-body, of a suspension-connection, C, uniting said seat with the car-body at or near its roof, the supporting-springs H, connected at their upper ends with the seat and having toe-pieces *l* at their lower ends, and the sockets *m* in the floor of the car adapted to receive said toe-pieces loosely within them, essentially as shown and described.



9. The combination, with a railroad passenger-car body, of a series of swinging supports arranged one in front of the other, suspended at their upper ends from or near the roof of the car, the seats connected at one end to the lower ends of said supports and supported by an attached slide working in a fixed guide at their other end, springs tying said seats to the floor of the car adapted to admit of the swinging of the seat, and supporting-springs connected at their upper ends to the seat, and having a loose fit at their lower ends within the floor of the car, substantially as specified.

400,067. TONGS. JOHN T. EVANS, Rhinerville, Utah. Filed June 9, 1888. Serial No. 276,601. (No model.)

Claim.—1. An improved lamp-tongs comprising two pivoted and spring-pressed prongs, B B', having their front ends, E E', curved outwardly, the curved arms F F', secured to and extending above and below the said ends, and the curved cross-pieces G G' and H H' on the lower and upper ends, respectively, of the said curved arms, substantially as herein shown and described.

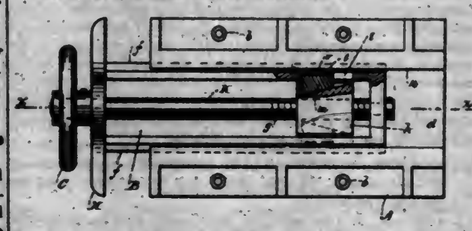


2. A pair of combined tongs and wick-trimmer, comprising two prongs pivoted together, a spring placed between the front ends of the said prongs, arms having cross-pieces and secured on the said

400,067.

front ends, and shears formed on the rear ends of the said prongs, substantially as shown and described.

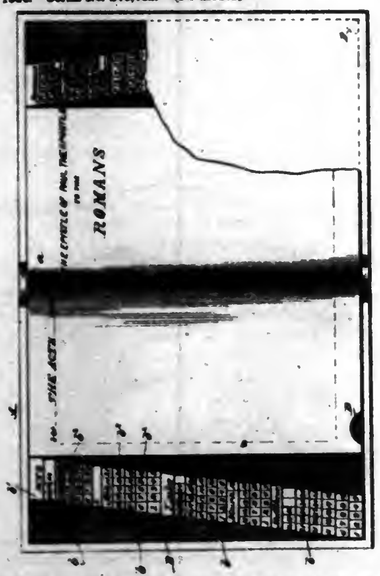
400,068. CAR-COUPLING. ROBERT L. EVANS, Scottsborough, Ala. Filed Aug. 7, 1888. Serial No. 282,187. (No model.)



Claim.—1. In a car-coupler, the combination, with the draw-head B, the pin C, having a fixed collar, c^6, and means, substantially as described, for raising the pin, of a ∩-shaped pin-holder adapted to engage the collar c^6 of the pin C, said holder pivoted to the draw-head and provided with extending arms *m m*, adapted to be struck by the draw-head of an approaching car, substantially as and for the purposes described.

2. In a car-coupler, the combination, with the draw-head B, provided with grooves L L and recesses *n*, and the ∩-shaped pin-holder pivoted in the grooves L, the upper portion, m^2, thereof extending upwardly and rearwardly over the draw-head, the lower extending arms, *m m*, fitting the grooves L L, and springs N, seated in the recesses *n n* and adapted to normally throw the arms *m m* outwardly, of the coupling-pin C, said pin consisting of the lower portion, *c*, the upper extended portion, *c'*, provided with a fixed collar, c^6, and means, substantially as described, for raising the link, whereby the collar is adapted to be engaged by the holder M, substantially as and for the purposes described.

3. In a car-coupler, the combination, with transverse shaft G, provided with operating-wheels H, and the bracket D, having an elongated slot, *d*, of the pin C, its upper end passing through slot *d* in the bracket D and connected with the shaft G, and provided with a fixed collar, c^6, the spring E, mounted on said pin and disposed between the collar c^6 and the bracket D, and the ∩-shaped supporter M, pivoted on the draw-head adapted to hold said pin in its elevated position, all arranged substantially as and for the purpose specified.



400,069. VISE. FREDERIC R. FARWELL, Fitchburg, Mass. Filed Oct. 4, 1888. Serial No. 287,185. (No model.)

Claim.—The combination of a fixed jaw having an attaching-plate provided with ways, a movable jaw provided with a box-shaped flanged frame adapted to slide in said ways and having slots in its sides, a rod journaled in the ends of said frame and provided with a screw-thread near its inner end, a nut adapted to travel on said rod

and provided with inclined grooves in its opposite faces, wedge-blocks disposed in said grooves and projecting into said slots, the outer faces of said blocks being serrated and provided with recesses, and laterally-expanding springs adjusted in said recesses and bearing upon the edges of said ways for forcing said blocks inward, substantially as described.

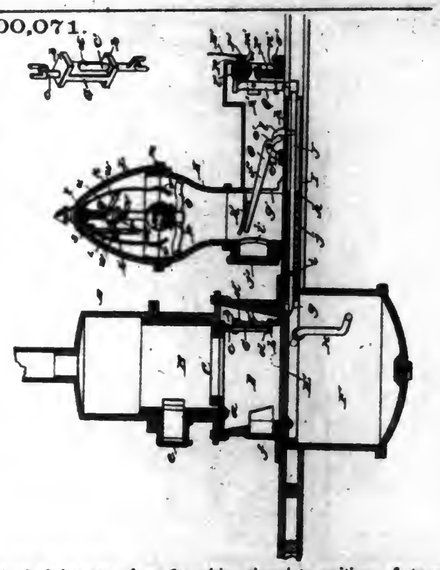
400,070. INDEX. JOHN P. FINDLEY, Blanchard, Pa. Filed July 12, 1888. Serial No. 279,782. (No model.)

Claim.—1. A book having its index formed in sections on opposite sides of a central or intermediate starting-point, and having the leaves of each said sections cut away from said starting-point to expose in the direction thereof portions of the leaves corresponding to each desired division and subdivision of the subject-matter of the book, substantially as and for the purposes specified.

2. A book having an index formed in sections on opposite sides of a central or intermediate starting-point, and provided with a nick or nicks cut in the edges of the leaves and terminating at one of the leaves which mark the intermediate starting-point, substantially as set forth.

3. A book having an index arranged in sections on opposite sides of an intermediate starting-point, each section being formed of a number of series facing toward the intermediate starting-point, and each of said series having a heading and subdivisions thereunder corresponding to the desired divisions and subdivisions of the subject-matter of the book, all substantially as and for the purposes specified.

4. A book having its index formed in sections on opposite sides of a central or intermediate starting-point, the ends of both sections of the index adjacent said starting-point being arranged at the same end of the leaves of the book, whereby the edge of the book is formed with a channel gradually widening toward one end, substantially as set forth.



5. A book having its index formed on opposite sides of a central or intermediate starting-point, and having the leaves of each said sections cut away from said starting-point to expose in the direction thereof portions of the leaves corresponding to each desired division and subdivision of the subject-matter, the ends of both said sections adjacent the starting-point being arranged at the same end of the leaves of the book, whereby the edge of the book is formed with a channel gradually widening toward one end, and a nick or nicks, D, being provided in the edges of the leaves and arranged to terminate at one of the leaves which mark the intermediate starting-point, all substantially as and for the purposes specified.

400,071. SAFETY CAR LAMP AND STOVE. OWEN FRANKS and WILLIAM CARROLL, Columbus, Ohio. Filed Dec. 1, 1887. Serial No. 256,614. (No model.)

Claim.—1. In a car-stove, the combination, with the stove-body A, provided with tight fire and ash-pit doors, of the hinged grate C, the hinged ash-pit bottom E, the shackle G, connecting the grate and the ash-pit bottom, the reservoir F, containing a fire-extinguishing liquid, and a fastener for holding the ash-pit bottom in the position of use, substantially as described.

2. The combination, with the heater having a connected grate

400,071.

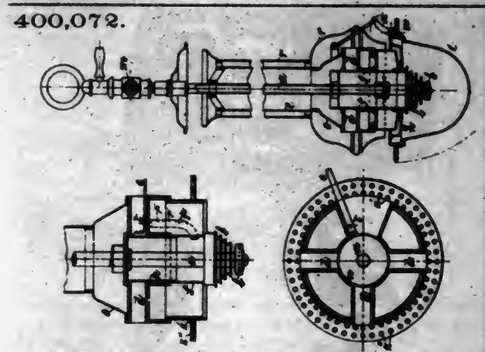
and ash-pit bottom, a lever for raising them into position, a fastener for sustaining them, and a lever for operating the fastener, of a loosely-supported weight above the lever to operate the same by its fall, substantially as set forth.

3. The combination, with a stove, A, provided with the movable grate C, the movable ash-pit bottom E, and the reservoir F, of the tubular column K, the weight-supporting cup *p*, the spherical weight M, the lever O, arranged to be struck by the falling of the weight M, and the retaining and releasing rod J, substantially as described.

4. The combination, with the tubular column K, weight-supporting cup *p* therein, and the spherical weight M, of the adjustable springs *u*, extending at opposite sides of the weight, substantially as described.

5. The combination, with the tubular column K, the weight-supporting cup *p*, and the spherical weight M, of the cap L, the springs *u*, the screw-threaded rod N, depending from the inner upper end of the cap, the follower *q* on the rod, the links *w*, connecting the springs and follower, the scale *a'*, and the index carried by the follower *b'*, substantially as described.

6. In a safety car stove and lamp, the combination, with a swinging grate and the sliding supporting-rod J, its releasing-lever, and the weight, of the lever Q, engaging the rod J with its lower end, the trigger R, having a tooth, *l'*, at one side engaging the upper end of lever Q and a stud, *m'*, at its outer side, and connections between the lamps and said stud, substantially as set forth.

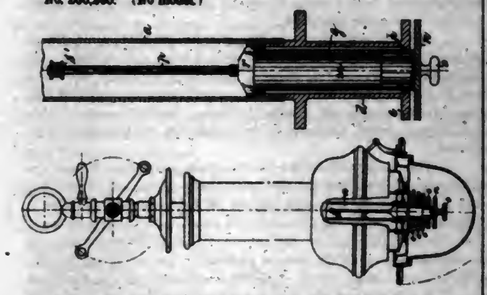


7. The combination, with the slotted casing I, and the spring-actuated rod J, projecting at both ends therethrough and having a lug, *l*, extending up through said slot, of the hollow column K above said casing, a weight, M, loosely supported therein, the pivoted lever O, engaging the lug *l* with its toe *c'*, and at its other end entering the column K in the path of the weight, the lever Q, engaging at its lower end the outer projecting end of the rod J, and the pivoted trigger R, having a tooth engaging the upper end of the lever Q and having a stud at its opposite end, substantially as set forth.

8. A combined safety-stove and lamp-extinguishing apparatus for cars, comprising the stove having a pivoted grate, a pivoted ash-pit bottom connected with the grate, a reservoir under the ash-pit, a locking-rod entering the reservoir and engaging the ash-pit bottom, the lug *l* on said rod, the column K, the weight M, supported loosely therein, the lever O, engaging the lug *l* and extending into the column in the path of the said weight, the lever Q, engaging the outer end of the rod J, the trigger R, engaging the upper end of the lever Q, the wick-operating devices, a rod connecting them, and a connection leading from said rod to the trigger, whereby when the weight falls the trigger, grate, and fire-pot bottom will be released, substantially as set forth.

400,072. REGENERATIVE GAS-BURNER. EDWIN FULLFORD and HENRY T. VAN LAUN, London, England. Filed July 18, 1888. Serial No. 280,304. (No model.) Patented in Belgium May 3, 1888, No. 81,673.

Claim.—1. The combination of the gas-pipe *a* and burner *b*, transparent globe or bowl *c*, with the tube *f*, chimney *e*, having the outlet-passages *d*, and mechanism for raising and lowering said chimney, substantially as set forth.



400,072.

2. The combination of the hinged frame *w*, lever or arm *x*, and link, with the chimney *e*, having rising and falling passages *d* movable therewith, and supporting devices for said chimney and said frame, whereby the lowering of the latter raises the former, substantially as set forth.

3. The combination, with the tube *f* and burner *b*, of the perforated pipe *p* and a casing having in its top above said pipe the hole *t*, substantially as set forth.

400,073. REGENERATIVE GAS-BURNER. EDWIN FULLFORD and HENRY T. VAN LAUN, London, England. Filed July 18, 1888. Serial No. 280,305. (No model.)

Claim.—1. In burners for regenerative and other gas-lamps, the combination, with the gas-supply pipe *a*, of the outer flanged tube, *d*, the inner tube, *g*, perforated near its base, flange *k*, below the perforations *l* through the tube, notched or perforated flange *i*, inner cylinder or plug, *m*, flange *n*, handle *o*, and screwed nut or cross-bar *r*, substantially as herein set forth.

2. The combination, with the cylinder or plug *m* and screwed nut or cross-bar *r*, of the spindle *p*, nut or stop *z*, the outer tube, *d*, the inner tube, *g*, the lower flange, *n*, and spindle *t*, said tube *g* having a notched flange at the top and a series of perforations near the bottom, substantially as set forth.

400,074. VELOCIPEDE. PETER GENDRON, Toledo, Ohio, assignor to the Gendron Iron Wheel Company, same place. Filed Nov. 15, 1887. Renewed Jan. 23, 1889. Serial No. 297,297. (No model.)

Claim.—1. In a velocipede, the combination, with the drive-wheel and its axle, of a bifurcated standard provided at its lower ends with half-bearings integrally formed therewith, and with half-bearings hinged thereto and provided with stubs forming complementary parts of the standard, and having jointly therewith an oval cross-section of slightly-increasing area toward the lower ends of said standard, and locking oval sleeves upon said standard, substantially as described.

2. In a velocipede, a detachable connection between the back frame and the standard, the same consisting of two rearwardly-projecting ears formed on the standard, one above the other, and provided with vertical bearings, the upper one of which is enlarged at its lower end, of a head formed on the end of the back frame and adapted to engage between the ears on the standard and have a vertical play between, of two pintles on said head engaging into the bearings formed in said ears of the standard, and of a saddle-strap provided at its forward end with a slotted locking-plate adapted to secure the parts detachably together, substantially as described.

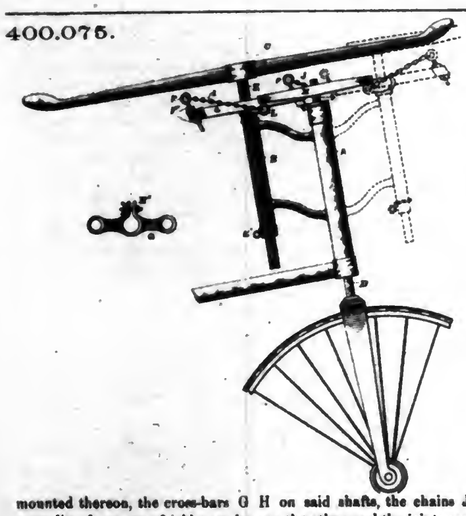
3. In a velocipede, the detachable connection between the back frame and the standard, the same consisting of two rearwardly-projecting ears formed on the standard, one above and one below, a head formed on the front end of the back frame and adapted to engage between the ears on the standard and have a limited vertical play between the same, of two pintles on said head adapted to engage in vertical bearings formed in the ears of the standard, the upper one of which bearings is enlarged toward its lower end, of a saddle-strap provided at its forward end with a slotted locking-plate adapted to detachably secure the head of the back frame to the standard, of a wedge-shaped fin formed on top of the back frame, and a crotch formed on the metallic saddle-strap adapted to engage with said fin on the back frame, substantially as described.

4. In a velocipede, the detachable connection between the back frame and the standard, the same consisting of two rearwardly-projecting ears formed on the standard, one above and one below, a head formed on the front end of the back frame, and adapted to engage between the ears on the standard and have a limited vertical play between the same, of two pintles on said head adapted to engage in vertical bearings formed in the ears of the standard, the upper one of which bearings is enlarged toward its lower end, of a saddle-strap provided at its forward end with a slotted locking-plate adapted to detachably secure the head of the back frame to the standard, and of a saddle secured by an upwardly-dissolving connection with the back frame, substantially as shown.

5. In a velocipede, the combination, with a front drive-wheel, a bifurcated standard in which said drive-wheel is journaled, a rear axle, two rear wheels journaled upon said rear axle, and a back frame, of a triangular vertical truss in one piece pivotally connected at the forward end to the standard and secured at the rear end to the center of the rear axle, and of two lateral bifurcated braces, the bifurcated front ends of which are secured to the main frame upon opposite sides thereof, and the rear ends of which are secured to the rear axle near the outer ends thereof, substantially as described.

6. In a velocipede, the combination of a front drive-wheel, a bifurcated standard in which said drive-wheel is journaled, a rear axle, two hind wheels journaled upon said rear axle, a back frame consisting of a main frame in one piece, substantially of the form of a triangular vertical truss, pivotally connected to the standward and at the rear end secured to the center of the rear axle, and two lateral bifurcated braces upon opposite sides, with their bifurcated front ends secured to webs formed in the corners of the truss integral therewith, and with their rear ends secured at the ends of the rear axle, respectively, substantially as described.

7. The combination, with the back frame and bracket K, of the bearing-plate L, the S-spring secured thereto and provided with a hole in its free end, the saddle P, and the saddle-iron *n*, provided with the pin *w* and loop *v*, all arranged to operate substantially as described.



8. The combination, with the back frame and bracket K, of the bearing-plate L, adjustably secured upon said bracket, of the adjusting-screw *r*, journaled in stationary bearings in the bracket, and of the S-spring secured at one end to the bearing-plate and connected at the other end to the saddle and the saddle-strap, all substantially as described.

9. The combination, with the back frame, of the bracket K, having the upwardly-projecting lugs *p q*, the adjustable bearing-plate L, carrying the saddle-slot *m*, threaded lug *n*, and mortise *o*, formed on said bearing-plate, and the adjusting-screw *r*, all arranged substantially as described.

400,075. VELOCIPEDE. WILLIAM GOULDER, Lea Bridge Road, Clapton, County of Middlesex, England. Filed Dec. 20, 1887. Serial No. 258,883. (No model.) Patented in England Oct. 18, 1887, No. 14,144; in France Nov. 19, 1887, No. 174,198, and in Germany Nov. 19, 1887, No. 45,162.

Claim.—1. In combination with the steering-wheel of a velocipede and the rod D rising therefrom, the rod E, the steering-handle C,

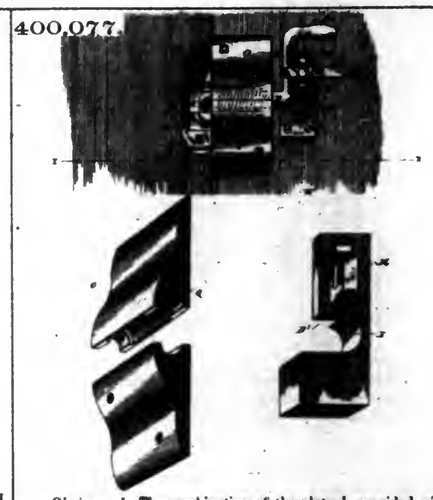
400,075.

mounted thereon, the cross-bars G H on said shafts, the chains J, extending from one of said cross-bars to the other, and the joints connecting said chains to said cross-bars, these joints having up-and-down motion, but rigidly laterally, substantially as set forth.

2. In combination with the steering-wheel of a velocipede and a rod, D, connecting thereto a second rod, E, having a steering-handle thereon, cross-bars on said rods, connections between said cross-bars, a hollow cylinder, B, which holds said rod and clips E' E^2, and their thumb-screws for adjusting rod E, substantially as set forth.

3. The method of adjustment of the rod E of the cylinder B, for raising or lowering the handle-bar C or turning it on one side or parallel with the wheels by aid of the clips E' E^2 and thumb-screws Fig. 2.

400,076. **DEVICE FOR HOLDING TILE-SETTINGS.** ALFRED GREENAWAY, Louisville, Ky. Filed May 5, 1888. Serial No. 272,935. (No model.)



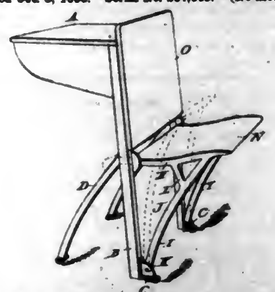
Claim.—1. In a tile-holder for fire-places, the combination, with the casing comprising the back and the sides bent at an angle thereto, of a longitudinal strip secured along said back and provided with projecting portions, substantially as and for the purpose set forth.

2. In a tile-holder for fire-places, the combination, with the casing, of a longitudinal strip secured along the back of the casing, said strip comprising the central secured portion and the angular projections extending therefrom, substantially as and for the purpose set forth.

3. In a tile-holder for fire-places, the combination, with the casing adapted to be disposed at the edge of the fire-place and comprising the back and the sides bent at an angle to the latter, of a longitudinal strip having its main portion secured to said back and provided with angular projecting portions, and transverse retaining-braces secured to the sides, substantially as and for the purpose set forth.

400,077. **FREIGHT-CAR LOCK.** JACOB HAHN, De Kalb, Ill. Filed Dec. 1, 1887. Serial No. 256,715. (No model.)

400,077.



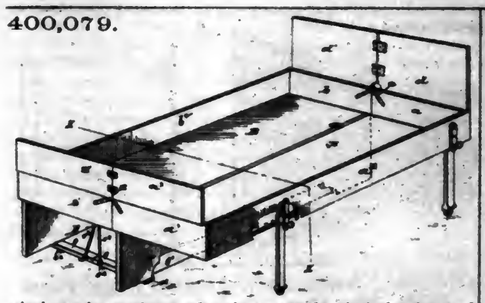
Claim.—1. The combination of the plate J, provided with the recess K and cross-bar F, the box O, provided with recess Q, the bolt B, having angular end seated in said box, the cleat C, provided with recesses D and D', and spring E and the lug G, substantially as shown, and for the purpose described.

2. In combination with the freight-car I, the plate J, rigidly attached to said car near the door opening therein and provided with the recess K, the door W, provided with cleat C, having recesses D and D' therein, and a bolt, B, seated on said door and provided with the engaging end H, and adapted to engage the said recess K when said door is closed, substantially as shown, and for the purpose described.

3. The combination of the box O, seated on the door W, and provided with recess Q therein, the bolt B, pivotally seated in said box and provided with the engaging end H, the spring E, the plate J, affixed to the car I, and provided with recess K and engaging-bar F, and the cleat C, provided with recesses D and D', whereby said bolt is adapted to be partially rotated and held in and out of engagement with the car I, substantially as shown, and for the purpose described.

4. In combination with the car I, having formed exteriorly thereon the recess K and engaging-bar F, the door W, provided with rock-bolt B, having the engaging end H, and the lug G, said bolt being adapted, substantially as shown, to be drawn and held in and out of engagement with said recess K, for the purpose described.

400,078. **SCHOOL DESK AND SEAT.** GUSTAVUS HAMEL, De Soto, Mo. Filed Oct. 3, 1888. Serial No. 287,065. (No model.)



Claim.—In a combined desk and seat, the combination, with the desk-supporting standards B, of the braces D, secured to the floor at their lower ends and at their upper ends to the standards B, and carrying the pins F on their inner faces, the angle-iron C, secured to the lower end of the desk-standard, and the seat-brackets I, pivotally secured at their lower ends to the angle-irons, the upper arms of such seat-brackets being provided with hook G and stop-bars L, whereby the motion of the seat is limited, substantially as shown and described.

400,079. **COMBINED SOFA AND BED.** CHARLES T. HARD, East Liverpool, assignor to Thomas H. Hard, Newburg, Ohio. Filed Mar. 10, 1888. Serial No. 266,822. (No model.)

Claim.—1. In a combined sofa and bed, the combination of a body, a base-section hinged to one side or edge of the body, facing-boards hinged to opposite sides of the body and serving to conceal

400,079.

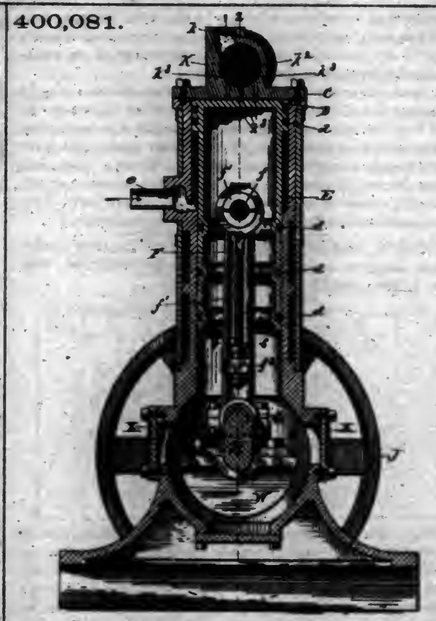
the base when used as a sofa and supports for the body when used as a bed, and sectional end hinged head and foot boards on body and base sections, respectively, substantially as described.

2. In a combined sofa and bed, the combination, with the body and base section, each having one open side or edge and hinged together at their open sides or edges, of facing-boards hinged to opposite sides of the body and serving to conceal the base when used as a sofa and supports for the body when used as a bed, pivoted and hinged braces for holding and supporting the facing-boards, and sectional and hinged head and foot boards on the body and base section, respectively, substantially as herein shown and described.

3. In a combined sofa and bed, the combination, with a base-section and a body hinged together, of facing-boards hinged to the said body and brace-strips hinged to the said facing-boards, the strips of the opposing facing-boards abutting when the said strips are extended, substantially as herein shown and described.

4. In a combined sofa and bed, the combination, with a base-section, A, having an open side and provided with pivoted legs, of the body B, hinged to the base-section and having an open side, the head and foot boards b d' and b' E, the facing-boards hinged to the body and provided with the hinged brace-strips o, and the boards a^2 d, hinged to the foot-board E and head-board d', respectively, substantially as herein shown and described.

400,080. **FEED-TROUGH.** CHRISTIAN F. HARDER, Chicago, Ill. Filed Jan. 2, 1889. Serial No. 295,236. (No model.)



Claim.—1. As an attachment to a vehicle-tongue having sockets, four standards removably inserted in these sockets on relative flaring positions, and having eyed upper ends holding the four corners of a flexible trough by means of a rope hemmed into the upper edges thereof and passed through the eyes of the standards, all substantially as set forth.

2. As an attachment to a vehicle-tongue having sockets, four standards removably inserted in these sockets on relative flaring positions, and having eyed upper ends holding the four corners of a flexible trough by means of a rope hemmed into the upper edges thereof and passed through the eyes of the standards, with the ends of the rope protruding from the hems to enable contracting and tying, all substantially as set forth.

400,081. **STEAM-ENGINE.** DEXTER D. HARDY, Chicago, Ill. Filed Mar. 13, 1888. Serial No. 267,122. (No model.)

Claim.—1. In combination with an engine having differential areas of pistons, the steam-chest having two separate ports, one of said ports being for the admission of steam to the larger area of said

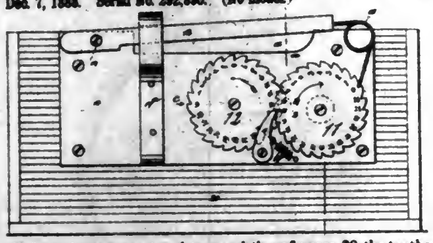
400,081.

piston and the other of said ports being for the exhaust of steam from the larger area of said piston, said steam-chest being provided with two separate valves, one for the admission of the steam to the larger area of the piston and the other for the exhaust of the steam from the larger area of the piston, both of said ports and both of said valves being arranged in one and the same steam-chest, substantially as described.

2. In a steam-engine wherein the steam is exhausted from one end of the cylinder only, the combination of a steam-chest having one or more openings in the valve-seat for the admission of steam to the cylinder and one or more openings in the valve-seat for the exhaust of the steam from the cylinder, all contained in one and the same steam-chest, valves for the admission and exhaust openings in the valve-seats corresponding in form to the form of the valve-seats and having openings corresponding therewith for the admission and the exhaust of the steam, said valves being of substantially uniform diameter throughout their length and fitted to their valve-stems in a way which permits of their free movement in a radial direction from their center of rotation under the pressure of the steam, whereby the valves are properly held in contact with their seats by steam-pressure regardless of their wear, substantially as described.

3. In an engine having a cylinder exhausting steam from but one end and a double-acting piston working therein, the combination of a steam-chest at its outer end parallel with the crank-shaft, two separate valves arranged in the opposite ends of the steam-chest and working independently of each other, having their valve-stems extending out of the ends of the steam-chest, and crank-arms connecting the valve-stems to independent eccentric-rods, whereby the admission and exhaust of steam is controlled, substantially as described.

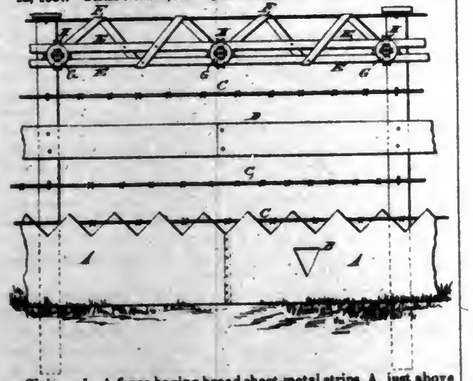
4. In an engine having a cylinder exhausting steam from but one end and a double-acting differential-area piston working therein, the combination of a pin, f, a two-part box surrounding the same and connected by the pin to the piston, and loop rod or rods f', holding the parts of the box around the pin and adjustable in length, substantially as described.



5. In an engine having a cylinder exhausting steam from but one end and a double-acting piston working therein, the combination of an inclosed crank-chamber into which the end of the steam-cylinder opens, a shaft passing through the crank-chamber and having its crank working therein, a rod connecting the piston with the crank, and loop rod or rods f', adjustable in length to take up the loss in the length of the connecting-rod, substantially as described.

6. In combination with an engine having differential areas of piston, a steam-chest supplying steam to the larger area of the piston only and provided with two separate sets of ports located near its ends, respectively, two valves arranged in the steam-chest to open and close the ports and adjustably attached in a radial direction to their respective valve-stems, valve-stems with their outer ends passing out through the opposite heads of the steam-chest and provided with crank-arms pivotally attached to eccentric-rods, and eccentric-rods of which one

is attached to an eccentric, revolving with the main shaft operating the exhaust-valve, and the other attached to a compound eccentric operated by the main shaft, regulating the movements of the admission-valve, substantially as described.



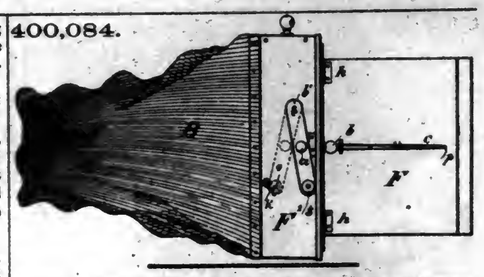
7. In an engine having but one cylinder with a double-acting differential-area piston working therein and from which the steam is exhausted from the larger area only, the combination of a steam-chest, admission and exhaust ports arranged in the chest, valves opening and closing the ports, eccentric-rods operating the valves, a crank-shaft operating the eccentric-rods and moving the piston up and down, and a steam-pipe constantly supplying steam to the smaller area of the piston to produce its upward stroke, substantially as described.

400,082. EGG-COUNT REGISTER. ALVIN F. HARRISON, Greeley, Kans., assignor to himself and William H. Harrison, same place. Filed Dec. 7, 1888. Serial No. 292,895. (No model.)

Claim.—An egg-count register consisting of a case, 20, the toothed and numbered disks 11 and 12, slightly overlapping each other, the disks 11 being provided with the pin 2, the pivoted lever 13, provided with the spring-arm 15, engaging the teeth of the disk 11, the stop 17ª, projecting over the lever, the spring 16ª, arranged beneath the lever, the pawl 16, engaging the teeth of the disk 11, and the spring 17, for holding the pawl in engagement with said disk, substantially as herein shown and described.

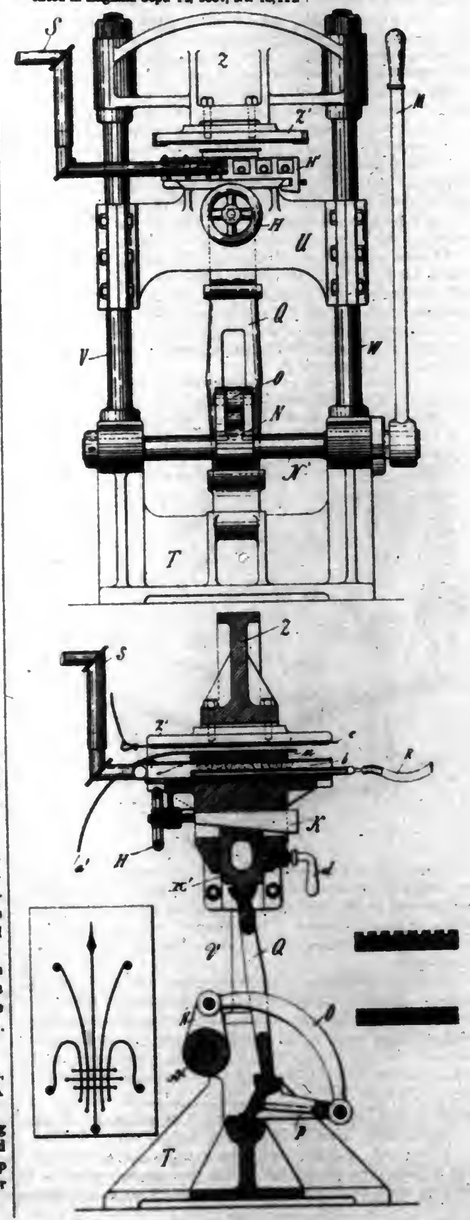
400,083. FENCING. ELISHA HAWES, Sacramento, Cal. Filed Feb. 12, 1887. Serial No. 227,431. (No model.)

Claim.—1. A fence having broad sheet-metal strips, A, just above and extending down to the ground, said strips being provided with vertical V-shaped openings B, with their lower corners at a distance of a few inches above the ground, for the purpose set forth, substantially as described.



2. A fence having broad sheet-metal strips A just above and extending down to the ground, said strips being provided with the vertical V-shaped openings B, the lower corners of which are at a distance of a few inches above the ground, and the V-shaped tongues formed integrally with the strips and adapted to be bent into and thereby close the openings, substantially as described.

3. In a fence, the upper wire and parallel strips E, in combination with the zigzag strip F strung between said wire and strips, and the cross-pieces H and rosettes riveted together and arranged on opposite sides of strips E at the angles of strips F, substantially as described.

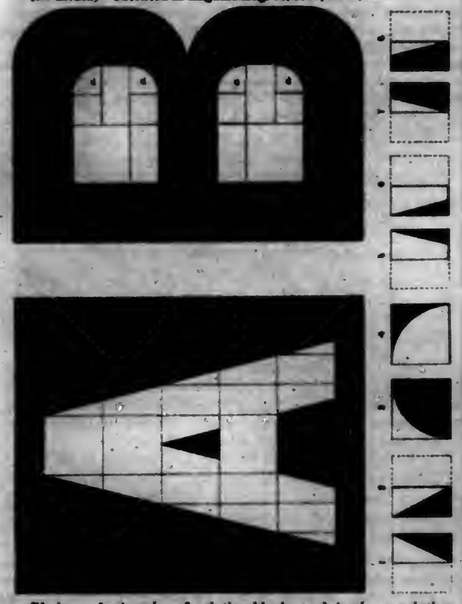


400,084. PHOTOGRAPHIC SHUTTER. HENRY HERBERT, London, County of Middlesex, England. Filed Jan. 4, 1889. Serial No. 295,304. (No model.) Patented in England Oct. 10, 1888, No. 14,545.

Claim.—The improved shutter hereinbefore described, consisting of a hinged flap closed by a thread or cord which is fixed to and operated by a screw stud attached upon a pivoting-bar, said flap opening automatically under the action of an india-rubber band or spring, for the purpose set forth.

400,084.

400,085. METHOD OF PRODUCING FANCY FIGURED WOODEN PLATES. ROBERT HIRNEL, Berlin, Prussia, assignor to Leo Seligsohn, same place. Filed Apr. 23, 1888. Serial No. 271,635. (No model.) Patented in England Sept. 14, 1887, No. 12,444.

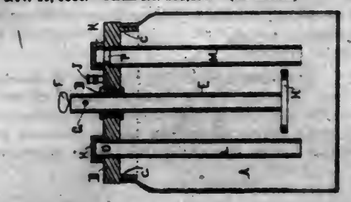


Claim.—1. The herein-described method of producing fancy figured wooden plates, which consists in first pressing the wooden plates between two metallic surfaces, one of which is figured and heated, and then passing the burned plate between pressing-rolls, substantially as and for the purpose described.

2. The herein-described method of producing fancy figured wooden plates, which consists in pressing the wooden plates between two metallic surfaces, one of which is figured and heated, then passing the burned plate through pressing-rolls to smooth the embossed plate, and subsequently polishing the smoothed burned plate by rolls or other suitable means, substantially as described, whereby a figured plate is produced closely resembling genuine inlaid-work.

400,086. PHENACETINE. OSKAR HINSBERG, Barmen, Germany, assignor to the Farbenfabriken, vormals Fr. Bayer & Co., Elberfeld, Germany. Filed June 29, 1887. Serial No. 243,063. (Specimens.)

Claim.—The product herein described, which has the following characteristics: it crystallizes in white leaves, melting at 135° centigrade; not coloring on addition of acids or alkalies; is little soluble in cold water, more so in hot water; easily soluble in alcohol, ether, chloroform, or benzole; is without taste, and has the general composition $C_{10}H_{13}O_2N$.

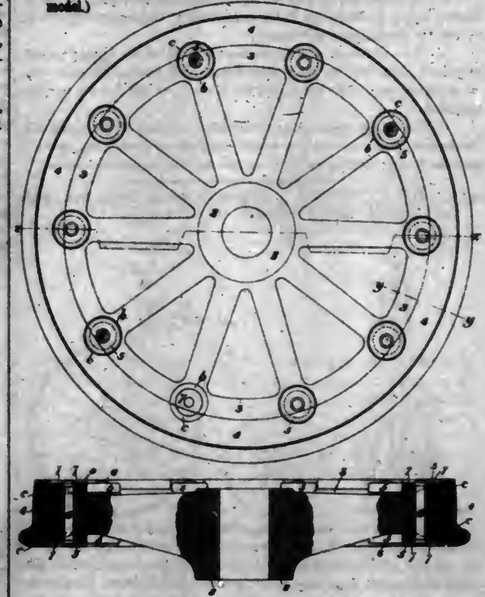


400,087. PRINTING BLOCK OR TYPE. SAMUEL JOHN, Tranmere, County of Chester, England. Filed Apr. 13, 1886. Serial No. 198,744. (No model.) Patented in England Aug. 18, 1886, No. 9,782.

Claim.—1. A series of printing-blocks each having a printing-surface corresponding in form and size to a given portion of a letter of the alphabet, the series embracing one or more blocks corresponding with every part of each and every letter of the alphabet, whereby said blocks are adapted to be combined to produce a printing type or block for every letter of the alphabet.

2. A font of printing-blocks each of a given size or multiple thereof, and each bearing a geometric form corresponding in form and dimensions with a definite part of a letter of the alphabet, the font containing a number of such blocks corresponding with each part of the several letters of the alphabet, whereby they are adapted to produce, when properly combined, each and every letter of the alphabet.

400,088. GALVANIC BATTERY. CARL E. KASEMEYER, Chicago, Ill., assignor to the Electrical Supply Company, Augusta, Conn. Filed Nov. 19, 1888. Serial No. 291,193. (No model.)



Claim.—1. In a battery, the combination of a cover composed of metal which expands when cooling with elements some of which are cast in such cover.

2. In a battery, the combination of a cover with elements some of which are provided with heads inclosed within the substance of such cover and cast therewith and shaped so as to form shoulders bearing upon such substance within the cover.

3. In a battery, the combination of a metal cover with elements the heads of some of which are inclosed within the metal of such cover and connected by the portion of the metal of the cover about the heads of the elements.

4. In a battery, the combination of a cover with elements the heads of which are inserted within such cover and provided with integral shoulders, so as to be secured thereto.

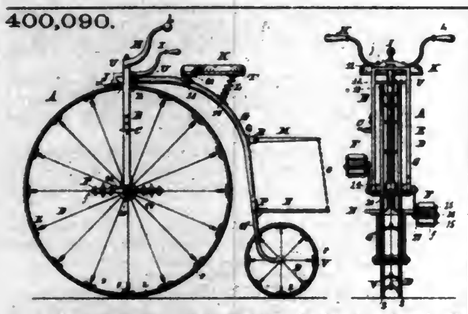
400,089. FASTENING DEVICE FOR CAR-WHEEL TIRES. JULIAN KENNEDY, Latrobe, Pa. Filed Dec. 15, 1888. Serial No. 293,737. (No model.)

Claim.—1. As means for connecting wheel-tires to the centers, a series of fasteners set on opposite sides of the wheel, each of said fasteners having flanges fitted in seats on the faces of the tire and wheel-center, and having also a bolt or rivet connecting it to the wheel-center, substantially as and for the purposes described.

2. As means for connecting wheel-tires to the centers, a series of fasteners set on opposite sides of the wheel and having flanges fitted in seats on the tire and wheel-center, and bolts or rivets connecting the opposite fasteners, substantially as and for the purposes described.

3. As means for securing tires to wheel-centers, a fastener having a circular retaining-flange, which is set in a correspondingly-shaped seat on the wheel center and tire and is secured in place thereon, substantially as and for the purposes described.

4. The combination of the wheel-center having a series of lateral marginal projections, 7, a circular seat formed on the tire and wheel-center at said projections, and fasteners having circular retaining-flanges which are placed on said seats, and bolts or rivets which pass through the wheel-center and secure the opposite fasteners, substantially as and for the purposes described.



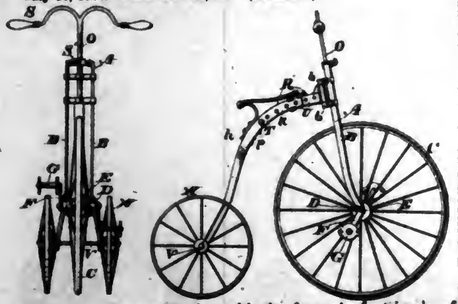
400,090. VELOCIPEDE. JOSEPH KNAPP, Buffalo, N. Y. Filed Jan. 15, 1889. Serial No. 296,418. (No model.)

Claim.—1. The double-tired wheel A, having the bridge-pieces E, connecting said rims or tires, said bridge-pieces having the passage for the spokes D, and the hub 10, as and for the purpose set forth.

2. In bicycles and tricycles, a main wheel consisting of two rims connected together by a series of bridge-pieces, a single hub, and spokes, as described, in combination with the fork B, backbone G, seat K, and trailing wheel V, the whole being constructed and combined as and for the purpose set forth.

3. The combination, with the fork B, having cross-pieces 11 12, of the backbone G, pivoted between said cross-pieces, the handle H, having the notch *j*, and the brake-lever I, with fork J and brake-shoes 21 22, as and for the object stated.

400,090.



4. The combination, with the backbone G, of the parcel-carrier N, hinged to the backbone at P and supported by the supporting-rod M, as and for the purpose mentioned.

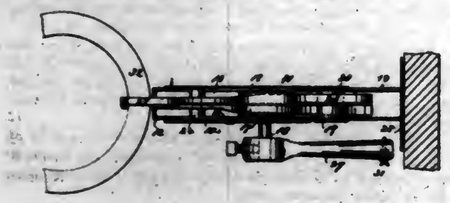
5. The combination, with the backbone G, of the hinged parcel-carrier N, supported by the supporting-rod M, having suitable stop, R, engaging the double eye Q, and the chain O, as and for the purpose specified.

6. The bridge-pieces E, as described, consisting of the plates 3 3, cross-piece 5, and central eye, 4, said bridge-piece having the spoke D secured by the locking-nuts 7 8, as and for the purpose set forth.

400,091. TRICYCLE. FREDERICK R. KOHLER, Canton, Ohio. Filed July 16, 1888. Serial No. 280,015. (No model.)

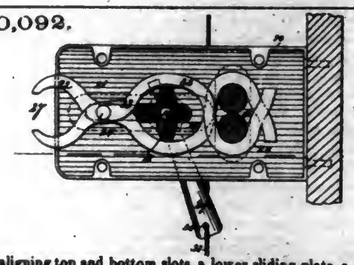
Claim.—1. The combination, with the frame A of a tricycle, of the adjustable frame K, having cross-bars, as L, with loops to embrace the parallel sides of said frame A, rearwardly-projected eyes to pivotally engage the front portion of the back frame, R, and handle-support O, and means for securing the frame K in desired adjustment in the frame A, substantially as set forth.

2. In combination, the inverted-U frame A, adjustable frame K, and means of securing said frame K in vertical adjustment, substantially as described, and for the purpose set forth.



3. In a tricycle, a back frame composed, essentially, of the parts T and U, having the loops *m*, fingers A, perforations *n*, and bolt *p*, substantially as described, and for the purpose set forth.

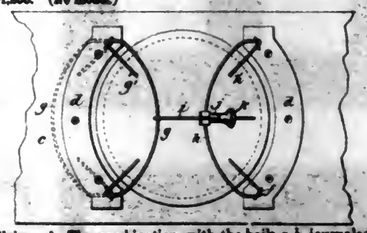
4. The combination, with the frame A of a tricycle, of the adjustable frame K, having cross-bars L, with loops to embrace the parallel sides of frame A, back frame, R, pivotally secured to said frame, handle-support O, and means for securing said frame and handle-support O in desired adjustment in the frame A, substantially as described, and for the purpose set forth.



5. The combination, with the frame A of a tricycle, of a frame, K, consisting of cross-bars formed with central apertures and provided with looped ends to embrace the parallel sides of the frame A, the said cross-bars constructed to pivotally engage the front portion of the back frame, a handle-support, K, an apertured boss, J, and a set-screw, S', substantially as set forth.

400,092. DEVICE FOR DETACHING ANIMALS. ISAIAH J. KUHATH, New York, N. Y. Filed Nov. 3, 1888. Serial No. 290,209. (No model.)

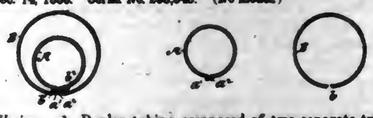
Claim.—1. The combination, with a casing provided with verti-



400,092.

cally-aligning top and bottom slots, a lower sliding plate, a pintle projecting upward through the plate and carrying an essentially-elliptical cam, and a lever secured to the lower end of the said pintle, of pivoted gripping-fingers bent upon themselves to form a central circular section inclosing the cam, and an outer hooked section, all combined for operation substantially as shown and described.

2. The combination, with a casing provided with vertically-aligning top and bottom slots, a lower sliding plate, a pintle projecting upward through the plate and carrying an essentially-elliptical cam, and a lever secured to the lower end of said pintle, of stops secured between the upper and lower walls of the casing to the rear of the said slots, pivoted gripping-fingers held to slide within the slots of the casing and bent upon themselves to form a central circular section inclosing the cam, a rear circular section inclosing the stops, and an outer hooked section, all combined for operation substantially as shown and described.



400,093. CLOSURE FOR CHURNS. WILLIAM H. LE SUER and FRED R. BARNEY, Aberdeen, Dak. Filed July 27, 1888. Serial No. 281,263. (No model.)

Claim.—1. The combination, with the bails *g h*, journaled on the loops *f* on the churn-head and having the ends *g' h'* extending through the loops *f* and resting on the churn-cover, of a means for drawing the central portions of the bails together, whereby the bail ends are pressed upon the cover and the cover is held in place.

2. The combination, with the bails *g h*, journaled in the loops *f* on the churn-head and having the ends *g' h'* extending through the loops *f* and resting on the churn-cover, of the threaded bolt *i*, having the hook engaging the bail *g*, the slide J, having the loop engaging the bail *h*, and the threaded nut *k*, as and for the purpose stated.

400,094. DUPLEX TUBING. ALEXANDER H. LEBOUF, Waterbury, Conn., assignor to Holmes, Booth & Haydens, New York, N. Y. Filed Dec. 14, 1888. Serial No. 293,545. (No model.)

Claim.—1. Duplex tubing composed of two separate tubes, an inner tube provided with a rib, and an outer tube provided with an opening receiving and engaging with said rib, the two tubes being closed and united, substantially as specified.

2. Duplex tubing composed of two separate tubes, an inner tube provided with a rib, made of two abutting flanges, and an outer tube provided with an opening receiving and engaging with said rib, all the tubes being closed and united, substantially as specified.

3. Duplex tubing composed of two separate tubes, an inner tube provided with a rib, made of two abutting flanges, and an outer tube provided with an opening furnished with inwardly-turned flanges and receiving and engaging with said rib, all the tubes being closed and united, substantially as specified.

400,095. REVERSIBLE EXCENTRIC. WILLIAM W. LOCKWOOD, Freeport, Kans. Filed Sept. 3, 1888. Serial No. 284,304. (No model.)

Claim.—1. The combination, with the shaft and the eccentric, of the support *c*, fixedly secured to the shaft, and the bell-crank lever interposed between the said support and the eccentric, substantially as set forth.

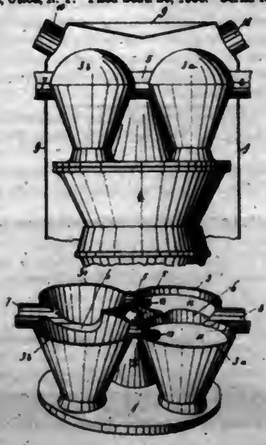
400,095.

2. The combination, with the shaft, the eccentric, and the support, of the bell-crank lever pivoted to the support, and having its outer end adjustably connected with the said eccentric, substantially as described.

3. The combination, with the shaft, of the block having an arm, the eccentric mounted on the block, the support secured to the shaft, and the bell-crank lever pivoted to the support, and having its short arm in engagement with the arm of the block, and having its outer end adjustably connected with the eccentric, substantially as described.

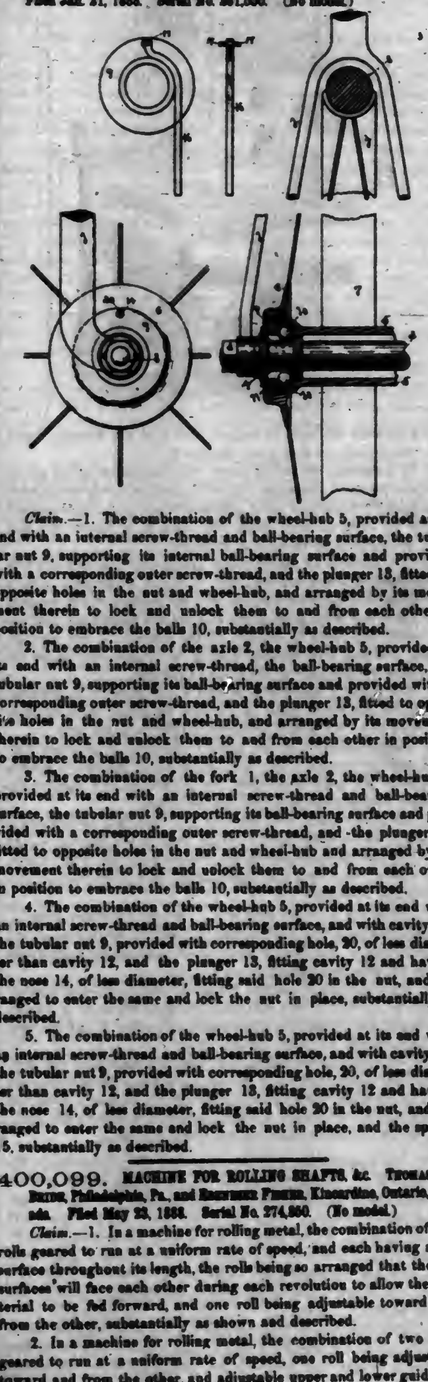
4. The combination, with the shaft and the eccentric, of the support C, fixedly secured to said shaft, the block mounted on said shaft, the bell-crank lever pivoted on said support, with one end engaging an extension of said block, and the connection between the lever and the eccentric, substantially as shown and described.

5. The combination, with the shaft and the eccentric, of the support on said shaft, the block B, mounted on said shaft and formed with an arm, *b*, provided with a slot, *b'*, the bell-crank lever pivoted on said support and formed with a lateral projection, *d*, engaging said slot, and the rod F, connecting the lever and the eccentric, substantially as shown and described.



6. The combination of the shaft, the block mounted on the shaft, the eccentric placed on the said block, the support secured to the shaft, the bell-crank lever pivoted to the support, and having its inner end in engagement with the said block, and having its outer end adjustably connected with the eccentric, and the lever G, having its arms at about right angles to one another, one arm being connected with the eccentric and the other arm connected with the sliding collar on the shaft, substantially as and for the purpose set forth.

400,096. CARBURETING-LAMP. JAMES P. MAGENIS, North Adams, Mass. Filed May 22, 1888. Serial No. 274,704. (No model.)



Claim.—In a carbureting-lamp, the combination, with the annular burner, of the conical or downwardly-tapered hydrocarbon-receptacle E, having a removable cap and arranged above and concentric with said burner in the described proximity thereto, whereby the flame may impinge on its lower portion, the two gas-conducting tubes extending axially through the said receptacle nearly to the top and one arranged within the other, and the horizontal tubes *c*, which connect the burner with the lower portion of the outer tube, as shown and described.

400,097. HEAT-RADIATOR FOR HOT-AIR FURNACES. CHAS. J. MANNING, Utica, N. Y. Filed Sept. 20, 1888. Serial No. 285,356. (No model.)

Claim.—A furnace having a radiator and a series of oval-shaped domes disposed radially around the center, said domes connected by flues, in combination with diaphragm-plates 11, resting on lugs in the oval-shaped domes nearest to the smoke-exit, said diaphragm-plates being provided with opening 13, adjacent to flue 5, substantially set forth, for the purposes stated.

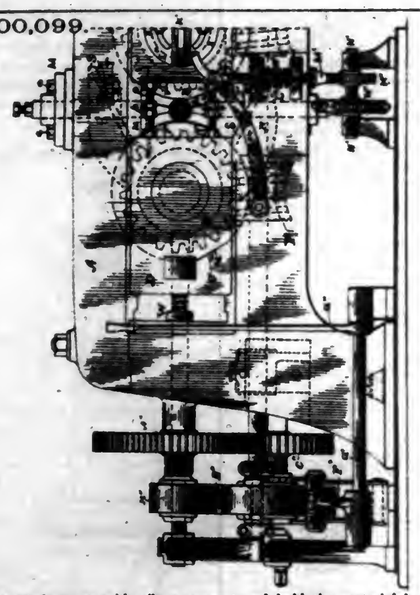
400,098. VELOCIPEDE. JOHN M. MARLIN, New Haven, Conn. Filed Jan. 21, 1888. Serial No. 261,550. (No model.)

Claim.—1. The combination of the wheel-hub 5, provided at its end with an internal screw-thread and ball-bearing surface, the tubular nut 9, supporting its internal ball-bearing surface and provided with a corresponding outer screw-thread, and the plunger 13, fitted to opposite holes in the nut and wheel-hub, and arranged by its movement therein to lock and unlock them to and from each other in position to embrace the balls 10, substantially as described.

2. The combination of the axle 2, the wheel-hub 5, provided at its end with an internal screw-thread, the ball-bearing surface, the tubular nut 9, supporting its ball-bearing surface and provided with a corresponding outer screw-thread, and the plunger 13, fitted to opposite holes in the nut and wheel-hub, and arranged by its movement therein to lock and unlock them to and from each other in position to embrace the balls 10, substantially as described.

3. The combination of the fork 1, the axle 2, the wheel-hub 5, provided at its end with an internal screw-thread and ball-bearing surface, the tubular nut 9, supporting its ball-bearing surface and provided with a corresponding outer screw-thread, and the plunger 13, fitted to opposite holes in the nut and wheel-hub and arranged by its movement therein to lock and unlock them to and from each other in position to embrace the balls 10, substantially as described.

4. The combination of the wheel-hub 5, provided at its end with an internal screw-thread and ball-bearing surface, and with cavity 12, the tubular nut 9, provided with corresponding hole, 20, of less diameter than cavity 12, and the plunger 13, fitting cavity 12 and having the nose 14, of less diameter, fitting said hole 20 in the nut, and arranged to enter the same and lock the nut in place, substantially as described.



5. The combination of the wheel-hub 5, provided at its end with an internal screw-thread and ball-bearing surface, and with cavity 12, the tubular nut 9, provided with corresponding hole, 20, of less diameter than cavity 12, and the plunger 13, fitting cavity 12 and having the nose 14, of less diameter, fitting said hole 20 in the nut, and arranged to enter the same and lock the nut in place, and the spring 15, substantially as described.

400,099. MACHINE FOR ROLLING SHAFTS, &c. THOMAS MCBRIDE, Philadelphia, Pa., and REUBEN FISHER, Kincardine, Ontario, Canada. Filed May 23, 1888. Serial No. 274,860. (No model.)

Claim.—1. In a machine for rolling metal, the combination of two rolls geared to run at a uniform rate of speed, and each having a flat surface throughout its length, the rolls being so arranged that the flat surfaces will face each other during each revolution to allow the material to be fed forward, and one roll being adjustable toward and from the other, substantially as shown and described.

2. In a machine for rolling metal, the combination of two rolls geared to run at a uniform rate of speed, one roll being adjustable toward and from the other, and adjustable upper and lower guides or

400,099.

supports between said rolls to support and hold the material being rolled, substantially as shown and described.

3. In a machine for rolling metal, the combination of the roll B, mounted in permanent bearings, the roll C, mounted in adjustable bearings, adjustable upper and lower guides between said rolls to support and hold the material being rolled, and yokes R, to control the said guides, substantially as shown and described.

4. In a machine for rolling metal, having two rolls, one of which has stationary bearings and the other of which is movable toward and from the first, the combination, with the journals of the movable roll, of upper and lower guide-plates to guide and support the material being rolled, and yokes R, secured to the journals of the movable roll, and provided with inclined arms S, to engage and adjust the guide-plates, substantially as shown and described.

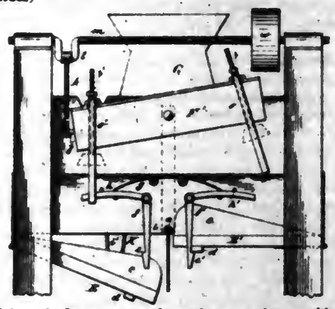
5. The guides P, adjustably secured to the plates O, in combination with the adjustable plates M, whereby the guides are adapted to be adjusted in a vertical and horizontal direction, as set forth.

6. The combination of the plates O, the yoke R, provided with arms S, and the wedges T, the said wedges being adapted to engage the edges of the arms S, whereby the guides are held against displacement, substantially as shown and described.

7. The combination, with the rolls B C and their journal-boxes or housings, of the screw-bolts *o*, having heads *p* and jam-nuts *m*, the bolts in opposite boxes projecting into contact with each other, whereby the rolls are prevented from approaching each other, substantially as shown and described.

8. The roll B, provided with disk I" and the adjustable bolts K", in combination with the lever L', bar L", pawl M', ratchet-wheel M", sprocket-wheel N", and chain O', whereby the material is automatically fed into the rolls, as set forth.

9. The combination, with the journal-boxes of roll C, of the screw-shafts W W', connected with said boxes, the gear-wheels A' A" on said screw-shafts, and a connection between the wheels A' A" and the main shaft, substantially as shown and described.



10. In a machine for rolling iron, having a stationary and movable roll, the combination, with the journal-boxes of the movable roll, of screws connected therewith to move said roll back and forth, and a reversing-gear connected with said screws to turn them in one direction or the other, substantially as shown and described.

11. The combination, with the roll C and its journal-boxes, the screw-shaft W W', connected with said boxes, the gear-wheels A' A" on said shafts and a friction-wheel on one of the same, of a shaft, C', carrying a friction-wheel, C', and a pinion, the latter being in gear with both the wheels A' A", the toggle-levers D, and the friction-wheel B", mounted thereon, a main driving shaft and a friction-wheel, B', thereon, and a lever and connections for throwing the friction-wheel B" into contact with either of the wheels B' or C', substantially as and for the purpose set forth.

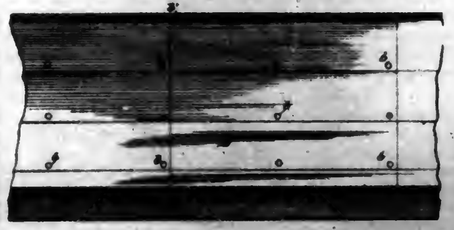
12. The combination, with the rolls of a machine for rolling metal, of a work guide and support consisting of a rotating thimble or box mounted in a supporting arm or bracket, and adapted to embrace and hold the article being rolled and to turn therewith, substantially as shown and described.

13. A mechanism for adjusting the article to be rolled to the proper rolling center, consisting of the combination of the bar R", bolts *b"*, cross-bar C', indicating-plate S', and nuts *c"*, as shown and described.

400,100. AUTOMATIC GRAIN-MEASURING MACHINE. WILLIAM MCCONAGHIE, Belleville, Ont. Filed May 7, 1888. Serial No. 273,010. (Model.)

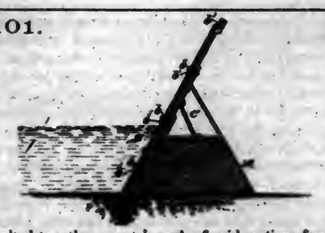
Claim.—1. In an automatic grain-measuring machine, the combination, with a box divided into two compartments and alternately opening and closing doors for the bottom of the compartments, of catches pivoted to the side of the box for locking the doors closed, a locking-lever pivoted to the box, means for operating said lever, and catch-releasing mechanism carried by the said rocking lever and having arms or rods projecting down into the compartments to be operated by the mass of grain, substantially as herein shown and described.

2. In a grain-measuring machine, the combination, with a box divided into two compartments and alternately opening and closing doors for said compartments, of catches for holding the said doors closed, a rocking lever, angle-levers pivoted to the rocking lever and adapted to engage the catches to release the same, and feet projecting from the angle-levers into the compartments, substantially as described.



3. In an automatic grain-measuring machine, the combination, with the doors E E', arranged to move in alternation with each other, of the spring-actuated catch-levers *f f'*, the lever F', the angled levers *o o'*, carried by the lever F' and provided with rods *p p'*, the downwardly-projecting arms of the levers *o o'* being arranged to engage the catch-levers *f f'*, and the feet *q q'*, for engaging the mass of material being measured, substantially as specified.

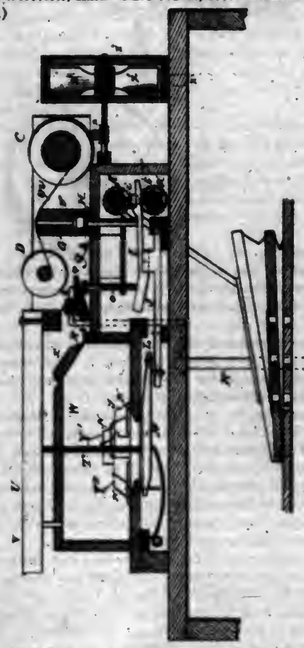
4. In a grain-measuring machine, the combination, with a box divided into two compartments, alternately opening and closing doors for said compartments, a hopper above the box, and a deflector pivoted in the hopper and operated by the movement of the doors, of catches for holding the doors closed, a rocking lever, and angle-levers pivoted on the rocking lever and having their vertical arms engaging the catches to release them and provided with feet projecting from the horizontal arms into the compartments of the box, substantially as herein shown and described.



5. In an automatic grain-measuring machine, the combination, with a box divided into two compartments and provided with a hopper, and alternately opening and closing doors for the said compartments, and a deflector pivoted in the hopper, of pivoted and spring-actuated catches for holding the doors closed, a rocking lever, means for operating said lever, catch-releasing mechanism carried by the rocking lever and having arms or rods projecting down into the compartments to be operated by the mass of grain, and a connection between the deflector in the hopper and one of the doors, substantially as herein shown and described.

400,101. LEVEE-PROTECTOR. JAMES M. MCLEMORE and CHARLES D. JOHNS, Coushatta, La. Filed Oct. 3, 1888. Serial No. 287,117. (No model.)

Claim.—1. The combination, with the levee structure A, of the shield B, applied to the front of the levee, said shield consisting of



400,101.

sections bolted together, as at *b*, each of said sections formed with a rabbet, *b'*, on which the overlapping section fits, whereby a smooth front and a water-tight joint are formed, substantially as and for the purpose described.

2. The combination, with the levee A of the usual form, of the shield B, applied to the water-front of said levee, said shield formed of metallic sections secured together, the lower section extended below the levee and entered into the river-bed, the upper portion of said shield projected above the levee, and an angle-brace, C, formed substantially as shown, its upright arm connected to the rear of the upper projecting portion of said shield, its horizontal member resting on the levee top, substantially as shown and described.

400,102. AUTOMATIC MUSICAL INSTRUMENT. JOHN MCTAMANY, Worcester, Mass. Filed Oct. 22, 1886. Serial No. 180,722. (No model.)

Claim.—1. In an automatic musical instrument, a set of valves controlling the ducts of the respective reeds or sound-producing devices, in combination with a series of air-passages not connected with said valves, but controlled by the music-sheet, intervening valve-operating devices adapted to be moved by mechanical power, and pneumatically-actuated devices for connecting and disconnecting said valve-operating devices with the power-transmitting mechanism as the said air-passages are opened and closed by the perforated and non-perforated portions of the music-sheet, substantially as hereinbefore set forth.

2. In combination with a reed-valve and a longitudinally-movable bar linked thereto, a pivoted piece attached to said bar, a plunger which depresses one end of said pivoted piece when forced down by atmospheric pressure, and a fluted roll which engages the said piece thus depressed and forces it back to open the valve, substantially as set forth.

3. In combination with a reed-valve, a longitudinally-movable bar operating thereon and a doubly-shouldered piece pivoted at or near its middle to said bar, two fluted rolls engaging, respectively, with the shoulders of said piece, the one operating to force back said bar, the other to bring it forward, a plunger acting on one end of said pivoted piece to force it into engagement with one of said fluted rolls, and a rod acting on the other end of said pivoted piece to force it into engagement with the other one of said fluted rolls, substantially as set forth.

4. In combination with a set of reed-valves and movable bars and pivoted pieces acting thereon, a fluted roll for actuating said bars, a set of rods resting on said pivoted pieces, a bar pressing on said rods, and a rod or wire connecting said bar to the bellows, so that the exhaustion of the latter may by drawing on said rod or wire hold said pivoted pieces out of contact with said fluted roll, substantially as set forth.

5. The roll-gudgeon formed of the intermatching blocks or sections D D', provided with the crank-handle *d'*, that passes through the casing, in combination with the bearing-cover E, fitting over the interlocking joint in said sections and having its upper half hinged to swing away from the other half, and the spring E', for retaining said swinging portion in place when closed, substantially as shown and described.

6. In combination with a set of movable bars and pieces which actuate the reed-valves and a fluted roll whereby they are operated, a set of rods extending from said pieces to the outside of the case to receive the atmospheric pressure and thereby hold said pieces out of accidental engagement with said fluted roll, substantially as set forth.

7. The combination, in a musical instrument, of a series of valves controlling the passage of air through the reeds or sound-producing devices, a power-operated mechanism for actuating said valves brought into effect by pneumatic devices controlled by a perforated music-sheet, and a set of manual keys with connections for working said valves, whereby said sounding devices can be controlled either manually or mechanically, as preferred.

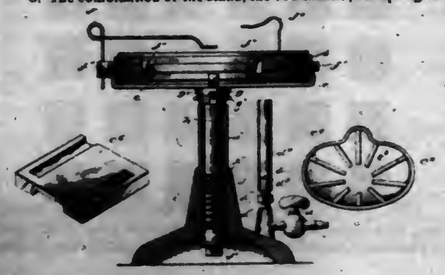
8. The fluted roll K, pivoted piece I, longitudinally-movable bar M, and a reed-valve, in combination with a link connecting said reed-valve to said bar, said link serving to open said valve and also to move said pivoted piece out of reach of said fluted roll, substantially as set forth.

9. A set of reeds having valves controlling their air-ducts and a manual having pitmen-pins extending from the keys to said valves, in combination with a music-sheet and an intervening mechanism composed of a series of operating-bars connected with said valves, a mechanically-operated actuating mechanism, and pneumatic devices controlled by the music-sheet for connecting and disconnecting said bars and actuating mechanism, as set forth, whereby said reeds may be operated by said music-sheet or by the keys, substantially as described.

10. In a mechanical musical instrument, the combination of a wind-wheel motor and the music-sheet winding apparatus.

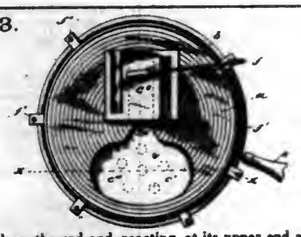
11. The combination, with the music-sheet winding-roll in an automatic musical instrument, of a wind-motor operated by a wind-current induced by the bellows or other wind-inducing apparatus, a hand-crank, and adjustable gearing, whereby said roll mechanism can at will be coupled for operation either by hand or by the wind-motor, substantially as set forth.

12. In an automatic musical instrument, the combination, with the tilting levers I and pressure-pins O, of the bar Q, operating-wire R, and means connecting said wire with the bellows-reservoir, whereby inflation of said reservoir raises said bar for releasing said pins and levers and collapse of said reservoir causes said bar to depress said pins, substantially as set forth.



13. In combination with the winding-roll, driving-shaft, the gear-wheels carried by said roll and shaft, and an interposed endwise-movable shaft carrying a power-transmitting gear-wheel, the endwise motion of said shaft leaving the said roll free to turn backward, substantially as set forth.

400,103. BLOW-PIPE BED. GEORGE W. MELOTTE, Ithaca, N. Y. Filed July 30, 1888. Serial No. 281,419. (No model.)



Claim.—1. The pad consisting of an asbestus ribbon or strip coiled upon itself, whereby pins may be inserted between the layers or coils of the pad, for the purpose set forth, substantially as described.

2. The pad consisting of tightly-coiled asbestus ribbon, and having the inclosing-band *b* on its perimeter, substantially as described.

3. The combination of the stand, the rod therein, the spring bear-

400,103.

ing downward on the rod and reacting at its upper end against the stand, the holding-arms *c*, having the cap *g*, hinged to the upper end of the rod, and the pad supported on the arms, substantially as described.

4. The revolubie asbestus block *a*, supported on the stand and provided with the excavation *c*, and aperture *c'* in the excavation, and the Bunsen burner *d*, fast to the stand *i* and arranged to register with the aperture *c* when the block *a* is rotated.

5. The stand *i*, provided with the round rod *h* in its upright post, in combination with the arms *e*, the pad *a*, and the cap *g*, its joint made by the tongue *g* of rod *h* in the slot of the cap and with the spring *j*, and the cap resting on the top of the post of the stand, whereby the arms *e* and the cushion-block *a* may be tipped, as set forth.

6. The movable cup *c''*, provided with the ribs *c⁴* on its under side, in combination with a perforated excavated cup, *c*, in the block *a*, and a Bunsen burner, *d*, the said parts being suitably supported by the stand *i*, as set forth.

7. The combination of the ingot-mold *c⁴* with the block *a*, having the excavation *c* and aperture *c'*, and the removable cup *c''*, as set forth.

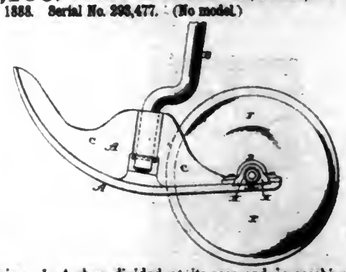
8. The cushion *a*, flat on one side and provided with a band, *b*, having a portion, *b'*, at right angles to the plane of the cushion, the mold *c⁴*, and means for securing the mold to portion *b'*, in combination with the cup *c''*, having spout *c⁵*, as set forth.

400,104. MUSICAL BOX. ARI B. METLAN, Ste. Croix, Switzerland. Filed Aug. 31, 1888. Serial No. 284,209. (No model.)

Claim.—1. A device in the mechanism of musical boxes provided with the following elements, constructed and arranged as described, to wit: a cylinder revolving upon two rest-bars which enter the center of the cylinder at the ends, the bar at the extremity of the cylinder farthest from the mainspring being fixed to the raised portion of the bed-plate, the other being the shaft to which the spring is attached and which is also fixed (except when the spring is being wound up) and bears upon the raised portion of the bed-plate at this end of the cylinder, the mainspring, which furnishes the motive power and causes the cylinder to revolve, being placed at one end and inside of the cylinder, with one end of the spring riveted or otherwise attached to the cylinder on the inside and the other end attached to the shaft that forms the rest upon which this end of the cylinder revolves, as above described.

2. A shaft in the end of the cylinder containing the mainspring, which serves both as a fixed rest upon which this end of the cylinder revolves and as the means by which the mainspring is wound up, one end of the spring being attached to the shaft, as above described.

400,105. MONOGRAM-PATTERN. JAMES W. MILLER, Denville, N. J. Filed May 26, 1888. Serial No. 275,061. (No model.)



Claim.—1. A card or sheet upon which is shown a series of monograms, each having for one of its letters the same letter of the alphabet heretofore described as the basis letter, combined with another letter, which last-named letter is different in each such combination, thereby forming monograms for the purpose of facilitating the production of monograms on sleeve-buttons and other articles of jewelry and other analogous articles not strictly classed as jewelry.

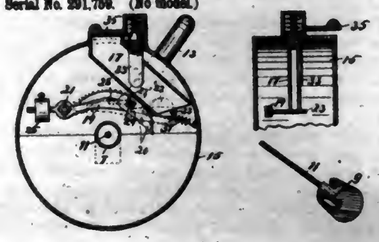
2. A card or sheet upon which is shown a series of monograms, each having for one of its letters the same letter of the alphabet heretofore described as the basis letter, which basis letter is an exact representation of the initial letter upon sleeve-buttons or other articles of jewelry or other analogous articles sold in the open market, combined with another letter, which last-named letter is different in each combination, thereby forming monograms for the purpose of facilitating the production of monograms on sleeve-buttons and other articles of jewelry and other analogous articles not strictly classed as jewelry.

3. A book consisting of a series of cards or sheets, upon each of which is shown a series of monograms, each series having for one of its letters the same letter of the alphabet heretofore described as the basis letter, which basis letter must be an exact representation of the initial letter upon sleeve-buttons or other articles of jewelry or other analogous articles which are sold in the open market, combined with another letter, which last-named letter is different in each such combination of the series, the monograms forming the series being arranged in a regular order, and the series forming the book being also arranged in a regular order, for the purpose of facilitating the production of monograms on sleeve-buttons and other articles of jewelry and other analogous articles not strictly classed as jewelry.

400,106. COLTER. DE WITT A. MOOR, Orlando, Fla. Filed Dec. 13, 1888. Serial No. 293,477. (No model.)

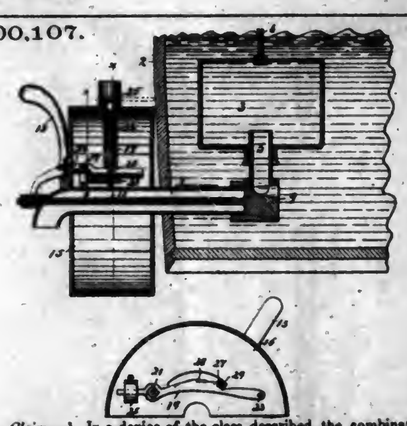
Claim.—1. A shoe divided at its rear end, in combination with the colter F and boxes for the colter-shaft placed upon the two ends of the shoe, which extend upon both sides of the colter, substantially as shown.

2. The combination of the revolving colter, the recessed collars between which the colter is held, the shaft G, which extends beyond each of the collars, and the two boxes E, supported upon the two ends of the shoe, substantially as described.



3. The combination of the colter, the two recessed collars between which the colter is clamped, the colter-shaft, the shoe provided with recessed or divided ends, so as to project upon both sides of the colter, the boxes E, and the covers D, provided with the flanges L, and the flanges N upon the shoe, substantially as described.

4. The combination of the colter-shaft, the boxes E, provided with the scrapers O, and recessed collars, between which the colter is clamped, substantially as specified.



5. The combination of the shoe provided with the recessed end, so as to extend upon both sides of the colter, and provided with the flanges H, the boxes E, placed between the flanges, and the covers D, which are placed over the boxes, so as to hold them in position with the colter-shaft G, the recessed collars I, and the scrapers O upon the inner ends of the boxes, substantially as shown and described.

6. The combination of the shoe having a pronged end, the boxes which are applied to these pronged ends, and the covers which are placed over the boxes, the ends of the shoe and the inner sides of the covers being rounded, so that the boxes can have a rocking movement, substantially as set forth.

400,107. AUTOMATIC FLUID-RELEASER. BARTON S. MOLYNEUX, Minneapolis, Minn., assignor, by direct and mesne assignments, to the National Water Supply Company, of Minnesota. Filed Nov. 24, 1888. Serial No. 291,769. (No model.)

400,107.

Claim.—1. In a device of the class described, the combination, with a reservoir and a receiving-chamber, 3, located in the reservoir, having a suitable air-vent, 6, and suitable port, 5, of the valve 9, adapted when operated to alternately connect said port 5 with the reservoir and with the pipe 7, a suitable handle, 13, connected to said valve and adapted to operate the same, a suitable weighted lever, 19, adapted to engage said handle 13 and to lock the same, so as to prevent the operation of said valve, and also adapted to be thrown out of engagement with said handle 13 by the weight of a coin, so as to permit the handle to be moved and the valve to be operated, substantially as described.

2. The combination, with a reservoir and a receiving-chamber, 3, of the valve 9, adapted to alternately connect said chamber with the reservoir and with the outlet-pipe, and having a suitable handle, 13, by which it may be operated, and the weighted lever 19, adapted to lock said handle 13, and adapted to be depressed by the weight of a suitable coin and thrown out of engagement with said handle, substantially as described.

3. In a device of the class described, the combination, with a suitable handle, 13, fitted with the spring 31, and adapted by suitable connections to operate the valve of the device, of the weighted lever 19, adapted when in its normal position to engage with and lock said handle 13, and adapted to be depressed by the weight of a suitable coin and thrown out of engagement with said handle, substantially as described.

4. In a device of the class described, the combination, with the valve-actuating lever 13 and the weighted lever 19, engaging the same, of the conduit 17, having the cut-off 33, and adapted to convey a suitable coin onto said lever, so as to depress the same and to throw it out of engagement with said lever 13, substantially as described.

5. The combination, in a liquid-releasing device, of a suitable reservoir, a receiver adapted to receive liquid from said reservoir, a valve controlling the passage of liquid from said reservoir to said receiver, a coin-conduit, and a latch adapted to lock said valve and to be released by a coin passed through said conduit, substantially as described.

400,108. TRIPLE VALVE FOR AUTOMATIC BRAKE MECHANISMS. FRANK MOORE, Pittsburg, Pa. Filed Dec. 21, 1888. Serial No. 294,296. (No model.)

Claim.—1. In a triple-valve device for automatic brake mechanisms, a piston-chamber having the inner surface of its wall provided with a recharging groove or channel for the passage of fluid under pressure past the valve-operating piston from the brake-pipe to the auxiliary reservoir during the period of application of the brakes, substantially as set forth.

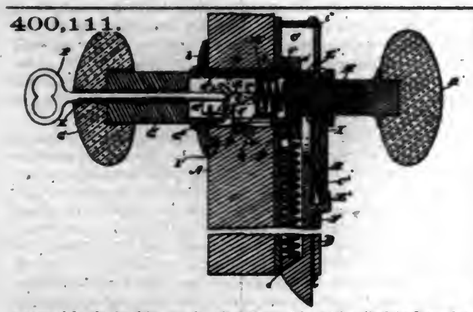
2. In a triple-valve device for automatic brake mechanisms, a piston-chamber having a recharging groove or channel formed in the inner surface of its wall, said groove being located in position to permit of the passage of fluid under pressure through the chamber past a valve-operating piston working therein in the position of rest of said piston after the application of the brakes, substantially as set forth.

3. In a triple-valve device for automatic brake mechanisms, the combination of a valve-operating piston, a connected valve controlling brake-cylinder supply and exhaust ports, and a piston-chamber communicating at opposite ends with a brake-pipe and with an auxiliary reservoir, respectively, and having the inner surface of its wall provided with a recharging groove or channel adapted to admit of the passage of fluid under pressure through the piston-chamber and past the piston when in position to effect the closure by the valve of both the supply and the exhaust ports of the brake-cylinder, substantially as set forth.

400,109. WAGON-JACK. WILLIAM B. MOORE, Unionville, Pa. Filed July 7, 1887. Serial No. 243,680. (No model.)

Claim.—In a wagon-jack of the character described, a standard having a lifting-lever, the longer arm of which has an eye or staple secured at the end thereof, through which a metal loop passes, one end of said loop being prolonged to form a stirrup and terminating in a hook which engages a similar hook on the shorter end of the loop for binding the stirrup against the standard, substantially as described.

400,110. BEATING-ENGINE. JOSHUA NORTON, Jr., Portneuf, Quebec, Canada. Filed June 26, 1888. Serial No. 278,090. (No model.) Patented in Canada Apr. 4, 1884, No. 26,796.

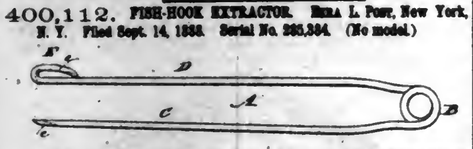


Claim.—1. In a beating-engine, the combination, with a suitable tub, of a beating-roll mounted therein, a bed-plate approximately tangent to said roll, and a mid-feather extending upwardly from near said roll and capable of vertical adjustment.

2. The combination of the tub A, the roll B, mounted within and near the bottom thereof, the bed-plate C, adjustably fixed in a recess in said tub and approximately tangent to said roll, and the curved mid-feather D, substantially as set forth.

400,111. LATCH AND LOCK COMBINED. THOMAS OVERTON, Corpus Christi, Tex. Filed June 29, 1888. Serial No. 278,563. (No model.)

Claim.—1. In a combined latch and lock, the combination, with a lock-case, a spring-actuated bolt mounted therein, a cylindrical bushing extending through the door and communicating with the case, a slot in said bushing, a knob-spindle having a cylindrical portion



400,111.

mounted in the bushing, a chamber formed in said cylindrical portion and having a slot adapted to register with the slot in the bushing when the spring-bolt is extended, intermediate actuating mechanism connecting the spindle and bolt, and a key-hole in one knob communicating with the hollow chamber, of a locking-latch pivoted in the chamber in the spindle and having an arm projecting on one side of the pivot, a spring-actuated follower engaging with said arm to hold the latch in a locked or unlocked position, and two oppositely-inclined cam-surfaces formed on the latch on the side of the pivot opposite the follower and adapted to be engaged by the key-bit to throw the end of the latch in or out of slot in the spindle, to engage with the slot in the bushing or to withdraw it from said slot, so as to lock or unlock the spindle, all constructed, arranged, and operating substantially as shown and described.

2. In a lock, the combination, with the bushing B, extending through and rigidly secured to the door and having a screw-thread, b^3, on its inner end, of the lock-case C, having the circular screw-threaded aperture c, into which the threaded end of the bushing is screwed, the spring-actuated bolt E, and knob-spindle connected therewith, and the outer plate, D, having the notch d', engaging with the lug c^3 on the case, and the downwardly-projecting side pieces, d, provided with screw-holes, all constructed and arranged substantially as shown and described.

400,112. FISH-HOOK EXTRACTOR. REBA I. POST, New York, N. Y. Filed Sept. 14, 1888. Serial No. 285,384. (No model.)

Claim.—1. A disgorger consisting of a two-armed tongs one of the arms of which is grooved at the end and the other bent upon itself and grooved at the end and along the bend, substantially as shown and described.

2. A disgorger consisting of two united arms one of which is grooved at the end and the other of which is bent upon itself at the end to form an eye and grooved along the outer face of said eye, said groove being deepened centrally of said face, substantially as shown and described.

3. A disgorger consisting of the arm C, having grooved end, and the arm D, having grooved eye E, provided with the pocket e, substantially as shown and described.

400,113. HITCHING DEVICE FOR VEHICLES. CYRUS B. PRICE, Stoneham, Mass. Filed July 16, 1888. Serial No. 280,099. (No model.)

Claim.—1. In a hitching device for vehicles, the combination, with sliding rod a, provided with one or more claws, a', of carrier a^2 and clamp a^3, sliding rod a being adjustable in carrier a^2, all arranged and operating substantially as and for the purpose set forth.

2. In a hitching device for vehicles, the combination of a rod, a, provided with claws a' and clamp a^3, with rod a^2, connecting rod c and clamp a^3, the connecting-rod being pivoted to the clamp, all arranged and operating substantially as and for the purpose set forth.

3. In a hitching device for vehicles, the combination of rod a, provided with one or more claws, a', clamp a^4, and connecting-rod a^5, a portion, a^{10}, of the connecting-rod a^5 being in a plane at right angles to the axle, all substantially as and for the purpose set forth.

4. In a hitching device for vehicles, the combination of rod a, having one or more claws, a', clamp a^2, and rod a^5, which connects rod a and clamp a^2, rod a^5 being pivoted to clamp a^2, and member a^{10} of connecting-rod a^5, having a lip, a^{11}, which overlaps portion a^{10} of member a^5 to cause the members a^{10} a^5 to move together, all substantially as and for the purpose set forth.

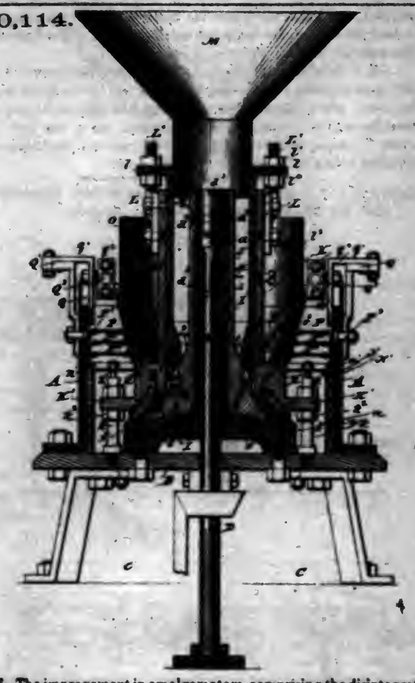
5. In a hitching device, the combination of the grip with the checkrein b and with bits of the bridle, the bridle being provided with the auxiliary strap b^5, having rings or the like through which pass straps connecting the grip and bits, all arranged and operating substantially as and for the purpose set forth.

6. In a hitching device, the combination, with the bits of a bridle provided with the auxiliary head-strap b^5, of a wheel-grip and checkrein connecting the bits and grip and supported by the auxiliary head-strap b^5, substantially as and for the purpose set forth.

7. In a hitching device for vehicles, the combination of rod a, having one or more claws, a', clamp a^3, and rod a^5, connecting rod a and clamp a^3, rod a^5 being pivoted to the clamp at a^4, all substantially as and for the purpose set forth.

400,114. AMALGAMATOR. NATHAN L. RABER, Corvallis, Oreg. Filed May 9, 1888. Serial No. 273,370. (No model.)

Claim.—1. In an amalgamator, the combination of the base, the drum, the pedestal having its upper face inclined downward from its center outward and provided near its outer edge with an upwardly-inclined portion, the feed-wheel fitted over said pedestal down close to the upper face thereof, and provided with passages for the pulp, &c., such passages having their open outer ends arranged adjacent to the upwardly-inclined portion of the pedestal, and the cover-tube, all substantially as and for the purposes specified.



2. In an amalgamator, a disintegrating feed-wheel formed with flutes and having the outer ends or portions of said flutes covered with a ring-like cover-plate, which is attached to and revolves with the wheel, forming closed passage-ways opening out of the rim of said wheel, said cover-plate having an edge or extension, 9, just above said passage-ways, whereby to guide the pulp, &c., thereinto, substantially as set forth.

3. The combination of the feed-wheel having a beveled circular face, 2, the cover-tube, the regulator-tube fitted within said cover-tube and over the feed-wheel, and having a beveled circular face, L^3, corresponding to and concentric with face 2 of the feed-wheel, said regulator-tube having lateral arms engaging studs on the cover-tube, and nuts on said studs, whereby the regulator-tube may be adapted to set the faces L^3 and 2 together or apart, substantially as set forth.

4. The combination, in an amalgamator, with the feed-wheel and the cover-tube, of the regulator-tube fitted over the feed-wheel in the cover-tube, and adjustable supports for said regulator-tube independent of the cover-tube, whereby the regulator may be adjusted independently of the cover-tube, substantially as set forth.

5. In an amalgamator, the combination of the cover-tube, the feed-wheel, the regulator-tube fitted over the feed-wheel and having lateral arms at its upper end, studs or standards mounted on the cover-tube and passing through openings in the lateral arms of the regulator-tube, and nuts on said studs above and below such arms, substantially as set forth.

400,114.

6. The improvement in amalgamators, comprising the disintegrating feed-wheel having a face, 2, the cover-tube and the regulator-tube fitted over the feed-wheel and having a beveled face, L^3, corresponding to the face 2 of the feed-wheel, such regulator-tube being also provided above the face L^3 with a beveled or inclined face, L^4, inclined approximately in a reverse direction to such face L^3, substantially as and for the purposes specified.

7. In an amalgamator, the combination of the base, the drum, the pedestal having its upper face provided near its outer edge with an upwardly-inclined portion, the feed-wheel fitted over said pedestal and having passages formed through it and opening out of its rim, the cover-tube, the adjustable regulator-tube, and the annular check-valve, substantially as set forth.

8. In an amalgamator, the combination of the pedestal, the feed-wheel, the cover-tube having its lower outer edge arranged in a plane above the outer edge of the pedestal, forming a passage-way between said cover-tube and pedestal, and the annular check-valve supported above the said passage-way and extended down over the same and bearing on the pedestal, substantially as and for the purposes specified.

9. In an amalgamator, the combination of the pedestal, the feed-wheel, the cover-tube arranged over and concentric with the pedestal and having its lower end formed of less diameter than the pedestal-base, and the annular check-valve supported on the cover above the pedestal and bearing at its lower end on said pedestal, substantially as set forth.

10. In an amalgamator, the combination of the feed-wheel having closed passage-ways opening out of its rim and provided at the inner end of and just above said passage-ways with an edge or extension, 9, whereby to guide the pulp, &c., thereinto, and the cover-tube having an annular groove receiving such extension 9, substantially as set forth.

11. In an amalgamator, the combination of the drum having a mercury-space and provided with an internal upwardly-facing shoulder or offset, and a separator arranged above said shoulder or offset and having its outer plate or edge extended down close to said offset, the mercury-space being provided below the offset of the drum, substantially as and for the purposes specified.

12. The combination of the base and the drum, having an offset, n, with the pedestal and the cover-tube having an offset, K^3, forming an annular mercury-space between them whose height is exactly the height of said offsets, with an annular separator and water-reservoir arranged just above but quite clear of said mercury-space, the outer ring of the separator being just above offset n' and the water-reservoir being just above offset K^3, said separator consisting, essentially, of a number of perforated annular silver-plated copper plates arranged in different horizontal planes connected together and suitably supported substantially as set forth.

13. In an amalgamator, the combination of the drum having the mercury-space, the guides or rails rigidly supported at the upper end of said drum, the separator arranged in the drum above the mercury-space and close to the inner wall or surface of said drum, and the hangers connected with said separator and extended to and having portions engaging and sliding on the guides or rails, whereby to support the separator, so it may be oscillated, substantially as set forth.

14. The combination of the drum, the guides or rails, the separator having hangers arranged to engage said rails, the balls on said hangers, the connecting-rod having at one end ball-sockets receiving said balls and having eccentric-straps at their opposite ends, and the shaft having eccentric-disks fitting within said straps, substantially as set forth.

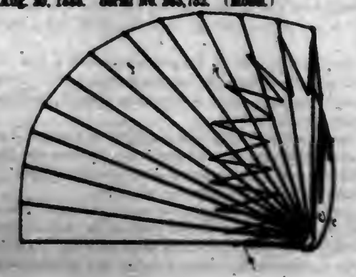
15. In an amalgamator, the combination, with the drum and the cover-tube and feeder therein, of the annular water-reservoir encircling the cover-tube and made of an external diameter considerably less than the internal diameter of the drum, and adapted for use, substantially as set forth, whereby the water, pulp, &c., may pass upward between the water-reservoir and drum and be discharged at the top of the latter, as and for the purposes specified.

16. The combination, in an amalgamator, of the drum, the cover-tube having an upwardly-facing shoulder, the reservoir arranged above said shoulder, and the feeder arranged in said cover-tube, substantially as set forth.

17. In an amalgamator, the combination of the drum, the feeder and cover-tube concentrically within the drum, the annular water-reservoir encircling the cover-tube, and the separator connected at its inner edge with the water-reservoir and extending to and fitted at its outer edge snugly against the inner surface of the drum, such separator and reservoir being suitably connected, whereby they may be oscillated, substantially as set forth.

18. In an amalgamator, the combination of the drum having an internal upwardly-facing shoulder, the cover-tube arranged concentrically in said drum and having an external upwardly-facing shoulder, the separator having its outer edge or plate arranged over the shoulder of the drum, and the reservoir connected with the separator and arranged above the shoulder of the cover-tube, substantially as set forth.

19. In an amalgamator, the drum having an inner concentric lining-plate of less external diameter than the internal diameter of the body of the drum, and a filling between said lining-plate and drum-body, said lining-plate being shorter than the drum-body, providing an internal upwardly-facing shoulder, substantially as set forth.

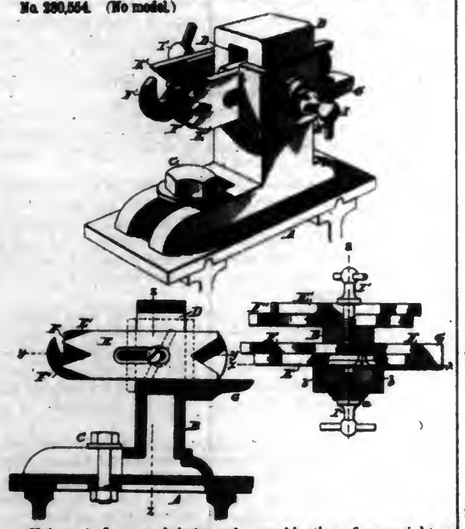


20. The combination of the base, the drum, the pedestal mounted on the base centrally within the drum, the feed-wheel over said pedestal, the cover-tube fitted over said feed-wheel, the adjustable regulator-tube within said cover-tube, the annular separator, and the annular water-reservoir within the drum and encircling the cover-tube, all substantially as and for the purposes specified.

21. In an amalgamator, the combination of the drum, the revolving feed-wheel, the pedestal centrally within the drum, the cover fitted over the feed-wheel, the check-valve, the perforated partition-plate N', located within the mercury-space of the drum, the separator, and the reservoir encircling the cover, substantially as and for the purposes specified.

22. In an amalgamator, a feed-wheel having its lower flared portion formed on its upper side with flutes leading to its outer edge and provided with a ring-like cover-plate secured to and revolving with the said wheel and arranged over the outer ends of said flutes, forming closed passage-ways between the said flutes at their outer ends, substantially as set forth.

23. An amalgamator comprising a drum or casing having a mercury-space, a feeder arranged to discharge the pulp, &c., into said mercury-space, and a separator and a water-reservoir arranged within said drum and above the mercury-space, such reservoir and separator being connected, substantially as set forth.



400,115. BUSTLE. LEONARD T. RIDGLEY, Ashland, Ohio. Filed Aug. 25, 1888. Serial No. 283,732. (Model.)

Claim.—1. In a bustle, the combination, with a single coiled-wire spring having its lower side gathered, of a spring coiled on and securing said gathered portion, the ends of said spring being carried out in opposite directions and secured, respectively, to the front and rear coil of said spring, and a coiled spring within said spiral spring, substantially as described.

2. In a bustle, the combination, with a single coiled spring having a cross-bar, as B, on its forward coil and its lower portion gathered, of springs, as C, coiled on said gathered portion, the ends *c* and *c'* of said latter springs being extended out in opposite directions and secured, respectively, to said cross-bar and the outer coil of the spiral spring, substantially as described.

400,116. **WORK-HOLDER.** ISAAC H. ROBERTS, Norristown, Pa., assignor to Mary A. Roberts, same place. Filed July 20, 1888. Serial No. 280,554. (No model.)

Claim.—1. In a work-holder, the combination of an upright or standard, a pair of independently-adjustable jaws mounted therein side by side and each provided with a seat to receive and hold the work, and a set-screw or clamp adapted to hold the jaws in their adjusted positions.

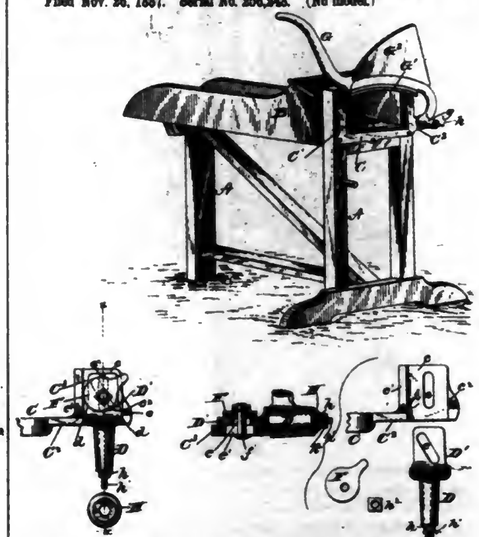
2. In combination with the upright or standard, two separate and independent pairs of clamping-jaws arranged with their seats in approximately the same horizontal plane, and means for clamping them to the standard.

3. In combination with the slotted upright or standard, two or more jaws mounted therein, a set-screw for clamping the jaws to the standard, and an arm or extension projecting from the standard and arranged, substantially as shown, to maintain one of the jaws in the same horizontal plane with the lathe-centers.

4. In combination with an upright or standard, a jaw, E, provided with a V-shaped notch in its end, a jaw, F, also mounted in the standard by the side of the jaw E and provided with a curved seat, and a set-screw for clamping the jaws to the standard.

5. In combination with the slotted upright provided with a threaded hole, two or more jaws mounted in the slot, a block, H, applied to the standard and adapted to bear against the jaws, and a screw provided with a collar to bear upon the block.

6. In a work holder or support for use in turning, the combination, with an upright or standard, of two or more jaws mounted therein and projecting from the same face thereof, one of said jaws being adjustable relatively to the standard toward and from the material operated upon in the same horizontal plane therewith, and a set-screw or clamp.



7. In combination with an upright or standard, a pair of jaws mounted therein side by side and adjustable one upon the other and relatively to the standard, and a set-screw or clamp for holding the jaws in their adjusted positions.

8. In combination with the slotted upright or standard, a pair of jaws mounted within the slot, a set-screw for clamping the jaws in position, and a second pair of jaws mounted upon the side face of the standard and provided with a clamp or set-screw.

9. In combination with an upright or standard, a jaw, E, mounted therein and provided with a V-shaped notch in its end, the apex of the notch being in the same horizontal plane with the lathe-centers, a jaw, F, also mounted in the standard by the side of the jaw E and provided with a seat to receive the material being operated upon and to hold the same in the V-shaped notch of jaw E, and a fastening device adapted to clamp the jaws in position.

10. In combination with an upright or standard provided with a slot, jaws mounted therein and of a thickness less than the width of the slot, a block, H, provided with wings *b b*, adapted to project beyond the wall of the slot and to bear against one of the jaws, and a screw, I, passing freely through the block and into the standard and provided with a collar to bear upon the block.

400,117. **FEED-CUTTER.** ELMORE W. ROSS, Springfield, Ohio. Filed Nov. 26, 1887. Serial No. 256,945. (No model.)

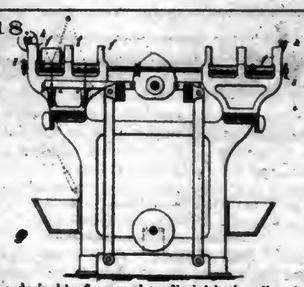
Claim.—1. The slotted pivot-supporting arm on the feed-cutter frame, in combination with a slotted pivot-plate or shank, the slot in one of said parts being in oblique relation to the slot in the other part, substantially as and for the purposes described.

2. The slotted knife-pivot support on the cutter-frame, in combination with the slotted plate having the knife-pivot formed upon it, the slot in the pivot-plate crossing obliquely the slot in the support and the through-bolt uniting said parts, whereby the knife-pivot is made both longitudinally and pivotally adjustable, and is retained at the desired adjustment by a single bolt, substantially as described.

3. The combination, with the slotted knife-pivot support, of the slotted plate having the tapering knife-pivot formed upon it and provided with a slot crossing obliquely the slot in the pivot-support, and a single through-bolt uniting said parts and permitting both the longitudinal and pivotal adjustment of said pivot, substantially as described.

4. A knife-pivot bracket or support having a side wall or flange, in combination with a knife-pivot arm supported by and having its fulcrum on said side wall of said bracket, one of said parts being provided with a slot, and a through-bolt for uniting said bracket and knife-pivot arm and permitting the adjustment of the latter on its side fulcrum-point, substantially as described.

5. The combination, with the knife-supporting bracket, of the knife-pivot plate supported by said bracket, one of said parts being slotted, the through fastening-bolt, the cam adjustable on said bolt, and a bearing for said cam to press against to adjust and hold the knife-pivot plate, substantially as described.

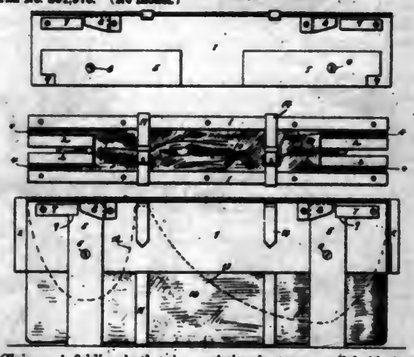


6. The combination, with the slotted and socketed knife-supporting bracket, of the slotted knife-pivot plate pivotally supported on the side walls of the bracket-socket, the clamping through-bolt, and the cam adjustable on said bolt, substantially as described.

7. The combination, with the knife-supporting arm C^3, having the socket and slot, as described, of the slotted and pivotally and longitudinally adjustable pivot-plate D', the tapering pivot on said plate, and the through-bolt for securing the plate D' to the arm or bracket C^3, and the cam-plate F on said bolt, all substantially as described.

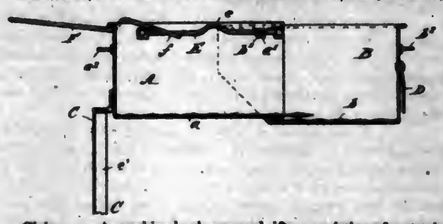
400,118. **MACHINE FOR WINDING YARN.** FERDINAND ROSSOTTER, Accrington, County of Lancaster, England. Filed Nov. 17, 1888. Serial No. 219,142. (No model.) Patented in England Jan. 9, 1884, No. 1,051, and Dec. 30, 1885, No. 16,008; in Germany Dec. 20, 1885, No. 36,088, and in Austria-Hungary Oct. 19, 1886, No. 31,376.

Brief.—The object of the invention is to enable the yarn to be



400,118.

wound into a desirable form and to diminish the vibrations resulting from the sudden reversal of the yarn-guiding devices.



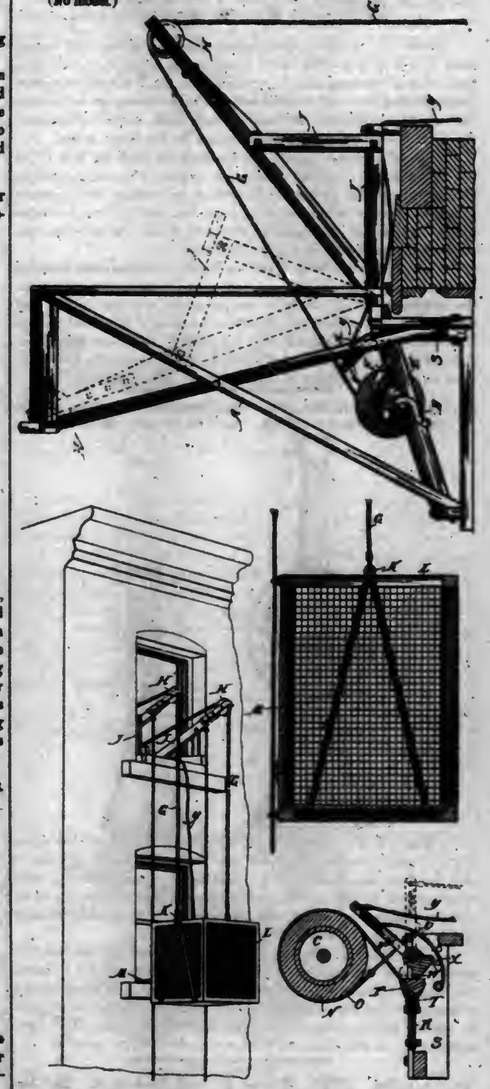
Claim.—In a machine for winding yarn, a thread-guiding motion consisting of the combination of a movable thread-guide rod, *e*, a pivoted lever mounted thereon, a pigtail or thread-guide, *g*, mounted upon the upper end of said lever, a retractile spring for said lever, attached to its lower end and to the said thread-guide rod, and a stop, *m*, for said lever, substantially as and for the purpose described.

400,119. **FOLDING BATH-TUB.** RANSOM SABIN, Shelby, assignor to himself and Erwin Stanhope, Mears, Mich. Filed Nov. 27, 1888. Serial No. 291,970. (No model.)

Claim.—A folding bath-tub consisting in two parallel side bars, 1, having sockets 8 8 near their opposite ends, and latches 7 pivoted in front of the open sides of said sockets, the legs 5 5, pivoted between their ends to the side bars below the sockets, the upper ends of the legs entering the sockets when swung into vertical position, and having notches to receive the latches 7, the end pieces, 2 2, hinged together at their adjacent ends, and at their opposite ends hinged to the ends of the side bars to swing inwardly, the bolt 15, crossing the meeting ends of said end pieces, and the water-proof sheet 10, substantially as set forth.

400,120. **COMBINED ASH PAN AND SIFTER.** JAMES F. SAYER, Gouverneur, N. Y. Filed Jan. 21, 1889. Serial No. 296,986. (No model.)

Claim.—1. A combined ash pan and sifter consisting of two telescoping sections having overlapping screen-bottoms and an imperforate bottom pan held thereto to temporarily retain the ashes, substantially as herein set forth.

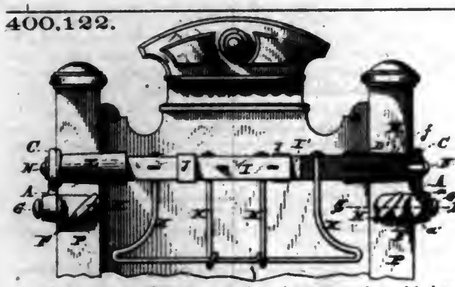


2. A combined ash pan and sifter consisting of two telescoping sections having overlapping screen-bottoms, lugs or stops on the sections limiting their extensibility, and an imperforate bottom pan held to the sections to temporarily retain the ashes, substantially as herein set forth.

3. A combined ash pan and sifter consisting of two telescoping sections having overlapping screen-bottoms, an imperforate bottom pan hinged to one section, and a latch device for the bottom pan when closed to the contracted sections, substantially as herein set forth.

4. The combination, in an ash pan and sifter, of two telescoping sections having overlapping screen-bottoms, an imperforate bottom hinged to one section and provided at its free end with an eye, *d*, and a hook, D, on the other section for securing the closed bottom pan to the contracted sifter-section, substantially as herein set forth.

5. The combination, in an ash pan and sifter, of two telescoping sections, A B, having overlapping screen-bottoms, an imperforate bottom pan held to said sections to temporarily retain the ashes, said section A having side rods, E, provided with offsets *e*, and a bail, F, fitted loosely on said rods and adapted to their offsets, substantially as herein set forth.

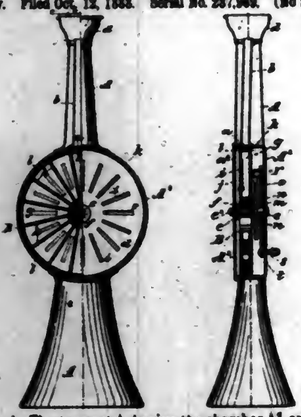


400,121. **COMBINED WINDOW-CLEANER AND FIRE-ESCAPE.** AMALIE SCHAEFER, Chicago, Ill. Filed Nov. 9, 1888. Serial No. 290,368. (No model.)

Claim.—The combination of a vertically-moving car with a windlass and ropes therefrom to support the car, and a friction-strap about such windlass and connected at one end with a spring-actuated slide, and a pivoted lever which engages such slide at one end, and a rope secured to the other end of the lever, so that by rocking such lever on its pivotal point the slide may be reciprocated to loosen or tighten the friction-belt, and thus control the rotation of the windlass.

400,122. **PILLOW-SHAM HOLDER.** GEORGE W. SCHIFFER and ARTHUR L. KNIGHT, Buffalo, N. Y. Filed July 16, 1888. Serial No. 280,094. (No model.)

400,122.



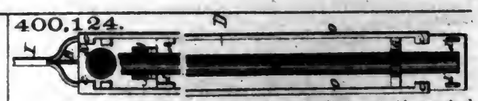
Claim.—1. In pillow-sham holders, the combination, with slotted arms A, having projecting claws B and lateral projecting heads C, of the L-shaped clamping-arm F, provided with the T-shaped projection G and catches *a a'*, said catches being arranged to engage with serrations or notches E along the inner opposite edges of the slotted aperture D in said arm A, substantially as and for the object stated.

2. In pillow-sham holders, the combination, with the bars I I', of the socket-pieces L L', held in frictional contact with and projecting beyond the ends of said bars, as specified, to produce the chambers *f*, spiral springs M, thumb-screws N, and brackets A, having suitable heads, C, to operate in conjunction with said screws and spiral springs, substantially as and for the object described.

3. In pillow-sham holders, the combination, with a suitable bracket having heads C, with apertures *c*, of the slats I I', having tapering ends, the socket-pieces L L', fitted to and projecting over the ends of said slats or bars I I', to form an adjustable chamber, *f*, the spiral springs M, located in such chamber, and the bolts N, said bolts being constructed to draw the ends of the bars I I' farther into the sockets L L' to compress the springs M, as and for the object specified.

400,123. MUSICAL TOY. JEAN SCHOENER, Nuremberg, Bavaria, Germany. Filed Oct. 12, 1888. Serial No. 287,969. (No model.)

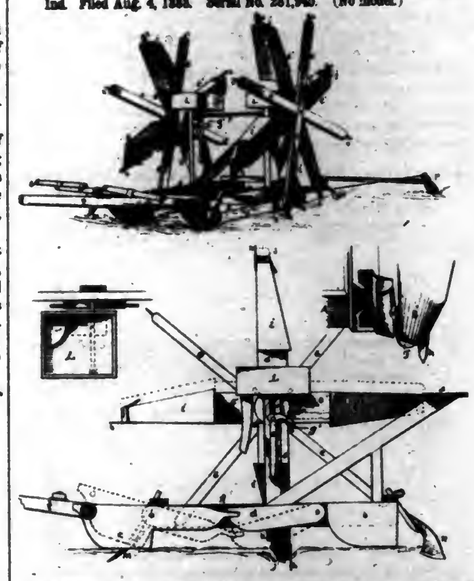
Claim.—1. The trumpet A, having the chamber A^2, and the opening *a* in said chamber, combined with the rotary drum B, hung in said chamber, said drum having a number of compartments, *g*, each compartment having a reed, *j*, to produce a musical sound, and an opening adapted to register with the opening *a*, for the admission of air, substantially as described.



2. The trumpet A, having the chamber A^2, and the opening *a* in said chamber communicating with the mouth-piece of the trumpet, combined with the drum B, hung in said chamber, said drum having a number of separate chambers, *g*, each chamber being provided with an opening for the admission of air and with a reed, *j*, and with means, substantially as described, for rotating the drum B, as specified.

400,124. PUMP. WILLIAM M. SCOTT, Elmwood, Ill. Filed Jan. 14, 1888. Serial No. 260,794. (No model.)

Brief.—A pump so constructed that the working-cylinders can be removed without disturbing the delivery-pipe.



400,124.

Claim.—In a pump, the combination of cylinders A A', attached to bed-plate C, a discharge-pipe, E, a plate, D, attached to the discharge-pipe E, openings K K', connecting cylinders A A' and discharge-pipe E, lugs *d d d' d'* on plate D, lugs *c c c' c'* on bed-plate C, spring-clamps G G, attached to bed-plate C, projecting ribs J J on discharge-pipe E, and a rod, H, attached to bed-plate C, substantially as set forth in foregoing drawings and specification.

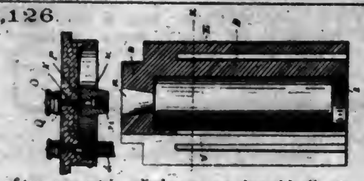
400,125. CORN-PLANTER. HENRY C. SHANAHAN, Mishawaka, Ind. Filed Aug. 4, 1888. Serial No. 281,945. (No model.)

Claim.—1. In a runner corn-planter, the forward runners pivoted to the frame at or near their back ends, combined with the supplemental arms or runners *d*, pivoted to the frame and jointed to said forward runners, substantially as set forth.

2. In a runner corn-planter, a pair of front runners pivoted to the main frame at or near the rear ends of said runners provided with rearward extensions, and the supplemental runners pivoted to the frame and jointed to said rearward extensions, so that as the front ends of said forward runners encounter an obstruction they rise on said obstruction by turning on their pivots, and the supplemental runners are thrown down to support the machine without changing the horizontality of the machine.

3. In a corn-planter, a transverse shaft having at each end of the planter a revolving rimless wheel provided with planter-boots spaced to plant at the proper distance between hills, and additional actuating-spokes *e* upon each of said wheels and intermediate between said boots, whereby the turning of the shaft is effected from either side of the planter while said boots are clear of the ground.

4. In a corn-planter, a revolving planting-wheel provided with planting-boots, as described, in combination with a carrying-frame having bearings which loosely engage the axle of said wheel and permit said axle and wheel to move vertically independently of said frame, and the boot levers G, carried by said frame, having their pivotal points below the axle and adapted to raise said axle by a cam action and sustain it in the upper part of said bearings to clear the planting-wheel of the ground, as set forth.



5. In a planter, the combination, with the axle carrying the planting devices, and a frame having bearings which loosely engage the axle, of levers pivoted upon the frame adapted to engage and elevate the axle, and having sockets into which the axle may drop and thereby hold the said levers in position, substantially as described.

400,126. GALVANIC BATTERY. FRANK SHAW, New York, N. Y. Filed Jan. 3, 1889. Serial No. 295,328. (No model.)

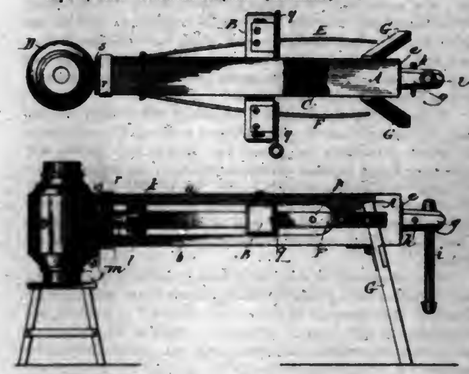
Claim.—1. The carbon or negative element of a galvanic battery, consisting, essentially, of two concentric carbon cylinders attached together at one end.

2. The carbon or negative element for galvanic batteries, consisting of two concentric cylinders or cup-shaped bodies formed with a head, B, as and for the purpose described.

400,126.

3. A negative element for galvanic batteries, consisting of two concentric cylinders of carbon attached together, the outer of said cylinders having a slot in its side, as and for the purpose described.

4. A negative element for galvanic batteries, consisting of two concentric cylinders of carbon, the outer of which is open at its lower end, while the inner has a slot in its side.

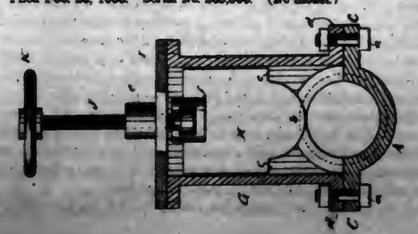


5. As a new article of manufacture, the carbon element for galvanic batteries, consisting of two concentric cylinders or cup-shaped bodies of carbon formed integral with a common head, the inner of said cylinders being provided with a slot in its side.

6. In a galvanic battery, the combination, with the two concentric cylinders forming the negative element, of a positive element consisting of a zinc electrode supported in a slot or opening in the outer cylinder.

7. In a galvanic battery, a negative element consisting of two concentric hollow cylinders of carbon projecting from a common head, the inner of said cylinders forming a magazine for the battery chemical and being provided with an opening in its side.

8. The combination, with the carbon element, of a supporting metal rod passing through the battery-cover and having a carbon head fitting into a socket in said element.

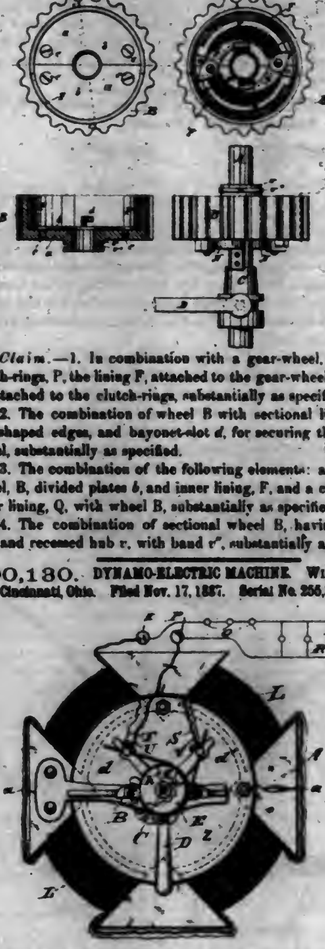


400,127. MACHINE FOR DRAWING SPOKES. WILLIAM SHELLY, Chicago, Ill., assignor to himself and George Oswald, same place. Filed Sept. 3, 1888. Serial No. 284,449. (No model.)

Claim.—1. A block, as A, provided with two arms, *a b*, in combination with a sliding cross-bar, B, provided with a nut, *c*, a screw, C, which fits the nut *c* and passes through a hole which is not screw-threaded in the block A, and bars E F, which pass through slots in the cross-bar B, substantially as and for the purposes specified.

2. A block, as A, provided with two arms, *a b*, in combination with a sliding cross-bar, B, provided with a nut, *c*, a screw, C, which fits the nut *c* and passes through a hole which is not screw-threaded in the block A, a clamp, as *k m*, adapted to be placed on a spoke or other article, and bars E F, which pass through slots in the cross-bar B and are adapted at their inner ends to engage with the clamp, substantially as and for the purpose specified.

400,128. GATE-VALVE. CHARLES H. SHEPHERD, New York, N. Y. Filed Feb. 28, 1888. Serial No. 265,566. (No model.)

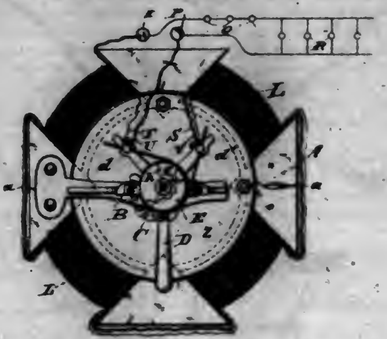


400,128.

Claim.—1. The combination, with the pipe A, provided with the collar B, the apertured ears C, and the transverse slot D, of the semi-circular cover E, provided with the central rib, E', fitting in the slot D, and with the apertured ears F, resting upon and bolted to the ears C of the pipe, substantially as herein shown and described.

2. The combination, with a transversely-slotted pipe, of an interchangeable cover and casing adapted to be secured to the pipe over the slot, the cover being provided with a rib and the casing with a sliding valve to enter the slot of the pipe when the cover or casing is in place, substantially as described.

400,129. CAR BRAKE AND STARTER. GIOVANNI B. SICCARDI, New York, N. Y. Filed Jan. 16, 1889. Serial No. 296,714. (No model.)



Claim.—1. In combination with a gear-wheel, B, and internal clutch-rings, P, the lining F, attached to the gear-wheel, and the lining Q, attached to the clutch-rings, substantially as specified.

2. The combination of wheel B with sectional lining F, having step-shaped edges, and bayonet-slot *d*, for securing the lining to the wheel, substantially as specified.

3. The combination of the following elements: a sectional gear-wheel, B, divided plates *b*, and inner lining, F, and a clutch, P, having outer lining, Q, with wheel B, substantially as specified.

4. The combination of sectional wheel B, having disks *a*, and split and recessed hub *r*, with band *r''*, substantially as specified.

400,130. DYNAMO-ELECTRIC MACHINE. WILLIAM L. SILVEY, Cincinnati, Ohio. Filed Nov. 17, 1887. Serial No. 255,276. (No model.)

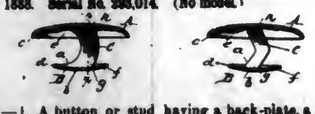
Claim.—1. A field-magnet for dynamo-electric machines, cast in a single piece and broken into two or more parts by means of wedges driven into holes where the divisions are desired for the purpose of facilitating the winding of the coils of wire thereon.

2. The field-magnet A, having the hole *a* therein for facilitating the fracture or division of the magnet for the purpose of winding.

3. The field-magnet of a dynamo-electric machine, the pole-pieces broken apart and united by sutures, as set forth.

4. The field-magnet of a dynamo-electric machine, the polar extensions united by a ragged, broken, or irregular joint for forming a more perfect magnetic joint, as set forth.

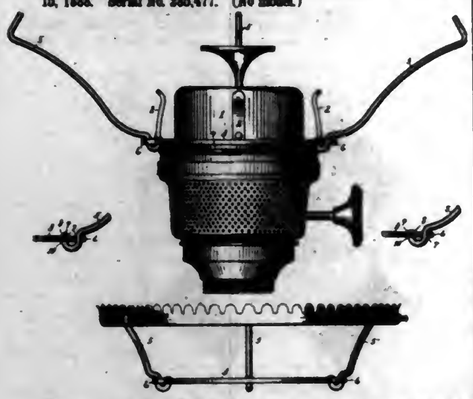
400,131. HAMMOCK. HERBERT M. SHALL, Baldwinsville, Mass. Filed June 19, 1888. Serial No. 277,573. (No model.)



Claim.—1. A hammock consisting in a seat and back portion, hooks at the upper end of the back portion, a looped rope secured at its ends to the forward corners of the seat portion, and adjustable hooks on the parallel parts of the rope, the looped part of the rope forming a foot-rest, substantially as set forth.

2. A hammock constructed with supporting-hooks at one end, and having at its other end a curved recess, and supporting-hooks with a rope passing through eyes in the shanks of the hooks and attached at its ends to the corners of the recessed end of the hammock, substantially as shown and described.

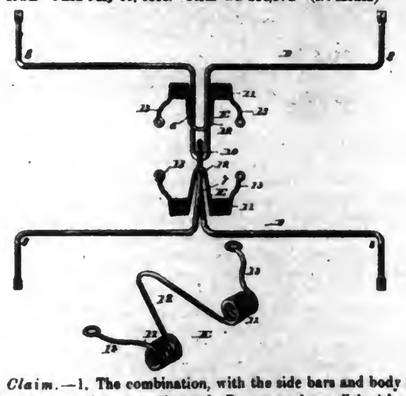
3. A hammock constructed with main portion 1, having curved recess 2, supporting-hooks 3 at one end and the looped rope 4 with its ends secured at the recessed end of the main portion 1, and the supporting-hooks 3, having eyes 5, through which rope 4 passes, substantially as shown and described.



400,132. BUTTON. THOMAS W. F. SMITTEN, Brooklyn, N. Y. Filed Dec. 8, 1888. Serial No. 293,014. (No model.)

Claim.—1. A button or stud having a back-plate, a post, and a head, all rigidly attached together, the post being of greater width than thickness or in alignment with the button-hole when applied and of practically uniform width from the lower surface of the head to the top of the shoe, one edge of said post being inclined to and forming an angle with the outer side of the back-plate, substantially as and for the purposes set forth.

2. A button or stud having a back-plate, a post, and a head, all rigidly attached together, the post being of greater width than thickness or in alignment with the button-hole when applied and of practically uniform width from the lower surface of the head to the top of the shoe, one edge of said post being inclined to and forming an angle with the outer side of the back-plate, the points of attachment between the head and the back-plate being in practically the same vertical plane, substantially as and for the purpose set forth.



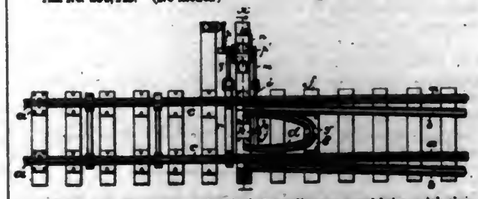
400,133. SHADE-HOLDER. GEORGE H. SOMERS, Bridgeport, Conn., assignor to The Bridgeport Brass Company, of Connecticut. Filed Sept. 15, 1888. Serial No. 285,477. (No model.)

Claim.—1. A shade-holder consisting of a ring having openings 7 and 8 and shade-arms, the lower ends of which are curved so as to pass through both openings, and are provided with shoulders 10, which rest against the under side of the ring, and reduced ends 9, which are headed down upon the top of the ring.

2. A shade-holder consisting of a metallic ring having ears 6, bent at an angle thereto, said ring and ears having openings, as shown, and shade-arms 5, having reduced ends and shoulders 10, said arms being passed through the openings in said ears and ring, the shoulders resting against the under side of the ring and the reduced ends headed down, as shown.

400,134. CARRIAGE-SPRING. BURRE M. SOULE, Cedar Rapids, Iowa. Filed July 30, 1888. Serial No. 281,374. (No model.)

Claim.—1. The combination, with the side bars and body of a road-vehicle, of the supporting-rods D, arranged parallel with each other and formed with loop forms or bails, which are linked together one within the other and having the ends shackled to the bars of the running-gear, substantially as shown and described.



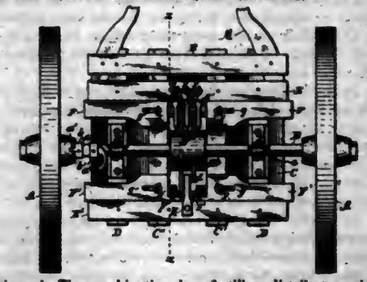
2. The combination, with the supporting rails or bars and body of a road-vehicle, of supporting-rods mounted in bearings on the body and formed at their middle with bails or loops linked together one within the other, and the ends of the bars shackled to the bars of the body-frame, and a spring, E, mounted on the bottom of the body-frame and formed to bear with its force on the interlinked loops of supporting-rods, substantially as and for the purpose specified.

3. The combination, with the supporting rails or bars and the body of a road-vehicle, of supporting-bars mounted in bearings on the bottom of the body and formed with loops linked together one within the other, and having the ends of the bars shackled to supports, and springs E, mounted on the bottom of the body-frame and adapted to bear with their force on the interlinked loops of the supporting-bars, substantially as described.

4. The combination, with the supporting rails or bars and the body of a road-vehicle, of supporting-bars A, mounted in bearings on the bottom of the body and formed with loops at their middle, said loops being linked together one within the other, and having the ends of the bars shackled to supports on the running-gear of the vehicle, and springs E, mounted on the bottom of the body, said springs consisting of spirals connected by a loop, arranged to bear on the interlinked loops of the supporting-bars, substantially as shown and described.

5. In a road-vehicle, the combination of parallel body-supporting bars, formed at their middle portions with loops linked one within the other and their free ends adapted to be connected to supports, and springs formed with loops to set over the loops of the supporting-bars to impart a resilient movement to the bars, substantially as described.

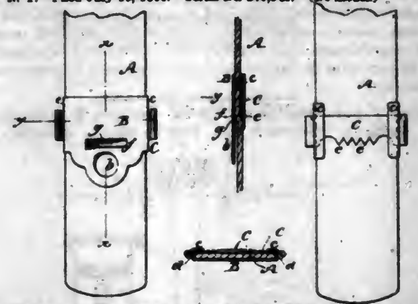
400,135. RAILWAY-SWITCH. WILLIAM SPIELMAN, Newark, N. J., assignor to Simeon J. Nasmburg, same place. Filed Dec. 20, 1887. Serial No. 258,443. (No model.)



Claim.—1. The improved switch for railways, combining with ties *f*, main rails *a a'*, siding-rails *b b*, and switch-rails *c c*, a double rail, *d*, having a continuous curve providing bearings at right angles to the direction of movement of the car-wheels and at its extremity inwardly curved, as at *d'*, said double rail being pivoted on a chair, *e*, having lips *g' g'* of the tie *f* at a point between the rails *a a b b*, and having its curved extremities *d' d'* extend forward toward the joint between the said switch-rails and the rails *a a* or *b b*, where the said extremities are held in fixed relation by tie-bars, one of which extends under the rails *a b* and connects with a connecting-rod, *m*, a crank-shaft, and a connecting rod or rods which join the said bent rail to the switch-rails, substantially as and for the purposes set forth.

2. In a switch, the combination, with rails *a b c*, of a bent rail piv

oted between said rails *a b* and at its extremities *d' d'* held apart by a bar, *j*, having pins *j' j'*, and a laterally-extending bar, *i*, bolted, as at K, to said bar *j*, and connected with the switch through the medium of connecting-rods and a crank-shaft, substantially as and for the purpose set forth.

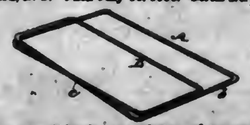


400,136. FERTILIZER-DISTRIBUTER. NAPOLEON B. SPRADLEY, Ashville, Ala., assignor of one-half to Joseph P. Caldwell, same place. Filed Dec. 29, 1888. Serial No. 294,918. (No model.)

Claim.—1. The combination, in a fertilizer-distributer, with the open-bottomed hopper and the revolving hub carrying the radial blades *d*, said blades being arranged staggering across said hub, of the curved stationary blades adjustably secured to the frame of the machine, substantially as described.

2. In a fertilizer-distributer, the combination of the open-bottomed hopper, the hub having the series of radial blades arranged staggering across the same, the cross-bar having a slot therein, the stationary blades adjustably secured in said slot, the cross-bar E^2, the stationary clearing-blade secured to said bar E^2, and the adjustable slide arranged in front and in rear of said central hub, substantially as described.

400,137. SUSPENDER-BUCKLE. LOUIS STEINBERGER, New York, N. Y. Filed July 10, 1888. Serial No. 279,549. (No model.)



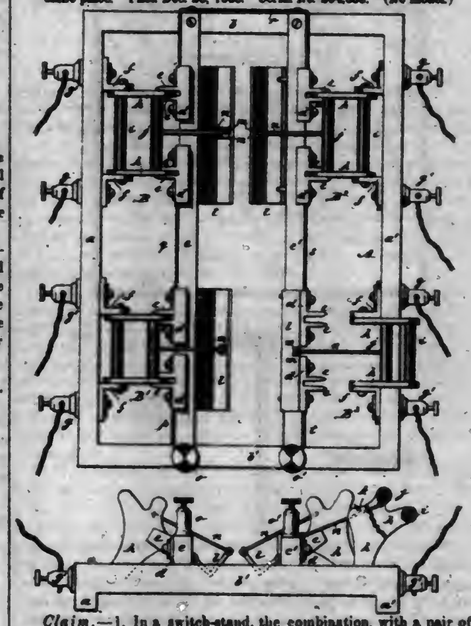
Claim.—1. The combination, with the buckle slide or body, of a loosely-attached laterally sliding and buckling spring bar or plate arranged on one side or face of said body and for operation in connection therewith, essentially as herein set forth.

2. In combination with the buckle slide or body, the loosely-attached laterally sliding and buckling spring bar or plate on one side or face of said body, provided with teeth or gripping points or projections, substantially as specified.

3. The combination of the buckle slide or body B, having a gripping-lip, *g*, on its inner surface, and the loosely-attached sliding and buckling spring bar or plate C, having teeth or projections *e* for operation together, essentially as shown and described.

400,138. SPRING-CLASP FOR HOLDING LETTERS. LOUIS STEINBERGER, New York, N. Y. Filed July 10, 1888. Serial No. 279,550. (No model.)

Claim.—1. An expansible clasp consisting of two parallel frames connected at one end only and movable toward and from each other, the clasp being open at its other marginal sides and end to receive and clasp a book or other article, substantially as set forth.



2. An expansible clasp consisting of two parallel frames connected at one end by a diagonal arm extending from opposite corners thereof, the clasp being open at its opposite end and at both sides, substantially as set forth.

3. An expansible clasp consisting of two parallel frames and two crossed arms connecting opposite corners of the said frames at one end of the clasp only, whereby the opposite end of the clasp and its opposite sides will be unobstructed to allow of the insertion of a book or other article, substantially as set forth.

4. An expansible clasp consisting of two parallel frames formed of a single wire crossed from opposite corners of the frames at one end of the clasp, the sides and opposite ends of the clasp being adapted to receive a book or other article, substantially as set forth.

5. A clasp consisting of two parallel frames formed of a single piece of wire crossed at one end of the clasp only to opposite corners of the two frames, one frame being smaller than the other, substantially as set forth.

400,139. SWITCH-STAND FOR DYNAMO-STATIONS. ROBERT R. STEWART, Dallas, Tex., assignor to himself and John Hugh Spivey, same place. Filed Dec. 28, 1888. Serial No. 294,855. (No model.)

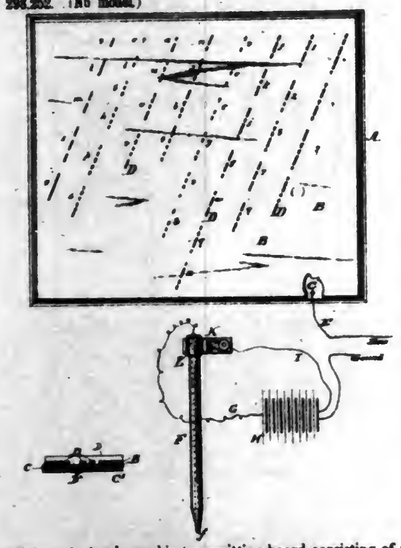
Claim.—1. In a switch-stand, the combination, with a pair of electrical contacts and a pair of swinging arms insulated from each other and adapted to be moved together to engage the contacts, of a movable plate connected with the swinging arms and fitted to touch both electrical contacts, substantially as specified.

2. In a switch-stand, the combination of interrupted outside circuit-conductors provided with spring-contacts on opposite sides of the breaks of the circuit, one or more pairs of arms, each pair being connected with the terminals of a dynamo, and plates arranged to close the circuit between the contacts, substantially as specified.

3. In a switch-stand, the combination of the frame A, contacts *d*, attached to the frame, arms *h*, adapted to engage the contacts, the plates *l*, and the rods *n*, substantially as specified.

4. In a switch-stand, the combination of the frame A, the spring-contacts *d*, attached to the frame, the angle-plates *f*, the arms *h*, provided with ears *k*, the insulating-bars *i j*, connecting the said arms *h*, the hinged angled plates *l*, the connecting-rods *n*, and the circuit-connections, substantially as specified.

400,140. LANTERN OR LAMP. GEORGE W. STOCKLY, Cleveland, Ohio. Filed Sept. 18, 1888. Serial No. 285,066. (No model.)

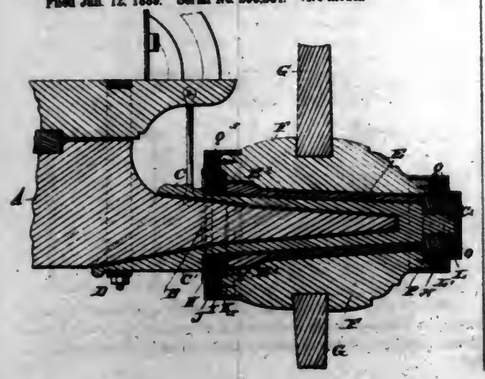


Claim.—1. In a photographic dark-room lamp or lantern, a frame having an opening therein, and a non-actinic screen made in sections differing in degrees of transparency or translucency to the passage of light.

2. In a photographic dark-room lamp or lantern, the combination of a source of light, a screen of non-actinic colored material arranged to interpose two or more different degrees of transparency or translucency to the passage of light, and an outside case or body provided with one or more openings through which light can be transmitted from within, substantially as set forth.

3. The combination, with a box or casing having one or more openings, of a movable cylinder therein, portions of the outside of which are made up of from one to several different layers of non-actinic material, and a source of light within the cylinder, substantially as set forth.

400,141. TELEGRAPHIC TRANSMITTER. ROSS C. STONE, New York, N. Y.; Samuel Wesley Smith administrator of said Ross C. Stone, deceased. Filed Dec. 1, 1887. Renewed Jan. 31, 1889. Serial No. 298,252. (No model.)



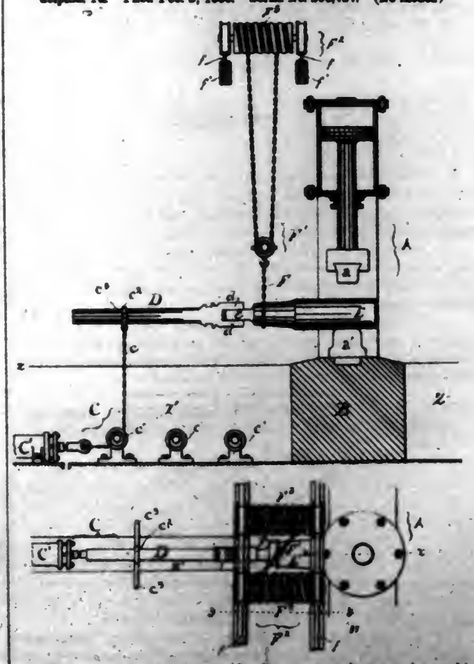
Claim.—1. A telegraphic transmitting-board consisting of an insulated metallic plate capable of connection to the line-wire and an integral non-conducting covering for said plate, said covering being pierced by apertures representing the characters of a signal and covering the entire surface of said metallic plate except where perforated.

2. The combination, with an insulated metallic plate, of an integral non-conducting covering extending over the surface of said plate, said covering having apertures representing the characters of a signal, and separate guiding-grooves proximate to said apertures.

3. In combination, an insulated plate forming a base and connected to a line-wire, an integral sheet of non-conducting material perforated, as described, with the characters representing a signal alphabet or code, covering said base-plate except where perforated, and a stylus having a non-conducting handle and a single metallic point connected to a battery-wire, the whole constituting a telegraphic transmitting apparatus, substantially as described.

400,142. AXLE-BEARING. FRIEDRICH STRAUB, La Crosse, Wis. Filed Jan. 12, 1889. Serial No. 296,201. (No model.)

Claim.—1. In an axle-bearing, the combination, with a skein provided near its inner end with a shoulder, of a collar held on the said skein near the said shoulder, and provided with an annular groove, a rubber washer fitting into the said groove, and a hub to which the said rubber washer is fastened and carrying the journal turning on the skein, substantially as shown and described.



2. In an axle-bearing, the combination, with a skein provided near its outer end with a reduced screw-threaded extension, of a nut screwing on the said threaded extension and provided with an annular groove, a rubber washer fitting into the said annular groove, and a hub on which is secured said rubber washer, the said hub being mounted to rotate on the said skein, substantially as shown and described.

3. In an axle-bearing, the combination, with a skein provided near its outer end with a reduced screw-threaded extension, of a nut screwing on the said threaded extension and provided with an annular groove, a rubber washer fitting into the said annular groove, a hub on which said rubber washer is secured, said hub being mounted to rotate on the said skein, and a cap secured on the outside of the said rubber washer, substantially as shown and described.

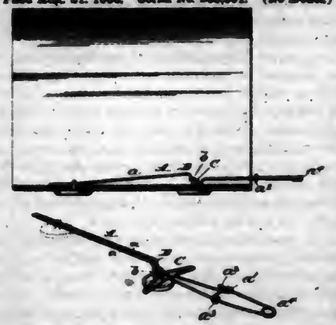
4. In an axle-bearing, the combination, with a skein provided on its inner end with a shoulder and on its outer end with a screw-threaded extension, of a journal held to rotate on the said skein, a hub secured on the said journal, a collar held on the said skein between the said shoulder and the inner end of the said journal, said collar being provided with an annular groove in its rim, a rubber washer held in the said annular groove and secured to the said hub, a nut screwing on the threaded extension of the said skein, and also provided with an annular groove, and a second rubber washer fitted in the said annular groove and secured to the outer face of the said hub, substantially as shown and described.

5. In an axle-bearing, the combination, with a skein provided on its inner end with a shoulder and on its outer end with a screw-threaded extension, of a journal held to rotate on the said skein, a hub secured on the said journal, a collar held on the said skein between the said shoulder and the inner end of the said journal, said collar being provided with an annular groove in its rim, a rubber washer held in the said annular groove and secured to the said hub, a nut screwing on the threaded extension of the said skein, and also provided with an annular groove, a second rubber washer fitted in the said annular groove and secured to the outer face of the said hub, and caps fastened to the outside of the said rubber washers, substantially as shown and described.

400,143. FORGING MECHANISM. FREDERICK W. TAYLOR, Philadelphia, Pa. Filed Feb. 5, 1889. Serial No. 298,727. (No model.)

Claim.—1. As a forging mechanism, a steam-hammer, in combination with a suspending device, whereby the forging is sustained, a

tilting device, whereby the floating of the forging is effected, and mechanism for altering the length of one or both of said devices, so as to enable the forging to be manipulated under the hammer, substantially as and for the purpose specified.



2. In a forging mechanism, a steam-hammer and a furnace, in combination with a traveling suspending device, whereby the forging is sustained and transferred from said furnace to said hammer, a tilting device, whereby the floating of the forging is effected, and mechanism for altering the length of one or both of said devices, so as to enable the forgemen not only to transfer a forging from furnace to hammer, but also to manipulate it under said hammer, substantially as and for the purpose hereinbefore described.

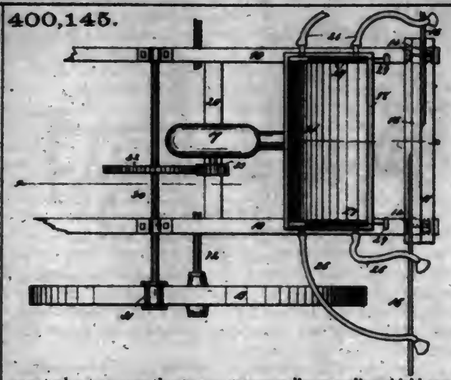
3. In a forging mechanism, a steam-hammer and a furnace, in combination with an overhead traveling and traversing trolley-crane, whereby the forging is sustained, a traveling tilting device, whereby the level of said forging is regulated when suspended, a rail system, whereby said tilting device is anchored and guided, the whole co-operating to enable the forgemen not only to transfer a forging from furnace to hammer, but also to manipulate it mechanically under said hammer, substantially as and for the purposes hereinbefore described.

4. In a forging mechanism, a steam-hammer, in combination with one or more furnaces, a fulcrum, and an underneath inverted downwardly-acting traveling trolley-crane, the length of whose tackle, being alterable at will, enables the forgemen to suspend the forging upon said fulcrum in a floating and preponderating condition, so as to traverse it to, manipulate it beneath, and rest it upon the anvil of said steam-hammer, substantially as and for the purposes hereinbefore described.

5. In a forging mechanism, the combination of a steam-hammer, a crane, one or more furnaces, an underneath switch, provided anchorage-railway leading from said hammer to said furnace or furnaces, a truck adapted to run along and be guided by said rail system, and an anchor-bridle attached to said truck and adapted to steer and maintain forgings when suspended on said crane in a floating posture, substantially as and for the purposes hereinbefore described.

400,144. CUFF-HOLDER. STEPHEN V. THOMAS, West Branch, Mich. Filed Aug. 21, 1888. Serial No. 283,301. (No model.)

Claim.—1. The cuff-holder herein described, adapted to fit in the eye or loops of a cuff-button, and having an offset or shoulder that springs past the eye or loop of one button, and is provided upon the opposite side of said eye or loop with a spring that flexes or bows outward to hold said offset or shoulder out of alignment with the button eye or loop, substantially as set forth.



2. The cuff-holder herein described formed of a wire doubling upon itself into two lengths or portions, each formed with an offset or shoulder and a short distance from said offset or shoulder with lateral arms or loops deflected or inclined outward and downward and jointly forming a spring, substantially as specified.

3. The cuff-holder consisting of a wire doubling upon itself into two lengths or portions, each formed with an offset or shoulder, and a short distance from said shoulder or offset with lateral arms or loops deflected or inclined outward and downward and jointly forming a spring, one length or portion having its inner end formed with an open eye or loop and thence extended laterally and terminating in an end eye or loop, while the other portion or length is extended through said end eye or loop of the opposite portion or length and beyond the same, and provided with a spring-pin engaging with the other eye or loop of the opposite portion or length, substantially as specified.

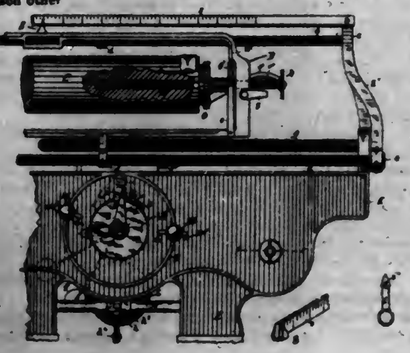
400,145. POISON-DISTRIBUTER. WILEY P. TOWNS, Delta, La. Filed July 19, 1888. Serial No. 280,383. (No model.)

Claim.—1. In a machine for distributing poison, the combination, with a powder-receptacle having openings at the sides and flexible tubes or hose connected with said openings, of a blower entering said

400,145.

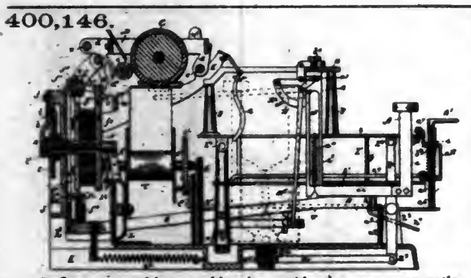
receptacle at or near the top, a downwardly-extending shield covering the blower-opening of the receptacle, and a gate controlling the exit-openings of the said receptacle, as and for the purpose specified.

2. In a machine for distributing poison, the combination, with a powder-receptacle having an inclined bottom and exit-apertures produced in the ends and a gate or valve controlling said exit-apertures, of a blower entering the powder-receptacle at the center and near the top, a shield covering the blower-openings in the receptacle extending vertically downward within a distance of the bottom, and flexible tubes secured in the exit-apertures provided with a rose at the extremity, substantially as shown and described.



3. In a machine for distributing poison, the combination, with a frame, a vertically-adjustable supporting-bar at the rear of said frame, laterally-adjustable arms attached to said supporting-bar, a powder-receptacle adjacent to the supporting-bar, having an inclined bottom, and exit-apertures produced in the sides, of a gate or valve controlling said exit-apertures, a blower leading into the powder-receptacle at or near the top, a downwardly-extending shield covering the blower-opening in the receptacle, and flexible tubes secured within the exit-apertures and supported upon the said arms, substantially as shown and described.

4. In a machine for distributing poison, the combination, with a frame, drive-wheels, a vertically-adjustable supporting-bar at the rear of the frame, arms laterally adjusted to said supporting-bar, a powder-receptacle having an inclined bottom and provided with exit-apertures in the ends, and a valve controlling said apertures, of a blower entering the powder-receptacle at one side, a downwardly-extending shield covering the blower-opening in the receptacle, a pinion attached to the fan-shaft of the blower, a drive-shaft provided with a friction-roller engaging the periphery of the drive-wheel, a gear-wheel secured to said drive-shaft meshing with the pinion, and flexible tubes secured in the exit-openings of the powder-receptacle supported by said arms, substantially as shown and described.



400,146. TYPE-WRITING MACHINE. HENRY H. URE, Philadelphia, Pa. Filed Mar. 14, 1887. Serial No. 230,767. (No model.)

Claim.—1. In a type-writing machine, a series of type-operating keys, each of said keys having two vertical arms, and a rod or bar connecting said arms, the inner of said arms standing radially.

2. In a type-writing machine, type-operating keys having two vertical arms, and a rod or bar connecting said vertical arms, and type-bars equal in number to said type-operating keys and connected at their outer ends with said type-operating keys at the upper end of said inner vertical arms, said connecting rods or bars being parallel to each other

400,146.

3. In a type-writing machine, in combination, a type-operating key having two vertical arms, and a rod or bar connecting said arms, said inner vertical arm having a slot or orifice, a spring in said orifice, a plate, *b*, one end of said spring being attached to the plate *b* and the other end to the type-operating key.

4. In a type-writing machine, in combination, a type-operating key having two vertical arms, and a rod or bar connecting said vertical arms, and a type-bar connected at its outer end with said type-operating key at the upper end of said inner vertical arm.

5. In a type-writing machine, in combination, a rack carrying carrier-operating frame, a rod (a portion of the main frame) upon which said rack carrying carrier-operating frame travels, a rack attached to said rack carrying carrier-operating frame, mechanism, substantially as described, to operate said rack, and a platen-carrier which travels on a rod independent of the rod upon which the rack carrying carrier-operating frame travels, and means, substantially as described, to provide contact between said platen-carrier and the rack carrying carrier-operating frame.

6. In a type-writing machine, in combination, a rack carrying carrier-operating frame, a rod, *g*, (a portion of the main frame,) upon which said rack carrying carrier-operating frame travels, a rack, fixed lugs on the main frame to guide said rack, a spring-actuated drum, and a gear of said spring-actuated drum into which said rack works, whereby when the spring-actuated drum operates the rack is driven forward and guided.

7. In a type-writing machine, in combination, a rack carrying carrier-operating frame which travels upon the main frame, a rack attached to said rack carrying carrier-operating frame, a main frame, a platen-carrier attached to said main frame so as to have only a lateral motion on said main frame, a portion of said main frame being pivoted, and a contact-arm connecting said platen-carrier and rack carrying carrier-operating frame in such a manner that ecatact is retained between them when the pivoted portion of the main frame is swung.

8. In combination, the vibrating spacing-frame and type-operating key having two vertical arms, and a rod or bar connecting said arms, said rod or bar projecting beyond said type-operating key a distance sufficient to rest above the outer end of said vibratory spacing-frame.

9. In the vertical reciprocating sliding frame of a type-writing machine, in combination, a rod in said frame, a spring upon said rod, a dog pivoted to said rod, a spring-actuated drum, and a ratchet upon said spring-actuated drum in which said pawl rests, whereby the paw is rigid in one direction of movement of said drum, but presents no obstacle to the opposite movement of the drum.

10. In a type-writing machine, in combination, a spacing-frame and spacing mechanism, and an adjustable spacing-key.

11. In a type-writing machine, in combination, a spacing-frame, a spacing-key, and an extension-finger projecting from said spacing-frame to a point beneath said spacing-key.

12. In a type-writing machine, in combination, a spacing-frame, an adjustable spacing-key, the plates *b* and *b'*, and orifices in said plates wherein the key rests and is secured.

13. In a type-writing machine, in combination, a spacing-frame, an adjustable spacing-key, the plates *b* and *b'*, orifices in said plates wherein the key rests and is secured, and extension-fingers a^9, projecting from the end of said spacing-frame.

14. In a type-writing machine, in combination, a rack carrying carrier-operating frame which travels upon the main frame, a rack, said rack having slots and being connected through said slots with the rack carrying carrier-operating frame by screws or similar means, which screws hold the rack in a fixed position on the rack carrying carrier-operating frame when said screws are in position, but when said screws are withdrawn a small distance the rack may be moved up, and a gear on said spring-actuated drum in which said rack normally rests, whereby when said rack is moved up the rack is released from the gear of the spring-actuated drum.

15. In combination, a spacing-frame, and a reciprocating sliding frame having the dog f^9, said dog f^9 having a reciprocating sliding motion independent of and in a plane parallel to the movement of the reciprocating sliding frame.

16. In a type-writing machine, in combination, a reciprocating sliding frame, a dog, f^9, connected to said frame, a spring surrounding said dog and retaining it normally in its most extended position, and a lever, f^{12}, pivoted upon the main frame, the outer end of said lever being in path of movement of said reciprocating frame.

17. In a type-writing machine, in combination, a spacing-frame, a reciprocating sliding frame connected with said spacing-frame and provided with dogs f' f^9, a lever, f^{12}, pivoted upon the main frame, a spring surrounding said dog f^9, a projection, f^{20}, on the reciprocating sliding frame, a spring-actuated drum, and a ratchet on said spring-actuated drum, in which said dog f' normally rests, whereby, when the sliding frame is elevated beyond its normal movement, both dogs f' f^9 are held free from the ratchet of said spring-actuated drum and the spring-actuated drum can revolve freely.

18. In a type-writing machine, in combination, a reciprocating sliding frame, dogs f' and f^9, said dog f^9 being connected with said frame by a pin, said pin projecting beyond the frame, a spring surrounding said dog and retaining it normally in its most extended position, a lever, f^{12}, pivoted upon the main frame, a projection, f^{20}, on the reciprocating sliding frame, and a spacing-frame, whereby, when the spacing-frame is depressed the required distance, both dogs are released.

19. In a type-writing machine, the combination of an adjustable drum-stop and spring-actuated drum.

20. In a type-writing machine, in combination, a bell-trip, a spring-actuated drum, and a bell-operator and bell.

21. In a type-writing machine, in combination, a bell-trip, a spring-actuated drum, a bell-operator, a loose shaft, an arm, *k*, of said shaft, a clapper, and a bell.

22. In a type-writing machine, the combination of an adjustable bell-trip and drum-stop with the bell and spring-actuated drum.

23. In a type-writing machine, in combination, an adjustable drum-stop, a spring-actuated drum, and a wheel revolving with said drum having teeth or orifices, in any of which teeth or orifices in said wheel said adjustable drum-stop may be placed.

24. In a type-writing machine, in combination, an adjustable bell-trip, a spring-actuated drum, and a wheel revolving with said drum having teeth or orifices, into any of which teeth or orifices in said wheel said adjustable trip may be placed.

25. In a type-writing machine, in combination, an adjustable bell-trip, a spring-actuated drum, a wheel revolving with said drum having teeth or orifices, into any of which orifices in said wheel said adjustable bell-trip may be placed, and said bell-trip having a projection, a bell-operator attached to the main frame, having a projection on its under side, a loose shaft, K, having an arm, *k*, and a bell and bell-clapper, whereby when the drum is moving in its forward motion and the adjustable bell-trip strikes the bell-operator the bell is rung, but on the return movement the adjustable bell-trip passes the bell-operator, but without affecting the arm *k*.

26. In a type-writing machine, the combination of the platen-carrier-actuating mechanism, a stop upon said platen-carrier-actuating mechanism, and a lug attached to the main frame, said stop and lug being relatively adjustable with respect to each other.

27. In a type-writing machine, in combination, a spring-actuated drum, an adjustable drum-stop, and an adjustable lug, M, secured to the main frame.

28. In a type-writing machine, in combination, a spring-actuated drum, an adjustable drum-stop, a rim, J, secured to the main frame, and adjustable lugs M, secured to said rim at the desired point.

29. In a type-writing machine, in combination, a platen-carrier, a platen, a plunger mounted upon and traveling with said platen-carrier, said plunger passing into said platen, and a driving-pawl.

30. In a type-writing machine, in combination, a platen-carrier, a platen, a plunger mounted upon and traveling with said platen-carrier, said plunger passing into said platen, and a driving-pawl, and a spring to return said plunger when it is forced into the platen.

31. In a type-writing machine, in combination, a platen-carrier, a platen, a plunger mounted upon and traveling with said platen-carrier, and a driving-pawl.

32. In a type-writing machine, in combination, a platen-carrier and platen, a plunger, a pawl attached to the platen-carrier frame, said pawl having a cam-shaped slot, a projection on the plunger which travels in said slot, a spring-tooth on the inner end of said pawl, a ratchet-wheel on the end of said platen, into which said pawl works, and a holding ratchet and pawl.

33. In a type-writing machine, in combination, a platen-carrier, a platen, a plunger, and a pawl having a cam-shaped slot.

34. In a type-writing machine, in combination, a platen-carrier, a platen, a plunger, a pawl having a cam-shaped slot and a spring-tooth at its inner end, and a ratchet-wheel on the end of said platen

35. In a type-writing machine, in combination, a platen-carrier, a platen, and two ratchet-wheels having a space between them, a driving-pawl which works in one ratchet-wheel, and a holding-pawl which works in the other.

36. In a type-writing machine, in combination, a platen-carrier and platen, a main frame, a portion of the main frame being pivoted, and a pointer flexibly attached to the pivoted portion of the main frame.

37. In a type-writing machine, in combination, a platen-carrier, a platen, a main frame, a portion of said main frame being pivoted, and a flexible pointer attached to said pivoted portion of the main frame, said pointer being adjustable, whereby when the pivoted portion of the main frame is swung said pointer will also swing, but is prevented from resting on the platen at the point of impact of the type.

38. In a type-writing machine, in combination, a platen-carrier and platen, a main frame, a portion of said main frame being pivoted, and a pointer attached to said pivoted portion of the main frame.

39. In a type-writing machine, in combination, a platen-carrier having a double-pointed pointer fixedly attached to said carrier, a main frame, a portion of said main frame being pivoted, and a double-faced scale fixedly attached to the pivoted portion of the main frame.

40. In a type-writing machine, in combination, ribbon-spools, ratchet-wheels on the shafts of said spools, an independent ribbon-operating bar, driving-pawls on the ends of said bar adapted to operate either ratchet-wheel, and operating-keys which rest above the outer end of said ribbon-operating bar, said ribbon-operating bar being capable of movement across the machine.

41. In a type-writing machine, in combination, ribbon-spools, ratchet-wheels on the shafts of said spools, an independent ribbon-operating bar, pawls on the ends of said bar adapted to operate either of said ratchet-wheels, and a series of type-operating keys.

42. In a type-writing machine, in combination, ribbon-spools, ratchet-wheels on the shafts of said spools, an independent ribbon-operating bar, pawls on the inner ends of said bar adapted to operate either ratchet-wheel, type-operating keys having two vertical arms, and a rod or bar connecting said arms, said rods or bars projecting beyond said type-operating keys a distance sufficient to rest above the outer end of said ribbon-operating bar.

43. In a type-writing machine, in combination, ribbon-spools, ratchet-wheels on the shafts of said ribbon-spools, an independent ribbon-operating bar, and driving-pawls on the inner ends of said ribbon-operating bar, said bar being pivoted at or near its inner end and being capable of lateral motion across the machine, whereby the corresponding pawls are engaged with or disengaged from their ratchet-wheels.

44. In a type-writing machine, in combination, ribbon-spools, ratchet-wheels on the shafts of said ribbon-spools, an independent ribbon-operating bar, pawls on the inner ends of said ribbon-operating bar, said bar being pivoted at or near its inner ends and being capable of lateral motion across the machine, and a retaining-spring, whereby the ribbon-operating bar is held fixed in its different lateral positions.

45. In a type-writing machine, in combination, ribbon-spools, ratchet-wheels on the shafts of said spools, an independent ribbon-operating bar, and pawls at the ends of said bar adapted to operate either ratchet-wheel, and a spring attached to the main frame and resting under said ribbon-operating bar, against which said ribbon-operating bar works.

46. In a type-writing machine, in combination, a type-bar, a type-bar hanger, and a guide made integral with said type-bar hanger, said type-bar being attached to said hanger, so that said type-bar may have a swinging movement and be guided by said hanger in said movement.

47. In a type-writing machine, an inverted-L-shaped type-bar hanger having a quadrantal guide.

48. In combination, a type-bar hanger, a type-bar suspended therein, and a direct-operating key, said operating-key being below the point of suspension of the type-bar in the hanger.

49. In a type-writing machine, in combination, a series of type-bars, a series of operating-keys to operate said type-bars, a vibratory frame on which said operating-keys and type-bars are mounted, and a vibratory spacing-frame.

50. In a type-writing machine, in combination, a vibratory spacing-frame having its front and rear ends parallel, a series of operating-keys having two vertical arms, the inner arms standing radially and the outer arms arranged in arcs of circles, and rods or bars connecting said arms, and a vibratory frame on which said keys are mounted.

51. In the shifting mechanism of a type-writing machine, in combination, shifting-keys, a sliding stop, and connecting-arm.

52. In the shifting mechanism of a type-writing machine, in combination, a connecting-arm, a sliding stop in which said arm normally rests, a spring to hold said stop in and return it to its normal position, shifting-keys, said keys being adapted to rest on a projection on the sliding stop, and a cam-shaped end on said keys, whereby when the shifting-keys are operated the connecting-arm is released from the sliding stop and shifted.

53. In the shifting mechanism of a type-writing machine, in combination, a connecting-arm, a sliding stop in which said arm normally rests, and two shifting-keys, said keys being adapted to rest on the sliding stop, and opposite cam-shaped ends on said keys, whereby when one of the shifting-keys is operated the projection of the connecting-arm is released from the sliding stop, and according as to which shifting-key is operated the connecting-arm is shifted forward or backward.

54. In a type-writing machine, in combination, a vibratory type-bar-carrying frame, a lever to which said frame is pivoted, a connecting-arm, a link connecting said vibratory type-bar-carrying frame and said connecting-arm, a projection on the end of said arm, a sliding stop in which said projection normally rests, and shifting-keys, a projection on said keys which rests on a projection on the sliding stop, and cam-shaped ends on said keys, whereby when the shifting-keys are operated the projection of the connecting-arm is released from the sliding stop and the vibratory type-bar-carrying frame is shifted.

55. In a type-writing machine, in combination, a vibratory type-bar-carrying frame, a lever to which said frame is pivoted, a connecting-arm, a link connecting said vibratory type-bar-carrying frame and said connecting-arm, a projection on the end of said arm, a sliding stop in which said projection normally rests, and two shifting-keys, projections on the opposite sides of said keys which rest on a projection on the sliding stop, and opposite cam-shaped ends on said keys, whereby when one of said shifting-keys is operated the projection of the connecting-arm is released from the sliding stop, and according as to which shifting-key is operated the vibratory type-bar-carrying frame is shifted forward or backward.

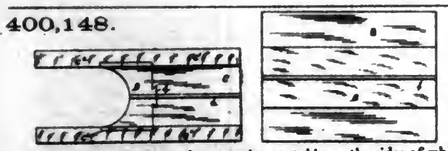
56. In the shifting mechanism of a type-writing machine, in combination, a shifting-key, a frame in which said key operates, a spring-stop, and a detent in the operating-key in such a position that said stop rests in said detent when the key is out of operation, said detent being of limited extent sufficient to sustain the key at rest, but a slight movement of the key when operating forces it out of said detent, of such construction that when the key is operated upon the sliding stop the stop is forced out of said detent.

57. In the shifting mechanism of a type-writing machine, in combination, a shifting-key, a frame in which said key operates, a spring-stop, a detent in the operating-key in such a position that said stop can be forced into said detent when the operating shifting-key has reached the limit of its travel, and it is held in such a position by said stop until released.

58. In the shifting mechanism of a type-writing machine, in combination, a connecting-arm, a vibratory frame, shifting-keys, a sliding stop in which said arm rests, and a spring-stop, whereby when one of the shifting-keys is operated the keys, the vibratory frame, and intermediate mechanism are held in a fixed position.

59. In a type-writing machine, in combination, a platen, ribbon-spools, shafts upon which said ribbon-spools rest, and intermediate supports for said ribbon between said ribbon-spools, said ribbon-supports being below said platen and pivoted to the main frame, so they can swing up on their pivoted supports toward the platen.

400,147. BINDER. EMIL WASSLEBEN, Crefeld, Prussia, Germany, assignor to Henry Rohr, St. John, Kans. Filed Oct. 20, 1888. Serial No. 288,710. (No model.)



Claim.—1. The combination, with a portfolio or similar cover, of a binder consisting of a rigid pin-carrying bar, a detachable apertured bar, springs held to slide upon said detachable bar, and sleeves sliding over the bar and springs, substantially as shown and described.

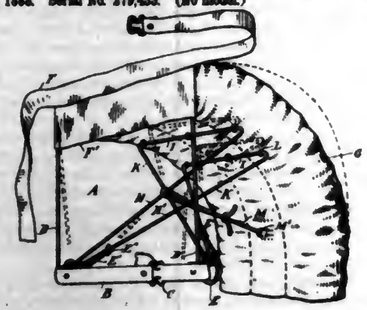
2. The combination, with a portfolio or similar cover, of a binder consisting of a rigid pin-carrying bar, a detachable apertured bar, springs held to slide upon said detachable bar, sleeves sliding over the bar and springs, and needles constructed of a wire rod bent to form a series of staples, substantially as shown and described.

3. A binder consisting of brackets, a pin-carrying bar secured to the brackets, a detachable apertured bar, springs sliding upon the same, sleeves sliding over the detachable bar and springs, and needles constructed of a wire rod bent to form a series of connected staples, all combined substantially as shown and described.

400,148. DIE FOR UPSETTING METAL BARS. WILLIAM R. WEBSTER, Philadelphia, Pa. Filed Jan. 12, 1889. Serial No. 296,186. (No model.)

400,148.

Claim.—1. A plunger for upsetting metal bars, the sides of which are re-enforced by ribs of greater thickness than the plunger, substantially as and for the purpose specified.



2. A plunger for upsetting metal bars, the front end of which is removable, substantially as and for the purpose specified.

3. A plunger for upsetting metal bars, having re-enforcing side ribs extended beyond the face of the plunger to form side walls for the dies.

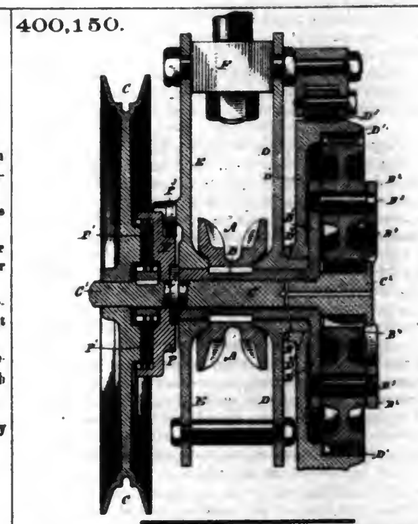
4. A plunger for upsetting metal bars, the sides of which are re-enforced by ribs of greater thickness than the plunger and the front end of which is removable.

5. A plunger for upsetting metal bars, the sides of which are re-enforced by ribs of greater thickness than the plunger and which extend both above and below the plunger proper.

400,149. BUSTLE. CHARLES W. WHITE, Toledo, Ohio. Filed July 9, 1888. Serial No. 279,433. (No model.)

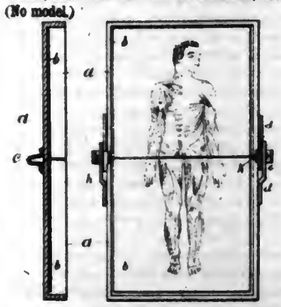
Claim.—1. In a bustle, a vertical frame provided with eyes at each lower extremity and coiled springs attached at their upper ends to the upper edge of said vertical frame, in combination with one or more bails connected at their lower ends with the eyes of the vertical frame and extending obliquely upward and outward to a connection with the under side of said coiled springs, and a flexible diaphragm connecting the lower ends of the vertical frame and serving to contract the same for raising the coils, substantially as described.

2. In a bustle, the combination of a vertical frame having side bars formed with eyes at their lower ends, said eyes terminating in spring-arms, said arms having loops which embrace the bails, coiled springs attached to the upper portion of the vertical frame, bails connected with said coiled springs and with the eyes of the side bars, and an adjusting-strap connected to the side bars of the vertical frame for contracting the same, substantially as set forth.



400,150. HOISTING MECHANISM. THOMAS A. WHITON, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company same place. Filed Apr. 14, 1888. Serial No. 270,706. (No model.)

Claim.—1. The combination, with a hoist-frame, of a driving-pulley provided with a safety lowering device exterior to the hoist frame upon one side thereof, a train of sun-and-planet gearing provided with a friction-brake exterior to the hoist-frame upon the other side thereof, and a main lifting-sheave within the hoist-frame, substantially as set forth.



2. The combination, with a hoist-frame, of a driving-pulley, C, connected by a safety frictional lowering device with the driving-shaft C', a ratchet-wheel, P, and pawl or check device P^a, and a train of gearing provided with a friction-brake, substantially as set forth.

3. The combination, with a hoist-frame, of a gearing consisting of the driving-sheave C, driving-shaft C', having pinion C^2, pinion B^4, pivoted to the driving-flange B', annular wheel D', and a brake whereby the said internal annular gear-wheel is frictionally coupled with the hoist-frame or released therefrom, hollow main shaft B, attached to the flange B' and journaled at each end in a bearing in the hoist-frame, and a lifting-sheave, A, attached to the shaft B, substantially as set forth.

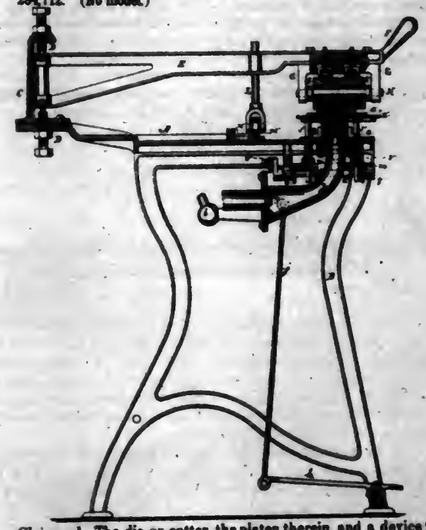
4. The combination, with the shaft B, of the sheave A^5, provided with the internal ratchet-teeth, A', and loose upon the shaft, a collar, B^3, and the pawl-disk A^3, provided with the projection A^4 and keyed to the shaft B, and the pivoted spring-pawl A^5, substantially as set forth.

400,151. MOUNTING AND BOXING ANATOMICAL CHARTS. JAMES T. WHITE, New York, N. Y. Filed Feb. 24, 1888. Serial No. 265,217. (No model.)

Claim.—A mounting for charts, &c., consisting of a plurality of box-sections hinged together by lock-hinges, so as to be held open in flat position, the joints being covered by flexible material, as described, and a sectional chart having its separate sections secured to the box-sections, so as to open with the box and be secured in flat position when open, all in combination, substantially as described.

400,152. LOOM-SHUTTLE. CHESTER F. WICKWIRE and THEODORE H. WICKWIRE, Cortland, N. Y. Filed May 4, 1888. Serial No. 272,844. (No model.)

Claim.—1. The combination, with the shuttle-body provided with an annular case and a rigidly-attached central spindle, of a collar loose on the spindle and adapted to engage and rotate with the spool, a coil-spring connected to said collar and trailing in the case, and a keeper placed removably across the free end of the spindle, substantially as specified.



2. The combination, with the shuttle-body having an annular case and a central spindle rigidly secured to said body, of a collar loosely mounted on said spindle and adapted to engage and rotate with the spool, a coil-spring connected to said collar and trailing in the annular case, and a keeper reaching across the spool and the free end of the spindle, said keeper hinged at one end to the shuttle-body and the other end engaging a catch on the other end of the shuttle-body, substantially as specified.

3. The combination of the shuttle-body formed with an annular central portion, A, elongated end portions, each of which is provided with a groove, the spindle *b*, the keeper I, hinged in the groove *a*, and having its free end provided with a notch, *n*, and the spring-actuated bolt *c*, adapted to engage the notch on the keeper, substantially as specified.

4. The combination, with the shuttle-body having an annular case and a rigidly-attached central spindle, of a keeper extending across the spool and free end of the spindle, one end of said keeper hinged in a groove formed in the shuttle-body and the other end provided with a notch, *n*, and a spring-actuated bolt adapted to engage the notch *n*, substantially as specified.

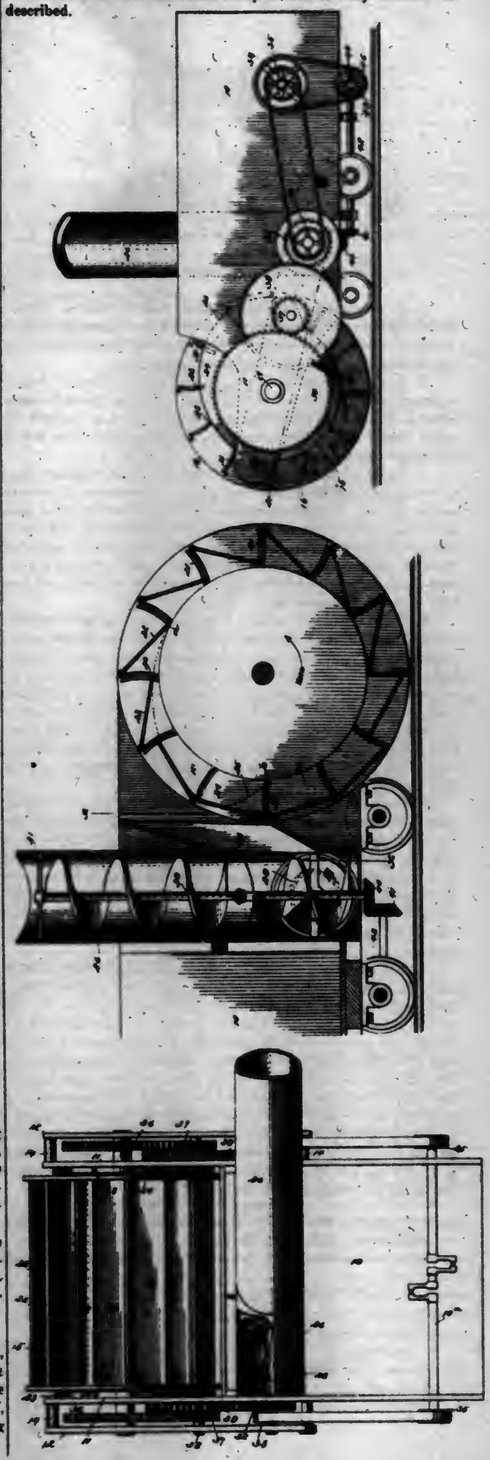
5. The within-described shuttle, formed with the annular central portion, A, annular recess *r*, and elongated end portions, A' A'', having, respectively, grooves *a a'*, the spindle *b*, the collar *d*, mounted on said spindle and provided with lugs *e e*, the spring *f*, connected at one end to said collar and having its free end trailing in frictional contact with the periphery of the recess *r*, the plate covering said spring and detachably connected to the shuttle-body, the keeper I, hinged in the groove *a* and extending across the free end of the spindle, and provided with a notch, *n*, and the spring-actuated bolt *c*, located in the groove *a*, and adapted to engage the notch *n*, all constructed and arranged substantially as described and shown.

400,153. MACHINE FOR CUTTING OUT CIGAR WRAPPERS OR BINDERS. JOHN R. WILLIAMS, Newark, N. J., assignor to the John R. Williams Company, New York, N. Y. Filed Sept. 6, 1888. Serial No. 284,712. (No model.)

Claim.—1. The die or cutter, the platen therein, and a device for pressing the leaf against the cutter, combined with the rolling-table encompassing the cutter, mechanism, substantially as described, for imparting a vertical movement to said table from a foot-treadle, an air-exhaust for the cutter, and mechanism, substantially as described, for applying or cutting off said exhaust from a foot-treadle, substantially as set forth.

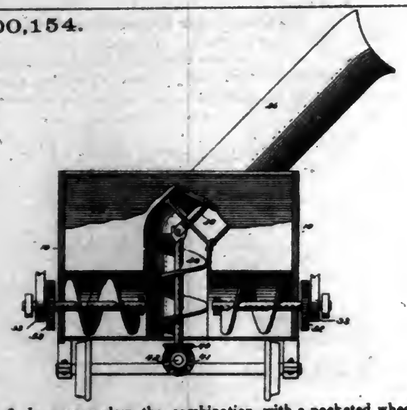
2. The die or cutter, the platen therein, and a device for pressing the leaf on the cutter, combined with rods within the cutter for supporting the platen, the bed-plate having elongated slots for said rods, the revoluble disks covering said slots, and an air-exhaust for the cutter, substantially as set forth.

3. The die or cutter, the platen therein, and a device for pressing the leaf on the cutter, combined with the rods W W, supporting the platen, the revoluble disks Y, the bed-plate having slots X, the caps Z, and an air-exhaust for the cutter, substantially as set forth.



4. In a machine for cutting and rolling, the die or cutter mounted upon a bed-plate and a platen within the cutter held upon yielding supports, combined with the rolling-table encompassing the cutter, the plate *n* below the cutter, the frame encompassing plate *n*, rods J', connecting the plate *n* with the rolling-table, mechanism, substantially as described, for moving said plate *n* vertically, and an air-exhaust for the cutter, substantially as set forth.

5. In a machine for cutting and rolling, the die and the platen therein, combined with the plates M', forming a rolling-table encompassing said die, the springs connecting said plates, the supporting-guides Q' for the plates M', mechanism, substantially as described, for moving said rolling-table vertically, and an air-exhaust for the cutter substantially as set forth.



6. In a machine for cutting and rolling cigar wrappers or binders, the die or cutter mounted upon a bed-plate and a platen within the cutter, combined with the rolling-table encompassing the cutter, the suspended frame *m*, plate *n*, shafts *o l*, cams *u* on said shafts, wheel A', chain B', rod D', foot-treadle E', rod G', arm H', and rods connecting the plate *n* with the rolling-table, substantially as set forth.

400,154. SNOW-PLOW. OREN WILLIAMS, Gouverneur, N. Y. Filed Nov. 27, 1888. Serial No. 291,962. (No model.)

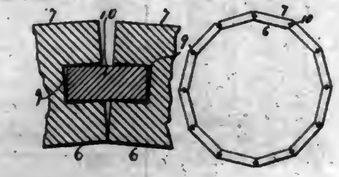
Claim.—1. In a snow-plow, the combination, with a pocketed wheel, of horizontal conveyers and an essentially vertical conveyer located between the horizontal conveyers, substantially as shown and described.

400,154.

2. In a snow-plow, the combination, with a pocketed wheel, of horizontal conveyers arranged end to end and an essentially vertical conveyer between the opposing ends of the said horizontal conveyers, substantially as and for the purpose specified.

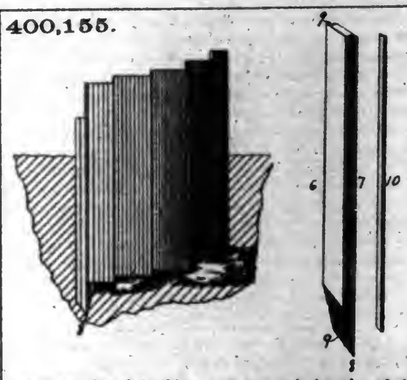
3. In a snow-plow, the combination, with a pocketed wheel, of horizontal conveyers arranged end to end, a vertical conveyer located between the ends of the horizontal conveyers, and an inclined conveyer hinged to and driven from the vertical conveyer, as and for the purpose specified.

4. The combination, with a pocketed wheel and discharge-plates pivoted in the pockets of said wheel, of horizontal conveyers arranged end to end, one having a right-hand and the other a left-hand pitch, a vertical conveyer journaled between the approaching ends of the horizontal conveyers, an inclined conveyer attached to and driven from the vertical conveyer, and a hopper adapted to receive the contents of the pockets and deliver the same to the conveyers, substantially as shown and described.



5. The combination, with a pocketed wheel, a discharge-plate pivoted in each of the pockets, provided at its free end with outwardly-extending pins, and a stationary trip-plate provided with a cam-surface adapted for contact with said pins, of horizontal conveyers arranged end to end, one having a right-hand and the other a left-hand pitch, a vertical conveyer journaled between the approaching ends of the horizontal conveyers, an inclined conveyer attached to and driven from the vertical conveyer, and a hopper adapted to receive the contents of the pockets and deliver the same to the conveyers, substantially as shown and described.

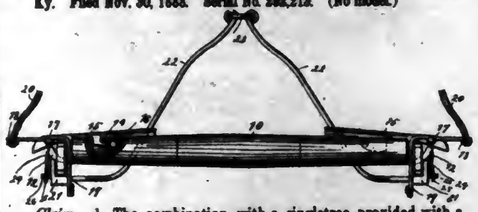
6. The combination, with the frame of a snow-plow, a wheel journaled in the forward end of the frame, provided with end flanges having radial slots therein, transverse partitions located at the rear of each slot, dividing said wheel into pockets, a discharge-plate pivoted in each pocket above the partitions, and pins secured to the free ends of the plates and passing through said slots, of a stationary trip-plate attached to the frame, provided with a circular upper cam-surface adapted for contact with the pins of the discharge-plates, substantially as shown and described.



7. The combination, with the frame of a snow-plow, a wheel journaled in the forward end of the frame, provided with end flanges having radial slots therein, transverse partitions located at the rear of each slot, dividing said wheel into pockets, a discharge-plate pivoted in each pocket above the partitions, and pins secured to the free ends of the plates and passing through said slots, of a stationary trip-plate attached to the frame, provided with a circular upper cam-surface adapted for contact with the pins of the discharge-plates, approaching horizontal conveyers journaled to the rear of the wheel, a combined vertical and inclined conveyer journaled between the approaching ends of the horizontal conveyers, and a hopper adapted to receive the snow from the discharge-plates and deliver the same to the conveyers, substantially as and for the purpose specified.

400,155. WELL-CRIB. WILLIAM H. WILLSCRAFT, Juniper, Ariz. Filed June 20, 1888. Serial No. 277,622. (No model.)

Claim.—The combination, in a well-crib, of a series of staves made

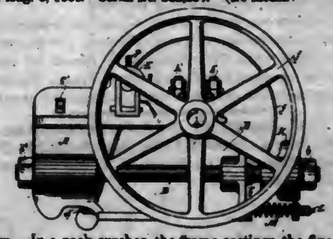


400,155.

wedge-shaped in their thickness at one end, the edge of the wedge being at one face of the stave, the two edges similarly grooved, and a tongue-strip adapted to loosely fit the grooves, substantially as shown and described, whereby the staves are interchangeable and reversible and may each be driven independently of the others.

400,156. HORSE-DETACHER. CHARLES R. WILSON, Bear Wallow, Ky. Filed Nov. 30, 1888. Serial No. 292,213. (No model.)

Claim.—1. The combination, with a singletree provided with a hook at its ends and a spring-actuated lever bearing upon the said hooks, of an angled releasing-lever pivoted upon the outer extremity of the singletree-lever and extending downward over the hook and horizontally outward from the said singletree-lever, and means, substantially as shown and described, for manipulating the said releasing lever, as and for the purpose specified.



2. The combination, with a singletree provided at each end with an outwardly-projected and upwardly-curved hook, and a lever pivoted upon the upper surface of the singletree, extending outward beyond the ends of the same over the said hooks, of an angled releasing-lever fulcrumed upon the outer end of the singletree-lever, the vertical member whereof is extended downward at each side of the said hooks, and a horizontal member carried upward over and beyond the hook, and a strap or equivalent device attached to the outer extremity of the said releasing-lever, all combined for operation substantially as shown and described.

3. The combination, with a singletree provided at each end with an outwardly-extending and upwardly-curved hook adapted to receive the trace, a lever pivoted in the upper surface of the singletree, extending over and beyond each hook, and an angled releasing-lever pivoted upon the outer extremity of each singletree-lever, of a trace-holder consisting of angled blocks, arms secured to the said blocks, having their inner ends connected, and a spring-actuated clamping device attached to the trace-blocks, substantially as shown and described.

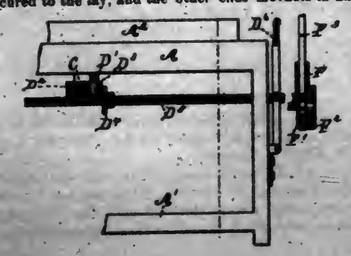
4. The combination, with a singletree provided at each end with an outwardly and upwardly curved hook, a lever pivoted upon the upper surface of the singletree, extending beyond and over the hook, and an angled releasing-lever pivoted to the outer end of the singletree-lever, passing downward over the hook of the said singletree, of angled trace-blocks, an arm secured to each block, said arms having their approaching ends united and carried over the singletree to the rear, a spring clamping device attached to the said trace-blocks, and a strap, rope, or chain secured to the outer extremity of the releasing-lever, all combined for operation substantially as shown and described.

5. The combination, with a singletree provided at each end with an outwardly and upwardly curved hook, a lever pivoted upon the upper surface of the singletree, extending beyond and over the hook, and an angled releasing-lever pivoted to the outer end of the singletree-lever, passing downward over the hook of the said singletree, of angled trace-blocks, an arm secured to each block, said arms having their ends united and carried over the singletree to the rear, a spring clamping device attached to the said trace-blocks, a strap, rope, or chain secured to the outer extremity of the releasing-lever, an angled bracket adapted for attachment to the dash-board of the vehicle, having a hood secured to the horizontal member of the bracket, and a spring-actuated lever-arm fulcrumed upon the said horizontal member beneath the hood, adapted for the reception of the united ends of the trace-block arms, all combined substantially as shown and described, and for the purpose specified.

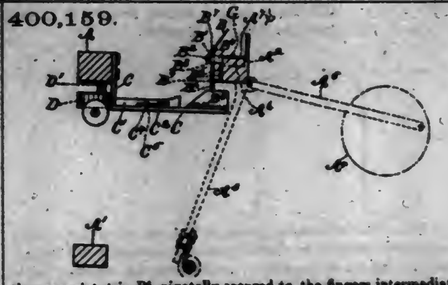
400,157. ROCK-CRUSHER. GEORGE E. ANES, San Francisco, Cal. Filed Aug. 8, 1888. Serial No. 282,257. (No model.)

Claim.—In a rock-crusher, the frame-castings, the fixed jaw, the movable jaw, and the means for operating said movable jaw, consisting of an eccentric, the depending connecting-rod, and the arm between said rod and the movable jaw, in combination with the longitudinal bolts passing through the castings for holding them together and receiving the strain, said bolts having shoulders b', projecting rear ends, nuts b^2, the sliding support K, mounted on the projecting rear ends of the bolts outside of the frame-castings, the nuts for moving said support K, and the arm J between the connecting-rod and the support K, substantially as herein described.

400,158. COMBINED STEP-LADDER AND IRONING AND BREAD BOARD. JOHN C. ARMSTRONG, Hudson, Mich. Filed May 29, 1888. Serial No. 275,478. (No model.)



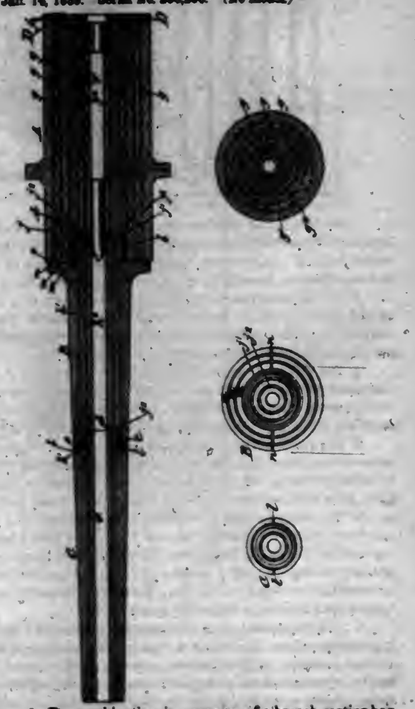
Claim.—1. The combination, with the step-ladder A, having the platform a, with the slots a' therein, hooks F F on the standards, and the back brace composed of two members, B' B^2, pivoted together and having the cross-bar g, of a board having ends f, which engage the slots a', as set forth.



2. The combination of the step-ladder having the hooks F F and the back brace comprising an upper member pivoted to the step-ladder and a lower member pivoted to the upper member, and having a cross-bar, g, provided with notches g', adapted to engage the hooks F, as specified.

400,159. WEFT STOP MECHANISM FOR LOOMS. GEORGE M. ATCHISON, West Troy, N. Y., assignor of one-half to John Picken, same place. Filed Jan. 3, 1889. Serial No. 295,312. (No model.)

Claim.—In a loom, the combination, with a shipping mechanism, of the lay provided with a cross-slot, fingers B, having one end pivotally secured to the lay, and the other ends movable in and out of

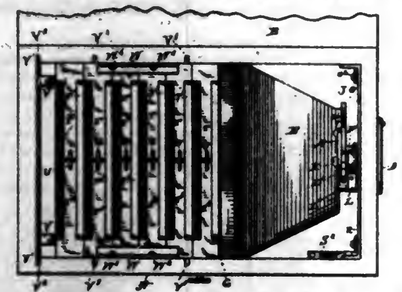


400,159.

the cross-slot, trip B^1, pivotally secured to the fingers intermediately of their ends and vertically movable in a slideway secured to the lay, an inclined slideway, C^2, for the trip, rammer C', having a diagonal slot and supported at one end by a pin passing through such slot, and a rammer engaging lever-cam pivotally secured to the breast-beam, and a cam-engaging stop fixed upon the shipper-actuating slide-rod, substantially as described.

400,160. ORDNANCE. BENJAMIN T. BARNETT, New York, N. Y. Filed Jan. 14, 1889. Serial No. 296,290. (No model.)

Claim.—1. The combination, in a cannon, of a breech-section having a series of tubes provided within and through its walls parallel with the bore, a water-box at the breech communicating with said tubes for introducing water through them for cooling the cannon, and a second section connected with the first-mentioned section in front thereof, the two sections having between their abutting faces channels communicating with said tubes and lateral channels for the escape of the water at the side of the cannon, substantially as herein described.



2. The combination, in a cannon, of a breech-section having a series of tubes provided within and through its walls parallel with the bore, a water-box at the breech communicating with said tubes for introducing water through them for cooling the cannon, a second section connected with the first-mentioned section and also provided with tubes for water, and a third section connected with said second section, the first and second sections having between their abutting faces channels through which the tubes in both communicate, and the second and third sections having between their abutting faces channels communicating with the tubes of the second section and lateral outlet-channels for the escape at the side of the gun of the water which has circulated through the tubes of the first and second sections, substantially as herein described.

400,161. BOLT-HEAD. OSCAR F. RALSTON, Brooklyn, N. Y. Filed Aug. 17, 1888. Serial No. 283,043. (No model.)

Claim.—The bolt-head A, having on its under side a part, *b*, being of a diameter between the diameters of the bolt-head A and the bolt proper, having one or more lips, *c*, running from the swelling *b* to the bolt proper, as shown in Figs. 1, 3, 4, and 6, all as described above, and for the purpose set forth.

400,162. PHOTOGRAPHIC CAMERA. ERASTUS B. BARKER, Newark, N. J. Filed Oct. 26, 1888. Serial No. 289,237. (No model.)

Claim.—1. The combination, in a photographic camera, of a shutter of segmental form attached to the front of the box and stopped at the limit of its movement by contact with the sides of the same, and an adjustable lens-carrying cone or box, substantially as set forth.

2. The combination, in a photographic camera, of a shutter attached to the front of the camera-box, an adjustable lens-carrying cone or box, and a chamber in rear thereof adapted to receive a number of plate-holders, substantially as set forth.

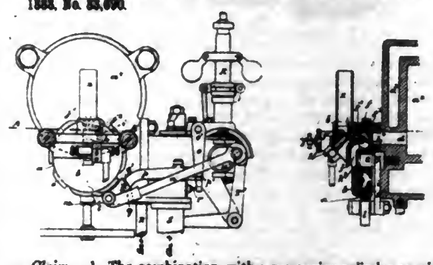
3. The combination, in a photographic camera, of a shutter, a lens cone or box, the rear end whereof is provided with a light-excluding cushion, and a plate-holder pressed by spring-pressure into substantially light-tight contact therewith, substantially as set forth.

4. The combination, in a photographic camera, of an adjustable lens-bearing cone or box, the rear end whereof is provided with a light-excluding cushion, and means to press the plate-holders into substantially light-tight contact therewith, substantially as set forth.

5. The combination, in a photographic camera, of a shutter, a lens cone or box, the rear end whereof is provided with a light-excluding cushion, a chamber in the rear thereof adapted to receive a number of plate-holders, and a spring at the rear of the plate-holders, constructed and arranged to press the plate-holders forwardly against the rear of the lens-cone, substantially as set forth.

6. The combination, in a photographic camera, of a light-excluding shutter, a lens cone or box, a chamber in rear thereof adapted to receive a number of plate-holders, a spring at the rear of the plate-holders, constructed and arranged to press the plate-holders forwardly, and inwardly-projecting ledges on the sides of the box, whereby the plate-holders are held in position during the removal of the one last exposed, substantially as set forth.

7. The combination, in a photographic camera, of a light-excluding shutter and adjustable lens cone or box, a chamber in rear thereof adapted to receive a number of plate-holders, a spring in the rear of the plate-holders, constructed and arranged to press the plate-holders forward, and adjustable inwardly-projecting ledges on the sides of the box, whereby the plate-holders are held in position during the removal of the one last exposed, substantially as set forth.



8. The combination, in a photographic camera, of a shutter attached to the front of the camera-box, a lens-carrying cone or box provided with a light-excluding cushion at its rear end, a chamber in the rear thereof adapted to receive a number of plate-holders, a spring in rear of the plate-holders, constructed and arranged to press the plate-holders into substantially light-tight contact with the cushion on the lens cone or box, and inwardly-projecting ledges on the sides of the box, substantially as set forth.

9. The combination, in a photographic camera, of a shutter attached to the front of the box, an adjustable lens cone or box provided with a light-excluding cushion at its rear end, a chamber in rear thereof adapted to receive a number of plate-holders, a spring in rear of the plate-holders, and adjustable inwardly-projecting ledges on the sides of the box, substantially as set forth.

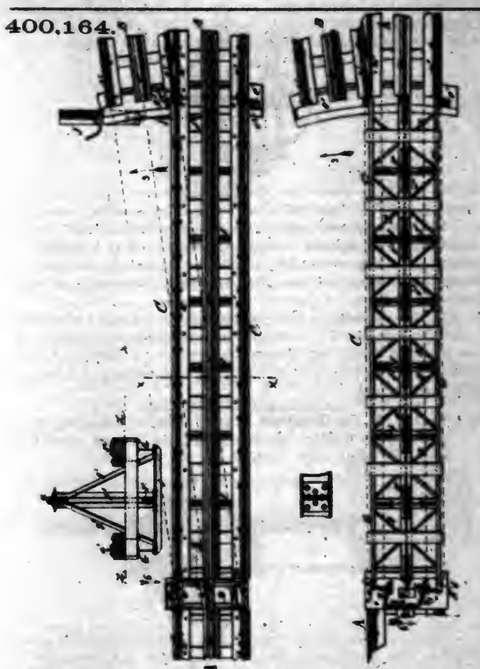
10. In a photographic camera, the combination of an apertured spring-actuated shutter of segmental form, provided with a holding-pawl operated from the exterior of the box, with an adjustable stop-pawl constructed and arranged to be operated from the exterior of the box and to engage with a projection or detent on the shutter and to hold the opening therein in alignment with the light-aperture in the front of the box, substantially as set forth.

11. A camera-box having a lens cone or box independent of the camera-box, and provided with a thumb-screw constructed and arranged to pass through the opening in the side of the camera-box and clamp the lens-cone in position within the same, whereby it may be readily removed for change of lenses, substantially as set forth.

400,163. GAS-ENGINE. TOM R. BARKER, Birmingham, County of Warwick, England. Filed Jan. 5, 1889. Serial No. 295,955. (No model.) Patented in England Oct. 15, 1887, No. 14,027, and in Belgium Nov. 15, 1888, No. 83,690.

Claim.—1. The combination, with a gas-engine cylinder provided with a single ignition-port and a cover-plate provided with a fixed ignition gas-duct and with openings for lighting the traveling ignition gas-jet and supplying it with air, of an intermittently-revoluble ignition-plate journaled between the said cover-plate and the cylinder, and provided with a series of equidistant similar cavities, each having openings communicating with the ignition-port in the cylinder and with the said openings in the cover-plate, an ignition gas-jet passage opening into each cavity and adapted to communicate with the fixed gas-duct in the cover-plate, and a hole for placing said gas-jet passage in communication with the port in the cylinder just before the cavity itself communicates with the said port, all arranged substantially as and for the purpose set forth.

2. The combination, with a gas-engine cylinder provided with a single ignition-port, a cover-plate provided with a fixed ignition gas-duct and with openings for lighting the traveling ignition gas-jet and supplying it with air, and a continuously-revoluble ignition-plate journaled between the said cover-plate and the cylinder, and having a series of equidistant ignition-cavities provided with traveling gas-jet passages and with openings, substantially as set forth, of ratchet mechanism connected to said ignition-plate for revolving it intermittently and suddenly, whereby at each movement of said plate an ignition-cavity is moved across the port in the cylinder but is not entirely cut off from communication with it and the next following ignition-cavity is simultaneously placed in communication with the openings in the cover-plate.



3. In a gas-engine, the combination, with a revoluble ignition-plate having a series of equidistant ignition-cavities, of ratchet mechanism connected to said ignition-plate for revolving it intermittently, a tappet-valve for supplying gas to the cylinder, a speed-governor, and a tappet or lever controlled by the said speed-governor and adapted to simultaneously open the said tappet-valve and permit the said ratchet mechanism to engage with the ignition-plate.

4. In a gas-engine, the combination, with a revoluble ignition-plate having a series of equidistant ignition-cavities and ratchet-teeth, of a pivoted continuously-reciprocating pawl for revolving said plate intermittently, a pivoted lever provided with a pin engaging with a slot in said pawl and holding it clear of the ratchet-teeth, a speed-governor, and a tappet or lever controlled by the said speed-governor and adapted to simultaneously open the said tappet-valve and disengage the said pin from the pawl, substantially as and for the purpose set forth.

400,164. SWITCH FOR CENTER-RAIL ELEVATED RAILROADS. FRANCIS A. BARTHOLOMEW, Bloomfield, N. J. Filed Aug. 6, 1886. Serial No. 210,167. (No model.)

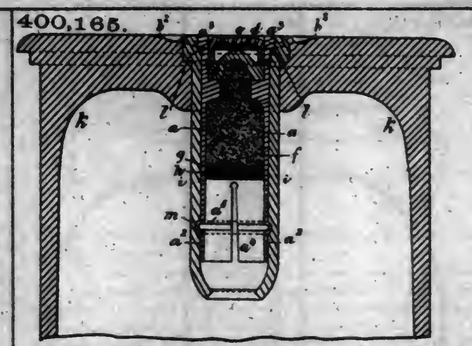
Claim.—1. The combination, with a main track and a branch track, of a swing-track or swinging section and a sliding section or switch-carriage, both moving simultaneously, the latter transversely to the former, substantially as and for the purpose set forth.

400,164.

2. The combination, with a main track and a branch track, of a swing-track or swinging section and a sliding section or switch-carriage, both moving simultaneously, the latter operated automatically by the movement of the former.

3. The combination, with a main track and a branch track and with a swing-track or swinging section, and a sliding section or switch-carriage moving transversely to the track, of a hydraulic motor, J, having piston-rod connected to the said switch-track, substantially as and for the purpose set forth.

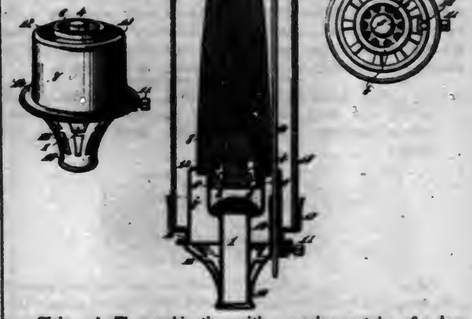
4. In combination with a main track and a branch track, a rigid swing-track pivoted at one end in its longitudinal center line to a stationary part of the structure and supported at its other end to admit of a circular movement horizontally on the said pivot, a sliding section or switch-carriage movable transversely to the track at the pivoted end of the said swing-track, and movable connections, substantially as described, transmitting motion from the said swing-track to the said switch-carriage, as hereinbefore set forth.



5. In combination with a main track and a branch track and with a switch-carriage, D, provided with switch-rails *a a'* and *b b'* and arranged to move transversely to the track, the swing-track C, pivoted at one end in its longitudinal center line to a stationary part of the structure and having at opposite sides of its pivot-point pivotal links *c'*, the elbow-levers H, pivoted to the said structure, and the rod I, pivoted to the said switch-carriage for operating the latter automatically by the movement of the said switch-track.

6. In combination with a main track and a branch track and with a switch-carriage, D, provided with switch-rails *a a'* and *b b'* and arranged to move transversely to the track, the swing-track C, composed of the center beam or girder, F, and side beams, G, connected by suitable transoms and braces, *f* and *g*, supporting a center rail, *a*, and side rails, *a'*, and pivoted with one end of the said central beam to a stationary part of the structure, the links *c'*, pivoted to the ends of the said side beams, G, the elbow-levers H, connected to the said links and pivoted upon the structure, and the bar I, movably connected to the said elbow-levers and also to the said switch-carriage, substantially as and for the purpose herein set forth.

400,165. PRIMER FOR CARTRIDGES. THOMAS R. BAYLISS, Northfield, County of Worcester, England. Filed Nov. 10, 1887. Serial No. 254,908. (No model.) Patented in England May 14, 1887, No. 7,066.



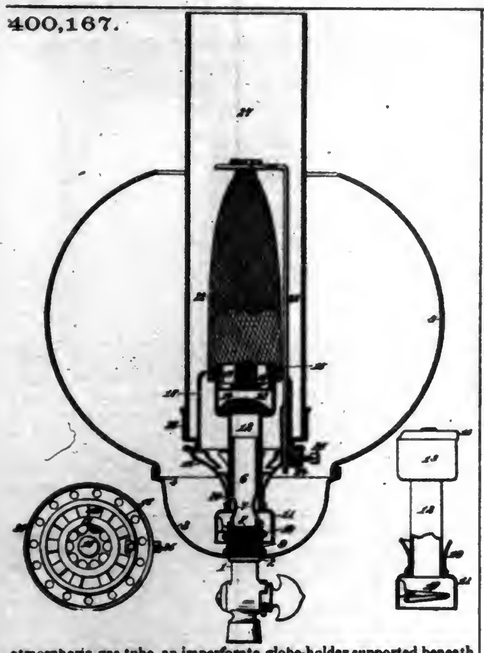
Claim.—1. The combination, with a cartridge-case, *k*, of the tubular chamber *i*, seated in the base of the cartridge-case, the tube *a*, having an inner split end and an outer rim, a^3, seated in the outer end of the tubular chamber and provided with a cavity, *b*, containing the anvil *c*, said tube containing the priming charge of powder, *f*, and powder-retaining wad *h* between its inner split end, and the anvil and the percussion-cap *e*, located in the cavity of the tube, substantially as described.

400,165.

2. The combination, with the cartridge-case *k*, of the tubular chamber secured in the base thereof and provided with the annular seat *l* in its outer end, the tube *a*, having an inner split end and a lateral rim, a^3, at its outer end, located in the annular seat of the tubular chamber, and provided with the cavity *b* and anvil *c*, said internal tube containing the priming charge of powder, *f*, and the powder-retaining disk *g* and wad *h* between its split end, and the anvil and the percussion-cap *e* in the cavity of the tube, substantially as described.

400,166. INCANDESCENT GAS-BURNER. HAROLD J. BELL, Gloucester City, N. J., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed May 10, 1888. Serial No. 273,456. (No model.)

Claim.—1. The combination, with a gas-burner tube, of a deep annular deflector surrounding the burner-tip and having converging arms connected with the burner-tube and a vertically-elongated lug perforated longitudinally to receive a rod or wire for supporting an incandescent device, substantially as described.



2. The combination of the gas-burner and its tube 1, the annular deflector 7, having a vertically-elongated and longitudinally-perforated lug, 10, and provided with converging arms 15, connected with the burner-tube, the rod 9, and mantle 8, substantially as described.

400,167. INCANDESCENT GAS-LAMP. HAROLD J. BELL, Gloucester City, N. J., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed May 10, 1888. Serial No. 273,458. (No model.)

Claim.—1. In an incandescent atmospheric gas-lamp, the combination of an atmospheric gas-tube having lateral air-inlets, a vertically-adjustable burner-tube surrounding the atmospheric gas-tube and movable thereon to control its air-inlets, an imperforate globe-holder supported beneath the air-inlets of the atmospheric gas-tube, a globe, a gas-burner, and a chimney for said burner, substantially as described.

2. In an incandescent atmospheric gas-lamp, the combination of an atmospheric gas-tube having lateral air-inlets, a vertically-adjustable bell-shaped shield movable on said tube, a vertically-adjustable burner-tube movable with said shield to control the air-inlets of the

400,167.

atmospheric gas-tube, an imperforate globe-holder supported beneath the air-inlets of the atmospheric gas-tube, a globe, a gas-burner, an annular deflector surrounding said burner, a perforated chimney-gallery, a glass chimney, and an incandescing device suspended within said chimney above the burner, substantially as described.

3. In an incandescent atmospheric gas-lamp, the combination of an atmospheric gas-tube having lateral air-inlets, an imperforate globe-holder supported beneath said air-inlets, a shield supported on the atmospheric gas-tube and surrounding the lateral air-inlets to prevent the flashing back of gas, and means for controlling the quantity of air admitted through said air-inlets, substantially as described.

400,168. ATMOSPHERIC GAS-BURNER. HAROLD J. BELL, Gloucester City, N. J., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed May 10, 1888. Serial No. 273,459. (No model.)

Claim.—1. In an atmospheric gas-burner, the combination, with a diaphragm having a central gas-passage, of a regulating-screw having a square or unpointed end located in said diaphragm transverse the direction in which the gas escapes through the central gas-passage of said diaphragm to control the flow of gas through said passage, substantially as described.

2. In an atmospheric gas-burner, the combination, with a diaphragm having a central gas-passage, of the regulating-screws having squared or unpointed ends and located end to end in said diaphragm transverse the direction in which the gas escapes through the central gas-passage of said diaphragm to control the flow of gas, substantially as described.

3. An atmospheric gas-burner having lateral air-inlets, a diaphragm provided with a central gas-passage, a regulating-screw located in said diaphragm transverse the direction in which the gas escapes through the central gas-passage of said diaphragm to control the flow of gas through said passage, and means for regulating the size of the lateral air-inlets to control the quantity of air admitted to the burner, substantially as described.

400,169. INCANDESCENT GAS-BURNER. HAROLD J. BELL, Gloucester City, N. J., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed June 21, 1888. Serial No. 277,713. (No model.)

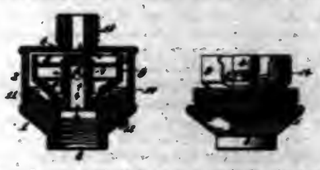
Claim.—1. In an incandescent gas-burner, the combination of an atmospheric gas-tube, a vertically-adjustable bell-shaped shield carrying a tube or sleeve that projects downward within said shield to control the lateral air-inlets of the atmospheric gas-tube, and a combined burner and gallery supported on said shield, substantially as described.

2. The combination, with the externally-screw-threaded base 1 and atmospheric gas-tube 5, of the bell-shaped shield 3, having an internal spiral ring or wire nut, 2, and carrying the tube or sleeve 7, having its lower end projecting downward within said sleeve, substantially as described.

3. The combination, with the atmospheric gas-tube 5 and vertically-adjustable shield 3, having a downward-projecting sleeve, 7, of the combined gallery and burner supported on said shield and comprising tube 9, gallery-shell 10, burner 13, and deflector 15, substantially as described.

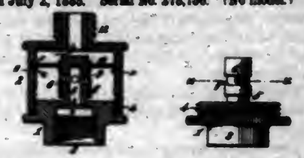
400,170. GAS-GOVERNOR. HAROLD J. BELL, Gloucester City, N. J., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed July 2, 1888. Serial No. 278,732. (No model.)

Claim.—1. In a gas-governor or gas-regulating burner, the combination, with the annular chamber 6, having an outlet-opening, 8, and the tubular stem 5, having gas-passages 18, and guide 14, of the hollow conical float 15, having a bottom plate, 16, provided with perforations 19 and carrying a tubular upward-projecting valve, 17, substantially described.



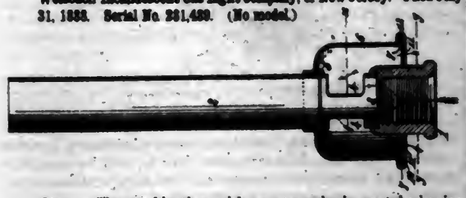
2. In a gas-governor or gas-regulating burner, the combination of the lower shell, 1, having a tubular stem, 5, provided with gas-exits, the guide 14, projecting above said stem, the annular chamber 6, having outlet-opening 8, the hollow conical float 15, having perforated bottom plate, 16, tubular valve 17, and gas-passages 19, the upper shell, 2, and the gas-passages 18 and 20 between said shells, substantially as described.

400,171. GAS-GOVERNOR. HAROLD J. BELL, Gloucester City, N. J., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed July 2, 1888. Serial No. 278,734. (No model.)



Claim.—In a gas-governor or gas-regulating burner, the combination of the base 1, having neck 3, flange 4, cup 5, and tubular stem 6, provided with exits 9 and guide 10, the shell 2, and the float-valve 8, having lower lip, 11, and perforated tube 13, an annular gas-passage, 12, being provided between the said lip and cup, substantially as described.

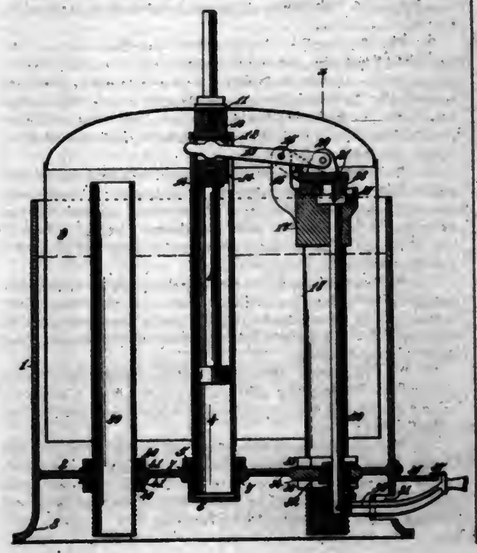
400,172. GAS-GOVERNOR. HAROLD J. BELL, Gloucester City, N. J., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed July 2, 1888. Serial No. 278,735. (No model.)



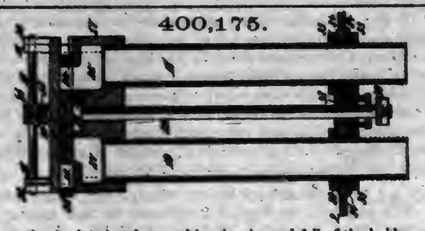
Claim.—In a gas-governor or gas-regulating burner, the combination of the base 1, having a tubular perforated stem, 4, and a cup 9, provided with an inclined perforated bottom, the shell 2, the annular gas-passage 11, the screw 12, and the tubular perforated valve 6, provided with disk-float 8, substantially as described.

400,173. GAS-GOVERNOR. HAROLD J. BELL, Gloucester City, N. J., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed July 2, 1888. Serial No. 278,736. (No model.)

Claim.—In a gas-governor or gas-regulating burner, the combination of the base 1, having a tubular stem, 5, closed at the top and provided with lateral gas-exits 6, located in an annular countersink, 7, the upper shell, 2, and the tubular valve 8, having lateral openings 9 and provided with a disk-float, 10, fitting loosely in the surrounding shell, an annular gas-passage, 11, being provided between said float and shell, substantially as described.



400,174. AIR-REGULATING DEVICE FOR ATMOSPHERIC GAS-BURNERS. HAROLD J. BELL, Gloucester City, N. J., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed July 31, 1888. Serial No. 281,489. (No model.)

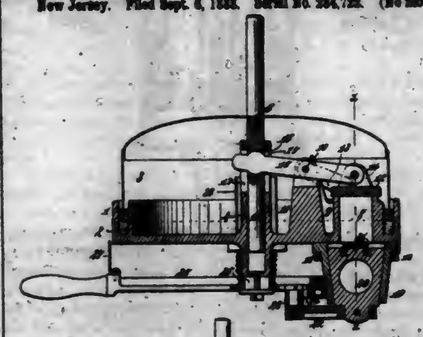


Claim.—The combination, with an atmospheric gas-tube having lateral air-inlets, and a bell-shaped shield, 6, supported on said tube above the air-inlets, surrounding and extending below the latter, and provided at its lower edge with an annular laterally-projecting flange, 7, of a stationary perforated disk, 8, having its periphery spun over and around said flange, and a rotatable perforated disk, 10, having a turned-over edge, 12, loosely spun around the periphery of the stationary disk to regulate the admission of air into the atmospheric gas-tube, substantially as described.

400,175. GAS AND AIR MIXER. HAROLD J. BELL, Gloucester City, N. J., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed Sept. 6, 1888. Serial No. 284,731. (No model.)

Claim.—1. In a gas and air mixing machine, the combination, with a water-tank, a gas-holder resting in said tank, and gas and air inlet pipes and a delivery-pipe located in said tank and holder, of a chambered block located upon and communicating with said inlet-pipes, a hinged valve adapted to control the admission of gas or vapor and air through the inlet-pipes and chambered block to the holder, a transverse rod on which said valve is hinged, and a lever fulcrumed on said rod and connected with said valve and gas-holder, whereby

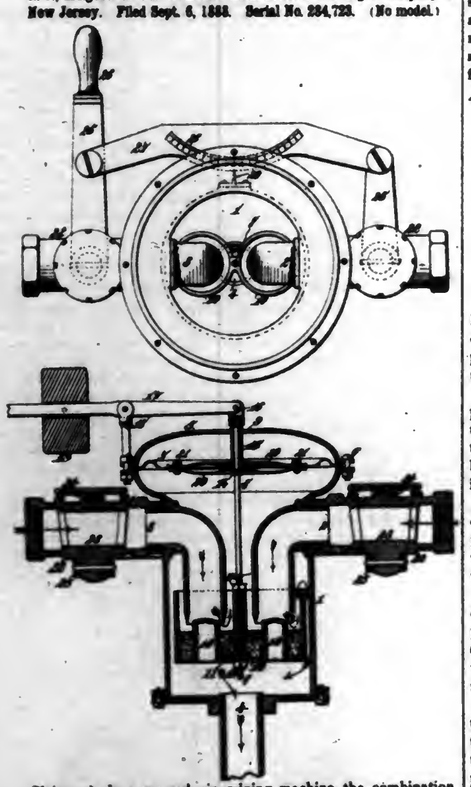
400,175.



the valve is closed and opened by the rise and fall of the holder, substantially as described.

2. In a gas and air mixing machine, the combination of a water-tank, a gas-holder resting in said tank, gas and air inlet pipes and a delivery-pipe located in said tank and holder, a chambered block communicating with said gas and air inlet pipes, a slide-valve adapted to control the relative proportions of gas and air admitted through said inlet-pipes, a rock-shaft provided at one end with an eccentric that connects with said slide-valve, a hand-lever on the other end of said rock-shaft, an index and scale adapted to indicate the relative proportions of gas or vapor and air admitted into the machine by the setting of the hand-lever, and a valve having lever-connections with the gas-holder, whereby said valve is closed and opened by the rise and fall of the holder, substantially as described.

3. In a gas and air mixing machine, the combination of a water-tank having a central vertically-slotted guide-tube open at its top and closed at its bottom, a gas-holder resting in the tank and having a central guide engaged in said tube, gas and air inlet pipes and a delivery-pipe located in the tank and holder, a chambered block communicating with said inlet-pipes, a slide-valve seated in said block and adapted to control the proportionate quantities of gas or vapor and air admitted into the machine, means, substantially as described, for operating the said slide-valve, a hinged valve seated above the slide-valve and adapted to control the admission of gas and air into the holder, and a lever connecting said hinged valve with the holder, whereby said valve is closed and opened by the rise and fall of the holder, substantially as described.



400,176. GAS AND AIR MIXER. HAROLD J. BELL, Gloucester City, N. J., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed Sept. 6, 1888. Serial No. 284,732. (No model.)

Claim.—1. In a gas and air mixing machine, the combination, with a tank having gas and air inlet pipes and an outlet-pipe, of a valve-casing secured to the bottom of said tank below the inlet-pipes, spring-seated valve-plugs located in said casing and adapted to control the proportionate quantities of gas and air admitted into the machine, a hand-lever fulcrumed beneath the tank, and links connecting said lever with the valve-plugs, substantially as described.

2. In a gas and air mixing machine, the combination of a tank having gas and air inlet pipes and an outlet-pipe, a gas-holder resting in said tank, a valve located above the inlet-pipes, a lever so connected with said valve and gas-holder that the rise and fall of the gas-holder will close and open the valve, so as to control the admission of gas and air into the holder, a valve-casing secured to the bottom of the tank below the inlet-pipes, and valve-plugs located in said casing and adapted to control the proportionate quantities of gas and air admitted into the said inlet-pipes, substantially as described.

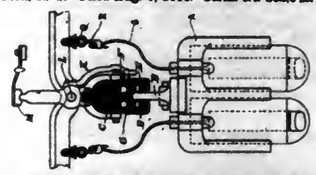
400,177. GAS AND AIR MIXER. HAROLD J. BELL, Gloucester City, N. J., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed Sept. 6, 1888. Serial No. 284,723. (No model.)

Claim.—1. In a gas and air mixing machine, the combination, with a tank having gas and air inlet pipes projecting downwardly within said tank, of cup-valves suspended beneath the open ends of said pipes and containing mercury, a vertical valve-rod attached to said valves and projecting through an air-opening in the top of the tank, a flexible diaphragm located in the upper part of the tank and centrally attached to the said valve-rod, and a balance-arm fulcrumed above the tank in pivotal connection with the valve-rod and carrying an adjustable weight, substantially as described.

2. In a gas and air mixing machine, the combination, with a tank having gas and air inlet pipes, and valve-casings communicating with said pipes, of valve-plugs located in said casings, arms attached to said valve-plugs, one of said arms being provided with a hand-lever, a link connecting said arms, a scale on said link, and a stationary index finger or pointer, substantially as described.

400,178. DRAWING-PEN. GEORGE BENNETT, Philadelphia, Pa. Filed Sept. 3, 1888. Serial No. 284,405. (No model.)

Claim.—1. A drawing-pen with blades having two adjustments for producing lines of two different widths, the nibs of the blades being brought into one adjustment by means of a spring and changed to the other adjustment by pressure from a finger of the hand, substantially as described.



2. A drawing-pen having hinged or jointed blades, a spring acting between said blades, and adjustable stop-screws to regulate the space between the nibs of said blades, substantially as herein described.

3. In a drawing-pen, the combination of two jointed blades having adjustable stop-screws to regulate the space between the nibs of said blades, said screws being located each side of said joint, with a spring acting between said blades, substantially as described, and for the purpose set forth.

4. A drawing-pen comprising the blades *a* and *b*, jointed at *c*, the stop-screws *e* and *d*, and the spring *f*, substantially as described, and for the purpose set forth.

5. A drawing-pen having blades provided with an adjustable stop-screw to regulate the space between the nibs of said blades when they are forced toward each other, and another adjustable stop-screw to regulate the space between the nibs of said blades when said blades are forced apart, substantially as described, and for the purpose set forth.

400,179. ELECTRIC-RAILWAY CONTACT. EDWARD M. BENTLEY, New York, N. Y. Filed Aug. 9, 1888. Serial No. 282,342. (No model.)

Claim.—1. The combination, with an electrically-propelled vehicle, of a contact device leading to a supply-conductor in a conduit outside of the track, and a transverse guide for said contact device permitting a normal movement thereof, but having an extension permitting an abnormal movement of the contact device.

2. The combination, in an electric railway, with an electrically-propelled vehicle, of a contact device for maintaining traveling electrical connection with a supply-conductor inclosed in a conduit outside the track, and a movable guide, upon which said contact device moves, having an abnormal transverse movement, and provided with a retractile spring for restoring it to its normal position.

3. The combination, with an electrically-propelled vehicle, of a contact device for maintaining the electrical connection with a supply-conductor inclosed in a conduit outside the track, a primary transverse guide therefor, and a secondary intermediate guide upon which the contact device moves.

4. The combination, with an electrically-propelled vehicle, of a contact device for maintaining the electrical connection with a supply-conductor inclosed in a conduit, a transverse mechanical guide for said contact device, and a transverse insulated electrical guide, with which the conductor of the said contact device has a traveling connection.

5. The combination, with an electrically-propelled vehicle, of a transversely-movable contact device for maintaining traveling electrical connection with a supply-conductor inclosed in a conduit outside the track, and a transverse insulated electrical guide connected to the propelling-motor, with which the conductor of the contact device has traveling connection.

6. The combination of an electrically-propelled vehicle, a contact device for engagement with the supply-conductor, and a mechanical connection between the contact device and vehicle, permitting movement of the contact device relative to the vehicle, with an electrical conductor leading to the contact device and having a detachable connection at its free end, with a conductor upon the vehicle in circuit with the propelling-motor.

7. The combination, with an electrically-propelled vehicle, of a supply-conductor below the vehicle, a contact device for engagement therewith, mechanically connected to the vehicle and movable relatively thereto, and a flexible electrical conductor leading to the contact device and having at its upper free end a spring-jack connection with the conductor upon the vehicle.

8. The combination, with an electrically-propelled vehicle, of a contact device maintaining electrical connection with a supply-conductor inclosed in a slotted conduit, a moving transverse guide for said contact device, a segment upon said guide, and an actuating-rope wound upon said segment.

9. The combination, with an electrically-propelled vehicle, of a contact device maintaining electrical connection with a conductor inclosed in a conduit, and a transversely-movable guide on which said contact device travels.

10. The combination, with an electrically-propelled vehicle and a supply-conductor, of a contact device for maintaining electrical connection with said conductor, and a movable guide upon which said contact device moves, having an abnormal transverse movement, and provided with a retractile spring for restoring it to its normal position.

11. The combination of the contact device and two independent sliding connections between the contact device and vehicle, permitting different ranges of movement.

12. In an electric railway, the combination of the primary transverse guide and a support engaging said guide, with a contact device having a transversely-traveling connection with said support.

13. The combination, in an electric railway, of a vehicle with a contact device extending into a slotted conduit for engagement with the supply-conductor therein, and two transversely-traveling connections between the contact device and vehicle, one having a longer range of movement than the other.

14. In an electric railway, the combination of a support traveling along suitable guides, with a contact device for engagement with the supply-conductor, inclosed in a conduit connected with and having an independent movement relative to said support, and stops for limiting this latter movement.

15. The combination, in an electric railway, of a vehicle, a support having sliding bearings permitting movement in a horizontal plane, and a contact device having a transversely-traveling connection with said support and in engagement with the supply-conductor.

16. The combination, in an electric railway, of a vehicle, a support having sliding bearings permitting movement in a horizontal plane, and a contact device having a transversely-traveling connection with said support and in engagement with the supply-conductor housed in the slotted conduit.

17. In an electric railway, the combination of a vehicle and a contact device for engagement with a supply-conductor housed in a slotted conduit, with a support for the contact device outside the conduit and connected to the vehicle in such a manner as to be movable relative thereto, and a connection between the contact device and the support, allowing a limited lateral movement between the two, whereby slight irregularities of movement may be compensated by the independent movement of the contact device.

18. In an electric railway, the combination of a vehicle and a contact device for engagement with a supply-conductor inclosed in a slotted conduit, with an intermediate support between the vehicle and the contact device, and connections permitting lateral movement between the vehicle and support and the support and contact device, respectively, whereby movement of the contact device either alone or with the support allows for irregularities in the line of the conduit.

19. The combination, with an electrically-propelled vehicle, of a contact device for engagement with the supply-conductor movable relatively to the vehicle, an independent conductor-guide, and a traveler moving therealong and in circuit with the contact device.

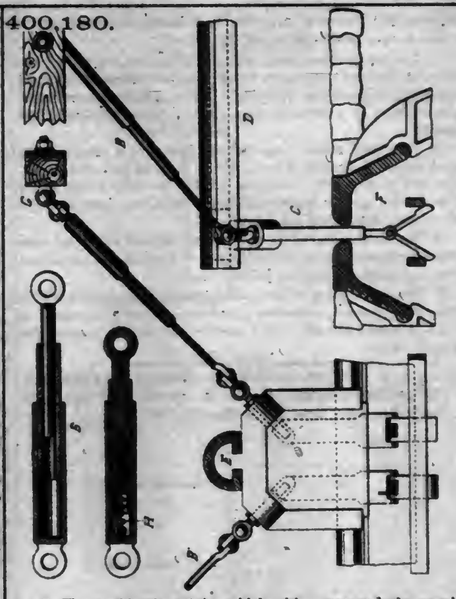
20. The combination of the contact device having a transversely-sliding connection with an electrically-propelled vehicle, an independent conductor-guide, a traveler moving therealong, and a flexible electrical connection between the contact device and traveler.

21. The combination, with a transverse conductor-guide upon a vehicle and a traveler therefor, of a contact device movable relatively to the vehicle and extending into a slotted conduit for engagement with the supply-conductor, and a flexible electrical connection between the contact device and traveler.

22. The combination, with an insulated conductor-guide upon an electrically-propelled vehicle and a traveler therefor, of a supply-conductor, a contact device movable relatively to the vehicle, and a flexible electrical connection between the contact device and traveler.

23. The combination of a contact device having a transversely-movable connection with an electrically-propelled vehicle, with an independent conductor extending along in proximity to the path of movement of the said contact device, and a traveler in circuit with the contact device and moving in contact with the said conductor.

24. The combination, with a movable transverse guide upon an electrically-propelled vehicle, and a contact device having a traveling connection therewith, of a fixed conductor-slide, a traveler therefor in circuit with the contact device, and a yielding electrical connection between the traveler and contact device, permitting movement of the contact device into and out of operative position.



25. The combination, in an electrically-propelled vehicle, with a transverse mechanical guide extending beyond the car-wheel, and a contact device movable along said guide, of a conductor-slide terminating at a point between the wheels, a traveler therefor, and a flexible electrical connection between the traveler and contact device.

400,180. ELECTRIC-RAILWAY PLOW. EDWARD M. BENTLEY, New York, N. Y. Filed Dec. 5, 1888. Serial No. 292,697. (No model.)

Claim.—1. The combination of a vehicle and a contact device for engagement with a supply-conductor, with an intermediate mechanical connection permitting movement of the contact device relative to the vehicle, and an extensible electrical connection between the contact device and vehicle.

2. The combination of a vehicle and a guide thereon with the contact device movable along said guide, and an extensible connection between the contact device and the vehicle.

400,180.

3. The combination of the vehicle with a contact device capable of being shifted from point to point upon the vehicle, and an extensible connection between the contact device and the vehicle.

4. The combination of the vehicle and a transverse guide thereon with a contact device movable along said guide, and an extensible electrical connection between the contact device and vehicle.

5. The combination, in an electric railway, of two line-conductors and a collector having contact-surfaces engaging with said conductors with extensible connections in circuit with said contact-surfaces and leading to the vehicle.

6. The combination of a vehicle with a contact device having a sliding movement thereupon and a connecting-link between the contact device and the vehicle, consisting of two or more sections extensible to one another.

7. The combination of a vehicle with a contact device capable of being shifted from point to point upon the vehicle, and a connecting-link between the contact device and the vehicle, consisting of a plurality of sections of conducting material extensibly connected together.

8. The combination of the conduit, the inclosed conductor, the vehicle, and transverse guide thereon, with the contact device movable along said guide, and an extensible connection between the contact device and the vehicle.

9. The combination of the conduit, the inclosed supply-conductors, the vehicle, and transverse guide thereon, with the plow movable along said guide, the contact-conductors carried by said plow, and the extensible electrical connections leading therefrom to the vehicle.

10. The combination of the conduit and inclosed supply-conductor with a contact device movable relatively to the vehicle, and an intermediate extensible connection one end of which is connected to the contact device and the other to the car.

11. The combination of the vehicle, a conduit, an inclosed conductor, and a contact device therefor, with a mechanical connection permitting movement of the contact device relatively to the vehicle and an extensible electrical connection between the contact device and the vehicle.

12. The combination of the vehicle, a conduit, and inclosed conductor, with a plow or current collector movable laterally relative to the vehicle, and an extensible connection between the plow and vehicle.

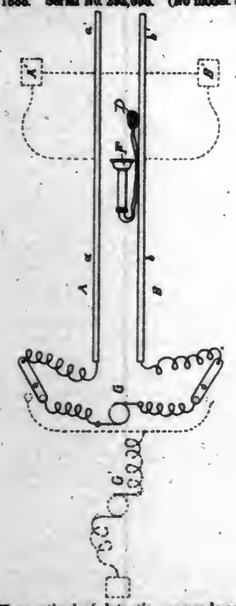
13. The combination of the conduit, the inclosed conductor, the vehicle, and contact device capable of being shifted from point to point upon the vehicle, with an extensible connection between the contact device and vehicle.

14. The combination of a conduit, a conductor therein, and a contact device with an electrical connection between the contact device and car, consisting of telescoping sections of conducting material.

15. The combination of the conduit and inclosed conductor with a vehicle, a contact device connected thereto, and an extensible link between the contact device and the vehicle.

16. The combination of a vehicle and a plow having a movable

connection therewith with extensible links leading from each side of the plow to the vehicle and bracing the plow.



17. The combination, in an electric railway, of the vehicle, the conduit, and inclosed conductor, with the contact device therefor and a connecting-link between the contact device and vehicle connected to one of them by a universal joint, thereby permitting freedom of movement.

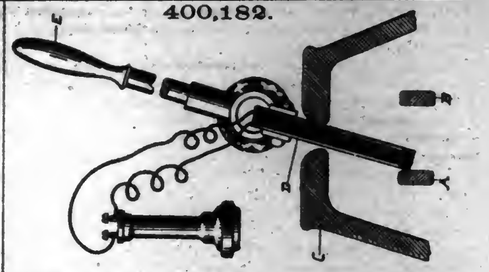
18. The combination, in an electric railway, of a vehicle and a contact device connected thereto, with a conduit, an inclosed conductor, and an electrical connection between the contact device and vehicle, consisting of an extensible link of conducting material and a universal-joint attachment for the same.

19. The combination of the conduit and inclosed conductor with the transversely-moving contact device for the same, and an extensible spring-connection leading to the vehicle.

20. The combination of the conduit and inclosed conductor with the plow, a mechanical connection permitting transverse movement of the plow, and an extensible spring electrical connection between the plow and vehicle.

400,181. METHOD OF DETECTING GROUNDS IN AN ELECTRIC DISTRIBUTING SYSTEM. EDWARD M. BENTLEY, New York, N. Y. Filed Dec. 5, 1888. Serial No. 292,698. (No model.)

Claim.—1. The method of detecting grounds on an electric railway having a normally-insulated line-conductor, which consists in first sending an irregular current through the grounded conductor, then moving along in proximity thereto an induction-coil connected to an accessible indicator, and noting on the indicator the variation in the induced current caused by the coil passing the grounded point.



2. The method of detecting grounds on an electric railway having an inclosed conductor, which consists in first sending an irregular current through the conductor, then moving along in the inclosure in proximity to the conductor an induction-coil connected to an accessible indicator, and noting on the indicator the variation in the induced current caused by the coil passing the grounded point.

3. The method of detecting faults upon an electric railway or other circuit having a normally-insulated line-conductor, which consists in first sending an irregular current over the conductor, inducing therefrom a secondary current, and applying an indicator to the secondary current, substantially as described.

4. The method of detecting grounds or short circuits on an electric railway having a normally-insulated line-conductor, which consists in first sending an irregular current through the faulty conductor, then inducing therefrom a series of secondary currents at various points along the line, and, lastly, noting the variation in the induced currents, and thereby locating the fault.

400,182. FAULT-DETECTOR FOR ELECTRIC RAILWAYS. EDWARD M. BENTLEY, New York, N. Y. Filed Dec. 17, 1888. Serial No. 293,837. (No model.)

Claim.—1. The combination of a normally-insulated line-conductor grounded at a point between its two ends, and an electric circuit

supplied with an irregular current and including the line-conductor and the grounded return, with an induction-coil adapted to be brought into proximity to the line-conductor at points preceding and succeeding the ground, and an indicator controlled by the current in the induction-coil.

2. The combination of a line-conductor normally insulated from its return, and a circuit including a portion only of the line-conductor, with a source of electricity sending an irregular current over said circuit, and an indicator operated by induction and adapted to be brought into proximity with the line-conductor at various points, for the purpose set forth.

3. The combination of a bared supply-conductor of low resistance adapted normally to supply current to the traveling motors upon an electric railway, and having a fault thereon at a point between its two ends, with an electric circuit, including a portion of the supply-conductor and the fault and traversed by an irregular current, an induction-coil in proximity to the supply-conductor at any desired point, and an indicator controlled thereby for detecting the presence of the irregular current in the corresponding portion of the supply-conductor, and thereby locating the fault.

4. The combination of a bared supply-conductor of low resistance extending along an electric railway and grounded at an intermediate point along its length, with an irregular-current generator in circuit with the supply-conductor and ground, whereby a complete circuit is established, including only a portion of the supply-conductor, and an induction-indicator adapted to be brought into proximity with the supply-conductor at successive points, for the purpose set forth.

5. A ground-detector for an electric railway having an inclosed conductor, which consists of an induction-coil adapted to move along in the inclosure in proximity to the conductor, having a connection attached thereto extending out through the slot of the inclosure and provided with an indicator in circuit therewith.

6. A ground-detector for an electric railway having an inclosed conductor, which consists of an induction-coil having a thickness less than the width of the slot, so as to be inserted and withdrawn therethrough, and provided with a connection extending through the slot, and an external indicator in circuit therewith.

7. A detector-coil for a conduit electric railway, having one straight longitudinal side adapted to be placed in proximity to the line-wire, the opposite side being arranged out of the immediate inductive field of said wire, and provided with a connection extending through the slot of the conduit, and with an external indicator.

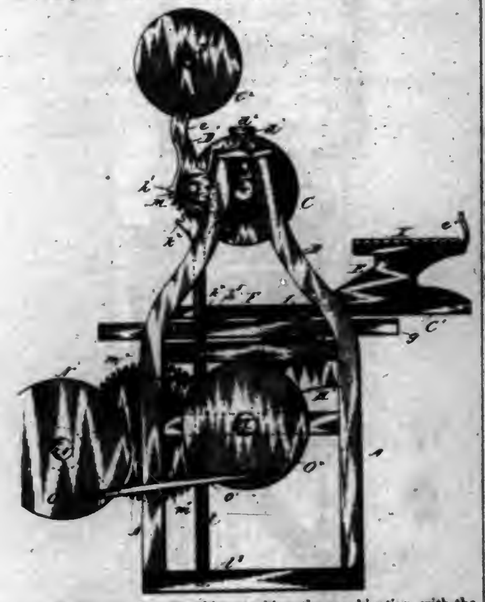
8. A fault-detector adapted to be placed in proximity to a line-conductor for detecting a fault thereon, consisting of the induction-coil D, the telephone in circuit with the induction-coil, and the supporting rod or pole E, substantially as described.

9. The combination of a housed line-conductor traversed by an irregular electric current, with an accessible indicator, an intermediate induction-coil, and connections, whereby the indicator responds to changes in the current upon the inclosed conductor.

10. The combination of a slotted conduit, two line-conductors therein adapted to form the direct and return branches of an electric circuit and located on opposite sides of and away from the slot, with a narrow induction-coil movable from side to side within the conduit, and an indicator controlled thereby, whereby the current upon either conductor may be tested without interference from the other.

11. The combination of a slotted conduit and a supply-conductor housed therein, with an induction-coil adapted to be brought into proximity to the conductor, and a telephone outside the conduit, in circuit with the induction-coil, for testing the line.

12. The combination of a plurality of line-conductors inclosed in a common conduit and located at intervals apart, with an induction-coil movable in the conduit into proximity with any desired one of the conductors, and an indicator controlled by the induction-coil.



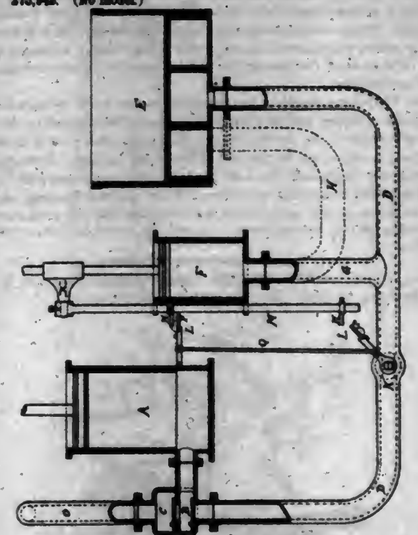
13. The combination of a metallic conduit and a line-conductor therein, with an induction-coil adapted to be brought into proximity to the inclosed conductor, and an indicator controlled by the induction-coil.

400,183. AUTOMATIC FOLDING CHAIR. HENRY H. BLAKE, Pittsburg, Pa., assignor to himself and Thomas A. Noble. Filed Feb. 17, 1887. Serial No. 227,994. (No model.)

Claim.—In an automatic folding chair, the combination of a seat supported by and adapted to swing backwardly upon a cross-bar having triangularly-shaped ends loosely pivoted in slots or bearings in the forward upper part of the arms or sides of the same, springs secured within the arms or sides of the same, adapted when extended to support the ends of the cross-bar in the upper part of the slots or bearings and when compressed to sink toward the bottom of the same, and springs attached to the arms or sides of the chair at the upper rear end of the slots or openings, and projecting downwardly and terminating near the bottom thereof, adapted to engage the acute edges of the triangularly-shaped ends of the cross-bar when said bar is thrown upward, whereby the seat is tilted or thrown vertically toward the back of the chair, substantially as and for the purpose herein described.

400,184. STARCHING-MACHINE. THOMAS J. BLAKE, Wilkinsburg, Pa. Filed Feb. 14, 1888. Serial No. 263,961. (No model.)

Claim.—1. In a starching-machine, the combination, with the carrier upon which the articles to be starched are laid, of a pressure-roll consisting of a hollow perforated metallic cylinder, substantially as and for the purpose set forth.

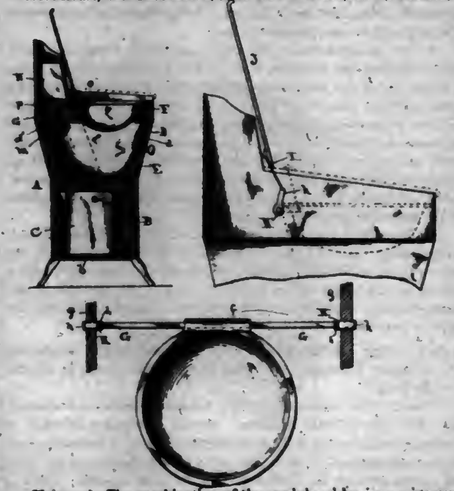


2. In a starching-machine, a detachable wiping-roll consisting of a cylinder mounted on adjustable arms and capable of being lowered upon and raised from the starching table or carrier, substantially as described.

3. In a starching-machine, the combination, with the reciprocating starching-table, of the pivotal arms D D', toothed segment k' upon one of said arms, the toothed lever k^2, mounted on the frame of the machine, lever l, pivotally connected to lever k^2, wheel N', having offset m^2, pinion N', and transverse shaft N, substantially as described.

4. In a starching-machine, the combination of the following elements, to wit: the wiping-roll, the toothed lever supporting the same, the toothed segmental lever, the swinging bar, the toothed wheel having a cam or offset on its face, and the pinion engaging with said wheel and mounted on the shaft, substantially as described.

5. In a starching-machine, the combination, with the reciprocating starching-table, the pressure-roll, and the wiping-roll, of the transverse shafts through which motion is conveyed to the table and to the arms supporting the wiping-roll, the crank-wheels on said shafts, and the connecting-pitman, substantially as described.



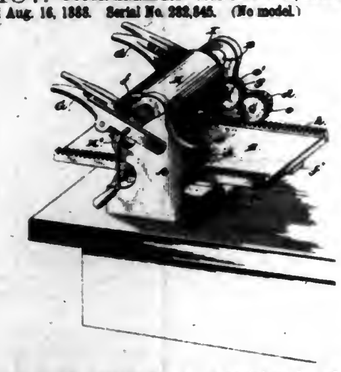
400,185. APPARATUS FOR ACCELERATING THE PASSAGE OF LIQUIDS THROUGH FILTER-BEDS. WILLIAM D. BOSH, Acton, London, County of Middlesex, England. Filed June 4, 1888. Serial No. 275,949. (No model.)

Claim.—1. The combination, with a filter of an ordinary suction-pump drawing liquid by suction through a filter-bed, of an auxiliary single-acting pump without valves and connected to the filter-casing, substantially as and for the purposes described.

2. The combination, with a filter, of a delivery-pump, A, connected with its casing, an auxiliary pump, F, for causing a reflux through the filter-bed, connected suction-pipes D and G, a valve, K, in said pipe D, between the delivery-pump and the union of said pipe G, and mechanism, substantially as described, for opening and closing said valve in time with the reciprocations of the piston of the auxiliary pump, substantially as hereinbefore specified.

400,186. PORTABLE WASH-STAND. NATHAN G. BOND, Fairfax Court-House, Va. Filed Nov. 9, 1888. Serial No. 290,342. (No model.)

Claim.—1. The combination of the wash-bowl having a side extension provided with a rectangular opening, the rod fitted in the opening of said extension, the sockets fitted to the ends of the rod and forming journals therefor, and having arms, the set-screws for holding the sockets on the rod, the cover, and the links connecting the said arms with the said cover, substantially as set forth, for the purposes described.



2. In a wash-stand, the combination, with the cabinet and the

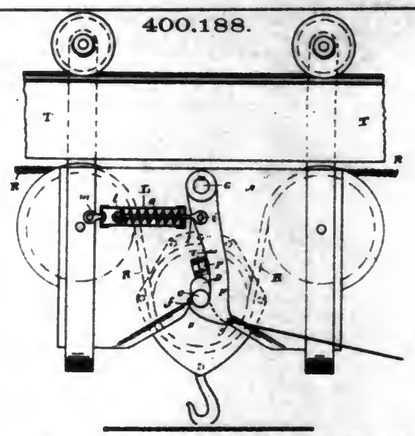
tilting wash-bowl, of the drawer or slide, and the combined splash and guide bowl supported by said drawer or slide having a discharge-opening in its bottom, and having the upper portion of its rear edge cut away to give clearance for the said wash-bowl when drawing the said slide out, substantially as set forth.

3. A portable cabinet wash-stand consisting of a frame or casing having a portion adapted to contain a slop-pail, a pivoted rocking bowl and tilting mechanism therefor secured to its top, and a drawer and splash-bowl supported thereby, said drawer being arranged to slide in and out of the case between the slop-pail and bowl, substantially as described.

4. The herein-described portable cabinet wash-stand, composed of the frame or casing having a bottom to support the slop-pail, a door to admit access to the interior of the cabinet, the drawer or slide, the splash-bowl supported by the said drawer and having a discharge-opening, the water-tank, the wash-bowl, the rod connected with the wash-bowl, the sockets fitted to the ends of the rods and forming journals for the same, and having arms, the cover, and the link connecting the said arms with the said cover, substantially as and for the purpose set forth.

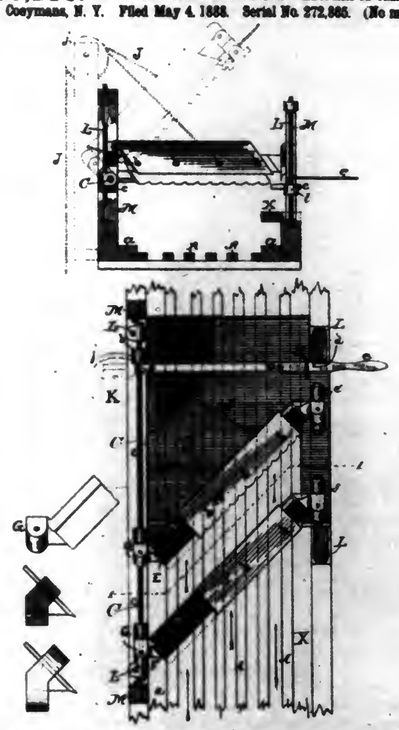
400,187. DOUGH-KNEADER. JOHN H. BOWERS, Mound City, Mo. Filed Aug. 16, 1888. Serial No. 282,845. (No model.)

Claim.—1. The combination, in a dough-kneader, of the side frames carrying pinions *g* and *e*, and having rack-teeth in one part of the edge thereof, bifurcated levers G G, pivoted to said frame; said levers forming bearings for a crank-shaft carrying a geared roller, and spring-actuated pawls adapted to engage the rack-teeth on the side frames for adjusting the bifurcated levers and roller, the said frames having slots through which the roller-shaft passes, and a kneading-board having rack-teeth, the parts being organized substantially as shown, and for the purpose set forth.



2. In a dough-kneader, the combination of a frame, a reciprocating kneading-bed mounted therein having an integral guide-spline at the center of the bottom thereof, grooved rollers journaled in said frame, with the grooves of which the guide-spline of the kneading-bed is in engagement, adjusting-levers pivoted to upper extensions of the frame on each side thereof, a crank-shaft having bearings in said levers, and a revoluble kneading-roll attached to said crank-shaft operating to reciprocate the kneading-bed and adapted to have a temporary stationary adjustment toward or away from said bed by means of the levers, substantially as described.

3. In a dough-kneader, the combination, with a frame having a reciprocating kneading-bed therein, adjusting-levers pivoted to the upper part of said frame on each side thereof, a crank-shaft having bearing in said levers, and a revoluble kneading-roll attached to said crank-shaft and adapted to reciprocate said kneading-bed, substantially as described.

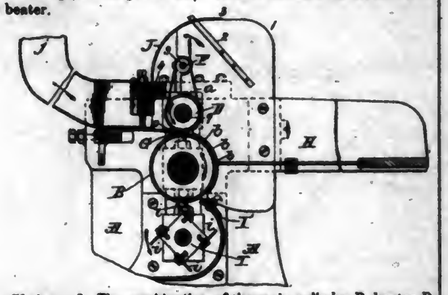


400,188. HOISTING AND CONVEYING MACHINE. ALEXANDER B. BROWN, Cleveland, Ohio. Filed Mar. 16, 1887. Serial No. 231,090. (No model.)

Claim.—The combination of the following-named instrumentalities: first, any suitable tramway; second, a tramway-carriage or trolley mounted to travel on said tramway; third, a hoist-rope having one end secured to a stationary point of attachment and the other end connected with the hoist-engine in the usual manner; fourth, a sheave-block in engagement with said hoist-rope, and which is supported by said rope only when being raised or lowered; fifth, the hooks P *f*, formed with depressed seats to accommodate the engaging devices of the sheave-block, and from which said devices can be released only by lifting the sheave-block, and, sixth, suitable means for the manipulation of said hooks by an attendant, said combination of instrumentalities operating substantially in the manner and for the purposes set forth.

400,188.

400,189. MACHINE FOR PLANING ICE. LEONARD R. CARHART, Coeymans, N. Y. Filed May 4, 1888. Serial No. 272,865. (No model.)

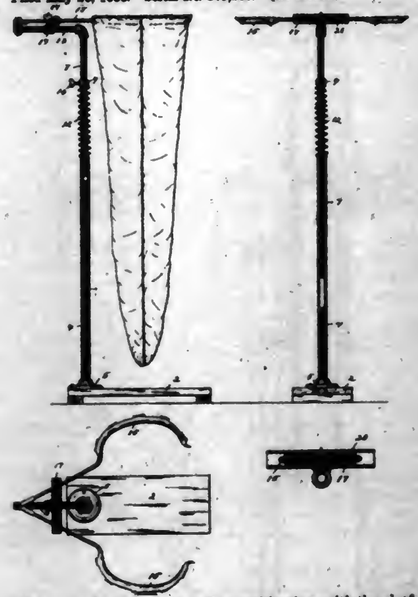


Claim.—1. In an ice-cutting machine, the combination of a knife provided with a notched cutting-edge, placed diagonally across and in combination with the chute of an ice-elevator, the shaft C, to which said knife is hinged, and the frame B, to which said knife is connected, all substantially as described, and for the purpose set forth.

2. In an ice-cutting machine, the combination of the knife I, having an unbroken cutting-edge, with the knife H, having its cutting-edge provided with right-angled notches, each of said knives placed diagonally across the chute of an ice-elevator, the shaft C, to which said knives are hinged, the frame B, to which said knives are attached, and the latch-lever *e*, attached to the frame B, with the notched rack *d*, with which said latch-lever engages, all substantially as described, and for the purpose set forth.

3. In an ice-cutting machine, the combination of the frame B, extending across the chute of an ice-elevator, the shaft C, to which said frame is hinged on one side, the bar *c*, to which said shaft is attached, the nuts *l l* at each end of said bar *c*, the bolts L L, provided with threads, with which the nuts *l l* mesh, the knives H and I, placed diagonally across said chute, hinged to said shaft C, and connected with the said frame B, the latch-lever *e*, attached to the frame B, hinged on the said shaft C, the notched rack *d*, with which the said latch-lever engages, the chain or cable J, attached to said frame, the sheave *j*, and the weight *k*, attached to said chain or cable, all substantially as described, and for the purpose set forth.

400,190. ROLLER-GIN. DANIEL S. CHAPIN, Milford, Mass. Filed Aug. 16, 1888. Serial No. 282,842. (No model.)

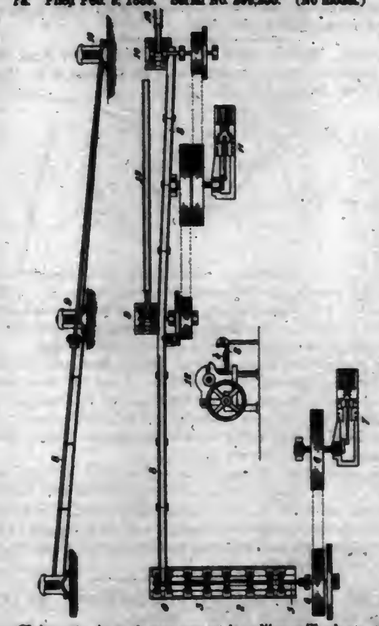


Brief.—A revolving fan above the beater prevents cotton from being carried over the beater, and the feed is quickened by a hood and exhaust-pipe arranged to draw the cotton toward the seed-arrester and beater.

Claim.—1. The combination of the main cylinder B, beater D, seed-arrester G, and fan F, substantially as and for the purpose set forth.

2. The combination of the main cylinder B, beater D, seed-arrester G, and hood J, provided with draft-pipe *j*, substantially as and for the purpose set forth.

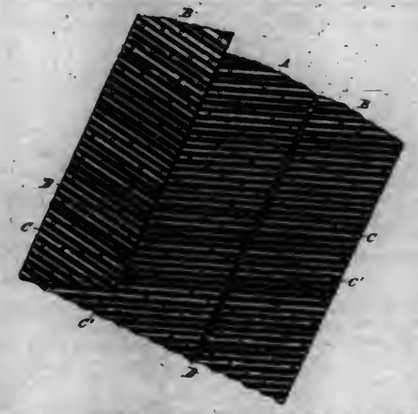
400,191. BAG-HOLDER. EDWARD W. CLARK, Rochester, Minn. Filed May 23, 1888. Serial No. 275,288. (No model.)



Claim.—1. In a bag-holder, the combination, with the platform, of the standard 4, secured to said platform, a spindle, 7, sliding within the standard and provided with suitable jaws which receive the bag, the collar 9, adjustably secured to the said spindle, and the spring 12, acting against the said collar to partially support the weight, substantially as described.

2. In a bag-holder, the combination, with a suitable support, of the jaws 15, pivoted upon the support, a spring, 20, for distending the jaws, and a cross-head carrying said spring 20 and adjustably secured to the said support to vary the spread of the jaws, substantially as described.

3. In a bag-holder, the combination, with the platform, of the standard 4, secured to said platform, the spindle 7, provided with the adjustable collar 9, the spring 12, arranged upon said spindle and resting upon the top of said standard, the jaws 15, pivoted upon said spindle, the adjustable cross-head 17, through which said jaws extend, and the spring 20, arranged within said cross-head between said jaws, substantially as described.



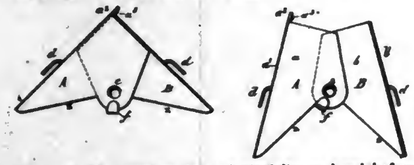
400,192. ROLLING-MILL PLANT. EDWARD L. CLARK, Pittsburg, Pa. Filed Feb. 9, 1888. Serial No. 263,235. (No model.)

Claim.—1. As an improvement in rolling-mill plants, the combination of the rolls 4 and 10, the intermediate rolls, 9, and the shears adjacent to the rolls 9, substantially as and for the purposes described.

2. As an improvement in rolling-mill plants, the combination of the sets of rolls 4 and 10, the guide-trough 8, leading from the one set to the other, the set of rolls 9, arranged at the side of the trough, and the adjacent shears 12, substantially as and for the purposes described.

400,198. CARPET-LINING. CHARLES H. COLE, Little Rock, Ark. Filed Feb. 1, 1888. Serial No. 262,648. (No specimens.) Patented in Canada Aug. 13, 1887, No. 27,416.

Claim.—1. A carpet-lining provided with diagonal corrugations from edge to edge and folded upon itself, for the purpose substantially as described.



2. A carpet-lining provided with perforated diagonal corrugations from edge to edge and folded upon itself from both sides, the perforations of the folded side sections non-registering with the perforations of the main or middle section, for the purpose substantially as described.

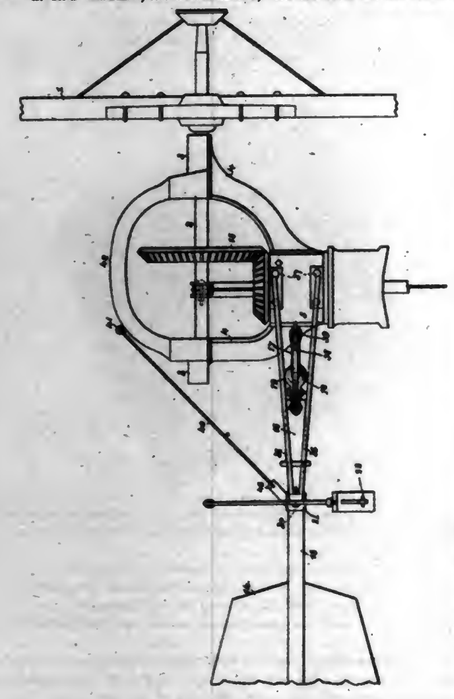
3. A carpet-lining provided with diagonal perforated corrugations from edge to edge and folded upon itself from both sides, the folded side sections in the aggregate being of the same width as the

main or middle section, forming a double lining, for the purpose substantially as described.

4. A carpet-lining consisting of three attached sections and transverse weakening-grooves, the two outside sections being folded under the main or middle section, forming a double lining in one piece, for the purpose substantially as described.

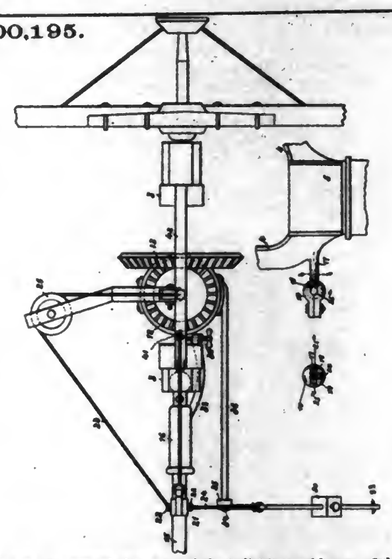
400,194. MOUTH-PIECE FOR BAGS. GEORGE W. DEAN, New York, assignor of one-half to James Steel, Jr., Brooklyn, N. Y. Filed Jan. 8, 1889. Serial No. 295,762. (Model.)

Claim.—1. The combination, substantially as hereinbefore set forth, in a bag mouth-piece of general triangular shape, of two like sections, *a a' b b'*, hinged to each other, one of the sections having an extension or lip, a^3, on the upper edge of its middle portion, projecting beyond the corresponding edge of the opposite section.



2. The combination, substantially as hereinbefore set forth, in a bag mouth-piece of general triangular shape, of two like three-sided sections, *a a' b b'*, hinged to each other, one of the sections having an extension or lip, a^3, on the upper edge of its middle portion, projecting beyond the corresponding edge of the opposite section, and a catch or fastening device formed on the lip.

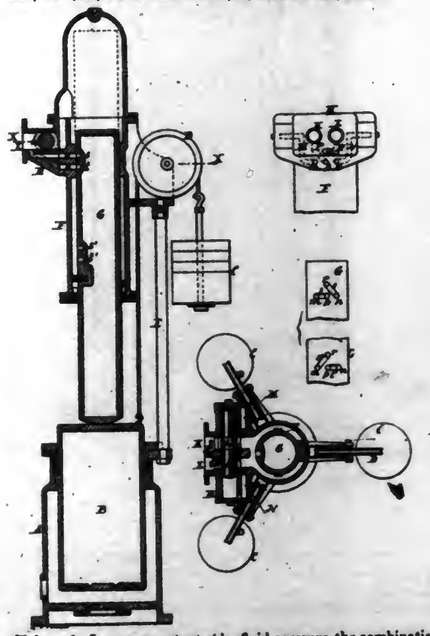
3. The combination, substantially as hereinbefore set forth, in a bag mouth-piece of general triangular shape, of two like sections hinged to each other and of rectangular shape in cross-section, each section being formed with an inclined edge, *z*, on each side and an ear or projection, *f*, on one section turned over the edge of the other section of the mouth-piece.



400,195. WINDMILL. GUSTAV DIETERT, Kentville, Tex. Filed May 31, 1888. Serial No. 275,567. (Model.)

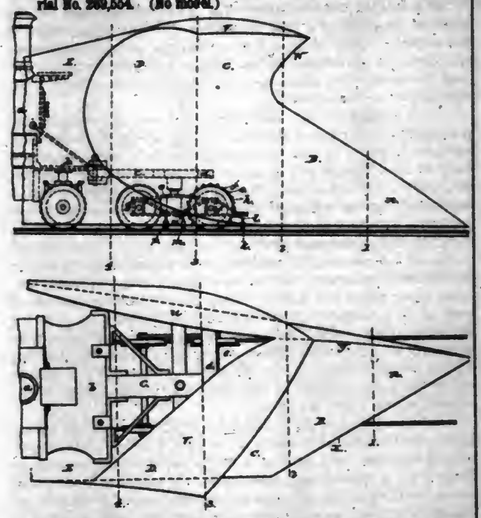
Claim.—1. The combination, with the revoluble wheel-support having the yoke 42, and the tail or rudder having a stem, of a ball and-socket joint, by which said stem is secured to said wheel-support, a collar or ring, 21, on said stem, and a rigid arm projecting upwardly from said ring and connected with said yoke, substantially as set forth.

2. In a windmill, the combination, with the stem 15, the collar 5,



400,195.

the arm 17, secured thereto, and the ball 18 on said arm, of the stock 16, receiving said stem, the socket 19, made integral with stock 16, receiving said ball, and the arm 36, made integral with said stock and carrying a set-screw, as set forth.



400,196. PUMP ACTUATED BY FLUID-PRESSURE. WILLIAM DONALDSON, Westminster, County of Middlesex, England. Filed Nov. 15, 1888. Serial No. 290,961. (No model.) Patented in England June 19, 1886, No. 8,165, and in India Oct. 17/24, 1887, No. 130/1,362.

Claim.—1. In a pump actuated by fluid-pressure, the combination of the pump-cylinder A, its plunger B, the power-cylinder F and its plunger G, butting on B, the counter-weights C and the guide-pulleys and the chains attached to the plunger B, and the valve-box H, arranged to alternate the supply and discharge of the working-fluid, substantially as described.

2. In a pump actuated by fluid-pressure, the valve-box H, having slide-plunger k, with groove *k'*, the passages M N P R and their ports *m n p r*, in combination with the recessed passages *s t* and *s' t'* in the plunger G, arranged and operating substantially as described.

400,197. SNOW-PLOW. MATTHIAS B. EATON, Boston, Mass., assignor to William W. Eaton, Hartford, Conn. Filed Apr. 4, 1888. Serial No. 269,554. (No model.)

Claim.—1. A one-sided snow-plow having its mold-board concave, forming a ledge for receiving and sustaining a quantity of snow or ice to weight the plow in use, and the concave landside, whereby the plow is balanced in use.

2. A one-sided snow-plow having its mold-board concave, forming a ledge for receiving and sustaining a quantity of snow or ice to weight the plow in use, and the overhanging portion and the concave landside, substantially as described.

3. A one-sided snow-plow having its mold-board concave, forming a ledge for receiving and sustaining a quantity of snow and having the overhanging portion, and the concave landside having the overhanging portion.

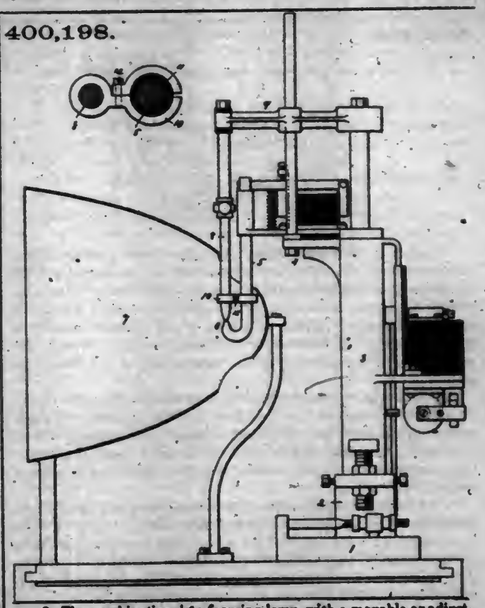
4. A one-sided railway snow-plow having the point, the concave mold-board increasing in concavity from front to rear and forming the ledge or projection for receiving and sustaining a quantity of snow or ice, whereby the plow is steadied and held in place, and the landside provided with the overhanging portion, substantially as described.

5. A one-sided railway snow-plow having the point, as described, the concave mold-board, the bottom slightly flattened, and the landside extending outward at an angle to the line-draft and inclined from a perpendicular inward, and the rear shields extending beyond the head of the locomotive, substantially as described.

6. The ice breaking and clearing wheel, having the diagonal grooves or indentations at each side extending partly across the tread of the wheel, leaving a portion thereof smooth, substantially as and for the purpose described.

7. The combination, with the wheel having the diagonal grooves or indentations at each side extending partly across the tread of the wheel, leaving a portion thereof smooth, of the ice-cutters, substantially as set forth.

8. The combination, with an ice breaking and clearing wheel having the diagonal grooves or indentations at each side extending partly across the tread of the wheel, leaving a portion thereof smooth, of an ice-cutter and of a spring drag or drags, substantially as described.



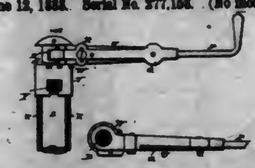
9. The combination, with an ice breaking and clearing wheel having the diagonal grooves or indentations at each side extending partly across the tread of the wheel, leaving a portion thereof smooth, of the ice-cutters, of spring drags or scrapers and a brush, substantially as and for the purpose set forth.

10. In a snow-plow, the shoe provided with the burner or heat-generator and with the partitions *c b'*, the partition *b'* being perforated, substantially as and for the purpose set forth.

400,198. ELECTRIC-ARC LAMP. EDGAR A. EDWARDS, Cincinnati, Ohio. Filed Dec. 1, 1886. Serial No. 220,360. (No model.)

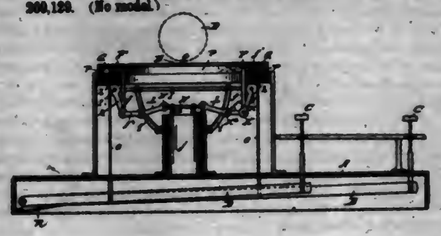
Claim.—1. In a focusing arc lamp, the combination, with a movable or adjustable electrode and mechanism to adjust the same, of a non-consuming electrode and a guide embracing the movable electrode at or near the tip thereof, substantially as and for the purpose set forth.

400,198.



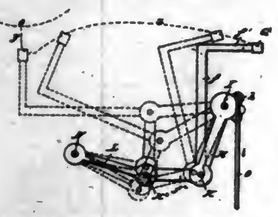
2. The combination, in a focusing-lamp, with a movable or adjustable electrode of carbon or equivalent material, of an electrode of copper and a guide embracing the movable carbon electrode at or near the point thereof, substantially as set forth.

3. In a focusing arc lamp, the combination, with a movable or adjustable electrode, of a non-consuming electrode and a clamp secured to the fixed electrode at or near the tip thereof and having a guide to receive the movable electrode at or near the tip thereof, said clamp being insulated from one of the electrodes, substantially as and for the purpose set forth.



4. The combination, in an electric lamp, with an automatically movable or adjustable carbon electrode, of an opposite electrode of copper, a tip or point of deposited carbon upon the end of said copper electrode, and a guide arranged to guide the movable carbon electrode at or near the point thereof, substantially as herein set forth.

400,199. CAR-STARTER. MARY E. FARNHAM, New Orleans, La. Filed June 12, 1888. Serial No. 277,158. (No model.)

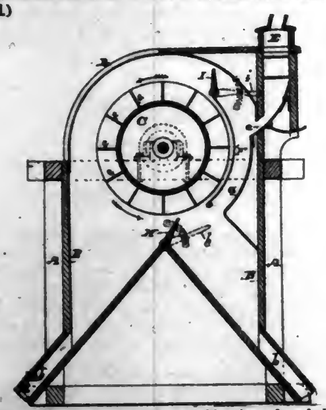


Claim.—In a car-starter, the combination, with the axles and gearing, substantially as described, of the hollow post K, the gear A thereon, the rod L, having a head, M, provided with apertures in its under side and passing through the said hollow post, the barrel V, adjusted to the upper end of the said post, the handle P, journaled on the said rod, the lever U, pivoted to the handle and provided at its forward end with studs, as shown, and suitable belt-connections, substantially as specified.

400,200. TYPE-WRITING MACHINE. JACOB FRIEDL and ANDREW W. STRIKER, New York, N. Y., assignors to the Writing Machine Manufacturing Company, same place. Filed Mar. 31, 1888. Serial No. 269,129. (No model.)

400,200.

Claim.—1. In a type-writing machine, a type-carrier pivoted at one point to the free end of one pivoted link and at another point to the free end of another pivoted link, the said links being arranged to vibrate in opposite directions and cause the type to move in two well-defined paths, first in substantially a horizontal direction radially inward to the common center and then substantially in a straight line and axially to the printing-surface, substantially as shown and described.



2. In a type-writing machine, the combination of a centrally-arranged fulcrum-support, a series of links, L, radiating therefrom, a concentric and exteriorly-arranged fulcrum-support, another series of links, H, radiating therefrom toward the links L, and a series of type-carriers pivoted to said duplex series of radiating links H and L, substantially as set forth.

3. In a type-writing machine, the combination of a series of pivoted links, H, extending inwardly and downwardly, a series of links, L, pivoted nearer the center of the machine and extending outwardly and downwardly, and a series of type-carriers consisting of the arms f f' f^2, disposed as described, and pivoted to the free ends of the links H and L at the points K K^2, substantially as set forth.

4. In a type-writing machine, the combination of a series of inwardly-extending pivoted links, H, a platen above said links, a circular inking-surface above said links and between them and the platen, a series of outwardly-extending pivoted links, L, and a series of type-carriers, each pivoted at two points to the free ends of a pair of said links, H L, substantially as and for the purpose set forth.

5. In a type-writing machine, the combination, with an inking-surface, as P, and a platen above the same, of the type-carrier F, and the oppositely-arranged links H and L, adapted to move the type from the inking-surface, give it a quarter-turn, and then move it to the platen, as set forth.

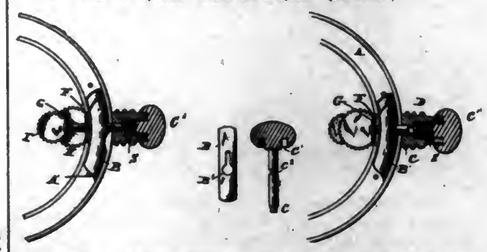
400,201. SEPARATOR. JOHN M. PEIRCE, Crockett, and JOHN R. CROSS, San Francisco, Cal. Filed Oct. 19, 1888. Serial No. 288,580. (No model.)

Claim.—1. In a separator, the combination of a shell or casing having independent discharges or outlets at its base, a rotary cylinder operating freely within the shell or casing, whereby a rotary current or body of air is created and accompanies the cylinder, and a feed-inlet for the material to the casing, by which it is directed into the sphere of the uprising portion of the current or body of air, whereby the particles of different specific gravities are separated and are carried to the different discharge-outlets, substantially as herein described.

2. In a separator, the combination of a shell or casing, a rotary cylinder operating freely within the shell or casing, whereby a rotary current or body of air is created and accompanies said cylinder, a feed-inlet for the material, for directing it into the uprising portion of the current or body of air, and a fixed shield-plate opposite the feed-inlet and protecting the periphery of the cylinder over its uprising portion, substantially as herein described.

3. In a separator, the combination of a shell or casing, a rotary cylinder operating freely within it, whereby a rotary current or body of air is created and accompanies the cylinder, a feed-inlet for the material, for directing it into the sphere of the uprising portion of the current or body of air, a fixed shield-plate protecting the uprising portion of the cylinder, and an opposing fixed plate forming a passage for the material within the sphere of the current or body of air, substantially as herein described.

4. In a separator, the combination of a shell or casing having independent discharges or outlets at its base, a rotary cylinder operating freely within the shell or casing, whereby a rotary current or body of air is created and accompanies it, a feed-inlet for directing the material into the sphere of the uprising portion of the current or body of air, and an adjustable valve within the shell or casing and extending into the sphere of the current or body of air for regulating it, substantially as herein described.



5. In a separator, the combination of a shell or casing having independent discharges or outlets at its base, a rotary cylinder operating freely within the shell or casing, whereby a rotary current or body of air is created and accompanies it, a feed-inlet for directing the material within the sphere of the uprising portion of the body or current of air, a fixed shield-plate covering and protecting the uprising portion of the cylinder, and an adjustable valve within the shell or casing below the cylinder for regulating the current or body of air, substantially as herein described.

6. In a separator, the combination of a shell or casing having independent discharges or outlets at its base, a rotary cylinder operating freely within the shell or casing, whereby a rotary current or body of air is created and accompanies it, a feed-inlet for directing the material within the sphere of the uprising portion of the body or current of air, and an adjustable valve within the shell or casing at the upper portion of the uprising current or body of air for regulating the suspension of the material, substantially as herein described.

7. In a separator, the combination of a shell or casing having independent discharges or outlets at its base, a rotary cylinder operating freely within the shell or casing, whereby a rotary current or body of air is created and accompanies it, a feed-inlet for directing the material within the sphere of the uprising portion of the body or current of air, an adjustable valve within the shell or casing below the cylinder for regulating the current or body of air, and an adjustable valve within the shell or casing at the upper portion of the uprising current or body of air for regulating the suspension of the material, substantially as herein described.

8. In a separator, the combination of a shell or casing having a feed-inlet and independent discharge-outlets at its base, a rotary cylinder having fan-blades on its periphery journaled in said casing and operating freely therein, whereby a rotary air-current is created, a fixed shield parallel with and protecting the uprising portion of the said cylinder, an adjustable valve journaled centrally within the shell or casing below for regulating the air-current, an adjustable valve journaled at the upper end of the fixed shield within the shell or casing, and the plate G, parallel to said shield, substantially as herein described.

400,202. STEM WINDING AND SETTING WATCH. AUGUST FISCHER, Winchester, assignor of one-half to James F. Potts, Whitehall, Ill. Filed Nov. 5, 1888. Serial No. 290,068. (No model.)

Claim.—1. The combination, with the sliding winding-bar of a stem-winding watch, of a gravity-catch in the case in position to engage and hold said bar against longitudinal movement, substantially as described.

2. The combination, with the winding-bar of a stem-winding watch and a spring bearing the same outward, of a sliding gravity-catch in the casing, and stops to limit the movement of said catch, substantially as stated.

3. The combination, with the grooved winding-bar of a stem-winding watch, of a sliding gravity-catch having a perforation through which said bar passes, said perforation being of unequal width, so as to embrace and hold the grooved portion of the bar when in one position, as set forth.

400,208. AUTOMATIC TWINE-WINDER. COMRAN FLEMING, Jr., Sewickley, Pa. Filed Apr. 23, 1888. Serial No. 271,682. (No model.)

Claim.—The combination, with the casing having a spool detachably connected to one side, of the cutter-bar rigidly secured to the same side as the spool and having a transverse aperture in its body portion and a knife-edge at one end thereof, whereby the twine is evenly wound upon the spool and cut as required, substantially as specified.

400,204. VELOCIPEDE. WILLIAM GOLDING, Moss Side, County of Lancaster, assignor to the Clavigor Cycle Company, (Limited,) Manchester, England. Filed July 14, 1887. Serial No. 244,240. (No model.) Patented in England Oct. 9, 1885, No. 11,990, June 17, 1886, No. 8,049, July 16, 1886, No. 9,234, Jan. 27, 1887, No. 1,304, and June 27, 1887, No. 9,001; in Belgium July 15, 1887, No. 73,050; in France Oct. 27, 1887, No. 184,164, and in Germany Apr. 21, 1888, No. 43,827.

Claim.—1. In a bicycle or tricycle, the combination, with the pedal-lever having the pedal at one end and connected at the opposite end to the crank connected by gearing to the axle of the driving-wheel, of the shifting fulcrum for said lever, located between the pedal and axle, substantially as described.

2. In a bicycle or tricycle, the combination, with the pivoted pedal-lever having the pedal at one end and connected at the opposite end to the axle of the driving-wheel, of a shifting fulcrum, on which said lever pivots, consisting of the plane surface and the roller on the lever bearing thereon, substantially as described.

3. In a bicycle or tricycle, the combination, with the drive wheel and steering-wheel, the frame carried thereby, and pivoted pedal-lever having the pedal at one end and connected to the drive-axle at the opposite end, of a shifting fulcrum, on which said lever pivots, formed by the plane surface carried by the lower rear portion of the frame, and a roller on the lever for engaging said surface, substantially as described.

4. In a bicycle or tricycle, the combination, with the driving-wheel axle and the pivoted pedal-lever connected thereto through intermediate gearing, of a shifting fulcrum, on which said lever pivots, located between the pedal and axle, and consisting of the plane surface carried by the frame, and the bearing on the lever engaging therewith.

5. In a bicycle or tricycle, the combination, with the driving-axle and the pedal-lever pivoting on a shifting fulcrum, of the sun-and-planet gearing between said lever and axle, substantially as described.

6. In a bicycle or tricycle, the combination, with the driving-wheel and pedal-lever pivoting on a shifting fulcrum, of the gear connected rigidly to the drive-wheel, and the gear engaging therewith connected rigidly to the pedal-lever, whereby a differential movement is given said parts, substantially as described.

7. In a rear-driving bicycle or tricycle, the combination, with the frame and driving-wheel, of the gear-wheel rigidly connected to the driving-wheel, the gear-wheel carried by the frame, the forwardly-extending pedal-lever connected to said last-mentioned gear and having the pedal at its forward end, and the shifting fulcrum between said pedal and gear-wheel, substantially as described.

8. In a bicycle or tricycle, the combination, with the sun-and-planet driving-gearing and the pedal-lever pivoting on a shifting fulcrum rigidly connected to the planet-gear, of the axle passing through the center of the sun-gear, the pedal-lever connected to said axle, and the crank connecting the axle and planet-gear, substantially as described.

9. In a bicycle or tricycle, the combination, with the sun-wheel rigidly secured to the drive-wheel, of the planet-wheel mounted in slots in its supporting-arm, whereby different-sized gears may be employed and the pedal-lever connected to said planet-wheel.

10. In a bicycle or tricycle, the combination, with the driving-wheel having the gear-wheel connected rigidly thereto, and the loose axle passing through the center of the driving-wheel, of the gear-wheel carried by said axle and engaging the gear-wheel on the driving-wheel, the crank on said axle, and the pedal-levers pivoting on a shifting fulcrum and connected to said axle, substantially as described.

11. The combination, in a tricycle having the front steering-wheels and axle, and the rearwardly-extending frame and drive-wheel, of the bearing for the neck on the rearwardly-extending frame mounted below the steering-wheel's axle forward of the center of such wheels and inclined from the top backward, whereby the drive-wheel and frame are tilted in turning, substantially as described.

12. In a tricycle, the combination, with the two front steering-wheels and the rear driver, of the arched axle for the steering-wheels having the bearing for the drive-wheel frame below the same and inclined from the top backward, substantially as described.

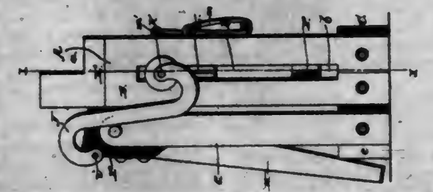
13. In a tricycle, the combination, with the two front steering-wheels and the rear driver, of the forwardly-inclined arched axle for the steering-wheels having the bearing for the drive-wheel frame below the same and inclined from the top backward, substantially as described.

14. In a tricycle or bicycle, the combination, with the drive-axle and crank, of the pivoted pedal-lever connected to said crank and having a pedal-extension and pedal on each side of its pivotal point, whereby two riders may drive with a single lever, substantially as described.

15. In a bicycle or tricycle, the combination, with the drive-axle and the pedal-lever pivoting on a shifting fulcrum and connected with said axle, of the pedal-extension and pedal on each side of the pivotal point of said lever, substantially as described.

16. In a bicycle or tricycle, the combination, with the drive-wheels, the pedal-lever pivoting on a shifting fulcrum, and intermediate gearing connecting the same, of the pedal-extension and pedal on each side of the pivotal point of said lever, substantially as described.

17. In a bicycle or tricycle, the combination, with the drive-wheels, the pedal-lever pivoting on a shifting fulcrum, and intermediate gearing connecting the lever and drive-wheel, of the pedal-extension and pedal on each side of the pivotal point of said lever, substantially as described.



18. The combination, with the drive-axle and the pivoted pedal-lever connected therewith, of the curved slot in the end of said lever and the pedal mounted therein, substantially as described.

19. The combination, with the pivoted pedal-lever, of a bearing therefor formed of the concavities on each side of the same, the adjustable screws having concavities therein, and the single ball fitting in said concavities, substantially as described.

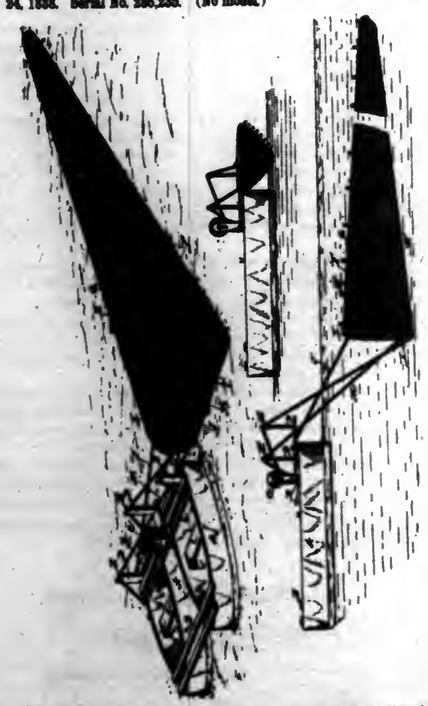
20. The combination, with the tubular head and the steering-bar passing through the same, of the rubber buffers at top and bottom carried by the washers, having flanges for preventing contact of the rubber with the steering-bar, substantially as described.

21. The combination, with the steering-head of a tricycle, of the steering-wheel and frame, and the top and bottom coil-springs connecting the said head and steering-frame, substantially as described.

400,205. LIFTING-JACK. HENRY GORTNER, New Albany, Ohio. Filed July 10, 1888. Serial No. 279,565. (No model.)

Claim.—1. In a lifting-jack, the combination of the main frame composed of two parallel side frames provided with guide-slots, the lifting-frame arranged between the said side frames and provided with blocks extending into the said guide-slots, and the pivoted lever H, connected by suitable links to the lifting-frame.

2. In a lifting-jack, the combination of the main frame composed of side frames, B B, provided with guide-slots b b, the lifting-frame located between the side frames, B, and provided with a foot-block,



F, which extends into the guide-slots *b*, the guide-block L, adjustably connected to the lifting-frame and extending into the guide-slots, and the pivoted lever H, connected by suitable links to the block L, substantially as described.

3. In a lifting-jack, the combination, with the main frame composed of side frames, B, provided with guide-slots *b b* and connected near their upper ends by the transverse bar D, of the lifting-frame arranged between the frames B B and provided with a longitudinal slot, c^2, registering with the slots *b* and sliding on the bar D, the adjustable bar L, arranged in the slot c^2 and provided with a series of perforations, *l*, adapted to register with perforations N in the sliding frame, the removable pin M, engaging the said registering apertures, and the pivoted lever connected by suitable links to the block L, substantially as specified.

4. In a lifting-jack, the main frame A, composed of the slotted side frames, B B, which are arranged on a suitable base, C, and connected by a transverse bar, D, in combination with the lifting-frame E, provided with a slot, e^2, embracing the bar D, and having a foot-bar, F, extending into the slots of the side frames, the adjustable block L, arranged in the slot e^2 and held in place by a pin, M, engaging registering apertures in the lifting-frame and the block L, the pivoted lever H, and the S-shaped or sigmoid links J, connecting the lever to the opposite ends of the bar L, substantially as specified.

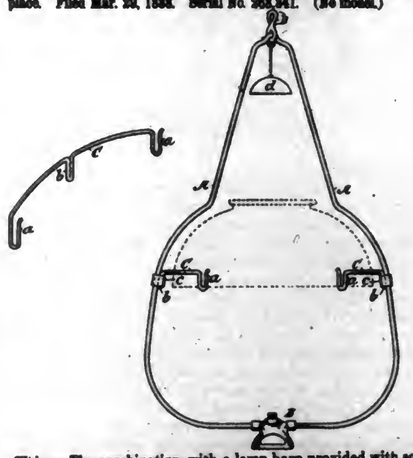
5. In a lifting-jack, the main frame provided with opposite guide-slots *b b*, and the lifting-frame mounted in the main frame and provided with slots extending into the guide-slots, in combination with the swinging standards G, pivoted to the base of the main frame, the lever pivoted between the upper ends of the standards, and the S-shaped or sigmoid links connecting the lever to the lifting-frame, substantially as specified.

400,206. FISH-TRAP. JOHN R. GREEN, Bremond, Tex. Filed Sept. 24, 1888. Serial No. 286,235. (No model.)

Claim.—1. The combination of two boats arranged side by side or parallel with each other and connected by scantlings B with a trap-net secured to the stems of said parallel boats, and draw-ropes and ropes for attaching the trap-net to the boats, substantially as specified.

2. The combination, with the boats secured together, of a trap-net flexibly connected to the sterns of said boats, a standard secured to the said boats and provided with a pulley in its upper end, and a draw-rope secured to the said net in the manner set forth, and having its free end passing over the said pulley, substantially as and for the purpose herein set forth.

3. The combination, with two boats secured together, of a trap-net flexibly connected to the sterns of the said boats, a standard secured upon the said boats and having a pulley mounted in its upper end, a windlass mounted upon the said boats, and a draw-rope secured to the trap-net in the manner herein described, passing with its free end over the said pulley in the standard and around the said windlass, substantially as and for the purpose herein described.



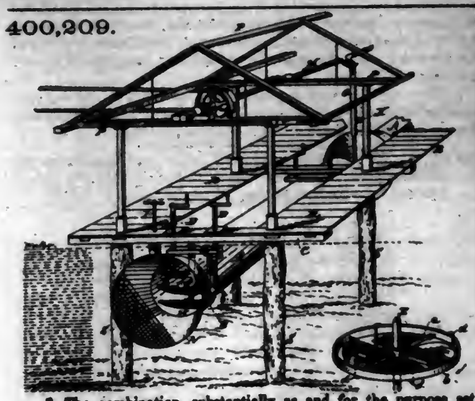
4. The combination, with the two boats secured together, of standards secured to the same and provided with pulleys in their tops, a trap-net connected to the standards by ropes, ropes secured to the mouth of the net and passing over the pulleys of the end standards, and a draw-rope secured to the said net, in the manner substantially as described, and passing over the pulley in the upper end of the middle standard, substantially as set forth.

5. The combination, with the two boats secured together, of the standards secured to the said boats and provided with pulleys in their upper ends, a trap-net flexibly connected to the sterns of the said boats, and having each flap of its mouth provided with a cross-rod, ropes attached to the ends of the lower rod and passing over the pulleys in the two end standards, and a draw-rope secured to the trap-net, in the manner herein set forth, and passing over the pulley in the upper end of the middle standard, all arranged to operate in substantially the manner herein set forth.

400,207. PROCESS OF MAKING AMMONIUM NITRATE. CECIL H. HAKE, Westminster, England. Filed Nov. 21, 1888. Serial No. 291,488. (No specimens.)

Claim.—The process of making nitrate of ammonia in a dry or solid form or state of powder by bringing together in either of the ways herein specified nitric acid and ammonia so as to effect their direct combination while both are in a gaseous or finely-divided form, and under such circumstances that the temperature caused by the combination does not rise sufficiently high to produce simultaneous decomposition of the nitrate of ammonia.

400,208. SUPPORT FOR LAMP-SHADES. WILLIAM HARPER, Brooklyn, N. Y., assignor of one-third to Edward H. Fessenden, same place. Filed Mar. 29, 1888. Serial No. 268,841. (No model.)

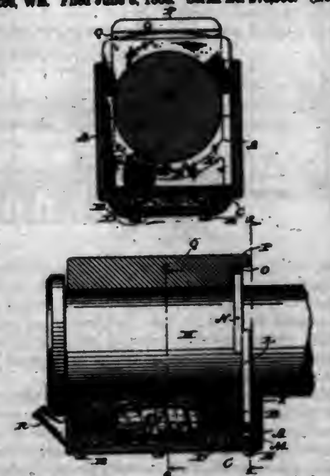


Claim.—The combination, with a lamp-harp provided with sockets, of supports for a shade, comprising two single wires having central shanks for engaging the sockets, the arms of said supports extending laterally at each side of the harp-wire substantially concentric with the shade and provided at their ends with hook-seats for the shade, substantially as specified.

400,209. SUB-SURFACE WATER-MOTOR. DAVID G. HASKINS, Cambridge, Mass. Filed Feb. 20, 1888. Serial No. 264,647. (No model.)

Claim.—1. The combination, substantially as and for the purpose set forth, of a structure erected in or over a water-way and having a floor or platform above the water-level, a conduit or tube adjustably supported beneath said floor or platform and capable of being submerged in the water, said conduit or tube being provided with valves or gates to regulate the flow of water through the conduit, mechanism upon the platform for raising and depressing the conduit, a shaft extending longitudinally through the center of the conduit and rotating in the same, hangers supporting said shaft attached to the support for the conduit, a series of propelling-blades upon said shaft acting by the impact of the water flowing through the conduit to cause the rotation of the shaft, mechanism for operating the valves or gates in the conduit from the platform, a power-shaft above or near the platform, and a crank, gearing, or other means for conveying power connected adjustably to the power-shaft and to the shaft in the conduit.

400,209.



2. The combination, substantially as and for the purpose set forth, of a structure erected in or over a water-way and having a floor or platform above the water-level, a conduit or tube adjustably supported from said structure and provided with gates or valves for regulating the flow of water through the conduit, mechanism for operating said valves or gates from the platform, a shaft extending longitudinally through said conduit and rotating in the same, radial rods *a a*, arranged at intervals on said shaft, and blades *c*, swinging by one of their edges on said rods and limited in their movement to any desired angle on either side of a plane at right angles to the axis of the shaft.

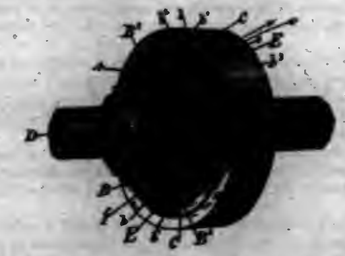
3. The combination, substantially as and for the purpose set forth, of a structure erected in or over a water-way and having a floor or platform above the water-level, U-shaped adjustable hangers depending from the cross-beams supporting said platform, a conduit or tube supported in said hangers and capable of being removed from the same, a shaft extending longitudinally through the conduit and capable of rotation in the same, hangers attached to the U-shaped hanger and supporting the shaft in the center of the conduit, blades upon the shaft acting by the impact of the water flowing through the conduit to cause the rotation of the shaft, and mechanism upon the platform for raising and lowering said U-shaped hangers and conduit supported thereby.

4. The combination, substantially as and for the purpose set forth, of the conduit A, the U-shaped hanger B, supporting the same, the cross-bar G, connecting the ends of the hanger B, the hanger or bar F, dependent from the cross-bar G and extending to the center of the conduit, the shaft E, supported in the hangers or bars F, the cross-beam C, and the screws D D, extending through the cross-beam C and the bar G, whereby the hanger B is raised or depressed.

400,210. JOURNAL-BOX. THOMAS R. HAYES and ALBERT J. READ, Milwaukee, Wis. Filed June 8, 1888. Serial No. 276,003. (No model.)

Claim.—1. The combination, with a journal-box, of a longitudinal slotted web arranged above the bottom of said journal-box, to extend the full length of the latter and from side to side thereof, one or a series of longitudinal wicks passed through the slotted web, and a slotted spring-plate engaging each wick and arranged to rest upon said web, substantially as set forth.

2. The combination of the journal-box A, having the bottom plate, D, the web B, provided with the longitudinal slots F and transverse slot K, the wicks G, passed through said longitudinal slots, the slotted spring-plates I, engaging said wicks, the non-absorbent plate L, passed through said transverse slot in the web B, the non-absorbent plate N, overlapping the one L, and the springs M O, arranged to exert their pressure against said plates L N, substantially as and for the purpose set forth.



400,211. HARNESS ATTACHMENT. ISAAC HINES, Hartford, Wis. Filed Sept. 22, 1888. Serial No. 286,308. (No model.)

Claim.—1. The harness attachment herein described, consisting of a spring having two arms bent in opposite directions and adapted to be placed in contact with the hames and the saddle, respectively, whereby the former is raised, substantially as described.

2. In a harness, the combination, with the saddle and hames, of the coiled spring secured on said saddle, having its ends extending out in opposite directions and secured to said hames and saddle, respectively, substantially as described.

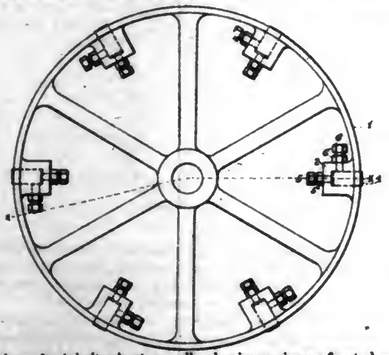
400,212. FRICTION-CLUTCH. HARRY W. HILL, Cleveland, Ohio. Filed Oct. 31, 1887. Serial No. 253,813. (No model.)

Claim.—1. The combination of the following integral parts, to wit: a hub, two arms united therewith on opposite sides of the center, and two semi-rings, each united at one end to one of said arms, with a clutch-rim and radially-moving blocks, inclined on one side and straight on the other, for expanding said semi-rings, substantially as and for the purpose specified.

2. The combination of a hub, two arms united therewith on opposite sides of the center, and two semi-rings, each united at one end with one of said arms, with a clutch-rim and radially-moving blocks inclined on the side which engages with the free end of one semi-ring, the other side and the face of the arm against which it bears being parallel to the axial line in which it moves, substantially as and for the purpose specified.

3. In a friction-clutch, the combination of a hub, two arms united therewith on opposite sides of the center, and two expansion semi-rings, each secured at one end to one of said arms, with a clutch-rim, A, radially-moving blocks C of the form described, the lugs b^3, and levers for moving said blocks, substantially as and for the purpose specified.

4. In a friction-clutch, the combination of a hub, two arms united therewith on opposite sides of the center, and two expansion semi-rings, each secured at one end to one of said arms, with a clutch-rim, A, radially-moving blocks C of the form described, the lugs b^3, levers for moving said blocks, and adjustable screws connecting said blocks and levers.



5. In a friction-clutch, a male clutch member consisting of a hub, two arms united therewith on opposite sides of the center, and two

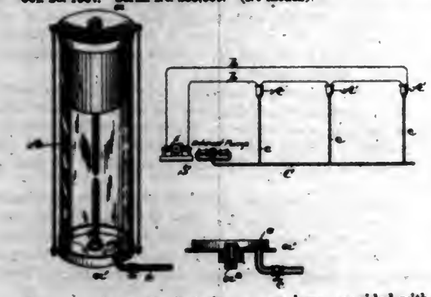
semi-rings, each united at one end with one of said arms, the whole being cast in a single piece, for the purpose specified.

6. In a friction-clutch, a male clutch member consisting of a hub, two arms connected therewith on opposite sides of the center, and two semi-rings, each connected at one end to one of said arms, the periphery of each of said rings being depressed at and near the point of union with said arms, the whole being cast in a single piece, substantially as and for the purpose specified.

7. In a friction-clutch, a male clutch member consisting of the following integral parts, to wit: a hub, two arms united therewith on opposite sides of the center, and two semi-rings, each united at one end to one of said arms, the periphery of each of said semi-rings being depressed at and near its point of union with its arm, and the periphery of said clutch member being made in the form of a double eccentric, substantially as and for the purpose specified.

400,218. PULLEY. JOHN EITENBAUGH, Smithton, Pa. Filed July 12, 1888. Serial No. 279,706. (No model.)

Claim.—1. A belt wheel or pulley having a rim perforated with rectangular holes equidistant from each other therein, the short side of said holes being parallel with the edge of said rim, said rim having a pocket extending radially from each of said holes, each of said pockets having two sets of set-screws, one set fixed in the side, the other the bottom of said pocket, and each having fixed therein an adjustable plate and block, substantially as and for the purposes described.

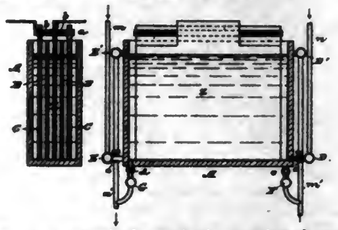


2. A belt wheel or pulley having the rim 1, in which are holes 7, provided with pockets 2, which have set-screws 5 and 6, being in bottom 9 and side 8 thereof, and being provided with their jam-nuts 5' 6', respectively, and in which are adjustable plate 3 and adjustable block 4, substantially as and for the purposes described.

3. A band-pulley provided with frictional blocks of elastic or fibrous material arranged at intervals around the periphery of the pulley and extending slightly beyond its face or rim, all substantially as described.

4. A band-pulley provided with frictional blocks of elastic material, arranged at intervals around its periphery and extending slightly beyond its face or rim, and devices for adjusting the blocks to the face of the pulley, all substantially as described.

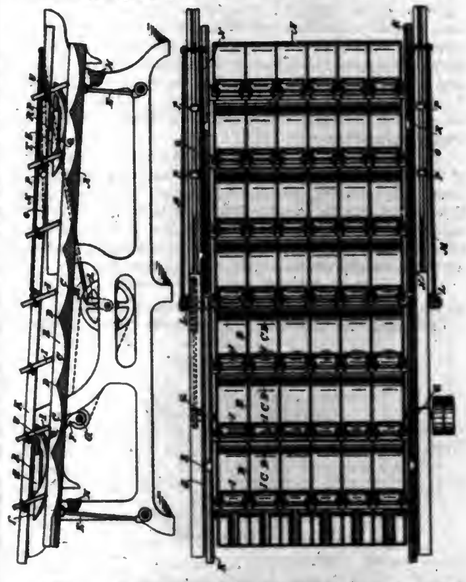
5. A band-pulley provided with pockets opening into its rim or face, and arranged at intervals around its periphery, and blocks of elastic or fibrous material arranged in said pockets and extending slightly beyond its face or rim, all substantially as described.



400,214. ELECTRIC-LIGHTING SYSTEM. WILLIAM I. HORNE, Meriden, assignor to the Horne Vacuum Company, Hartford, Conn. Filed Oct. 28, 1887. Serial No. 253,639. (No model.)

Claim.—1. A case for inclosing an arc lamp, provided with an aperture at the top for the removal of the upper carbon, a closure for the same, and aperture at the bottom for the removal of the lower carbon, and a closing-plug for said aperture, provided with a socket for receiving and holding the lower carbon in proper position, substantially as described.

2. An air-tight inclosing-case for an arc lamp, an exhaust-pipe opening into and communicating with said case, and a valve above the opening within the case, substantially as described.



400,215. GALVANIC BATTERY. ALEXANDER IMCHENETSKY, St. Petersburg, Russia. Filed July 21, 1888. Serial No. 280,586. (No model.) Patented in France June 29, 1888, No. 191,498.

Claim.—1. A galvanic element having a carbon electrode, a zinc electrode, and two liquids in which the said electrodes are respectively immersed, the liquid about the carbon consisting of dilute manganic acid and the liquid about the zinc consisting of a solution of a sulphite or hyposulphite of an alkaline metal.

2. The combination, with a battery element having different compartments and liquids for the electrodes, of the supply-pipes *m* and *n*, the distributing-pipes D and E, the overflow-pipes D', E', *m'*, and *n'*, and the drainage-pipes F and G, said drainage-pipes being connected with the pipes *m'* and *n'*, respectively, substantially as set forth.

400,216. CONCENTRATOR. JOSEPH A. JOHNSON, San Francisco, Cal. Filed Aug. 31, 1888. Serial No. 284,290. (No model.)

Claim.—1. In a concentrator, an inclined table having its surface divided into longitudinal lanes or channels, the surfaces of which are formed into wave-like basins or depressions, and a series of rakes or scrapers adapted to move through said channels and depressions, in combination with a mechanism whereby said rakes or scrapers are drawn through the basins toward the upper end or head of the table and returned, substantially as herein described.

2. An inclined concentrating percussive table having lanes or channels, with the surfaces formed into wave-like depressions or basins, rakes or scrapers adapted to travel from end to end of said depressions, and side bars to which said scrapers are attached, in combination with cranks and connecting-rods by which the bars are actuated, the guide-channels Q, and the oscillating latches or bars S, by which the scrapers are returned after each upward stroke out of contact with the depression or basins, substantially as herein described.

400,217. THRASHING-MACHINE. ARTHUR JOHNSTON, Lockport, N. Y. Filed Jan. 5, 1886. Renewed May 28, 1888. Serial No. 275,323. (No model.)

Claim.—1. The combination, with the revolving cylinder of a thrashing-machine, of the end plates, B B, provided with ribs *l l*, and the adjustable concave-supporting segments D D, having projecting lugs *o o*, substantially as and for the purpose set forth.

2. The combination, with the end plates and the adjustable concave-supporting segments of a thrashing-machine, of the slotted collars *n* and bolts *f*, substantially as described.

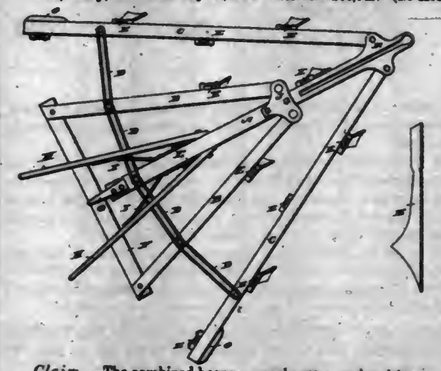
3. The combination, with the cylinder-bars of a thrashing-machine provided with oval tapering openings having their longest dimensions arranged parallel to the plane of revolution, of the reversible teeth having oval tapered shanks adapted to fit the openings in the bars, and to secure the teeth in proper position when reversed, substantially as and for the purposes described.

400,218. CHEVRON. FRANCIS S. JOHNSTON, Philadelphia, Pa. Filed Aug. 23, 1888. Serial No. 283,544. (No specimens.)

Claim.—1. A chevron composed of a single piece of lace or ribbon having woven integral with the fabric continuous stripe of contrasting color or material running in parallel lines lengthwise of the tape or ribbon, and having woven selvaged and finished edges, substantially as described.

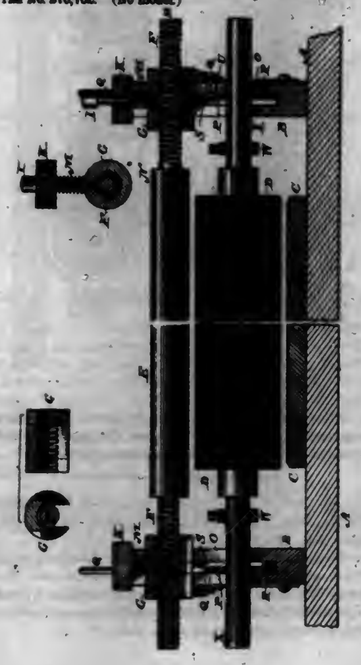
2. A chevron formed from a single piece of lace or ribbon in which stripe of contrasting color or material are woven integral with the fabric and in continuous parallel lines lengthwise of the tape or ribbon, the chevron being folded at the center and mitered by a single row of stitching, substantially as described.

400,219. OIL PROCESS IN BUTTER-MAKING. BYRON KANAMLE, Marion, Ohio. Filed Mar. 21, 1888. Serial No. 267,988. (No model.)



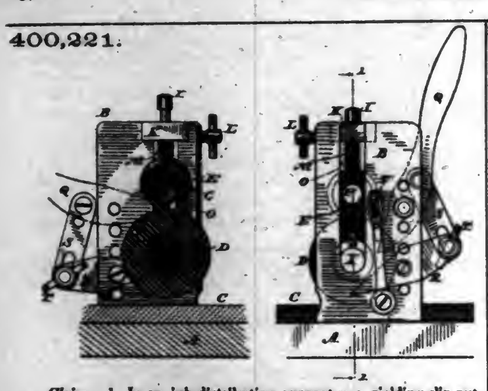
Claim.—1. A process for determining the exact amount of oil contained in a sample of cream, consisting of the withdrawal of a sample taken vertically through the contents of the creamery-pail or other gaged vessel, then decanting the mixed contents of the extractor, then churning the cream, and finally exposing the churned cream to the heat of a flame the temperature of which is sufficiently high to drive off the water held in suspension by the oil, substantially as set forth.

2. The process for determining accurately the amount of oil contained in a quantity of cream, consisting, essentially, in securing a sample vertically through the contents of a cream-pail, churning the sample, and finally exposing the churned sample to the action of a degree of heat sufficient to drive off the water contained in the oil, substantially as set forth.



3. The process for determining the amount of oil contained in a quantity of cream, consisting in taking a sample vertically through the contents of a cream-pail, churning the same, exposing the cream sample to the action of a degree of heat sufficient to drive the oil to the top, and finally expelling the water therefrom, substantially as set forth.

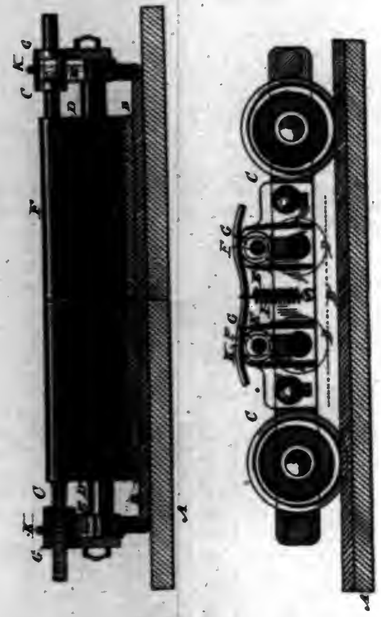
400,220. HARROW AND CULTIVATOR. SAMUEL W. KILPATRICK, Gilroy, Cal. Filed July 24, 1888. Serial No. 280,945. (No model.)



Claim.—The combined harrow, weed-cutter, and cultivator described, consisting, essentially, of the forward plate, K, the central beam, A, secured at its forward end thereto, the lateral beams C, having their forward ends pivoted to the said plate K, the intermediate short beams, B, pivotally secured to said beam A by plate J, the slotted links D, connecting the rear portions of the respective beams, and also connecting the said beams to the central beam, the weed-cutter F, secured at opposite ends to the intermediate beams, and the brace G, extending from said cutter to the rear end of the central beam, the handles and the teeth and cushions secured to the beams, substantially as specified.

400,221. INK-DISTRIBUTING APPARATUS FOR PRINTING-MACHINES. JOHN T. KING, Madison, Wis. Filed Apr. 14, 1888. Serial No. 270,702. (No model.)

400,221.

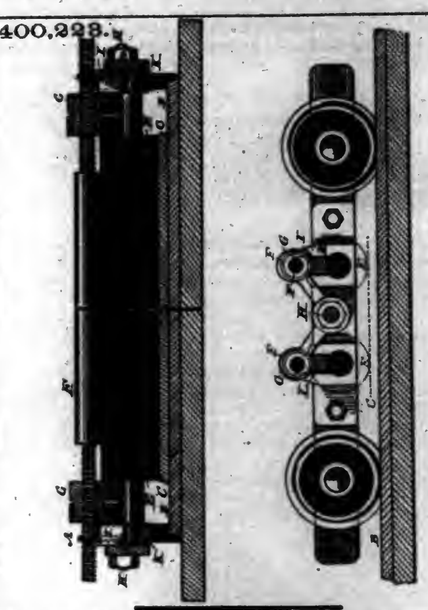


Claim.—1. In an ink-distributing apparatus, a yielding slip-nut, in combination with a threaded shaft of a screw-vibrator, substantially as set forth.

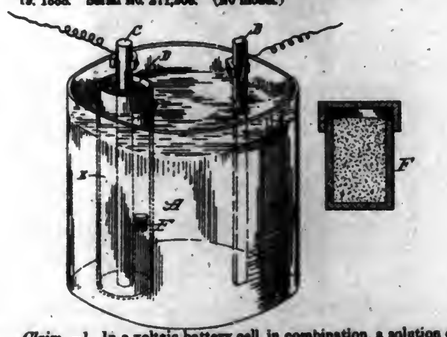
2. In an ink-distributing apparatus, the combination, with the rollers adapted to be lifted from their bearings, of the lifting-levers acting upon them separately, but connected by a pivoted link, so as to raise the upper roller simultaneously with the lower, but to a greater height than the lower is raised, substantially as set forth.

3. In an ink-distributing apparatus, the combination, with the rollers, lifting-levers, and link, arranged and operating as described, of a catch or fastening for holding the levers in the position for supporting the rollers when out of action, substantially as set forth.

400,222. INK-DISTRIBUTING APPARATUS FOR PRINTING-MACHINES. JOHN T. KING, Madison, Wis. Filed Apr. 21, 1888. Serial No. 271,445. (No model.)



Claim.—The combination, with a car for an ink-distributing apparatus, of the screw vibrators, the slip-nuts, the springs I, and the yokes K, arranged and operating substantially as set forth.

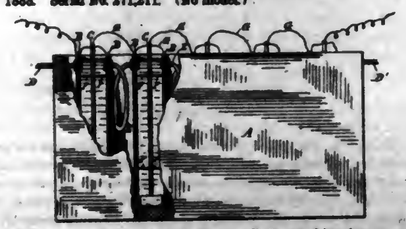


400,223. INK-DISTRIBUTING APPARATUS FOR PRINTING-MACHINES. JOHN T. KING, Madison, Wis. Filed Apr. 21, 1888. Serial No. 271,446. (No model.)

Claim.—The combination, with a car for an ink-distributing apparatus, of the composition rollers, the screw vibrators, and the slip-nuts loosely pivoted to the shaft H, so as to cause the screw vibrators to bear by the yielding force of gravity upon the upper peripheries of the composition rollers, substantially as set forth.

400,223.

400,224. VOLTAIC BATTERY. ISIDOR KITSEE, Cincinnati, Ohio, assignor to Mayer Sulzberger, trustee, Philadelphia, Pa. Filed Apr. 19, 1888. Serial No. 271,208. (No model.)



Claim.—1. In a voltaic-battery cell, in combination, a solution of chloride of ammonia, or of chloride of soda, or of other chloride, bisulphate of mercury, and positive and negative elements immersed in said solution, as specified.

2. In a voltaic-battery cell, in combination, a solution of chloride of ammonia, or of chloride of soda, or of other chloride, bisulphate of mercury contained in a porous capsule, and positive and negative elements immersed in said solution, as specified.

3. In a voltaic-battery cell, in combination, a battery-fluid, a porous capsule immersed in the fluid in the porous cup in which the negative element is contained, and provided with material to prevent the polarization of said element or to restore the vitality of said fluid, as specified.

400,225. VOLTAIC BATTERY. ISIDOR KITSEE, Cincinnati, Ohio, assignor to Mayer Sulzberger, trustee, Philadelphia, Pa. Filed Apr. 19, 1888. Serial No. 271,211. (No model.)

Claim.—1. In a voltaic-battery cell, in combination, a carbon-cup negative element, means at one side of said cup for the supply of

battery-fluid thereto, means at the other side of said cup for the escape of said battery-fluid therefrom, a positive element contained and supported in said carbon cup, and at or near its lower end provided with an opening or orifice, the construction and arrangement of said parts being such that the battery-fluid is permitted to flow into said cup, downwardly and upwardly in contact with the interior surfaces of said cup and the exterior surfaces of said positive element, and out of said cup, as specified.

2. In a multiple-cell voltaic battery, in combination, a series of two or more couples, each consisting of a carbon-cup negative element, means at one side of said cup for the supply of battery-fluid thereto, means at the other side of said cup for the escape of said battery-fluid therefrom, a positive element contained and supported in said carbon cup, and at or near its lower end provided with an opening or orifice, means for the supply of battery-fluid to the first cup of the series, means for the escape of said battery-fluid from the last cup of said series, and tubes, each extending from the battery-fluid-escape orifice of one cell to the battery-fluid-supply orifice of the next cell, as specified.

3. In a voltaic battery, in combination, a cell or cup provided with positive and negative elements, a battery-fluid reservoir connected therewith by a supply-pipe, a battery-fluid-discharge pipe leading from said cell, and a re-enforcing cell or reservoir provided with substances from which the battery-fluid is made, connected with the battery-fluid-discharge opening of the first-named cell and with the battery-fluid-supply orifice of the next cell of the series, as specified.

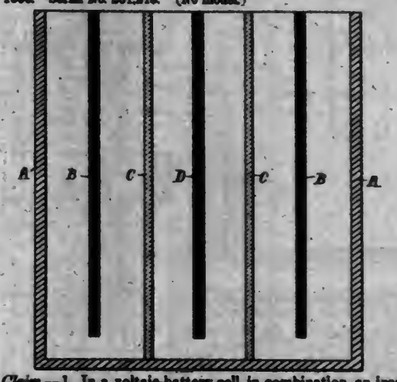
4. In a voltaic battery, in combination, a cell provided with means for the supply of the battery-fluid thereto and with means for the escape of the battery-fluid therefrom, positive and negative elements so constructed and arranged as to permit said battery-fluid to flow through said cell in contact with said elements, one or more re-enforcing cells provided with material from which the battery-fluid is formed, means for the escape of the battery-fluid from the first-named cell to said re-enforcing cell, means for the escape of said battery-fluid from said re-enforcing cell, a battery-fluid reservoir connected by a pipe or by other means with the first cell of said series, a second battery-fluid reservoir connected by a pipe or by other means with the last cell of said series, and means for alternately at will raising either reservoir and simultaneously lowering the other, substantially as set forth.

400,226. SECONDARY BATTERY. ISIDOR KITSEE, Cincinnati, Ohio, assignor to Mayer Sulzberger, trustee, Philadelphia, Pa. Filed May 10, 1888. Serial No. 273,430. (No model.)

Claim.—1. An electrode for a secondary battery, consisting of a plate of lead or other "element" substance backed and supported by a supporting-plate of suitable material unsusceptible to electrolysis or to corrosive action.

2. An electrode for a secondary battery, consisting of a supporting-plate unsusceptible to electrolysis or to corrosive action enveloped by lead or other "element" substance, substantially as set forth.

3. An electrode for a secondary battery, consisting of a supporting-plate formed of a substance unsusceptible to electrolysis or to corrosive action, and provided as to its surface with a layer or coating of lead or other "element" substance, substantially as set forth.



4. An electrode for a secondary battery, consisting of a supporting-plate formed of a substance unsusceptible to electrolysis or to corrosive action, provided as to a part or all of its surface with red lead or other "active" material, and also provided with an outer layer or coating of lead or other "element" substance, substantially as set forth.

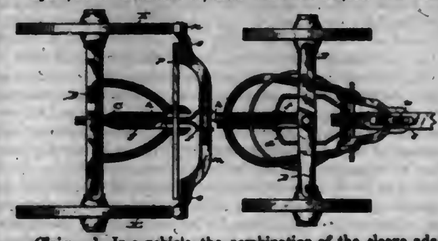
5. An electrode for a secondary battery, consisting of a supporting-plate formed of a substance unsusceptible to electrolysis or to corrosive action having a series of holes, perforations, or cavities, provided as to the whole or part of its surface with red lead or other "active" material, and also provided with an outer layer or coating of lead or other "element" substance which enters and passes through the perforations, substantially as set forth.

6. An electrode for a secondary battery, consisting of a supporting-plate formed of a substance unsusceptible to electrolysis or to corrosive action having a series of holes, perforations, or cavities, provided with an outer layer or coating of lead or other "element" substance which extends through so as to line the perforations, and which is also provided with red lead or other "active" material within the lead-lined perforations, substantially as set forth.

7. The combination, to form a secondary battery, of a containing-vessel, a series of positive electrodes, each consisting of a supporting-plate and an "element" substance, a series of negative electrodes, each consisting of a supporting-plate and an "element" substance and interdisposed between the positive electrodes, and separating devices to maintain the respective electrodes out of contact, substantially as set forth.

400,227. VOLTAIC BATTERY. ISIDOR KITSEE, Cincinnati, Ohio, assignor to Mayer Sulzberger, trustee, Philadelphia, Pa. Filed July 27, 1888. Serial No. 281,212. (No model.)

Claim.—1. In a voltaic-battery cell, in combination, an iron electrode immersed in a battery-fluid containing chlorate of sodium or a chlorate of other material, and a carbon electrode immersed in a battery-fluid containing sulphuric acid, as specified.



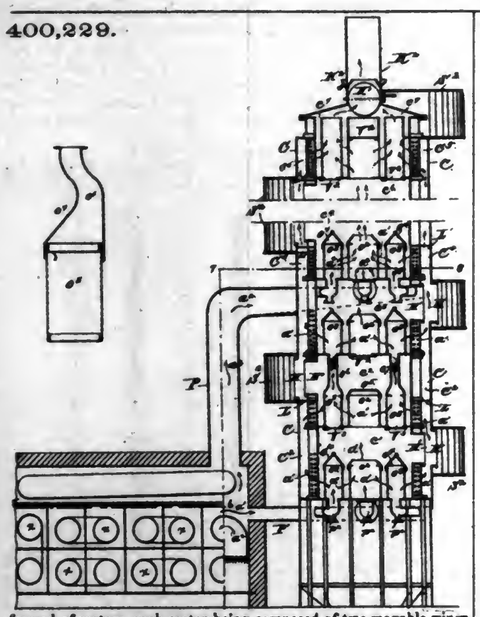
2. In a voltaic-battery cell, in combination, an iron electrode immersed in a battery-fluid containing chlorate of sodium or a chlorate of other material, and a carbon electrode immersed in a battery-fluid containing sulphuric and nitric acids, as specified.

3. In a voltaic-battery cell, in combination, an iron electrode immersed in a battery-fluid containing chlorate of sodium and hydrochloric acid, and a carbon electrode immersed in a battery-fluid containing sulphuric acid, as specified.

4. In a voltaic-battery cell, in combination, an iron electrode immersed in a battery-fluid containing chlorate of sodium and hydrochloric acid, and a carbon electrode immersed in a battery-fluid containing sulphuric and nitric acids, as specified.

5. In a voltaic battery, in combination, an iron electrode immersed in a battery-fluid containing chlorate of sodium or a chlorate of other material, and a carbon electrode immersed in a battery-fluid containing acid, as specified.

400,228. WAGON-BRAKE. LEVI E. LANE and GEORGE HILLIARD, Lyons, N. Y. Filed Nov. 17, 1888. Serial No. 291,169. (No model.)



Claim.—1. In a vehicle, the combination of the sleeve adapted to slide longitudinally on the tongue, the yoke *d*, also adapted to slide, connected to the sleeve and having its curved rear portion, the lever *f*, pivoted to the reach and having its lower end engaging the curved portion of the yoke, the lever *g*, also pivoted to the reach, the rod *h*, connecting the upper ends of levers *f g*, the brake-bar suspended from and having the supporting-yokes sliding on the reach, and the bar *k*, connecting the lower end of the lever *g* to the brake-bar, substantially as described.

2. In an automatic vehicle-brake apparatus, the brake-bar, the brake-shoes pivoted thereon and adapted to turn axially, and the inverted-V-shaped springs *v*, each having one end secured to the pivotal part of the brake-bar and the other end attached to one of the brake-shoes, for the purpose set forth, substantially as described.

400,229. MALT-KILN. PHILIPPE LAUTE, Carcassonne, France. Filed Aug. 20, 1888. Serial No. 283,231. (No model.)

Claim.—1. In a malt-kiln, a drying-chamber having its floor

400,229.

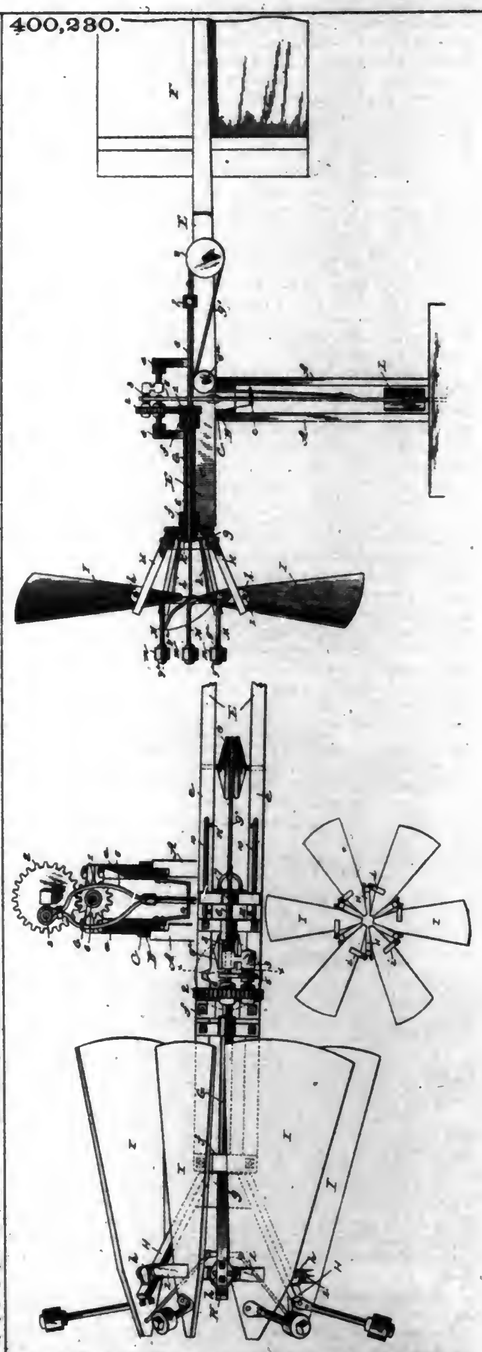
formed of sectors, each sector being composed of two movable wings forming a gate, substantially as and for the purposes specified.

2. In a malt-kiln, a drying-chamber having its floor formed of sectors, each sector being composed of two movable wings forming a gate, in combination with covering-plates arranged along the lines of division of the sectors, substantially as and for the purposes set forth.

3. In a malt-kiln, a drying-chamber having its floor formed of sectors, each sector being composed of two movable wings forming a gate, in combination with covering-plates E, having the form of an inverted V, arranged along the lines of division of the sectors, the said plates forming chutes, whereby the entire contents of the chamber are discharged when the gates are thrown open, substantially as and for the purposes specified.

4. In a malt-kiln, a drying-chamber having its floor formed of sectors, each sector being composed of two movable wings, a shaft for each of said wings, and gearing for imparting a partial revolution to all of the shafts simultaneously, substantially as and for the purposes specified.

5. In a malt-kiln, a drying-chamber having its floor formed of sectors, each sector being composed of two movable wings, a shaft for each of said wings, and gearing for imparting a partial revolution to all of the shafts simultaneously, and a locking device, substantially as described, to lock the shafts against backward motion when rotated in a given direction, substantially as and for the purposes specified.



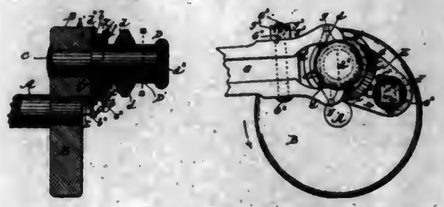
6. In a malt-kiln, a drying-chamber having its floor formed of sectors, each sector being composed of two movable wings, a shaft for each of said wings, and a pinion on each of said shafts, and in combination therewith, the operating-ring R, provided with the toothed portions r r' r^2, and the ratchet-teeth r^3, the pawl r^4, and the gear-wheel W', substantially as and for the purposes specified.

7. The herein-described malt-kiln, consisting of a plurality of superposed drying-chambers having partly perforate and partly imperforate walls, heat-distributing pipes o^3 o^3 for each chamber, having likewise partly perforate and partly imperforate walls, valves or dampers for said pipes o^3, arranged alternately at the inlet and outlet thereof, valves or dampers for the pipes o^3, arranged alternately at the inlet and outlet thereof, a connection between the upper open end of the pipes o^3 of one chamber and the like lower ends of the same pipes in the chambers next above, an imperforate inclosing-casing of greater diameter than the drying-chambers divided horizontally into annular air-ducts, and a heating-furnace connected with the heat-distributing pipes of the lower chamber, substantially as and for the purposes specified.

400,230. WINDMILL. BENJAMIN F. LEFEVER, Hayfield, Pa. Filed Aug. 4, 1888. Serial No. 281,941. (No model.)

Claim.—1. In combination with the hollow main shaft of a windengine, the flaring dish-shaped head, arms bolted to its outer surface, vanes mounted on shafts pivoted in the outer ends of said arms, the regulator-shaft within the hollow main shaft, the regulator-head on the end of said shaft, and rods connecting said head to the inner ends of the vanes, also in combination with governor-arms and weights carried on the ends of said arms and extended to the front, substantially as described.

400,230.



2. In combination, the posts A A, the main beam E, the hollow main shaft, the pivoted vanes, the operating-rod 6, extending through the hollow shaft, the rods k and head K, connecting the vanes with the operating-rod, the vertical rod, the gear-and-pinion connection between the same and the main shaft, a sliding cross-head, 7, having the operating-rod swiveled thereon, the rope g', pulleys 8 and 8* for directing said rope from the cross-head to within the posts A A, and the weight L on the vertical rod, substantially as described.

3. In combination, the vanes, the main shaft, and the connection between the said shaft and the rod, consisting of the pinion 1 on the shaft, the crank-shaft in bearings 4 4, the gear 2, carried thereby and in mesh with the pinion, and the pitman connected to the crank-shaft and vertical rod, substantially as described.

4. In combination, the hollow main shaft, the pivoted vanes, the rod 6, extending through said hollow shaft and connected at its rear end to suitable controlling-weight, the vertical rod and the connection between said vertical rod and the hollow main shaft, consisting of the pinion 1, gear 2, crank 3, and the pitman 5, said pitman being in loop form to avoid the operating-rod 6, substantially as described.

400,231. JOURNAL-BOX FOR CRANK-PINS. PAUL W. LEFFLER, Grinnell, Iowa, assignor to Craver, Steele & Austin, same place. Filed Dec. 3, 1888. Serial No. 290,611. (No model.)

Claim.—1. In combination, a crank-shaft, crank-wheel, crank-pin, journal-box, and a clamp-plate secured to the crank-wheel to bear against the journal-box and hold it on the crank-pin, substantially as described.

2. In combination, a crank-wheel and a crank-pin, a journal-box having an annular flange, and a clamp-plate secured to the crank-wheel to bear against said flange and hold the journal-box on the crank-pin, substantially as described.

3. In combination, a crank-wheel and crank-pin, a journal-box having an oil-hole, and a plate secured to the crank-wheel and provided with a recess fitted over the journal-box in the same plane as the oil-hole and adapted to cover the oil-hole during a portion of the revolution of the crank-pin and journal-box, substantially as described.

4. In combination, a crank-wheel and crank-pin, a journal-box having an enlarged outer end to form a receptacle for waste and lubricant and having an oil-hole, and a plate secured to the crank-wheel and provided with a recess fitted over the journal-box in same plane as and adapted to cover the oil-hole during a portion of the revolution of the crank-pin and journal-box, substantially as described.

5. In combination, a crank-wheel and crank-pin, a journal-box having an annular flange and an oil-hole, and a plate secured to the crank-wheel with a recess in one end fitted over the journal-box in same plane as the oil-hole and resting against the annular flange to hold the journal-box in place on the crank-pin and cover the oil-hole during a portion of the revolution of the crank-pin and journal-box, substantially as described.

6. In combination, a crank-wheel and crank-pin, a journal-box having an enlarged outer end for waste and lubricant, an annular flange on its inner end, and an oil-hole, and a clamp-plate secured to the crank-wheel, with a recess in one end fitted over the journal-box in the same plane as the oil-hole and resting against the annular flange to hold the journal-box in place on the crank-pin and to cover the oil-hole during a portion of the revolution of the crank-pin and journal-box, substantially as described.

7. The combination of the crank-wheel B, crank-pin C, journal-box D, having a flange, d^3, upon its inner end, an oil-hole, d^2, and a closed and enlarged outer end, d^3, and a clamp-plate, E, secured to the crank-wheel, substantially as described.

8. In combination, a crank-wheel, crank-pin, a journal-box having an oil-hole and annular flange at its inner end seated in a recess in the crank-wheel, and a clamp-plate secured to the crank-wheel and adapted to hold the journal-box on the crank-pin and intermittingly cover the oil-hole, substantially as and for the purpose described.

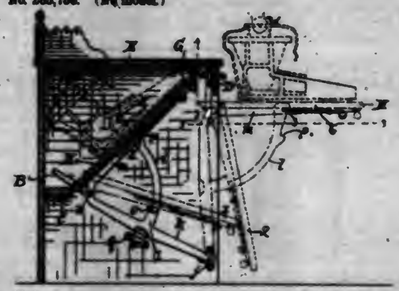
9. In combination, a crank-wheel, crank-pin, a journal-box having an oil-hole and annular flange at its inner end seated in a recess in the crank-wheel, and an enlarged outer end for an oil-reservoir, and a clamp-plate secured to the crank-wheel and adapted to hold the journal-box on the crank-pin and intermittingly cover the oil-hole, substantially as and for the purpose described.

10. In combination, a crank-wheel and crank-pin, a journal-box having an enlarged outer end for an oil-reservoir, an annular flange on its inner end, an oil-hole and pintles d, a pitman having bearings g for the pintles d, and a clamp-plate secured to the crank-wheel and adapted to hold the journal-box in place and intermittingly cover and uncover the oil-hole, substantially as and for the purpose specified.

11. In combination with the crank-wheel and crank-pin, the journal-box constructed substantially as described and seated in a recess in the crank-wheel, and pitman having straps with bearings g for the pintles d of the journal-box, substantially as and for the purpose specified.

12. The combination, with the crank-wheel and crank-pin, of journal-box D, having oil-holes d^2 and pintles d, a pitman fulcrumed upon said pintles, and a clamp-plate, E, secured to the crank-wheel by a set-bolt, F, to revolve with the crank-wheel and cover the oil-hole d^2 during a portion of the revolution of the crank-pin and journal-box and admit of free lateral movement of the pitman, substantially as described.

13. In combination with the crank-wheel and crank-pin, a journal-box, D, having an annular flange, d^3, and pintles d, a pitman fulcrumed upon said pintles, and a clamp-plate, E, secured to the crank-wheel to revolve therewith and rest against the flange d^3 to hold the journal-box in place, substantially as described.



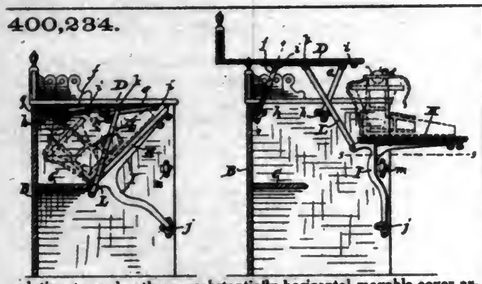
400,232. PUSH-BUTTON. JOSEPH H. LEHMAN, Philadelphia, Pa. Filed Aug. 8, 1888. Serial No. 282,230. (No model.)

Claim.—1. An electric signaling push-button consisting of a base-piece supporting an electro-magnet connected in the line-circuit, spring terminals secured to the base-piece at each side of and having their ends over the magnet, a button for closing the terminals, and an armature for the magnet connected to one of the terminals, substantially as described.

2. An electric signaling push-button consisting of a base-piece, an electro-magnet the core of which has an extended end secured to the base-piece, spring terminals also secured to the base-piece and having their free ends over the magnet, and one of the terminals being provided with a bent portion forming the armature of the magnet, substantially as described.

400,233. COMBINED DESK AND TYPE-WRITER CABINET. CHARLES H. LEONARD, Indianapolis, Ind. Filed Sept. 18, 1888. Serial No. 285,736. (No model.)

Claim.—1. A combined desk and cabinet consisting of the following elements, namely: a pair of side walls, a back wall, and a desk-top, all secured together in a fixed relation to each other, a pair of brackets each consisting of two arms pivoted together so as to fold one upon the other, one of said arms being pivoted to the side wall of the cabinet, a table mounted on said folding arms, means for securing the table in different positions relative to the arms of the brackets which are pivoted to the side walls, and means for locking said arms in a vertical position, all combined and arranged to co-operate substantially as and for the purpose specified.



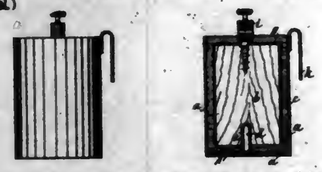
2. In combination with the side walls of a type-writer cabinet, the pair of folding brackets, each having an arm, k, arm m, pivoted thereto, and a brace, l, said brace being provided with a series of stops, the table secured to said brackets, and the catch-levers arranged to engage said stops, all combined and arranged to co-operate substantially as specified.

3. The combination of a desk having a fixed top, a pair of brackets pivoted to the supports of said desk-top, and each having a folding arm, a table secured to said folding arms and arranged to swing beneath said desk-top, all arranged to co-operate substantially as specified, whereby the table is folded beneath and projected below and in front of the desk-top, substantially as and for the purpose specified.

400,234. TYPE-WRITER CABINET. CHARLES H. LEONARD, Indianapolis, Ind. Filed Sept. 18, 1888. Serial No. 285,737. (No model.)

Claim.—1. A cabinet consisting of the following elements, namely: a pair of side walls suitably connected, so as to bear a fixed

400,234.

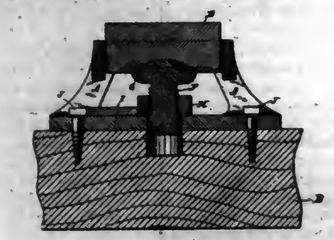


relation to each other, a substantially horizontal movable cover arranged to close the opening between said side walls at the top, a swinging table arranged below said cover between said walls and pivoted thereto, folding supports connecting the cover with the side walls, and intermediate connecting mechanism connecting said cover and table, all combined and arranged to co-operate substantially as specified, whereby the cover is raised and lowered in a substantially horizontal position by the swinging movement of the table.

2. A cabinet consisting of the following elements, namely: a pair of side walls suitably connected, so as to bear a fixed relation to each other, a substantially horizontal movable cover arranged to close the opening between said side walls at the top, folding supports connecting the cover with the side walls, whereby the cover is held in a horizontal position when raised, and a swinging table arranged below said cover between the side walls, pivoted thereto and arranged to swing outward therefrom, all combined and arranged to co-operate, substantially as specified, to form a table adapted to support a type-writer in position for use and an inclosed receptacle for the same when not in use.

3. In a type-writer cabinet, the combination, with a cabinet having a movable top and an open front, of the brackets I I, pivoted at one end to the opposed interiors of the side walls of the cabinet, arranged to swing toward the front edge thereof, and having the table H rigidly secured to their free ends and extending from wall to wall, and suitable stops arranged to limit the swinging movement of the brackets, whereby the table is projected outward from the front of the cabinet to form a horizontal support for a type-writer and withdrawn to form an inclined front cover for the upper portion of the cabinet, substantially as specified.

400,235. GALVANIC BATTERY. EDUARD LIEBERT and SALLY A. ROSENTHAL, Berlin, Germany. Filed Nov. 30, 1888. Serial No. 292,360. (No model.)

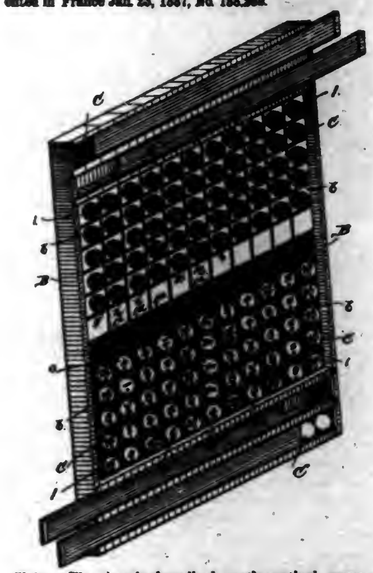


Claim.—1. An electrode for an electric battery, consisting of a non-conducting base, a coating or covering of foliated or leaf silver applied thereto, and chloride of silver applied to said coating, substantially as described.

2. An exciting-liquid for silver and zinc batteries, consisting of one hundred parts, by weight, of water, from twelve to twenty parts of sulphate of zinc, from one to four parts of sulphuric acid, and from two to ten parts of perchloride of mercury or protochloride of mercury.

3. A dry exciting agent for electric batteries, consisting of water, sulphate of zinc, sulphuric acid, perchloride or protochloride of mercury, and tragacanth, in or about the proportions specified.

400,236. SIDE BEARING FOR RAILWAY-CARS. JOHN J. MARR, New York, N. Y. Filed Nov. 8, 1888. Serial No. 290,277. (No model.)

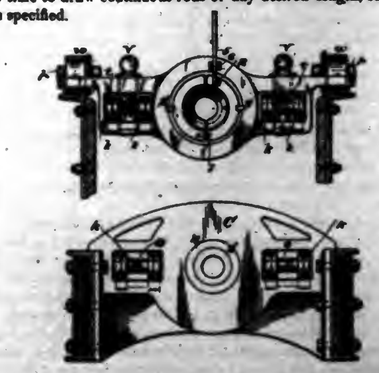


Claim.—1. In combination with the body of a car and its truck, side bearings arranged between the truck and the car and provided with vertically-adjustable bearing-surfaces.

2. In a side bearing for railway-cars, the combination of a frame inclosing a vertically-adjustable bearing-block with an adjusting-screw supported on said frame and beneath said block.

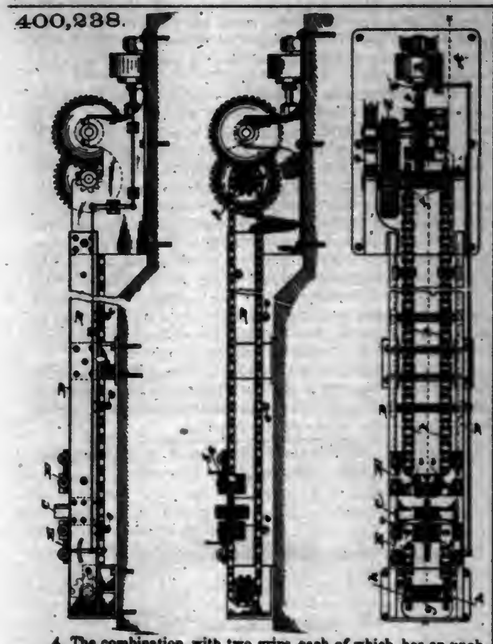
3. In a side bearing for railway-cars, the combination of a frame inclosing a vertically-moving bearing-block with a screw for vertically adjusting the block, a nut for supporting and operating the screw, and a key for securing said nut against rotation.

400,237. MATHEMATICAL GAME. LOUIS MARTAIN, Paris, France. Filed May 14, 1888. Serial No. 273,780. (No model.) Patented in France Jan. 23, 1887, No. 183,209.



Claim.—The herein-described mathematical game, consisting, essentially, of a board divided into squares, as described, and checkers bearing numbers, mathematical signs, the word "Proof," and blank checkers, substantially as and for the purposes described.

400,238. DRAWING METALS. WILLIAM A. MCCOOL, Beaver Falls, Pa., assignor of one-half to H. W. Hartman, same place. Filed Oct. 1, 1888. Serial No. 286,837. (No model.)

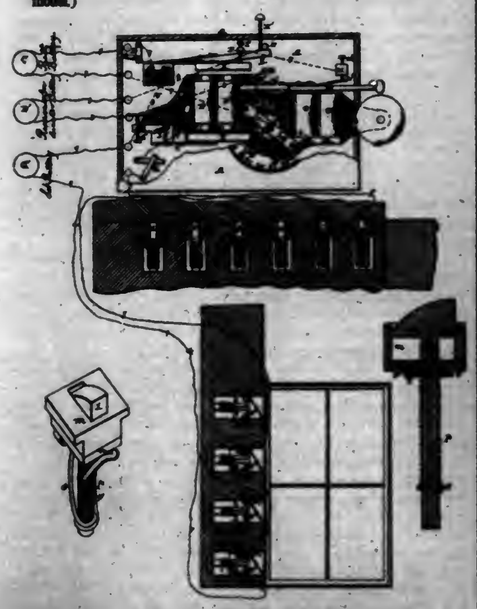


Claim.—1. The combination, with a fixed drawing-die, of grip mechanism adapted to first force and then pull the article operated on, substantially as and for the purposes specified.

2. The combination, with two grips, of an interposed fixed die and mechanism for actuating the grips, substantially as and for the purposes specified.

3. The combination, with a fixed drawing-die, of a grip having an unobstructed axial opening throughout its length, and power mechanism for actuating said grip, said power mechanism arranged at one side, or off the axial or center line of the die and grip, whereby the hold of the grip on the rod being drawn may be advanced from time to time to draw continuous rods of any desired length, substantially as specified.

400,238.



4. The combination, with two grips, each of which has an unobstructed axial opening throughout its length, of an interposed die, substantially as and for the purposes specified.

5. In a metal-drawing machine, the combination, with a grip-truck having a tapering annular orifice or grip-seat, of a tapering annular sectional grip, substantially as and for the purposes specified.

6. In a metal-drawing machine, the combination, with a grip-truck having a tapering grip-seat, of a tapering sectional grip, a grip-lever having a fulcrum on the truck, and a pin for actuating the grip-sections, substantially as and for the purposes specified.

7. The combination, with a fixed drawing-die, of a pushing-grip arranged in front of said die, and power mechanism for actuating said grip, substantially as and for the purposes specified.

400,239. ELECTRIC BURGLAR-ALARM. JOSEPH Y. MCKINNEY, New Wilmington, Pa. Filed Dec. 17, 1888. Serial No. 293,677. (No model.)

Claim.—1. In an electric burglar-alarm, the combination, with a bell-battery, a set battery, and a reserve battery, of two sets of magnets, the armature K, which breaks the bell-battery when the magnets P are charged, the set armature S, which closes the set battery when forced inward, and closes the reserve battery when the current is broken, and the armature Y for operating upon an indicator, substantially as described.

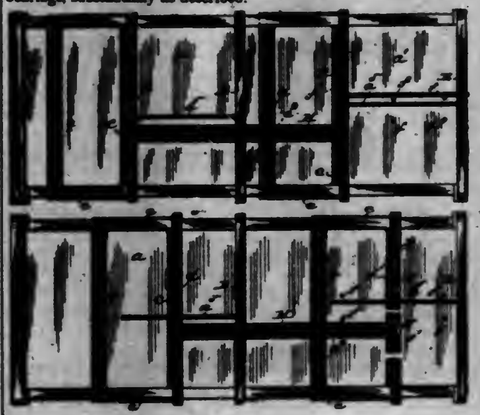
2. In an electric burglar-alarm, the combination, with a set battery, a bell-battery, and a reserve battery, of two sets of magnets, the armature K, for opening and closing the bell-battery, contact I', the set armature S, provided with the operating-pin H', and posts T and R, with which the armature S engages, for the purpose of closing the reserve battery when the circuit is broken, and for the purpose of closing the set battery when it is forced inward by means of the operating-rod H', substantially as set forth.

3. In an electric burglar-alarm, the combination, with the bell battery, set battery, and reserve battery, of the magnets P and O, the armatures K S, contacts I' N', posts R T, armature N, contact N', armature Y, the escapement secured to its end, and the escapement-wheel, the dial and indicator being secured to the shaft of the escapement-wheel, whereby the indicator is moved when the circuit is opened or closed, for the purpose substantially as described.

400,240. BLOW-PIPE BED. GEORGE W. MILOTTE, Ithaca, N. Y. Filed Dec. 19, 1888. Serial No. 294,009. (No model.)

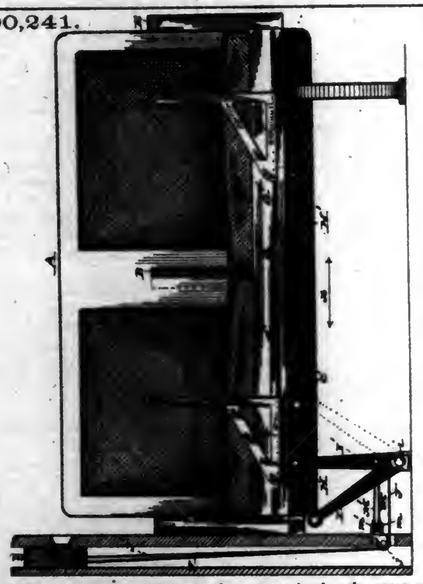
Claim.—1. The asbestus pad or cushion having the encircling band provided with the transverse grooves B, and the loops D, in alignment therewith, substantially as described.

2. The combination, with the asbestus cushion, of the band encircling the same and having the inwardly-bent portions C engaging the periphery of the cushion, and the outwardly-bent portions D, substantially as described.



3. The combination, with the cushion and the clamps, of the block K, having the depending pivotal pin or stem, and provided with the longitudinal and transverse openings adapted for the reception and adjustment of the arm of the clamps, substantially as described.

4. The asbestus cushion having the band provided with loops or openings D, in combination with the detachable handle having the bent arms adapted to engage said loops or openings, substantially as described.

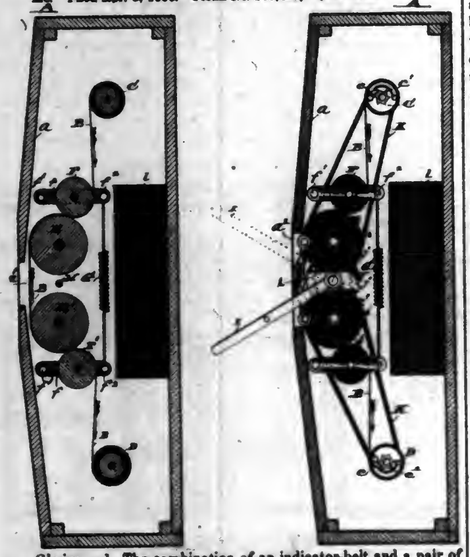


400,241. ADJUSTABLE CAR-SEAT AND INDICATOR. OSBORNE R. MERRIAM, St. Louis, Mo. Filed Mar. 2, 1888. Serial No. 265,960. (No model.)

Brief.—The adjustment of the seat to whole or half fare or free causes a corresponding indicator to be displayed.

Claim.—1. The combination of the car-seat, the movable arm C, the rod H, lever I, cord J, indicator-target, the car, and the cord-bearings, substantially as described.

400,241.



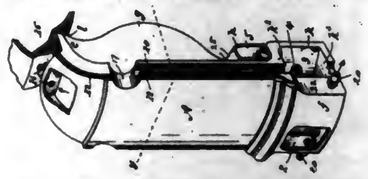
2. The combination of the car, the car-seat having the compartments *a a'*, the arms C D, the rods H H', the levers I I', the cords J J', and the indicator and target, substantially as described.

3. The combination, with a seat having a laterally-adjustable arm, of an indicator and actuating devices arranged to be operated by said arm for different indications according to the adjustment of the latter, substantially as set forth.

4. The combination of the car-seat, the laterally-adjustable arm the dog, and the key, substantially as described.

400,242. STATION-INDICATOR. OSBORNE R. MICHAUD, St. Louis Mo. Filed Apr. 3, 1888. Serial No. 269,429. (No model.)

Claim.—1. The combination of an indicator-belt and a pair of rollers, E E', over which it passes for presentation to view, with additional rollers F F, mounted in movable bearings and in contact with said belt above and below said rollers E E', and a spring-tie attached to said movable bearing for drawing said rollers F F' against said belt, the latter passing in front of rollers E E' and behind rollers F F', substantially as and for the purpose set forth.



2. An indicating-belt and a pair of rolls over which it passes for presentation to the eye, in combination with gear-wheels *e e'*, turning with said rolls, a shaft provided with a gear-wheel, *h*, which meshes with said gear-wheels *e e'*, a lever turning on said shaft having lateral play thereon and provided with a lateral pin, and a disk fast on said shaft and provided with perforations for receiving said pin, in order that the indicator-belt may be operated by moving said lever, substantially as set forth.

3. The combination of the indicator-belt B and the rollers C D, on which the ends of said belt are wound, with the casing A, having an opening in its front opposite the middle of said belt, the rolls E E', arranged above and below said opening, in order that the belt may pass over and before them vertically behind said opening, the rolls F F', arranged in front of said belt above and below said rolls E E', the pivoted bearings *f*, in which said rolls F F' are mounted, and the spring-tie G, connecting the free ends of said levers, substantially as set forth.

4. In combination with a case having an opening and an indicator-belt arranged behind said opening, a pair of rolls journaled in fixed bearings before which said belt passes, a pair of rolls arranged in front of said belt above and below the pair first mentioned and mounted in movable bearings, a spring-tie for drawing said movable bearings toward each other, and a lever-shaft and gearing for operating the pair of rolls first above mentioned, substantially as set forth.

5. In combination with a traveling belt and pair of rolls before which it passes, a pair of movable tightening-rolls arranged in front of said belt, and spring-pressed against said belt above and below the former pair of rolls, for the purpose described.

400,248. SECTIONAL BOILER. JOHN H. MILLS, Boston, Mass. Filed June 16, 1888. Serial No. 277,357. (No model.)

Claim.—1. The combination, with a series of chambered boiler-sections arranged and joined together to form an inclosed combustion-chamber and having a direct water communication the one with the other, of a common receiver-drum having communicating-passages leading therefrom to the upper portion of each boiler-section, substantially as described.

2. The combination, with a series of chambered boiler-sections arranged and joined together to form an inclosed combustion-chamber, each of said sections being intermediate of its height formed with an inwardly-extended portion which is transversely inwardly converging, and said sections having a direct water communication the one with the other, of a common receiver-drum, having communicating-passages leading therefrom to the upper portion of each boiler-section, substantially as described.

3. The combination, with a series of chambered boiler-sections, A, arranged and joined together to form an inclosed combustion-chamber and having water communication with each other at their lower ends, of a common receiver-drum, 15, resting on the top of said sections and having water communications between it and the upper ends of said sections, substantially as described.

4. A series of boiler-sections arranged and joined together to form an inclosed combustion-chamber and having a direct water communication the one with the other, a grate supported in said combustion-chamber, the radial flues 17, the base-flue 3, in communication with a smoke-pipe, and vertical flues between said radial and base flues, combined with a common receiver-drum having communicating-passages leading therefrom to the upper portion of each boiler-section, substantially as described.

5. A series of chambered boiler-sections, each formed at its lower portion with its water-space of contracted width, as at 2, and having the additional integral partition-walls *k*, k^3, and k^3, open at their ends inside thereof, and said sections having formed in adjacent edges at their upper portions the radial recesses 17 and vertical recesses from said radial recesses to and through said wall k^3, said sections being arranged and joined together to form an inclosed combustion-chamber, a circular base-flue, 3, radial flues and vertical flues 10 between and in communication with said radial and base flues, and stoppers closing the outer ends of said radial flues, and the nipples 20, connecting and forming communication between said chambered sections at the lower portions thereof, in combination with the common drum 15 at the top of said sections, and the nipples 16, connecting the upper end of each of said sections and said drum, substantially as described

6. A sectional boiler consisting of a series of chambered boiler-sections arranged and joined together to form an inclosed combustion-chamber and having a direct water communication the one with the other, and having formed therein the radial flues 17, the base-flue 3, and a smoke-pipe in communication with said base-flue, and vertical flues 10 between said radial and base flues, the circular perforated conduit 5, an air-pipe leading thereto, and the common drum 15, having communicating passages leading therefrom to the upper portion of each boiler-section, substantially as described.

7. A sectional boiler consisting of a series of chambered boiler-sections arranged and joined together to form an inclosed combustion-chamber and having a direct water communication the one with the other, and having formed therein the radial flues 17, the base-flue 3, and vertical flues 10 between said radial and base flues, the circular perforated conduit 5, the distributing-box 8, with which said conduit communicates, an air-pipe leading to said distributing-box, and the common drum 15, having communicating passages leading therefrom to the upper portion of each boiler-section, substantially as described.

8. A sectional boiler consisting of a series of boiler-sections arranged and joined together to form an inclosed combustion-chamber and having a direct water communication the one with the other, the radial flues 17, the base-flue 3 in communication with a smoke-pipe, the vertical flues between radial and base flues, a grate supported in said combustion-chamber, the perforated circular conduit 5, formed of the arc-sections A, joined to said boiler-sections, the distributing-box 8, with which said conduit 5 communicates, the circular pipe 4, disposed in the base-flue, the pipe J, leading thereto, and the vertical passages 24, connecting said pipe 4 and distributing-box, substantially as described.

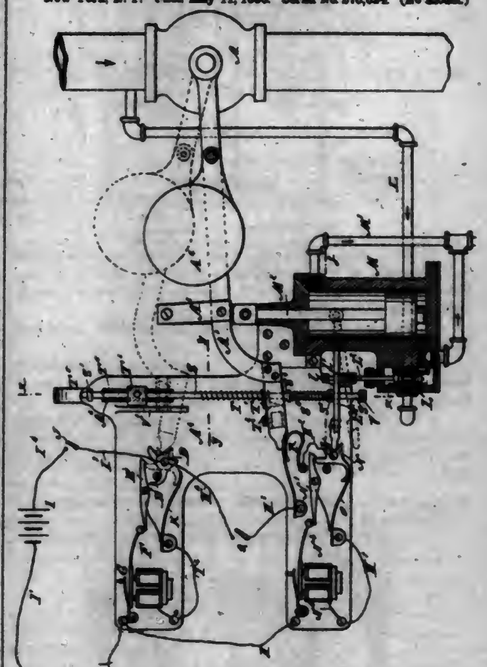
9. A sectional boiler consisting of a series of chambered boiler-sections formed, joined, and arranged together to form an inclosed combustion-chamber, base-flue 3, radial flues 17, and vertical flues 10, and the circular perforated air-conduit 5, substantially as described, said chambers having a direct water communication the one with the other, of a smoke-pipe connected with said base-flue, a distributing-box, 8, with which said circular conduit 5 is connected, the circular pipe 4, disposed within the base-flue, the air-inlet pipe J, leading thereto, the vertical passages 24, connecting said pipe 4 with said distributing-box, the grate supported in said combustion-chamber below said perforated conduit 5, the common drum having communicating-passages leading therefrom to the upper portion of each boiler-section, the pipe 37, leading from said drum, and the return-pipe 18, leading into the lower portion of one of the said boiler-sections, substantially as described.

400,244. LETTER-BOX. ROBERT J. MITCHELL, Seneca, Mo. Filed July 11, 1888. Serial No. 279,651. (No model.)

Claim.—1. In a mail-box having an opening for the insertion of mail-matter, the combination of a door for closing the said opening, the device G, for holding the said door shut, and the alarm mechanism for operating the device G for disengaging it from the said door, substantially as described.

2. In a mail-box, the combination, with the door for closing the opening through which the mail is inserted, of the device G, for locking the door, the crank-shaft E, for operating and fastening the device G, and the alarm mechanism for moving the said crank-shaft, substantially as and for the purpose described.

3. In a mail-box, the combination, with the door for closing the opening through which the mail is inserted, of the lifter connected with the said door and the alarm mechanism for operating the said lifter, substantially as described, for the purpose set forth.



4. The combination, in a mail-box, of the door for closing the opening through which the mail is inserted, the lifter connected with the said door and arranged to hold it shut, the crank-shaft constructed to operate the lifter and to fasten the lifter down, and the alarm mechanism for operating the said crank-shaft, substantially as and for the purpose described.

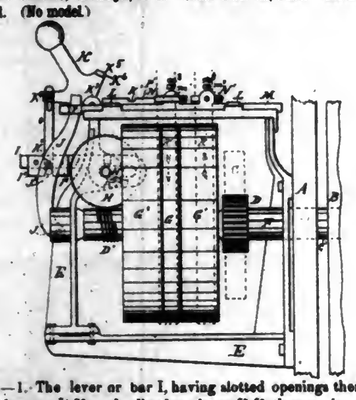
5. The combination, with the mail-box and the door for closing the opening through which the mail is inserted, of an indicator-sign, a shield for covering the said indicator-sign, the arm connected with the shield, and the arm connected with the said door and constructed to engage with and operate the arm connected with the shield when the said door is opened, substantially as described.

6. In a mail-box, the combination of the door for closing the opening through which the mail is inserted, the indicator-sign, the shield for covering the indicator-sign, the arm connected with the shield and projected within the path of and operated from the door, the lifter for opening the door, and the alarm mechanism, substantially as and for the purpose described.

7. In a mail-box, the combination, with the indicator-sign and the shield for covering the indicator-sign, of the door and a connection between the said door and the said shield, substantially as and for the purpose described.

400,245. THROTTLE-VALVE CONTROLLER. GUSTAVE S. NEU, New York, N. Y. Filed May 11, 1888. Serial No. 273,694. (No model.)

Claim.—1. In a device of the character described, the combination, with the cylinder, piston, ports, and slide-valve of a fluid-power motor, of a forked lever, L^3, embracing the cylinder and pivoted on opposite sides thereto, the stem of the slide-valve working loosely through said lever and having stops *l l'* on opposite sides thereof, substantially as described.



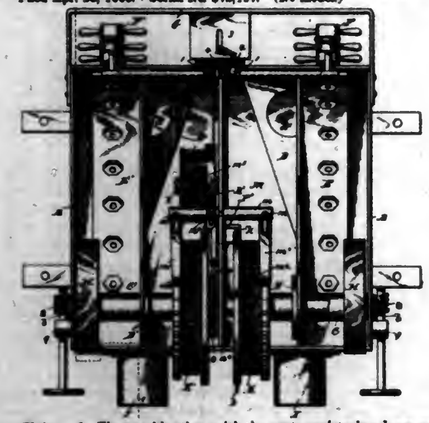
2. The combination, with the arm A' of a self-acting valve, of a catch, E, for restraining the arm A', a catch-tripping device, F, a fluid-power motor arranged to return said arm A' to the restraint of its catch, a valve for said motor having an operating-arm, a locking and releasing device for the motor-valve, a rod, S, working loosely through the main arm A' and the motor-valve arm, a spring, S^2, coiled on said rod between the two arms and adapted to be compressed by the arm A', stops S^3 and V on the rod S on opposite sides of the motor-valve arm, and another stop, T^3, connected to the rod and arranged to be moved by the arm A', so as to reset the motor-valve, substantially as described.

3. The combination, with the arm A' of a self-acting valve, of a catch, E, arranged to automatically engage and restrain the arm A', a catch-tripping device, F, a fluid-power motor arranged to operate the arm A', a motor-controlling valve having an operating-arm, a self-locking and a releasing device for the motor-valve, a rod, S, connected to the motor-valve arm and working loosely through the main arm A', a spring, S^2, arranged to be compressed by the arm A' and to act on the motor-valve arm, a stop, T^3, connected to said rod above the arm A', a spring arranged to be compressed by the arm A' and to act on the stop T^3, a self-acting catch, T^4, arranged to restrain the stop T^3, and a tripper, U, for said catch arranged to be operated from the arm A', substantially as described.

4. The supporting-frame A^4, having a rigid forward and downward projecting guide, V', to receive and retain the arm A' against lateral movement, as and for the purpose specified.

5. The swinging arm A', provided with a sliding bearing, T', through which the longitudinally-movable rod S is passed, and on which rests the spring T, coiled on said rod, as and for the purpose specified.

400,246. REVERSING-GEARING FOR WASHING-MACHINES. JOHN M. OAKLEY, Brooklyn, N. Y. Filed Feb. 10, 1887. Serial No. 227,201. (No model.)



Claim.—1. The lever or bar I, having slotted openings therein and projections, as I^4 I^5, and adjusting-pieces I^3 I^2 thereon, in combination with the operating-lever J, belt-shifting bar M, and frame E, substantially as described.

2. The weighted lever K, the frame E, link or bar O, and slotted bar I, all in combination, as set forth.

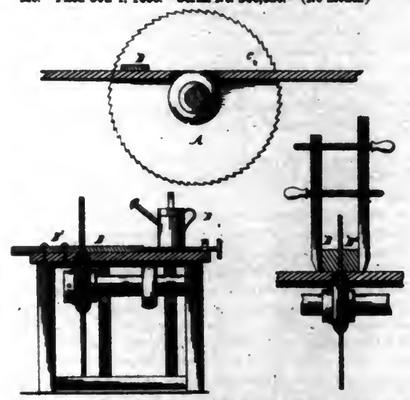
3. The wheel H, having pin H^3, in combination with the shaft F, having worm D', bar I, having projections I^4 and I^5, link O, lever J, having pin J^2, and weighted lever K, substantially as set forth.

4. The combination of the bar I, having projections I^4 I^5, wheel H, having pin H^3, lever J, having pin J^3, lever K, bar M, frame E, shaft F, worm D', pulleys G G' G^2, and pinion D, substantially as set forth.

400,247. CASH-INDICATOR. AVEN PEARSON, Washington, D. C. Filed Apr. 28, 1888. Serial No. 272,117. (No model.)

Claim.—1. The combination, with the cents-registering drum provided with projecting pins and mechanism for turning it, of the dollars-drum, a toothed wheel secured to the side of said drum, and a lever provided with a hinged pawl to turn the said wheel, the lever being operated by the pins on the cents-drum, whereby the dollars-drum is caused to move faster than the cents-drum, for the purpose stated.

2. The combination, with the cents-drum provided with radial pins and mechanism for turning it, of the dollars-drum, a toothed wheel secured to the side of said drum, and a lever provided with a hinged pawl to turn the said wheel, and having an arm extending laterally into the path of the radial pins on the cents-drum, whereby the dollars-drum is caused to move faster than the cents-drum, for the purpose stated.

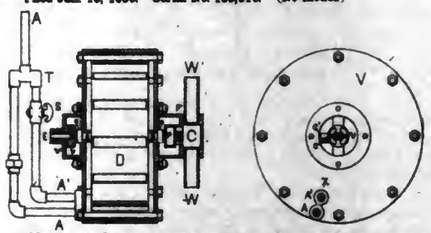


3. The combination, with the cents-drum provided with projecting pins and mechanism for moving it, of the dollars-drum, a toothed wheel secured to the side of said drum, and an adjustable lever provided with a hinged pawl to turn the said wheel, the lever being operated by the pins on the cents-drum, substantially as described, and for the purpose stated.

4. The combination, with a registering-drum, of an adjustable pawl having an integral laterally-extending indicating-finger, substantially as described, and for the purposes stated.

5. The combination, with the main shaft, a loose sleeve encircling said shaft, and a frame-piece rigidly secured on said sleeve and carrying a curved plate, of a retracting-spring, and a drum to which one end of said spring is attached, an arbor on which the drum is mounted, a toothed wheel on one end of the arbor, and a worm-screw in engagement with said wheel for regulating the tension of said spring, for the purpose set forth.

6. In a cash-register of the class described, the combination, with the casing, the shaft, a sleeve encircling said shaft, a frame-piece carrying a curved plate, and a spring for retracting said frame-piece, of an air-cushion attached to the casing and a plunger attached to the curved plate, substantially as described, and for the purpose set forth.



400,248. PROCESS OF TEMPERING SAWS. JOSEPH PELTS, Vinolt, Mo. Filed Oct. 1, 1888. Serial No. 286,836. (No model.)

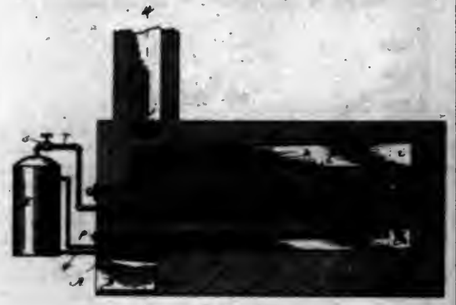
Claim.—1. The method hereinbefore described of tempering saws and removing rim-bound kinks, &c., which consists in pressing a rubbing-piece firmly against the face of the saw while in rapid motion, thus heating a part of the blade, then suddenly cooling the same, substantially as described.

2. The method hereinbefore described of removing blisters, kinks, &c., from saws, which consists in drilling holes in the blade at proper places, then driving the saw at a high speed and heating a portion by pressing a rubbing-block against it, and then suddenly cooling, substantially as described.

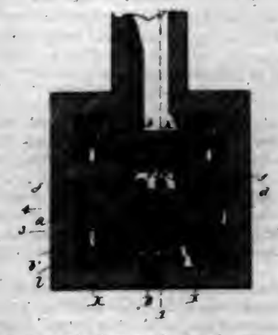
400,249. AUTOMATIC VALVE. THOMAS O. PERRY, Chicago, Ill. Filed Jan. 18, 1886. Serial No. 189,010. (No model.)

Claim.—1. In combination, substantially as set forth, a case containing water, a drum journaled horizontally in such case, comprising circumferentially-successive chambers having each an opening by which it communicates with the case, a pipe communicating with the case below the horizontal plane of the drum's axis, whereby air may be forced into the case and enter the chambers on one side of the drum, and a pocket revolved by the drum and communicating as it revolves alternately with the case and with an exterior water-supply, whereby the water in the case is replenished by pocketfuls at a time.

2. In combination with the case containing water, a drum journaled horizontally in such case, comprising chambers circumferentially successive, having each an opening by which it communicates with the case, a pipe communicating with the case below the horizontal plane of the drum's axis, by which air may be forced into the case and caused to enter the chambers on one side of the drum, a valve revolved by the drum controlling the escape of air from the case, and a pocket also revolved by the drum and communicating as it revolves alternately with the case and with an exterior water-supply, whereby as the air carries off water the pocket may supply it.



3. In combination with the case containing liquid and the chambered drum revolved therein, substantially as set forth, the valve E, which controls eduction from the case, and the pocket P, which furnishes water to the case, flexibly connected, and gearing which communicates motion from the drum to one of them, and thence through such flexible connection to the other, whereby they may severally adjust themselves to their respective seats, substantially as set forth.



4. In combination with the case and drum, constructed and operating substantially as described, the water-chamber C, communicating through a port with the case, the pocket P, covering said port and actuated by the drum, and having an aperture which coincides with the port at one position of the pocket, and at another position thereof stands uncovered and constitutes communication from the pocket to the case, whereby the pocket communicates alternately with the case and with the chamber C, and never with both at once, substantially as and for the purpose set forth.

5. In combination with the case and the chambered drum and the air-pipe admitting air forced into the case below the drum, the branch pipe A' of such air-pipe admitting air from the same source opening into the case at one side of the drum and provided with the regulating-cock S, substantially as and for the purpose set forth.

6. In combination with the case containing liquid, and the chambered drum revolved therein in the manner described, the valve E, which controls eduction from the case, the pocket P, which imports water into the case in the manner described, a shaft which connects said valve and pocket being loosely joined to them both, and a spring reacting between said valve and pocket to force them apart and hold them against their seats, respectively, substantially as set forth.

400,250. BAKER'S OVEN. EDUARD A. C. PETERSEN, Lake View, Ill. Filed Nov. 27, 1888. Serial No. 292,084. (No model.)

Claim.—1. In a baker's oven, direct and return gas-flues below the hearth or baking-chamber and an air-flue interposed between the direct gas-flues and hearth, with a register for regulating the amount of air to be admitted, substantially as and for the purpose set forth.

2. In a baker's oven, central direct flues provided below the hearth or baking-chamber divided vertically by a horizontal iron plate, the lower halves of the flues to conduct the gases from the fire-chamber and the upper to conduct a current of air regulated by a register, all substantially as set forth, for the purpose specified.

400,251. MEASURING-FAUCET. ELI S. REED, Chattanooga, Tenn. Filed Nov. 21, 1888. Serial No. 291,500. (No model.)

Claim.—The combination of the vessel A, having the scale of graduations upon its sides, the cap-plate B, the base-plate C, the tie-rods H, connecting said cap and base plates, said cap-plate B having lugs d' d, and said base-plate C having lugs c' c, whereby the plates are attached to the support, substantially as described.

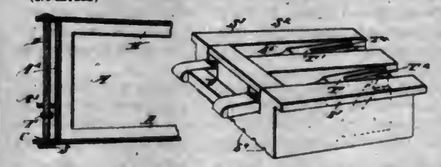
400,251.

400,252. FIRE-KINDLER. MICHAEL REILLY, Brooklyn, N. Y. Filed Sept. 10, 1887. Serial No. 249,296. (No model.)

Claim.—As a new article of manufacture, a fire-kindler composed of spent bone-black saturated with oil and a binding material, the whole being formed into a block or brick, substantially as specified.

400,253. FOUNTAIN-PEN. BERNIE ROSENTHAL, Williamsport, Pa. Filed Aug. 22, 1888. Serial No. 283,408. (No model.)

Claim.—1. In a fountain-pen, the combination of the reservoir with a laterally-moving valve provided with a projection and a suitable tube connected to the valve and which conveys the ink to the pen, substantially as shown.



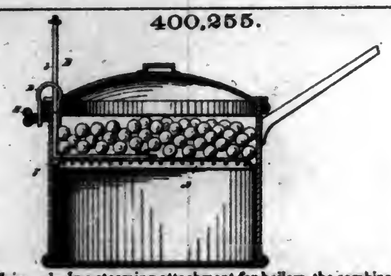
2. In a fountain-pen, the combination of a reservoir having a tapering or conical end, a laterally-moving spring-actuated valve provided with a projection to receive the pressure of the finger, and a movable supply-pipe connected to the valve, substantially as described.

3. In a fountain-pen, the combination of the reservoir provided with an air-opening, a laterally-moving valve for closing its lower end, and a rod secured to the valve and provided with a valve at its upper end for closing the air-opening in the side of the reservoir, substantially as set forth.

4. The combination, in a fountain-pen, of a reservoir, a valve for closing its lower end, a projection for moving the valve, a supply-pipe for conveying the ink to the pen, and a thimble, L, provided with a guide for the supply-pipe, substantially as specified.

5. In a fountain-pen, the combination of the holder provided with an opening through one side, the reservoir secured inside of the holder and provided with an air-opening and made conical or tapering at its lower end, a spring-actuated valve provided with a projection, a rod for operating a valve which controls the supply of air to the reservoir, and which rod is secured to the valve, a tube for supplying ink to the pen connected to the valve, and a thimble, L, provided with a guide through which the end of the supply-pipe passes, substantially as shown and described.

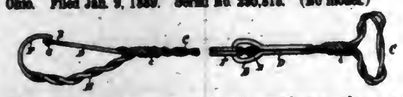
400,254. APPARATUS FOR EXTRACTING OIL FROM OIL-CAKES. THORLEY A. SCHOOLAR, Avondale, Ala., (executor of John L. Moss, deceased,) and NORRIS LITTELL, Emporia, Kans., assignors of one-third to Edward W. Doe, Tallahassee, Fla. Filed Sept. 6, 1887. Serial No. 248,880. (No model.)



Claim.—1. The combination of the platen, the levers T^3, pivoted within the platen, and the draw-bars arranged within the platen and projecting therefrom and having their inner ends pivoted to the upper ends of said levers T^3, as set forth.

2. The combination of the platen having the recesses S^2 and S^3, the draw-bars arranged in the recesses S^2 and connected together, and the levers T^3, pivoted in the recesses S^3 and connected to the draw-bars, as set forth.

400,255. CULINARY APPARATUS. ANNA O. SCHOCKMAN, Lincoln, Nebr. Filed Nov. 14, 1888. Serial No. 290,802. (No model.)



400,255.

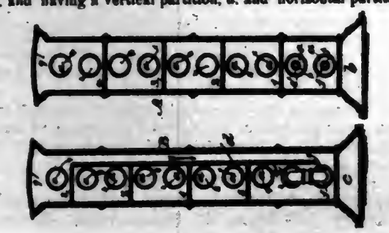
Claim.—1. In a steaming attachment for boilers, the combination of the perforated disk A, the elbow-shaped standard having its foot riveted or bolted to the center of the disk and its upright at right angles with the rim, and the clevis-shaped clamp D, adapted to slide upon the upright and provided with a slot, *a*, and set-screw E, for adjusting same upon the standard, substantially as described.

2. The concavo-convex perforated disk A, the elbow-shaped arm B, having its foot secured to the center of the convex face of the disk, and the clevis-shaped clamp-hook D, provided with the slot *a*, to receive the arm and adapt the hook to slide thereon, and the set-screw E, to adjust it to position, all combined and arranged substantially as and for the purpose described.

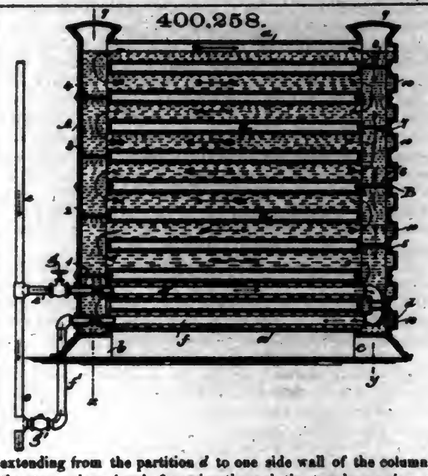
400,256. WIRE SNAP-HOOK. SAMUEL P. SCOTT, Hillsborough, Ohio. Filed Jan. 9, 1889. Serial No. 295,818. (No model.)

Claim.—As an improved article of manufacture, the snap-hook herein described, consisting of the loop C, twisted shank *c*, a tongue, D, formed of doubled wire and having an eye, B, and an arm, E, having a hook, F, at its extremity, said hook being formed with a downwardly and inwardly inclined tooth, G, adapted to engage said eye, all formed of a continuous wire, substantially in the manner and for the purpose specified.

400,257. SEWING-MACHINE-ATTACHMENT HOLDER. EDWARD SEITZ, Peoria, Ill. Filed Mar. 24, 1888. Serial No. 268,443. (No model.)



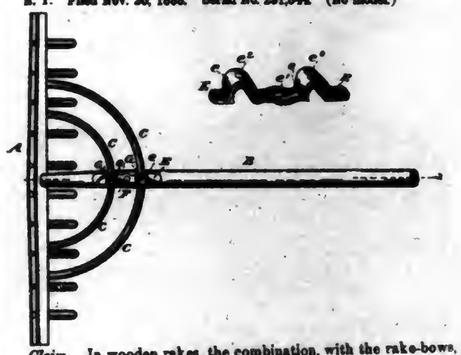
Claim.—The combination, with the presser-bar, having a transverse recess in its lower end, of a sewing-machine attachment provided with a transversely-grooved shank fitting said recess and a lever-actuated rock-shaft mounted in said presser-bar above and transverse to said shank and provided with a bend or offset greater than the shaft's distance above the shank, whereby rocking of the shaft may throw the offset into the shank's groove and draw the shank into or force it out of position, according to the direction of the motion.



400,258. RADIATOR. JOSEPH SHACKLETON, New York, N. Y. Filed Feb. 13, 1888. Serial No. 263,608. (No model.)

Claim.—1. The combination, with the horizontal pipes *a*, of the end column, A, having horizontal partitions and connected to the pipes *a*, and the end column, B, having horizontal partitions and vertical partition, and pipes for the supply of steam passing into and through the pipes in the lower portion of the radiator, substantially as set forth.

2. The combination, with the horizontal pipes *a*, of the end column, A, connected to said pipes and having horizontal partitions between the pairs of pipes *a*, the end column, B, also connected to the pipes *a*, and having a vertical partition, *d*, and horizontal partitions



400,258.

extending from the partition *d* to one side wall of the column, and the steam-pipes *e* and *f* passing through the two lower pipes *a* and connected to the steam-supply, substantially as and for the purposes set forth.

400,259. WOODEN RAKE. JAMES A. SHAFER, Richmondville, N. Y. Filed Nov. 30, 1888. Serial No. 291,344. (No model.)

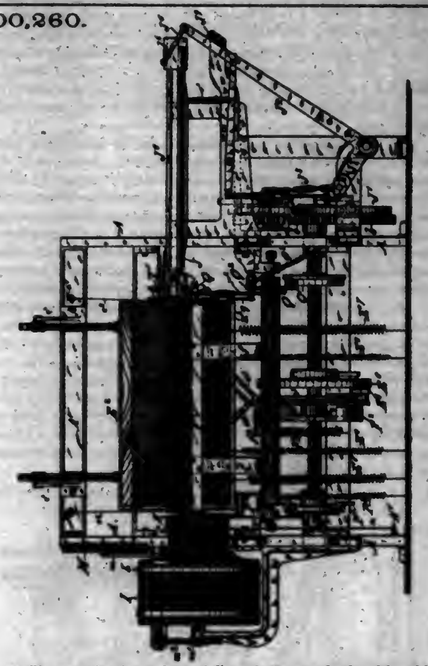
Claim.—In wooden rakes, the combination, with the rake-bows, of the rivets G G and a clasp, E, having the bridge-holes e^2 e^2 to receive said rivets, whereby the bows are only riveted to the clasp and not to the handle, as shown and described.

400,260. LOOM FOR WEAVING CHENILLE, &c. HALCYON SKINNER and EUGENE TYRRELL, Yonkers, N. Y., assignors to the Alexander Smith & Sons Carpet Company, same place. Filed Feb. 7, 1887. Serial No. 226,837. (No model.)

Claim.—1. The combination, substantially as before set forth, of the shifting yarn-holder constructed with a series of yarn-cases and the corresponding series of yarn-tubes which hold the ends of the yarn and which are connected with said yarn-holder so as to be shifted with it.

2. The combination, substantially as before set forth, of the shifting yarn-holder constructed with yarn-cases, with a tension device to prevent the yarns from rendering too freely from the yarn-cases.

3. The combination, substantially as before set forth, of the shifting yarn-holder with an index of the yarn-cases, which index is arranged upon the yarn-holder and moves with it.



4. The combination, substantially as before set forth, of the shifting yarn-holder with a face index of the yarn-cases.

5. The combination, substantially as before set forth, of the shifting yarn-holder constructed with yarn-cases, with the stop by which the said yarn-holder is held when a yarn is to be drawn from one of the yarn-cases.

6. The combination, substantially as before set forth, of the shifting yarn-holder constructed with yarn-cases, with a yarn-drawing device, by means of which the yarn is drawn from the yarn-cases across the loom.

7. The combination, substantially as before set forth, of the shifting yarn-holder constructed with yarn-cases and the yarn-drawing device, with the yarn-cutter by means of which the drawn strand of yarn is cut loose from the yarn-holder.

400,260.

8. The combination, substantially as before set forth, with a shifting yarn-holder constructed with yarn-cases, of the yarn-drawing device and the selvage-trimmer, whereby the ends of the strands of yarn which have been seized by the yarn-drawing device are trimmed to a substantially uniform length.

9. The combination, substantially as before set forth, of the yarn-tube and the yarn-drawing device constructed with spring-nippers adapted to be opened by being forced against the mouth of said yarn-tube.

10. The combination, substantially as before set forth, of the spring-nippers of the yarn-drawing device with the rod by which they are moved, and the intervening sliding shank and spring.

11. The combination, substantially as before set forth, of the nipper-jaws of the yarn-drawing device with the opener by which they are opened when their grip upon the yarn is to be relaxed, and the opening-cam by which said opener is operated.

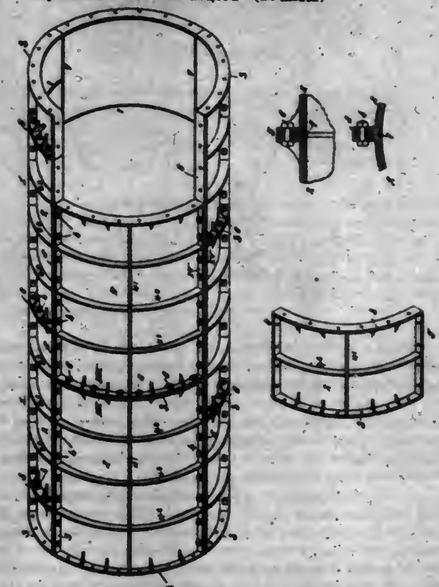
12. The combination, substantially as before set forth, of the nippers of the yarn-drawing device, the opener, and a cam for imparting the supplementary backward movement to the nippers.

13. The combination, substantially as before set forth, of the yarn-drawing device with the rebound-stop.

14. The combination, substantially as before set forth, of the drop-heddles, the tension device for the warp-threads controlled by said heddles, and the tension-relaxing device by which the acting force of said tension device is varied.

15. The combination, substantially as before set forth, of the whip-roll, the tension-weight thereof, the tension-lever, and the tension-cam by which said lever is operated.

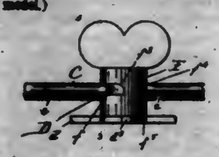
16. The combination, substantially as before set forth, of the three leaves of heddles, the heddle-lever, the connecting-rods between two of said leaves and the said heddle-lever, and the connections between one of said two leaves and the third leaf of heddles.



400,261. DEVICE FOR APPLYING HEAT TO THE BODY. DEXTER M. SMALL, Providence, R. I. Filed Feb. 24, 1888. Serial No. 265,221. (Model.)

Claim.—1. A device for making continuous warm or hot applications to the body, which consists of a receptacle for heating water, a hollow air-tight appliance suitable for contact with the person, and flexible tubes E and F, connecting the appliance and receptacle, all constructed and combined so as to operate substantially as set forth.

2. The heater constructed with an enlarged top and base separated by a contracted intervening neck, and having one or more sets of tubes extending out from the sides thereof, for the purpose specified, each set consisting of two tubes, one above the other, substantially as described.

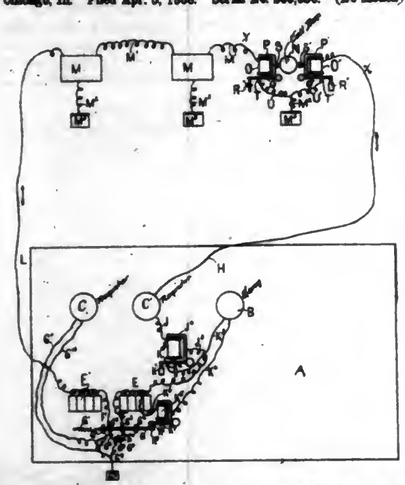


400,262. CONDUCTING-PIPE. GEORGE C. SMITH, Chicago, Ill. Filed May 22, 1888. Serial No. 274,084. (No model.)

Claim.—1. A conducting-pipe composed of sections, each having joining flanges and ribs, the distance from rib to flange and rib to rib being equal in all the sections, whereby the sections may be put together in break-joint style and the flange of one section be caused to coincide with a rib of the contiguous section, substantially as set forth.

2. A pipe composed of sections or segments having transverse joining flanges and ribs, such sections being put together in lap or break-joint style with their ribs and flanges meeting or coinciding throughout the circumference of the pipe, and the distance between the transverse flanges of some of said sections being different from the distance between such flanges of the other sections, whereby the ends of the pipe may be finished evenly, substantially as set forth.

400,263. TRANSOM-LIFTER. JOHN W. SMITH, Chicago, Ill., assignor to Edward Payson, same place. Filed May 21, 1883. Serial No. 274,800. (No model.)



Claim.—1. In a transom-lifter, the combination of the transom and its lifting-rod with a stationary eye-piece for the lifting-rod to pass through, and a revolving thumb-piece journaled on said eye-piece and provided with a projection adapted to engage the lifting-rod and hold it in position, substantially as specified.

2. The combination of the lifting-rod C having recesses *c*, and eye-piece D, having a base-flange, *d*, provided with a recess, d^3, with the revoluble thumb-piece F, provided with a sleeve having oblong slots f^2 f^2, the projecting edges *f* whereof are adapted to engage the recesses of the lifting-rod, and provided also with a stop, f^3, to engage the recess d^3 of the base-flange, substantially as and for the purpose set forth.

3. In a transom-lifter, the combination of a notched lifting-rod with a stationary eye-piece for the lifting-rod to pass through, a revolving thumb-piece swiveled on said eye-piece and carrying a projection adapted to engage the notches in said lifting-rod, and a spring or its equivalent for throwing it into such engagement, substantially as specified.

400,264. AUTOMATIC GROUNDING DEVICE. ELMER A. SPERRY, Chicago, Ill. Filed Apr. 5, 1888. Serial No. 269,656. (No model.)

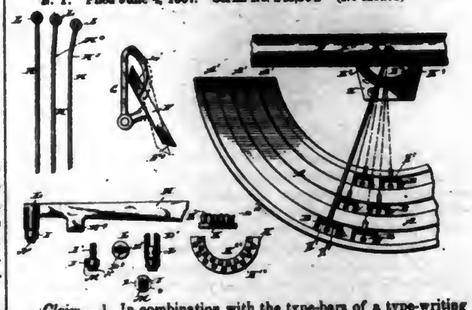
Claim.—1. The combination of a main normally-closed metallic circuit with an electro-magnet therein, a ground circuit and contact, a pivoted armature-lever adapted to move between such contact and such magnet, such armature held to such magnet by the influence of the current passing over the main line, and a motion-retarding device connected with such armature-lever, which permits the same to leave the magnet and engage the contact only when the current is discontinued for a considerable period of time.

2. The combination of a main normally-closed metallic circuit with an electro-magnet therein, a ground circuit and contact, a pivoted armature-lever adapted to move between such contact and such magnet, such armature held to such magnet by the influence of the current passing over the main line, and a retarding device connected with such armature-lever, which permits the same to leave the magnet and engage the contact only when the circuit is discontinued for a considerable period of time.

3. The combination of a main normally-closed metallic circuit with a call-box therein, an electro-magnet on each side of said call-box in the main circuit, a pivoted armature-lever controlled by each of said magnets, a ground-line and two contacts, one in the path of each of such levers, said levers attracted to the magnets by the influence of the current passing over the main line, and two motion-retarding devices connected with such armature-levers, which permit the same to leave the magnets and engage the contacts only when the current is discontinued for a considerable period of time.

4. The combination of a main normally-closed metallic circuit with an electro-magnet therein, a local circuit and a contact, a pivoted armature-lever adapted to move between such contact and such magnet, such armature held to such magnet, said local circuit containing an electro-magnet, in combination with a grounding-switch controlled by said magnet and connected with the battery, so as to ground the same when the main line is broken.

5. The combination of a main normally-closed metallic circuit with an electro-magnet therein, a local circuit and a contact, a pivoted armature-lever adapted to move between such contact and such magnet, such armature held to such magnet, said local circuit containing an electro-magnet, in combination with a grounding-switch controlled by said magnet and connected with the batteries, so as to ground the same when the main line is broken, and a second electro-magnet in the main line, with a pivoted armature-lever, and a ground-line and a contact-point in the path of said armature-lever.



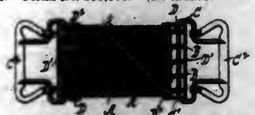
6. The combination of a normally-closed metallic circuit with an electro-magnet therein, a pivoted armature-lever controlled by said magnet, a ground-line and a contact-point in the path of such lever, a second electro-magnet in the main line, a pivoted armature-lever controlled thereby, a local circuit with contact-point in the path of said lever, an electro-magnet in such local circuit, a battery in the main circuit, a ground-line, and a switch controlled by said last-mentioned magnet and adapted to ground the battery, so that when the main line is broken it is grounded at the battery and on the line, so as to make a circuit, part ground and part metallic circuit.

7. The combination of a normally-closed metallic circuit with an electro-magnet therein, a pivoted armature-lever controlled by said magnet, a ground-line and a contact-point in the path of such lever, a second electro-magnet in the main line, a pivoted armature-lever controlled thereby, a local circuit containing an alarm, with contact-point in the path of said lever, an electro-magnet in such local circuit, a battery in the main circuit, a ground-line, and a switch controlled by said last-mentioned magnet and adapted to ground the battery, so that when the main line is broken it is grounded at the battery and on the line, so as to make a circuit, part ground and part metallic circuit.

8. The combination of a normally-closed metallic circuit with a series of call-boxes therein, an electro-magnet on each side of each box, a pivoted armature-lever attracted to such magnet by the influence of the current passing therethrough, a ground-line and contact-point in the path of each of such levers, a central-station magnet in such main line with similar armature-lever, a local circuit having a contact-point in the path of such lever and containing an electro-magnet, a ground-line contact-point, battery, and battery-grounding switch, the latter controlled by the electro-magnet in the local circuit.

9. The combination of a normally-closed metallic circuit with a series of call-boxes therein, an electro-magnet on each side of each box, a pivoted armature-lever attracted to such magnet by the influence of the current passing therethrough, a ground-line and contact-point in the path of each of such levers, a central-station magnet in such main line with similar armature-lever, a local circuit containing an alarm and having a contact-point in the path of such lever and containing an electro-magnet, a ground-line contact-point, a battery, and battery-grounding switch, the latter controlled by the electro-magnet in the local circuit.

400,265. TYPE-WRITING MACHINE. CHARLES SPIRO, New York, N. Y. Filed June 4, 1887. Serial No. 240,304. (No model.)



Claim.—1. In combination with the type-bars of a type-writing machine, a locking-rib having slots, the slots and type-bars being relatively constructed so that two or more bars are locked by one and the same slot in the rib, substantially as specified.

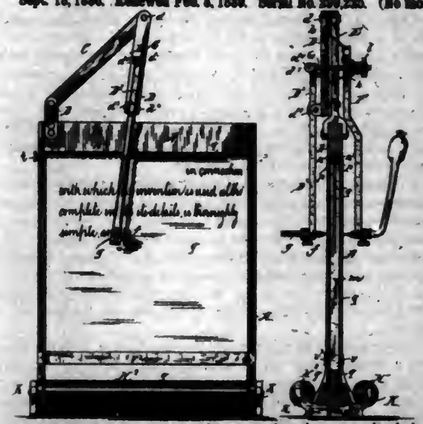
2. In a type-writing machine, a series of type-bars pivoted in brackets mounted in a series of grooves concentric with the printing-point, in combination with a locking-plate having a rib concentric with the printing-point, and provided with slots for the reception of the type-bars, substantially as specified.

3. The combination of a type-bar, a block slotted to embrace the same and longitudinally bored for the reception of a type-bearing ping, the bore of the block extending from end to end thereof and forming passages at each side of the bar, substantially as specified.

4. A type-plug having a roughened shank, in combination with a block bored longitudinally to receive the same loosely, and slotted to a width less than that of the bore, and with a type-bar, substantially as specified.

400,266. ELASTIC STRAP. LEWIS STEIN, New York, N. Y. Filed Nov. 15, 1888. Serial No. 290,870. (No model.)

Claim.—In an elastic adjusting-strap for garments, a series of spiral springs, A, each having its free ends formed into coils B at right angles to the springs, combined with wire links C, having plain straight members inserted in said end coils at the opposite ends of the springs, thereby preserving the full elasticity of the springs, and sheet-metal housings D, folded to embrace said members of the links and the end portions of the springs for producing a direct connection of both the springs and the housings with said links, substantially as shown and described, for the purpose set forth.



400,267. GAS-PRESSURE INDICATOR. ALFRED THOMAS, West Cowes, Isle of Wight, and PHILIP THOMAS, Buckingham, County of Bucks, England. Filed July 11, 1888. Serial No. 279,695. (No model.) Patented in England Jan. 30, 1888, No. 1,266.

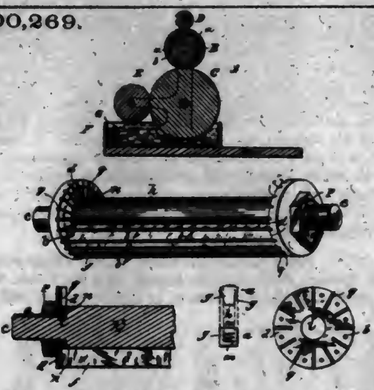
400,267.

Claim.—A gas-pressure indicator having no fixed joints, and consisting of a supporting back piece provided with a shelf, an outer liquid-containing tube closed at its bottom and supported on said shelf, a cap secured to the upper end of the outer tube and provided with a central orifice, and an inner tube centered in the outer tube and having its lower end open and in free communication with the outer tube above the closed bottom thereof, said inner tube extending upward through the cap and having its upper open end adapted to connect with a gas-inflow tube for passing gas down the inner tube and causing the liquid therein to pass through the open lower end of said inner tube into the base of the outer tube, substantially as described.

400,268. APPARATUS FOR PRODUCING CHARACTERS IN THEIR REVERSE. CHARLES A. THOMPSON, New York, N. Y., assignor to the Rapid Duplicating and Copying Machine Company, same place. Filed Sept. 13, 1888. Renewed Feb. 8, 1889. Serial No. 299,235. (No model.)

Claim.—1. In an apparatus for producing characters in their reverse, the combination, with a tablet, of an arm supported to be moved in a plane parallel to one face of the tablet, and having a tracing-point at its end, and an arm connected to the movable arm to move in a plane parallel to the other face of the tablet in conjunction with the tracing-arm, and having a marking-point at its end, as shown and set forth.

2. In an apparatus for producing characters in their reverse, the combination, with a tablet, of an arm supported to be moved in a plane parallel to one face of the tablet, and having a tracing-point at its end, and an arm having a marking-point at its end and connected to be moved in conjunction with the movable arm in a plane parallel to the other face of the tablet, and having a connection with the said arm for being moved toward and from the face of the tablet in a manner corresponding with the motion to and from the tablet of the same, as shown and set forth.



3. The combination, with a tablet or board, A, of bars D D^2, the one pivoted to the other, and the bar D^2 carrying at its end a pencil or tracing point, and the bar D hung to said tablet through a suitable joint, and of bar F, connected to said bar D by a spring-strip, E, and a rod, G, hung to the end d^2 of the bar D, passing to and secured in contact with the said bar F, substantially as described, for the purpose specified.

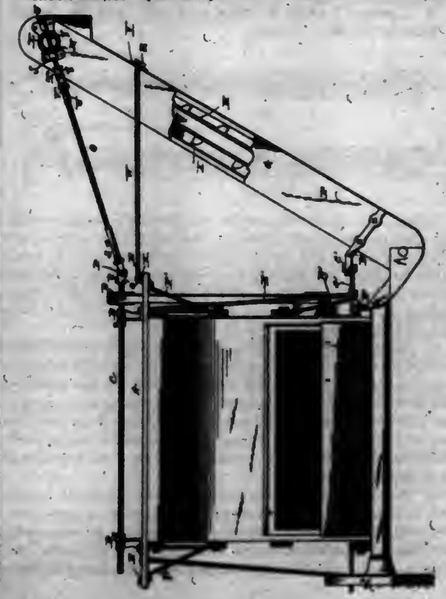
4. The combination, with a tablet or board, A, of bars D D^2, the one pivoted to the other, and the bar D^2 carrying at its end a pencil or tracing point, and the bar D hung to said tablet through a suitable joint, and of bar F, connected to said bar D by a spring-strip, E, and a rod, G, hung by a swivel-joint to the end d^2 of the bar D^2, passing to and loosely through the end of said bar F_2, and having a thumb-screw, *l*, substantially as described, for the purpose specified.

5. A tablet made hollow or chambered and having a pair of feed-rollers, *p p*, a slot, *s*, and a spring-strip, *v*, in combination with a stand, L, for supporting said tablet, provided with paper-roll H, substantially as described, for the purpose specified.

400,269. ROTARY PRINTING-MACHINE. CHARLES A. THOMPSON, New York, N. Y. Filed May 16, 1887. Renewed Feb. 8, 1889. Serial No. 299,354. (No model.)

400,269.

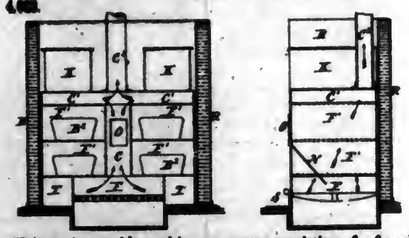
Claim.—1. In a printing-machine, the type-cylinder consisting of the cylinder having journal-bearings provided with screw-threads and longitudinal grooves *e*, the collars *d d*, having radial-face grooves, and splines *i*, matching the journal-grooves, the clamping-nuts, and the type-confining rules or plates, the latter and the collars being removable for interchangeable parts to suit the desired size and style of type to be used, substantially as described.



2. In a printing-machine, the type-cylinder having collars at each end, provided with radial grooves on their inner faces, and rules or plates bound within said grooves and maintained in axial alignment by means which clamp and lock the collars to the cylinder, as herein set forth.

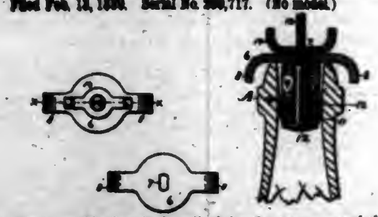
3. In a printing-machine, the combination, with a type-cylinder, of an impression-roller, a squeezing-roller, and a tank for containing water, arranged to immerse the lower portion of said impression-roller, substantially as described, for the purpose specified.

4. In a printing cylinder or drum, the combination of a spindle having shoulders near its ends, collars upon the spindle and bearing against the said shoulders and formed with radiating grooves, clamping-nuts upon the ends of the spindle bearing against the collars, and ribs or rules extending longitudinally of the spindle, and having their ends in the grooves of the collars, as shown and set forth.



5. The combination of a type cylinder or drum having longitudinal pockets formed by longitudinal and radial partitions or rules, and type having two sides or edges beveled or converging toward the inner end to fit in the pockets, and having the face formed in an arc corresponding to and concentric with the circumference of the drum, as shown and described.

400,270. GRAIN-ELEVATOR ATTACHMENT FOR THRASHING-MACHINES. ELIJU M. THORPE, Wapella, Ill. Filed Feb. 28, 1888. Serial No. 265,606. (No model.)



Claim.—A grain-elevator attachment for thrashing-machines, comprising the yoke D', pivoted to a strip, A', the forked brace W, pivoted to a socket-plate at one end and attached to the elevator at the other end, said strip and socket-plate being suitably braced and secured to a thrashing-machine near its top and bottom, respectively, the shaft C, journaled in bearings secured to the separator, the short shaft K of the elevator, the short shaft N, journaled in bearings attached to the side of the elevator, the beveled gear-wheels connecting the shafts K and N, the tumbling-shaft capable of moving longitudinally in the sleeve S, and the universal joints P and T, which respectively connect the shaft C and the shaft N to the tumbling-shaft, substantially as specified.

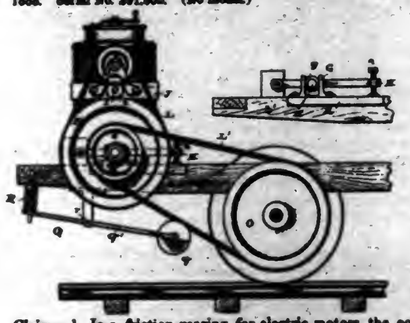
400,271. PORTABLE COOKING-STOVE. ALFRED S. TOMKINS, Holmwood, Caterham, County of Surrey, England. Filed Nov. 7, 1888. Serial No. 290,294. (No model.) Patented in England Mar. 26, 1888, No 4,022.

Claim.—A portable cooking apparatus consisting of a fire-place, F, flues C and C', chimney C², ovens F', and boilers K, in combination with the water-casing R, substantially as described.

400,272. BOTTLE-STOPPER. JOSEPH A. TRAUT, New Britain, Conn. Filed Feb. 13, 1889. Serial No. 299,717. (No model.)

Claim.—The herein-described bottle-stopper, consisting of the cap-plate provided with an oblong opening and handles, a conical-ended plug, an expansible block, the bolt 12, having a flattened shank, and the thumb-nut 14 secured thereon, substantially as described, and for the purpose specified.

400,273. TABLE IMPLEMENT. LOUIS P. VALIQUET, Brooklyn, N. Y., assignor to Louise W. Strong, same place. Filed Oct. 26, 1887. Serial No. 253,432. (No model.)

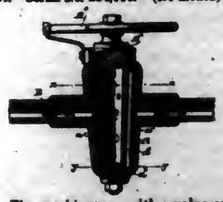


Claim.—1. A table implement consisting of a handle or stem with a hooked jaw fixed thereto, in combination with a sliding rod arranged to slide in said handle, a movable spur fixed on the lower end of said sliding rod, whereby when said rod is depressed said spur is moved toward said fixed jaw, and a retracting-spring in said handle engaging said rod and adapted to draw said movable spur away from said hooked jaw, substantially as set forth.

2. A table implement consisting of a handle or stem with a hooked jaw fixed thereto, said jaw being formed with two tines spread apart, in combination with a sliding rod arranged to slide in said handle, a movable spur fixed on the lower end of said sliding rod, whereby when said rod is depressed said spur is moved toward the space between said tines, and a retracting-spring in said handle engaging said rod and adapted to draw said movable spur away from said hooked jaw, substantially as set forth.

3. The combination of tubular handle A, having recess G, hooked jaw B, fixed to said handle and formed with two tines spread apart, movable spur C, adapted to said fixed jaw and co-operating therewith, rod E, sliding through said handle carrying said movable spur, and having shoulder *a* near its upper end, and retracting-spring F within said recess G, and bearing against the shoulder *a*, whereby said spur C is normally held away from said fixed jaw B, substantially as set forth.

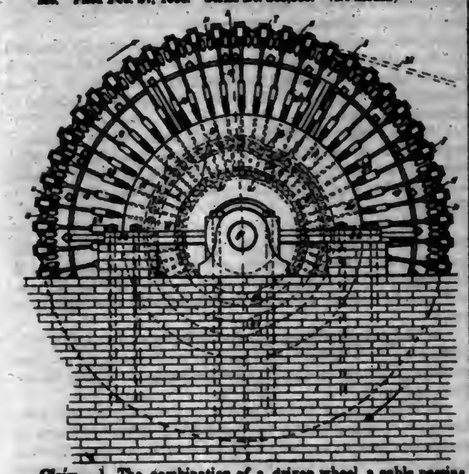
400,274. FRICTION-GEAR FOR ELECTRIC MOTORS. CHARLES J. VAN DEPOELE, Lynn, Mass. Filed July 14, 1887. Renewed Nov. 24, 1888. Serial No. 291,302. (No model.)



Claim.—1. In a friction-gearing for electric motors, the combination of a friction-pinion on the armature-shaft, a friction-pulley pressed against said pinion from one direction, a friction-pulley separately mounted and pressing thereagainst from another direction, elastic belts passing over both the friction pulleys and acting to hold them against said pinion, a driving-pulley on the counter-shaft, a pulley on the axle to be driven, and belts between the driving-pulley and the axle-pulley, whereby the motion of the armature-shaft is communicated thereto, substantially as described.

2. A gearing for electric motors, comprising a friction-pinion on the armature-shaft, a counter-shaft mounted in movable bearings and adjustable to and from the armature-shaft, a friction-pulley on the counter-shaft engaging the pinion, a friction-pulley independently mounted, and also in contact with the pinion, flexible belts connecting the friction-pulleys and acting to press them oppositely upon the pinion, a driving-pulley also on the said counter-shaft, and connections between the driving-pulley and the axle of the car, substantially as described.

3. In a gear for electric motors, the combination, with the motor having a friction-pinion on its armature-shaft, of a counter-shaft mounted in adjustable bearings, means for adjusting said bearings with respect to the armature-shaft, consisting of a pivoted lever and adjusting-screw, a friction-pulley in contact with the armature-shaft pinion, an additional friction-pulley, also in contact therewith, spring-belting connecting the friction-wheels and acting to press them together upon the friction-pinion, a driving pulley or pulleys also upon said counter-shaft, one or more pulleys on the axle to be driven, and spring-belting extending between the counter-pulley and the pulleys to be driven, substantially as set forth.



400,275. REGULATING-VALVE. WILLIAM VOGEL, Chicago, Ill., assignor to the Vogel Petroleum Heating Company, same place. Filed Apr. 15, 1887. Serial No. 234,908. (No model.)

Claim.—1. The combination, with a valve-casing provided with a single channel for the passage of the fluid therethrough, of a valve-plug fitted to turn in said casing, and provided with a series of passages of unequal size adapted to be brought separately into register with the said channel of the valve-casing and arranged at such distances apart that one only of the said passages can be brought into register at the same time, a stem extending from the plug for turning the same, and a hand-wheel or other device engaging said stem and carrying figures or characters indicating which of the passages in the plug is in position to give passage to the fluid, substantially as described.

2. The combination, with the valve-casing provided with recesses *a a'*, constituting a single channel for the passage of fluid therethrough, of a hollow valve-plug formed with a plurality of openings of unequal size in the walls thereof, said openings being adapted to be brought separately into register with the recess *a*, and passages extending from the interior of the plug to the recess *a'*, substantially as described.

400,276. GRIP-PULLEY WHEEL. RICHARD P. WALSH, St. Louis, Mo. Filed Feb. 27, 1888. Serial No. 265,262. (No model.)

Claim.—1. The combination of a driven wheel, a cable passing thereabout, clamps carried by said driven wheel, two series of rods connected to said clamps, a guide-wheel holding said rods in position and revolving with said driven wheel, and cams controlling said rods to intermittently clamp the cable to the driven wheel, for the purpose described.

2. The combination of a driven wheel, a cable passing over said wheel, clamps intermittently clamping said cable to said wheel, rods having elastic sockets in them intermediate of their ends, which rods are connected to said clamps, and a disk having cam-grooves controlling said rods, whereby said elastic sockets compensate for any irregularity of adjustment and operation and prevent undue pressure being thrown upon the cable.

3. A grip-pulley wheel having clamps arranged around the periphery thereof, rods connected to said clamps, and a stationary disk with cam-groove controlling said rods, whereby the cam-disk puts on and takes off the clamps.

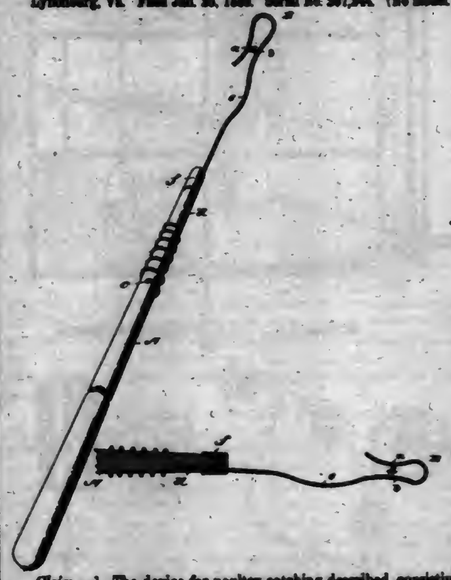
4. A grip-pulley wheel having clamps arranged around the periphery of said wheel, two rods connected to each clamp, one of which rods throws said clamp in and out of the plane of the cable, and the other of which raises said clamp and draws it down upon said cable, and a disk having cam-grooves controlling said rods.

5. A grip-pulley wheel having clamps pivoted in movable bearings journaled in the periphery of said wheel, a rod connected to the clamp, a second rod connected to said movable bearings, whereby the clamps are swung into and out of the plane of the cable and the cable is clamped and unclamped, and a disk having cam-grooves controlling said rods.

6. A grip-pulley wheel having clamps pivoted in movable bearings journaled in the periphery of said wheel, rods for said clamps, a stationary disk provided with cam-grooves which control said rods, and a guide-wheel revolving with said grip-pulley, substantially as described.

7. The combination, substantially as hereinbefore set forth, of the driven wheel 3, carrying the clamps 7, journaled in the bifurcated piece 9, the rods 13 15, connected to said bifurcated piece 9, and the clamps 7, respectively, a disk having grooves controlling said rods, a cable, and a guide-wheel, 14.

8. The combination, substantially as hereinbefore set forth, of the wheel 3, driven by the gear-wheel 2, the rim 6, carried thereby, the clamps 7, as described, journaled on said rim, the rods 13 15, the guide-wheel 14, mounted on the hub of said wheel 3, a stationary disk carrying the cam-grooves 21 22, controlling said rods, and clamps to intermittently clamp the cable.

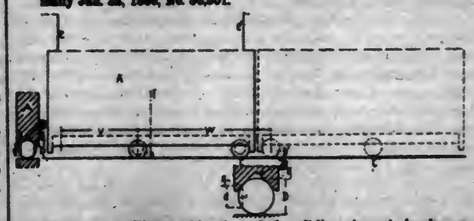


9. The combination, substantially as hereinbefore set forth, of the driven wheel 3, the rim 6, secured to the same, the clamp 7, carried by said rim and mounted in the part 9, the rods 13 and 15, the guide-wheel 14 for said rods, a spring-socket in said rods, rollers carried by said rods at their inner ends, and a cam-disk, 20, bearing the two cam-grooves 21 22, in which said rollers travel, as and for the purpose described.

10. The combination, as hereinbefore set forth, of the wheel 3, clamps 7, pivoted in the bifurcated piece 9, journaled eccentrically in the periphery of said wheel, a rod connected with said bifurcated piece, a rod connected with said clamp, a guide-wheel revolving with the aforementioned wheel, forming bearings for said rods, and a stationary disk having two cam-grooves controlling the two series of rods.

11. The combination of a wheel, as 3, a cable, and a grip-pulley therefor secured directly upon said wheel, for the purpose described.

12. The combination of the spur-wheel 3, a rim, 6, mounted upon said wheel, forming a pulley for a cable, clamps for intermittently clamping said cable to said rim, and a pinion-wheel for driving said spur-wheel intermeshing with the same, substantially as and for the purpose described.

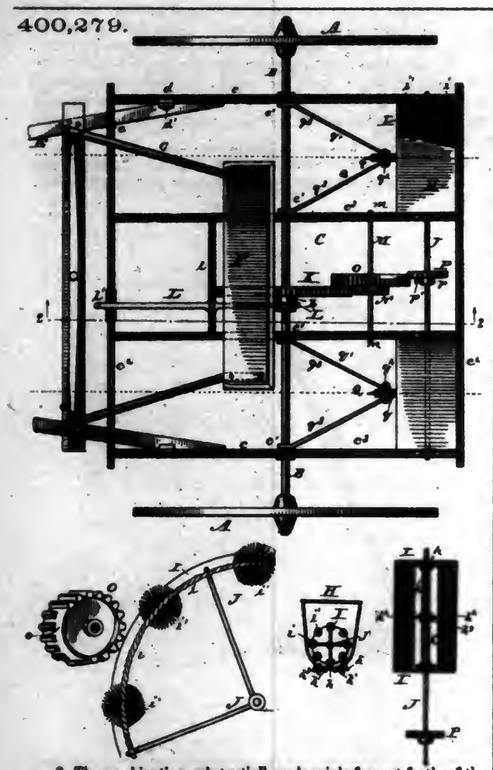


400,277. DEVICE FOR CATCHING POULTRY. JACOB I. WALK, Lynchburg, Va. Filed Jan. 23, 1888. Serial No. 297,244. (No model.)

Claim.—1. The device for poultry-catching described, consisting of the wooden handle A and wire extension B, united by attaching one end of the wire to the handle, winding it around the same, and finally securing it in a groove in said handle, by a band, *f*, substantially as specified.

2. An improved article of manufacture, consisting of a handle, the wire secured thereto, as shown, and having at its outer end a hook with inward bends *a b*, to form a contracted entrance, and also a bend, *c*, adjacent to the hook, substantially as specified.

400,278. DOOR-HANGER. STEPHEN WERNER, Vienna, Austria-Hungary. Filed Apr. 6, 1887. Serial No. 233,903. (Model.) Patented in Austria-Hungary Aug. 6, 1884, No. 17,895 and No. 36,155, and in Germany Jan. 22, 1886, No. 36,501.



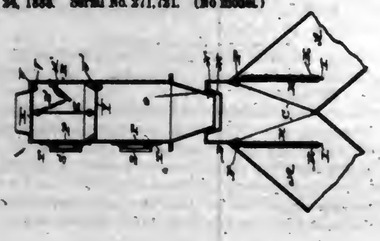
Claim.—1. The combination of the sliding door A, having an angular groove, two balls, *b c*, and a surface supporting the balls, the door straddling the balls with its grooved portion, substantially as and for the purpose described.

2. The combination, with the sliding door A, of a bar, *k*, having an angular groove, two balls, *b c*, and a surface supporting the balls, the said bar *k* straddling the balls with its grooved portion, substantially as and for the purpose specified.

400,279. MACHINE FOR DISTRIBUTING INSECT-POWDER, &c. JAMES H. WHITE, McDonough, N. Y. Filed Sept. 21, 1888. Serial No. 285,973. (No model.)

Claim.—1. The combination, substantially as hereinbefore set forth, of the carrying-wheels, the axle, the main frame or body mounted thereon and free to rock in bearings on the axle, the hopper on the rear end of the frame, the shafts connected to the front end of the frame, the downwardly-extending plates secured to the side beams of the frame and having curved slots, and the bolts adjustable in the slots and connecting the rear ends of the shafts with the plates.

400,279.



2. The combination, substantially as hereinbefore set forth, of the frame or body, the carrying-wheels, their axle mounted in bearings in the frame or body, the cog-wheel mounted on the axle and adjustable longitudinally thereon, the hopper on the rear end of the frame, the agitator therein, the agitator-shaft, and gearing between the agitator-shaft and the cog-wheel on the main axle.

3. The combination, substantially as hereinbefore set forth, of the main frame or body, the carrying-wheels, their axle, the cog-wheel mounted on the axle and adjustable longitudinally thereon, the hopper on the rear end of the frame, the agitator within the hopper, and the agitator-shaft, the cog-wheel longitudinally adjustable on said shaft and gearing between the cog-wheel on the agitator-shaft and the cog-wheel on the main axle.

4. The combination, substantially as hereinbefore set forth, of the main frame or body, the carrying-wheels, their axle, the cog-wheel longitudinally adjustable on the axle, the hopper on the rear end of the frame, the agitator therein, the agitator-shaft, the cog-wheel on the agitator-shaft, the small cog-wheel engaging with the cog on the main axle, the shaft to which it is secured, and the cog-wheel on said shaft, provided with a continuous series of teeth on one side of its periphery and a broken series of teeth on its opposite side, for the purpose specified.

5. The combination, substantially as hereinbefore set forth, of the hopper having a longitudinal opening at its lower end, the agitator-shaft extending longitudinally through the hopper, the disks mounted thereon, the twisted wires stretched between the disks, and the bristles twisted in with the wires.

400,280. FUEL-FEEDING PIPE. W. ALANSO WILCOX, Grand Rapids, Mich., assignor to Foster Stevens & Co., same place. Filed Apr. 24, 1888. Serial No. 271,731. (No model.)

Claim.—1. The combination of the inclined pipes A, having the shoulders or offsets C at their upper ends, and the valves H, hinged or pivoted in the said pipes and adapted to close against the said shoulders or offsets, substantially as described.

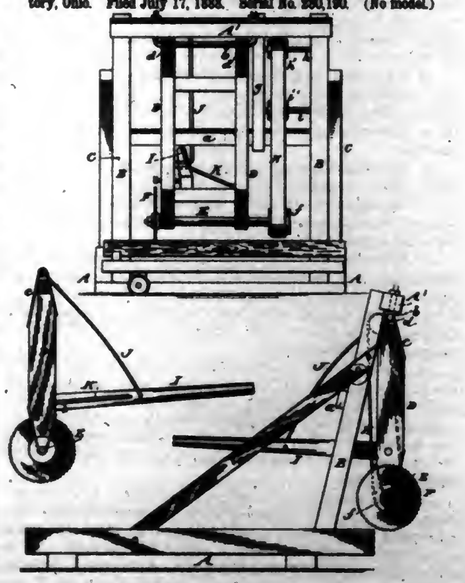
2. The combination of the inclined pipes A, having the shoulders or offsets C at their upper ends, and the valves hinged or pivoted in the said pipes and provided with the packings I, of rubber or suitable material, projecting beyond the edges of the valves and adapted to effect tight joints with the pipes, substantially as described.

3. The combination of the inclined pipes A, the box B, connecting the upper ends of said pipes and forming the shoulders or offsets C, and the valves H, hinged or pivoted in the upper ends of the pipes and adapted to close against said shoulders or offsets, substantially as described.

4. The combination of the box B, having the opening D and the slide or cover for said opening, the pipes A, having their upper ends connected to and communicating with the box, and the valves H, hinged or pivoted in the pipes, adapted to open and close the same and provided with the operating crank-handles G, substantially as described.

5. The double safety-gate for fuel-feeding pipes, having two doors with an air-space between them, said two doors connected and operated simultaneously by one movement in opening and closing, substantially as described.

6. In combination with a double safety-gate for fuel-feeding pipes, such gate consisting of two doors connected together and simultaneously operated by one movement and with an air-space between, a slide or door in the pipe between the two parts of the gate, whereby such intervening air-space can be exposed to the outer air, substantially as described.

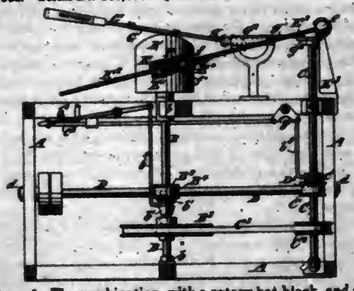


7. The combination, with the box O, of the valves X Y, hinged or pivoted therein and arranged one above the other, and the link arranged within the box O and connecting the said valves, whereby they may be closed simultaneously and caused to form an air-space in the box between them, substantially as described.

8. The combination of the box O, having the opening on one side, the valves X Y, hinged in the said box, one of said valves having the arm W, whereby it may be operated, and the link connecting the said valves, substantially as described.

9. The combination of the box O, having the opening R on one side, the valves X Y, hinged in the said box at a distance apart, for the purpose set forth, the valve A', hinged to one side of the box above the opening R, and the link connecting said valve to the valve X, substantially as described.

10. In fuel-feeding-pipes for furnaces, the two inclined pipes forming branches of the main pipe, each of said inclined pipes having at or near the point of bifurcation an independent valve or gate adapted to close that pipe and direct the entire current of air through the other, said gates also adapted to be both opened at the same time entirely out of the passage-way, substantially as described.



400,281. SWINGING SAW. EDWARD R. WILLIAMS, Mount Victory, Ohio. Filed July 17, 1888. Serial No. 280,190. (No model.)

Claim.—1. The combination, with the upright frame, the ball *b*, and the saw-frame pivotally supported at its upper end on said ball and carrying the saw, of the lever attached at one end to the cross-bar of the saw-frame, the inclined brace-rod J, attached at one end to said lever and at its other end to the said ball, and the horizontal brace-rod K, extending at substantially right angles to the brace-rod J and attached at one end to the lever and at its other end to one of the side bars of the saw-frame, substantially as and for the purpose specified.

2. The combination, with the upright frame, the ball *b* on the under side of the top cross-bar of said frame, and the saw-frame pivotally supported at its upper end on said ball, of the shaft A, arranged eccentric to the line of said ball, the saw-arbor carried by the saw-frame, the pulley *f* thereon, the pulley *h'* on the shaft *h*, and the belt connecting and passing over said pulleys, substantially as shown and described.

400,282. MACHINE FOR POUNCING HATS. JOHN C. WILSON, Yonkers, N. Y., assignor to John T. Waring, same place. Filed July 19, 1888. Serial No. 280,404. (No model.)

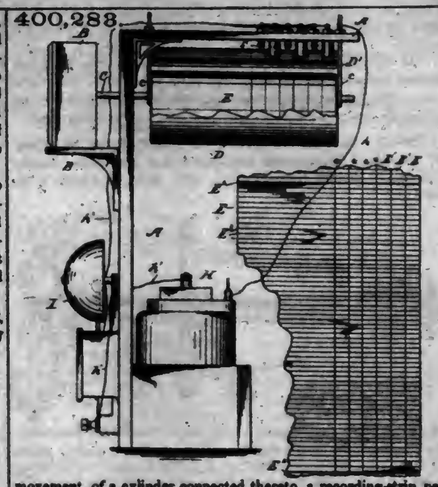
Claim.—1. The combination, with a rotary hat-block, and a roller having a pouncing-surface, and which is free to be rotated by contact with the rotating hat on said block, of an elastic pouncing-pad and a movable support common to both said roller and pouncing-pad, whereby said roller and pouncing-block may be together moved toward and from the rotary hat-block, substantially as and for the purpose herein described.

2. The combination, with a rotary hat-block and pouncing-roller, of a movable support for the said roller, and an elastic pouncing-pad carried by said support in such relation to said roller that in the movement of the said roller toward the hat on the block the said pad will first reach the hat, substantially as herein described.

3. The combination, with a rotary hat-block, and a roller having a pouncing-surface, and which is free to be rotated by contact with a hat on said block, of a movable support for the said roller, and an elastic pouncing-pad carried by said support in such relation to said roller that when not subjected to pressure toward the hat-block it may hold the said roller out of contact with the hat thereon, but when pressed against the hat may permit the roller also to come in contact therewith, substantially as and for the purpose herein described.

4. The combination, with a rotary hat-block, and a roller having a pouncing-surface, and which is free to be rotated by contact with a hat on said block, of a movable holder for said roller, and an elastic pouncing-pad connected with said holder in a position which brings a portion of the surface of said pouncing-pad nearer than the periphery of the said roller to the hat-block, substantially as and for the purpose herein described.

5. The combination, with a rotary hat-block, a pouncing-roller capable of being rotated by contact with a rotating hat on said block, of a pouncing-pad, and a holder for said roller and pad, and means, substantially as herein described, for changing and securing the positions of the said pouncing pad and roller relatively to each other in said holder, substantially as herein described.



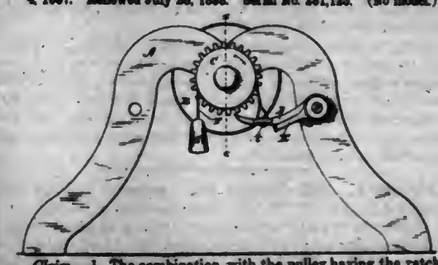
6. A pouncing-pad for pouncing hats, having an elastic flexible portion projecting beyond the body of said pad and capable of bending over the said body, substantially as and for the purpose herein described.

7. The combination, with a rotary hat-block, a pouncing-roller which is free to be rotated by contact with a hat on such block, and a pouncer having a reciprocating motion, of two separate hand-levers, one for carrying said roller and the other for carrying said reciprocating pouncer, substantially as herein described, whereby the said roller and reciprocating pouncer may be manipulated together or separately, as herein set forth.

400,288. TIME-RECORDER. HARVEY R. ADAMS, Marseilles, Ill. Filed Apr. 16, 1888. Serial No. 270,853. (No model.)

Claim.—1. In a time-recorder, the combination, with a clock-movement, of a cylinder connected thereto, a recording-strip passing over said cylinder and moving with the same, independent recording-levers for marking or perforating the recording-strip, and independent keys which engage their respective levers to operate the same both when inserted and when withdrawn, substantially as and for the purposes specified.

400,283.

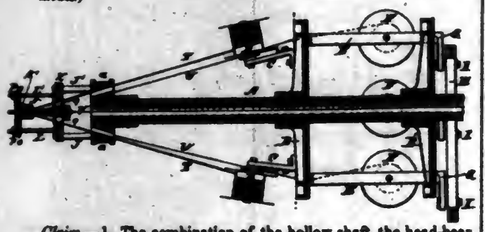


2. In a time-recorder, the combination, with the clock-movement, of a cylinder connected therewith, a suitably-divided recording-strip passing over said cylinder, a series of recording-levers arranged to mark or perforate the recording-strip at different distances from its lateral edges, the slotted sleeves into which the ends of said levers extend, and independent keys, one for each lever, adapted to fit the corresponding slotted sleeves, and when inserted therein to engage with and operate the recording-levers both when inserted and when withdrawn, substantially as and for the purposes specified.

3. In a time-recorder, the combination, with the clock-movement, the cylinder connected thereto, and the recording-strip passing over said cylinder, of the levers F, each provided with a tail-piece, F^2, pivoted to yield downward, but not upward, a suitable fulcrum for said tail-piece when depressed, the slotted sleeve F^3, into which the end of said tail-piece projects, and a spring-key, G, having cam or enlargement *g'* to engage the end of said tail-piece both when inserted and when withdrawn, substantially as and for the purposes specified.

4. In a time-recorder, the combination, with the clock-movement, of the cylinder connected thereto and provided with a covering of tin-foil or other conductive material, a suitably-divided recording-strip of paper or other non-conductive material passing over and actuated by said cylinder, a series of recording-levers, each provided with a point constructed of conducting material, keys for operating said levers to cause them to pierce the recording-strip and come in contact with the conducting-surface of the cylinder, a battery or other source of electricity, one pole of which is connected to the cylinder and the other pole of which is connected to each of the lever-points, and an alarm or bell arranged in the circuit and adapted to operate when the circuit is closed, substantially as and for the purposes specified.

400,284. DEVICE FOR PREVENTING THE BACKWARD MOVEMENT OF MACHINERY. JAMES A. ALLEN, Adams, Mass. Filed Oct. 4, 1887. Renewed July 26, 1888. Serial No. 281,123. (No model.)



Claim.—1. The combination, with the pulley having the ratchet-teeth, of the pawl, the belt or strap, and the weight, substantially as described.

2. The combination, with the pulley having the ratchet-teeth, of

the pawl, the belt or strap, the weight, and the stop E, substantially as described.

3. The combination, with the pulley and ratchet, of the strap held in frictional contact with the pulley, the pawl attached to one end of the strap and the counterbalancing weight to the other, and the stop for limiting the movement of the pawl, substantially as described.

400,285. MACHINE FOR MAKING STRANDS FOR WIRE ROPES, &c. THOMAS C. BARRACLOUGH and JOHN F. KAY, Manchester, County of Lancaster, England. Filed Nov. 13, 1886. Serial No. 218,305. (No model.)

Claim.—1. The combination of the hollow shaft, the head-bearing, the lay-plate, the guide-ring Q, the dies, and the conical nozzle supported between the dies and the lay-plate, substantially as set forth.

2. The combination of the hollow shaft, the lay-plate carried by said shaft, the die-studs having their inner ends fastened to the lay-plate, the cross-bar adjustably held upon the free ends of the die-studs, the dies, and the conical nozzle supported between the lay-plate and said dies, substantially as shown and described.

3. The combination of the hollow shaft and the head-bearing, the lay-plate, the guide-ring, the dies, and the conical nozzle carried by one end of the hollow shaft, the two rings keyed near the opposite end of said shaft, the brackets having bobbin-supporting arms fastened to the inner ring, the fliers having corresponding bobbin-supports journaled between the rings, and means, as the cranks and crank-ring, for moving said fliers about their axis, substantially as and for the purpose described.

400,286. TOOL-HOLDING BOX. GEORGE H. BARTLETT, Short Hills, N. J. Filed Oct. 29, 1888. Serial No. 289,490. (No model.)

Claim.—1. A tool holder or receptacle provided with a plurality of cells or compartments, combined with a recessed cover, a rod rigidly attached to the cover, and a second rod having pivotal or hinged connection with the rod first mentioned, said tool holder or receptacle being provided with a guide for the rods adapted to engage both of the same when the latter are in alignment with each other and the cover is in place upon the receptacle, substantially as described.

2. A tool holder or receptacle consisting of a block of wood provided with a plurality of cells or compartments, combined with a recessed cover, a rod rigidly attached to the said cover, and a second rod having pivotal or hinged connection with the rod first mentioned, said block being provided with internal guide-apertures adapted to receive both of said rods when the latter are placed in alignment with each other, substantially as described.

3. A tool holder or receptacle comprising a plurality of slabs or layers grooved upon their adjacent faces to form a series of cells or compartments to receive the tools, a recessed cover, a rod rigidly attached to said cover, and a second rod hinged or pivoted to the said rod first mentioned, said slabs or layers being provided also with grooves upon their adjacent faces, which form a recess to receive said rods, substantially as described.

400,287. TOOL-HOLDING BOX. GEORGE H. BARTLETT, Short Hills, N. J. Filed Oct. 29, 1888. Serial No. 289,491. (No model.)

Claim.—1. As a novel article, a tool holder or receptacle consisting of two exterior slabs or layers provided with grooves upon their inner faces which terminate short of the lower ends of the said slabs or layers, and one or more intermediate layers provided with similar grooves upon both faces, said layers being secured together with the grooves therein opposite each other to form a series of compartments

400,287.

or cells, and a cover connected with the upper end thereof, said cover being recessed in its inner face to receive the ends of the tools which project from the compartments or cells, substantially as described.

2. As a novel article, a tool holder or receptacle consisting of two exterior slabs or layers grooved upon their inner faces, and one or more intermediate layers grooved upon both faces, said layers being secured together with the grooves therein opposite each other to form a series of straight rows of compartments or cells, and a cover provided on its inner face with a plurality of grooves arranged severally over the rows of compartments or cells, and forming recesses to receive the ends of the tools which project from said compartments or cells, substantially as described.

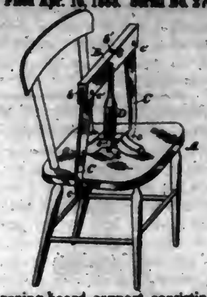
3. A tool holder or receptacle consisting of a wooden block provided with a plurality of cells or compartments, combined with a recessed cover and a cylindric rod attached to the cover and fitting and sliding within a guide-recess formed in the said block, substantially as described.

4. A tool holder or receptacle provided with a plurality of compartments or cells, combined with a recessed cover, a cylindric rod rigidly attached to the cover and having sliding and rotating connection with the receptacle, and a second shorter rod secured in said cover and having sliding connection with the receptacle, substantially as described.

5. A tool holder or receptacle comprising a plurality of slabs or layers grooved on their adjacent faces to form a series of cells or compartments to receive the tools, a cover, and a cylindric rod rigidly attached to the cover, said slabs or layers being provided also with grooves upon their adjacent faces, which form a guide-recess to receive said rod, substantially as described.

400,288. TOOL-HOLDING BOX. GEORGE H. BARTLETT, Short Hills, N. J. Filed Jan. 31, 1889. Serial No. 298,195. (No model.)

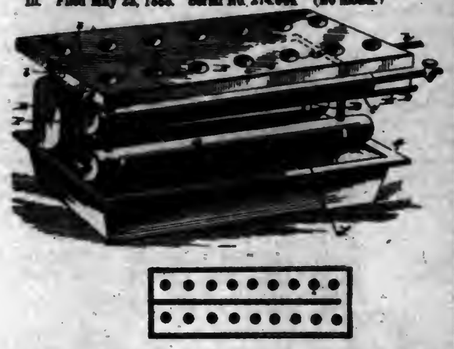
Claim.—1. As a novel article, a tool-holding box or receptacle consisting of a block formed of a plurality of slabs or layers provided with grooves upon their adjacent faces, said layers being secured together with the grooves therein opposite each other to form a series of compartments or cells, and a series of plugs inserted in the said grooves at the lower end of said block to close the lower ends of the compartments or cells therein, substantially as described.



2. As a novel article, a tool-holding box or receptacle consisting of a block formed of a plurality of slabs or layers provided with grooves upon their adjacent faces, said layers being secured together with the grooves therein opposite each other to form a series of compartments or cells, and a series of plugs inserted in said grooves at the lower end of said block to close the lower ends of the compartments or cells therein, said plugs being made of unequal lengths, substantially as described.

400,289. SASH-FASTENER. ALBERT H. BENDER, Manhattan, Kans. Filed Nov. 16, 1888. Serial No. 290,294. (No model.)

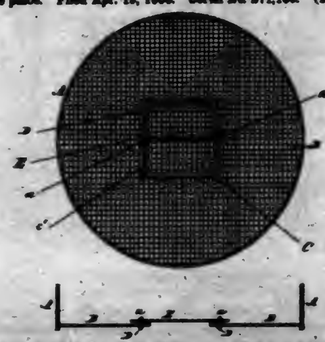
Claim.—In a sash-fastener operated by a key, the escutcheon indented or hollowed to receive a nut screwed onto the body of the key and provided with slots, into which to insert lugs on the end of the detachable key-stem, substantially as shown and described.



400,290. SUPPORT FOR IRONING-BOARDS. WILLIAM R. BURRT, Williamsport, Pa. Filed Apr. 16, 1888. Serial No. 270,897. (No model.)

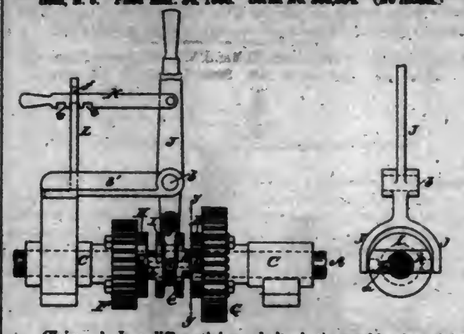
Claim.—1. An ironing-board support consisting of a top piece having a hooked arm pivotally secured at each end and a central brace adapted to be raised or lowered, substantially as described.

2. The ironing-table support herein described, consisting of the top piece, B, straight-edged on its upper side, the hooked arms C, pivotally attached at its ends, the shaft D, movable up and down in said top piece, and the brace E, pivotally attached to its end, substantially as described.



400,291. RETORT VAPORIZER AND SUPERHEATER. STELLA D. BIDDISON, Fort Worth, Tex., assignor to Samuel M. Biddison, Chicago, Ill. Filed May 23, 1888. Serial No. 274,644. (No model.)

Claim.—1. As an improvement in retort-vaporizers, the combination, with the series of pipes, of the upper horizontally-disposed spreader and superheater arranged over said pipes and divided into two chambers communicating at one end, and having a series of holes or apertures extending through said chambers, substantially as set forth.

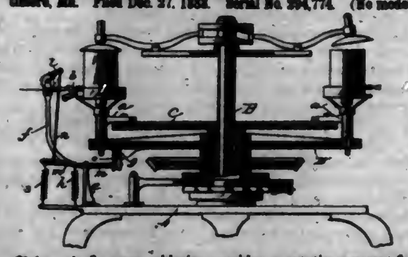


2. The combination, with the boiler and the oil and vapor pipes, of the upper horizontally-disposed spreader and superheater divided by a central partition into two communicating chambers and having a series of vertical holes or apertures extending therethrough, and the short pipes connecting said oil and vapor pipes with said spreader and superheater, substantially as set forth.

400,292. DEVICE FOR MENDING SIEVES. EDWARD A. DOLAN, Hamilton, Ontario, Canada, assignor of one-half to William L. Venster, same place. Filed Apr. 19, 1888. Serial No. 271,189. (No model.)

Claim.—An article of manufacture—to wit, a patch for mending holes in sieve fabrics, comprising a piece of wire-netting, a frame, D, thereto formed with projecting loops *a*, and a rod or wire, F, for securing said frame and netting in place, substantially as and for the purpose specified.

400,293. DIFFERENTIAL SPEED-CLUTCH. JOHN BROOKS, Plainfield, N. J. Filed Mar. 24, 1888. Serial No. 268,264. (No model.)



Claim.—1. In a differential speed-clutch, the combination of the differently-proportioned fast and loose companion gears located, respectively, upon the driving and driven shafts, opposite clutch-disks upon the loose gears, having grooves located upon the faces of the said opposite disk, the sliding clutch-collar that is operative between said loose gears, having transverse ribs intersecting the grooves eccentrically to their axis, and adapted thereby to interlock at a single point of revolution of the adjacent disks, as and for the purposes set forth.

2. The combination, with the loose gears of the herein-described differential speed-clutch mechanism, of the clutch-disks rotatively adjustable thereupon to engage at different points with the sliding clutch-collar, as set forth.

3. The combination, with the loose gears of the herein-described differential speed-clutch mechanism, of the rotatively-adjustable clutch-disks thereon, the concentric slots extending through said loose gears, and the clamping-bolts projected from the disks through said slots, adapted to secure them at variable points of adjustment, as described.

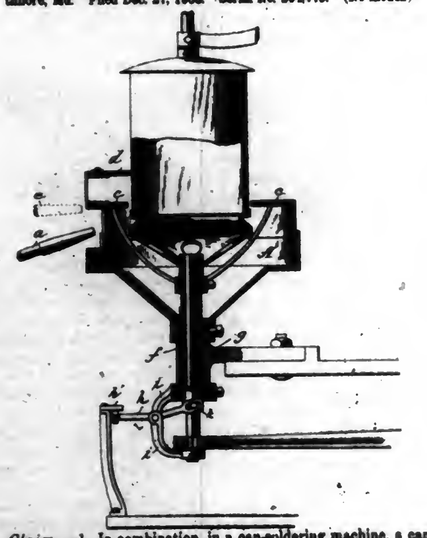
400,294. CAN-SOLDERING MACHINE. WILLIAM D. BROOKS, Baltimore, Md. Filed Dec. 27, 1888. Serial No. 294,774. (No model.)

Claim.—1. In a can-soldering machine, a rotating support for the can-carriers, means for revolving the cans carried by the said carriers, solder-feeding devices supported in line with the carriers, a movable support for said feeding devices, and means for moving the support to and from the table, substantially as described.

2. In a can-soldering machine, a plurality of solder-feeding devices, movable supports for said devices, means for moving said supports, and means for operating the feeding devices of the series simultaneously, substantially as described.

3. In a can-soldering machine, a solder-feeding device, a movable support therefor, means for automatically moving the feeding device forward, and means for feeding the solder at the same time, substantially as described.

4. In a can-soldering machine, a plurality of solder-feeding devices, movable supports for the same, connections from one of said supports and from one of said feeding devices to the machine for automatically operating the same, and intermediate connections from said support and said feeding devices to the other supports, and feeding devices of the series for operating the same by the operation of the first-named support and device, substantially as described.



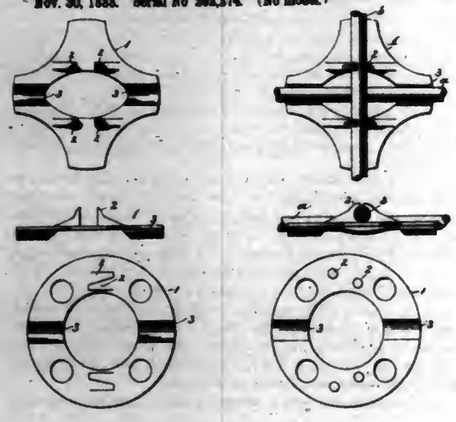
5. In a can-soldering machine, a rocking support for the solder-feeding devices, consisting of an arm, *f*, a solder-feeding device carried on the upper end thereof, a cam on the master-wheel for operating the arm *f*, a cam, *o*, and connections from said cam to the solder-feeding devices, substantially as described.

6. In combination with a can-seat, a plate, *c*, arranged above the

level of the said seat, a bulge formed on said plate, and an opening through the center of the bulge for applying solder to the can, substantially as described.

7. In combination with a revolving can-seat, a flame-chamber therefor, the top plate, *c*, of which is slightly above the level of the seat, a bulge formed on said top plate, and an opening through the same for directing solder to the can, substantially as described.

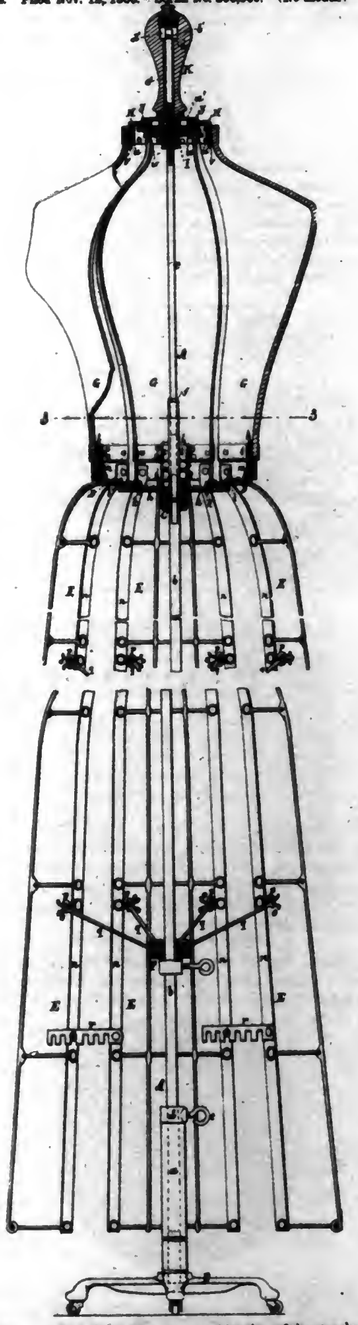
400,295. CAN-SOLDERING MACHINE. WILLIAM D. BROOKS, Baltimore, Md. Filed Dec. 27, 1888. Serial No. 294,775. (No model.)



Claim.—1. In combination, in a can-soldering machine, a can-seat, solder-feeding devices, a flame-chamber, a flame-tube, *a*, for directing heat to the flame-chamber, a second flame-tube arranged above the level of the first for applying heat to the periphery of the can, a segmental shield supported from the upper plate of the flame-chamber, and a solder-tube arranged on approximately the same level as the second flame-tube, substantially as described.

2. In combination, in a can-soldering machine, a can-seat, a vertically-movable plate, *c*, a series of heating devices having their flame-tubes below the level of the plate *c* in its raised position, and solder and heating tubes arranged upon a higher plane than the flame-tubes of the heating-stations, substantially as described.

3. In combination, a can-seat, a vertically-movable plate, *c*, a series of heating devices having their flame-tubes below the level of the plate *c*, a segmental shield on said plate, and flame and solder tubes in approximately the same horizontal plane and in line with the edge of the can to be soldered, substantially as described.



4. In combination, a can-seat, a flame-chamber, a vertically-movable plate, *c*, forming the upper part of the flame-chamber, and means for raising said plate, consisting of a cam, *N*, the sleeve *f*, and connections between the sleeve and cam, substantially as described.

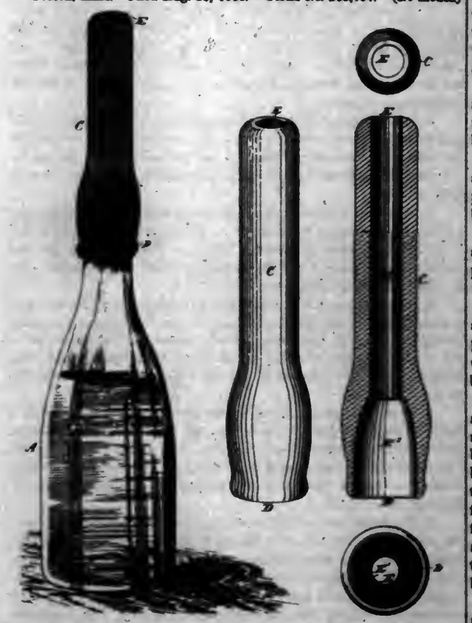
400,296. CLAMP. GEORGE F. BROTT, Washington, D. C. Filed Nov. 30, 1888. Serial No. 292,574. (No model.)

Claim.—A clamp for securing crossed wires together by clasping only one of them, consisting of a plate provided on its rear side with projections for clasping around the rear wire on both sides of the crossing-point of the wires, and having a groove also in its rear side, for the reception of the front wire on both sides of said crossing-point, substantially as described.

400,297. DRESS-FORM. FREDERICK W. BROWN, Cambridgeport, Mass. Filed Nov. 12, 1888. Serial No. 290,569. (No model.)

Claim.—1. In a dress-form, the combination of the standard made in sections detachable from each other and from the foot, as described, with the flanged collar C, secured to one of said sections and provided

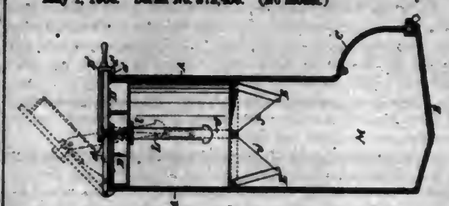
with arms *h*, slotted and having at their outer ends projections *i*, and the skirt-sections provided with the slotted arms D, the projections *i* being to enter the slots in the arms D, and the arms D having the projections *k* to enter the slots in the arms *h*, all essentially as shown and set forth.



2. In a dress-form, the combination of the standard made in sections detached from each other and from the foot, as described, with the flanged collar C, secured to one of said sections and provided with arms slotted and having the projections *i*, and the skirt-sections having the extension-arms D, also slotted and provided with the projections *k* and *l*, the former, *k*, to enter the slot in the arms *h*, and the latter, *l*, to enter sockets in the skirt-section and waist-sections of the form to support the same, all essentially as shown and set forth.

3. In a dress-form, the standard made in sections detachable each from the other, the collar C, fixed to one of the said sections and provided with arms *h*, slotted as shown, and having the projections *i*, in combination with the skirt-sections provided with the arms D, slotted and having the projections *k* and *l*, the sockets *m*, and with the notched arms *r* and headed studs *s* for connecting the said sections to each other, all substantially as shown and set forth.

4. The knob K, provided with the flange *d'*, and having a passage through it to receive the upper end portion of the standard, also a groove, *e'*, leading out of said passage, and a chamber, *d'*, communicating with said passage and groove, in combination with the standard provided with the stud *b'*, and having fixed to it the collar I, with the slotted arms *x* and projections *y*, the slotted arms H, having the downward projections *v* and *w*, the former entering the sockets *u* in the form-sections and the latter the slots in the said arms *x*, the flange of said knob bearing on said arms H, and the stud *b'* resting on the bottom of chamber *d'*, all substantially as shown, and for the purpose described.



5. In a dress-form, the standard-made sections, detachable each from the other and from the foot, for the purpose described, the collar C, fixed to one of said sections and provided with arms slotted, as shown, and having projections *i*, and the arms D, slotted, and having the projections *k* and *l*, in combination with the skirt-sections provided with sockets *m* and spring-catches *o*, the rods *g*, pivoted to a collar on the standard and connected to the said spring-catches, and the said collar F, adjustable on the standard, all essentially as shown and set forth.

400,298. VETERINARY DRENCHER. CHARLES C. CARRASCO, Boston, Mass. Filed Aug. 25, 1888. Serial No. 283,797. (No model.)

Claim.—An elastic rubber nipple for administering medicines and liquids to horses and other dumb animals, consisting of a cylinder with rounded edges and an enlarged end, and having a circular opening or cavity, E E, through its entire length, said opening being enlarged at one end, E', to receive the neck of a bottle, all as shown and described in the accompanying drawings and specification.

400,299. LETTER-BOX. THOMAS C. CHAPPELL and EVERETT D. MOORE, Baltimore, Md.; said Moore assignor to said Chappell. Filed May 1, 1888. Serial No. 272,453. (No model.)

Claim.—1. A box for the reception of mail-matter, in combination with a cover provided with locking mechanism, and a false bottom also provided with locking mechanism, and means for unlocking the cover and closing and locking the false bottom simultaneously.

2. A box for the reception of mail-matter, in combination with a cover provided with locking mechanism, a false bottom also provided with locking mechanism, and means for locking the cover and unlocking the false bottom simultaneously.

3. A box for the reception of mail-matter, in combination with a cover which is provided with locking mechanism, and a false bottom also provided with locking mechanism, and mechanism attached to the false bottom and controlling the locking mechanism of the cover and false bottom, whereby from the exterior of the box the false bottom may be closed and locked and the cover unlocked simultaneously, or the cover when closed may be locked and the false bottom unlocked and opened simultaneously.

4. A box for the reception of mail-matter, in combination with a cover which is provided with locking mechanism, and a false bottom also provided with locking mechanism, and a lever suitably pivoted to a part of the box attached to the false bottom and controlling the locking mechanism of the cover and false bottom, whereby from the exterior of the box the false bottom may be closed and locked and the cover unlocked simultaneously, or the cover when closed may be locked and the false bottom unlocked and opened simultaneously.

5. A box for the reception of mail-matter, in combination with a cover and a false bottom and a lever suitably pivoted to a part of the box and attached to the false bottom, and a locking mechanism for the false bottom which operates automatically to lock the false bottom when it is raised and closed, and a locking mechanism for the cover controlled by the lever by which the false bottom is raised, in such a manner that the cover will be unlocked when the lever has raised the false bottom and its locking mechanism has locked it, substantially as described.

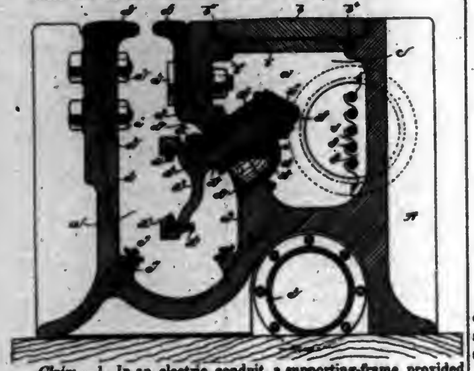
6. A box for the reception of mail-matter, in combination with a cover provided with locking mechanism, and a false bottom also provided with locking mechanism, and means for locking the false bottom by mechanism which operates to unlock the cover.

7. A box for the reception of mail-matter, in combination with a cover provided with locking mechanism, and a false bottom also provided with locking mechanism, with means for locking the false bottom operated by the same mechanism which unlocks the top.

8. A box for the reception of mail-matter, in combination with a cover provided with locking mechanism, and a false bottom also provided with locking mechanism, and means for locking the cover when closed by mechanism which operates to unlock the false bottom.

9. A box for the reception of mail-matter, in combination with a cover provided with locking mechanism, and a false bottom also provided with locking mechanism, and means for locking the cover when closed operated by the same mechanism which unlocks the false bottom.

10. A box for the reception of mail-matter, in combination with a cover, and provided with locking mechanism which consists of a rod secured thereto, and a bolt suitably located on the interior of the box in position to engage said rod and lock the cover, and a false bottom also provided with a rod secured thereto and operating within the box and connected with a bolt engaging said rod, whereby the false bottom when closed may be locked, and means connected to the false-bottom rod whereby the false bottom may be raised and locked, and means secured to or operated by the false-bottom rod whereby the locking mechanism of the cover will be released when the false bottom has been raised and locked, substantially as described.



11. A box for the reception of mail-matter, in combination with a cover which is provided with locking mechanism, which consists of a rod secured to the cover, and a bolt suitably mounted on the interior of the box in position to engage the hole in or offset upon said rod, whereby the cover may be locked, and a false bottom also provided with a rod, and a bolt suitably located on the interior of the box in position to engage a hole in or projection upon said rod, whereby the false bottom may be locked when closed and a lever pivoted to a

suitable part of the box and attached to the false bottom, and mechanism operated by said lever whereby, when the false bottom is closed and locked, the cover will be unlocked.

12. A box for the reception of mail-matter, in combination with a false bottom provided with a rod which engages a bolt suitably located within the box to engage a hole in or projection upon said rod and lock the false bottom when closed, a cover for said box also provided with a rod, and the bolt suitably located within said box to engage a hole in or projection upon said rod, and means operated by the cover whereby the false bottom will be unlocked and opened when the cover is closed and locked.

13. A box for the reception of mail-matter having an opening in the bottom and a door hinged to one side of said opening, the two opposite sides of the box between which the door swings extending below the level of the other two sides and being provided with devices to limit the fall of the door, substantially as described.

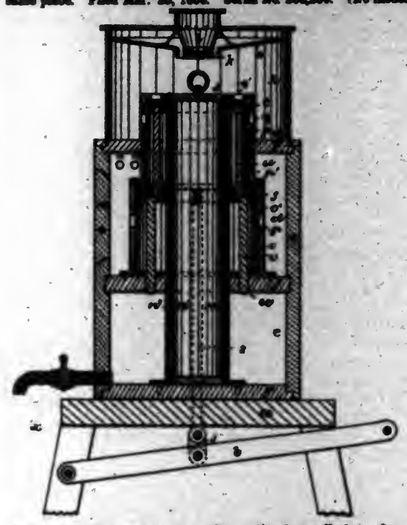
400,800. ELECTRIC CONDUIT. HENRY A. CHASE, Boston, Mass. Filed Nov. 30, 1888. Serial No. 292,172. (No model.)

Claim.—1. In an electric conduit, a supporting-frame provided with a division-wall having an opening and forming within the said frame a slot-chamber and an accessible chamber, a removable cover for said accessible chamber, and end walls for said chamber provided with an opening, as c', whereby communication may be established between the accessible chambers of adjacent supporting-frames, substantially as described.

2. In an electric conduit, the combination, with a series of supporting-frames, each provided with a slot-chamber and an accessible chamber in communication with each other, of slot-rails secured to said supporting-frame, and a pipe, as c^3, secured to the said frames to establish communication between the accessible chambers of the said supporting-frames, substantially as described.

3. In an electric conduit, the combination, with a conductor, of an insulator therefor, and a hydrocabon-barrier carried by the said insulator, whereby leakage of current is obviated, substantially as described.

4. In an electric conduit having a slot-chamber and an accessible chamber provided with ledges b^3 b^3 in communication with the said slot-chamber, a removable cover for said accessible chamber resting upon said ledges and provided with a circumferential groove, and a band, b^4, of packing material located in said groove and bearing against the walls of the said accessible chamber, whereby a water-tight joint is effected without the use of bolts, &c., substantially as described.



5. In an electric conduit, a slot-chamber and an accessible chamber communicating with the said slot-chamber and provided with a removable cover, and a conductor in said slot-chamber, combined with an insulator to support said conductor and with a hydrocarbon-barrier carried by the said insulator, whereby leakage of current is prevented, substantially as described.

6. In an electric conduit, a series of supporting-frames, each having a slot-chamber having its walls provided with shoulders, combined with slot-rails having slots 40 in their web, which rest on the said shoulders, and secured to the said walls, substantially as described.

7. In an electric conduit, the herein-described supporting frame or casting formed in one piece, and having the intermediate wall, a^3, provided with an opening, and forming with the walls of the said frame or casting a slot-chamber and accessible chamber, the bottom of the accessible chamber extending to substantially near the bottom of the casting, whereby increased space is obtained in the accessible chamber, substantially as described.

8. In an electric conduit, a slot-chamber and an accessible chamber communicating with the said slot-chamber and provided with a removable cover, and a conductor in said slot-chamber, combined with an insulator to support said conductor having a trough, and with an oil located in said trough, substantially as described.

400,801. WATER RENOVATING AND PURIFYING DEVICE. LEWIS S. GROSSMEYER, Newark, N. J., assignor to Carrol Phillips Bassett, same place. Filed Mar. 23, 1888. Serial No. 268,269. (No model.)

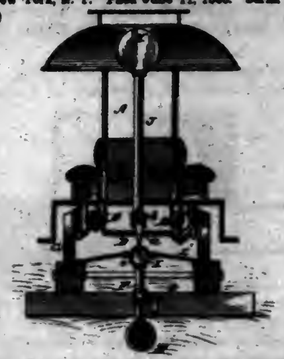
Claim.—1. The combination, with a filtering-cylinder, of a case or structure having an unfiltered-water chamber, an air-chamber, and a filtered-water chamber formed thereabout in a series, substantially as and for the purposes set forth.

2. In a filter, in combination, a cylindrical filter forming the vertical chamber *a*, around which is formed an outer chamber, *p*, and a piston-head adapted to force the water through the said cylinder into the said chamber *a*, and means for operating said piston-head, substantially as and for the purposes set forth.

3. In combination, in a case, *e*, having partitions *f* and *g*, forming chambers *h*, *d*, and *e*, a porous pipe or cylinder extending through said partition into said chambers, cylinders *o p*, piston-heads *s t*, and means, as described, for operating said piston-heads, whereby water and air are forced through said porous pipe, substantially as and for the purposes set forth.

4. In combination with a partitioned case having a series of chambers therein and a porous cylinder or pipe extending into or through said chambers, suitable cylinders, *o p*, and piston-heads for forcing air and water through said porous pipe, substantially as and for the purposes set forth.

5. In a filter, the combination, with a porous pipe or cylinder and a piston-head working thereon, and a suitable co-operating cylinder, of a perforated facing providing a bearing or wearing surface for said piston and adapted to allow the passage of water to said porous pipe or cylinder, substantially as set forth.



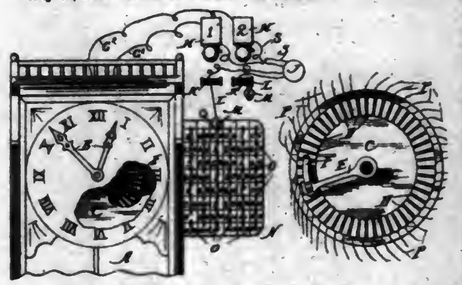
6. In combination with a case having unfiltered and filtered water chambers and an air-chamber, a porous pipe or cylinder extending through or into said chambers, suitable cylinders, piston-heads, and a rod or rods for operating said heads, and a hand-lever, all said parts being arranged and adapted to operate substantially as and for the purposes set forth.

7. In combination, a suitable case partitioned off to provide a filtered-water chamber at the bottom, an unfiltered-water chamber above, and an intermediate air-chamber, porous media forming walls for said chambers, and means for forcing air through said filtering media into contact with water filtered from the upper chamber, substantially as set forth.

8. In combination, a suitable casing having a filtered-water chamber, an air-chamber, and an unfiltered-water chamber, and a chamber formed by porous walls extending vertically through or into said chambers, and a coagulant-chamber adapted to supply coagulating material to the unfiltered water, and piston-heads and suitable cylinders therefor for forcing the unfiltered water supplied with coagulant through said porous walls and into said filtered-water chamber, a lever, and means for connecting said piston-head with said lever, substantially as set forth.

9. The improved water-renovator, combining therein a case partitioned off into a filtered-water chamber, and air-chamber, an unfiltered-water chamber and a coagulant-chamber, a porous pipe or cylinder, cylinders *o p*, having openings *r* and *q q'*, piston-heads *s* and *t*, connecting-rods, a lever, links connecting said connecting-rods with said lever, suitable openings in said case to allow the introduction of air and ice into said air-chamber, and a faucet for drawing off the pure water, as and for the purposes set forth.

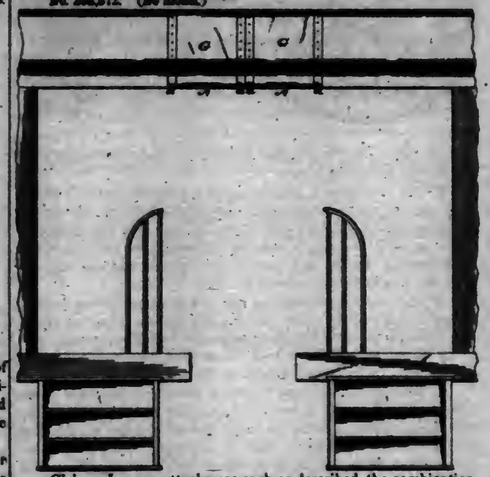
400,802. AUTOMATIC AIR-SUPPLY FOR PROPELLING CARS. JOHN T. CLARK, La Grange, Ga., assignor of three-fourths to Lonsdine C. Pressley, New York, N. Y. Filed June 11, 1888. Serial No. 276,780. (No model.)



Claim.—1. The combination, with a continuous air-pipe, E, of valved branches F G, arranged at intervals along the same and terminating in slotted valve-sections I, bent downwardly at their ends and provided with a longitudinal slot-valve composed of continuous elastic flaps, substantially as shown and described.

2. The combination, with a car having a compressed-air reservoir and a mouth-piece, *a*, leading therefrom and projecting below the car, of the underground pipe E, having branch pipe F, with stop-cock or valve G, the slot-valve I *e*, with flexible strips *c c*, the brace-arms I', connecting the slot-valve to the rails, and the brace-arms H, connecting the slot-valve to the pipe E, substantially as and for the purpose described.

400,803. PRESERVING COCOANUT. WILLIAM P. CLOTWORTHY, Baltimore, Md. Filed Jan. 19, 1889. Serial No. 296,855. (No specimens.)



Claim.—The method of preparing the kernel of the cocoanut for preservation and storing by granulating it and then torrefying in a metal cylinder which is revolved over a moderate fire, and when cool adding for every pound of the roasted meat a solution of ten grains of salicylate of soda dissolved in one ounce of absolute alcohol, as described

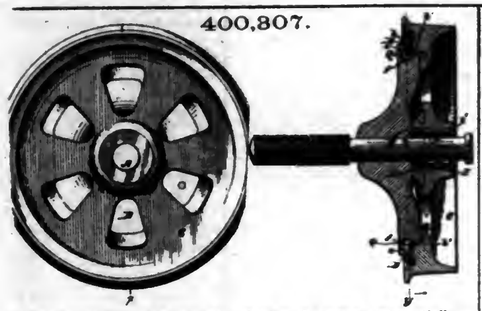
400,804. HOTEL-CALL. EDWARD J. COLBY, Chicago, Ill. Filed May 10, 1888. Serial No. 273,393. (No model.)

Claim.—In a hotel-call, the combination of the clock A, provided with the dial and hands in the ordinary manner, with an insulating-disk, C, back of the dial, commutator-strips D D, secured upon such insulating-disk in a circle concentric with the dial of the clock, an arm, E, and trail or brush F, adapted to rotate with the hands of the clock and to travel over the commutator-strips, a board, N, having thereon a series of hooks, O O, each designated by an hour and minute mark a series of wires extending one from each commutator-strip to the corresponding hook, an electrical circuit in metallic connection with the clock mechanism and containing a battery and wires passing throughout the hotel, a series of bells, one in each room, in circuit, a wire passing from each of such bells, a spring-roller, K, in the hotel-office, a series of such rollers, one for each room or bell, a series of tags, one for each room and roller, numbered to correspond with the room and perforated at its lower extremity, a series of flexible connectors, each connecting one tag with its proper bell and roller, so that by connecting any of said tags with any of said hooks a circuit will be made through the clock, battery, bell of the connected room and connectors, tag, hook, wire connecting such hook with the commutator-strip, and thence through the brush and arm at the hour when such brush is on the strip which corresponds with the number indicated on the hook to which the tag is attached.

400,805. ROOF-CONNECTION FOR RAILWAY-CARS. JAY F. COLE and BELL W. PARRO, Grouse, Iowa. Filed Dec. 3, 1888. Serial No. 292,572. (No model.)

Claim.—In a car attachment such as described, the combination, with the parallel bars connected by a flexible covering, of expanding springs connecting said bars, the brackets having a perforated lug adapted to receive the ends of the springs, and a perforated aperture communicating with the perforation in the lug, and a set-screw adapted to engage the ends of the spring and secure the same in position, substantially as specified.

400,806. CAR-COUPLING. HARRISON V. CONWAY, Boone, Iowa. Filed Jan. 3, 1888. Serial No. 295,278. (No model.)



Claim.—1. The herein shown and described car-coupling, composed of the following elements: the draw-bar having vertical standards grooved on their opposing sides, and having the openings *a* and *a'*, the swing-pin C, having lateral projections which work in the grooved standards, the levers E E and F, connected with pin C, the supplemental pin H, adapted to be inserted through an opening in the bottom of the draw-bar, and the slide A, for supporting the said pin H, substantially as and for the purpose described.

2. In a car-coupling, the combination, with the pin H, which is adapted to be removed and inserted through an opening in the bottom of the draw-bar, of the slide for supporting the said pin, substantially as and for the purpose described.

400,807. CAR-WHEEL. JOHN W. COOPER, Atlanta, Ga. Filed June 26, 1888. Serial No. 278,072. (No model.)

Claim.—1. The combination, with the axle and the center having a groove in its periphery, of the wheel having a portion encircling the center and having a groove which coincides with the groove in the said center, and the rollers let into the grooves through a suitably-

400,307.

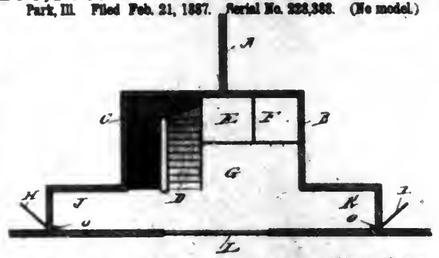
located opening and locking the wheel to the center, substantially as and for the purpose described.

2. The combination, with the axle and the center having a groove in its edge, of the wheel having an annular flange which encircles the center and having a groove on its inner side coinciding with the groove in the center, and having an opening extending from the groove, and the rollers let into the said grooves through the said opening, substantially as and for the purpose described.

3. The combination, with the axle and the center having its outer corner rounded, of the wheel having a portion encircling the center, and having a corresponding rounded portion to fit the rounded corner of the center, and rollers confined in coinciding grooves in the center and the wheel, substantially as and for the purpose described.

4. The herein shown and described car-wheel, composed of the axle having the center B secured thereto, the wheel having an annular flange which encircles the center, the rollers fitted in coinciding grooves in the flange and the edge of the center, being let into the grooves through an opening in the flange, which opening is closed by a plug, and the roller-bearing fitted in an enlarged portion of the bore and held therein between the center and a shoulder in the said bore, substantially as specified, for the purpose described.

400,308. METHOD OF CONSTRUCTING UNDERGROUND CONDUITS. WILLIAM C. CRANMER and SYDNEY W. ARNOLD, Philadelphia, Pa. Filed Oct. 19, 1888. Serial No. 288,601. (No model.)



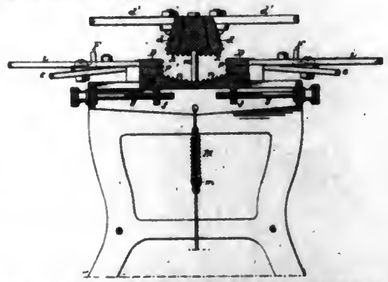
Claim.—1. The method herein described of forming continuous underground conduits of plastic material for electric and other wires in a ditch or trench direct, which consists in providing a flexible casing composed of non-conducting material having a core of water, air, sand, sawdust, or the like and temporarily hermetically closed at both ends, in building the conduit material around said casing, and subsequently freeing the core therefrom, substantially as described.

2. The method herein described of forming continuous underground conduits of plastic material for electric and other wires in a ditch or trench direct, which consists in providing a flexible casing having a core of water, air, sand, sawdust, or the like and temporarily hermetically closed at both ends, in building the conduit material around said casing and subsequently freeing the core therefrom, and finally withdrawing the casing, substantially as described.

3. The method herein described of forming continuous underground conduits of plastic material for electric and other wires in a ditch or trench direct, which consists in providing a flexible casing composed of non-conducting material having a core of water, air, sand, sawdust, or the like and temporarily hermetically closed at both ends, in further providing suitable means for retaining the casing in position, and finally in building the conduit material around said casing and subsequently freeing the core therefrom, substantially as shown and described.

4. The method herein described of forming continuous underground conduits of plastic material for electric and other wires in a ditch or trench direct, which consists in providing a flexible casing having a core of water, air, sand, sawdust, or the like and temporarily hermetically closed at both ends, in further providing suitable means for retaining the casing in position, in further building the conduit material around said casing and subsequently freeing the core therefrom, and finally withdrawing the casing, substantially as shown and described.

400,309. FIRE-PROOF BUILDING. ROBERT S. CRITCHELL, Oak Park, Ill. Filed Feb. 21, 1887. Serial No. 228,388. (No model.)



Claim.—1. A building provided with combustible portions separated by a fire-proof wall, an intermediate vacant portion formed by two secondary fire-proof walls, and doors located at the rear end of angular recesses or extensions formed by said secondary walls, the doors communicating, respectively, with the said combustible portions, substantially as described.

2. A building provided with a fire-proof partition-wall, A, secondary fire-proof walls C and B, connecting said partition-wall with the exterior wall of the building and forming recesses J and K therewith, and doors H and I, located in said recesses J and K and opening, respectively, into the separated main portions of the building, substantially as described.

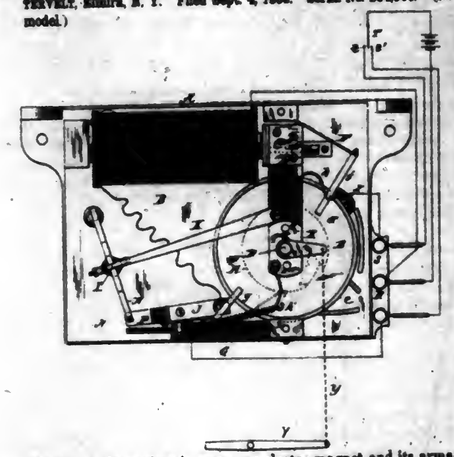
3. In a building, the combination, with combustible portions separated from each other in part by a fire-proof partition and in part by an inclosed portion provided with fire-proof walls, of elevators, stairways, or the like located in the rear part of said inclosed portion for communication between the several floors of the building, and recesses or extensions in the front part of said inclosed portion provided with doors opening into the combustible portions, substantially as described.

4. In a fire-proof building, the combination of fire-proof wall A, walls C and B, connecting said wall A with one of the exterior walls of the building, sheet-metal plates M, window-glass L, and communicating doors H I, substantially as and for the purpose set forth.

400,310. MACHINE FOR FORMING SHEET-METAL PIPES. FREDERICK W. DAVIDSON, Philadelphia, Pa. Filed July 5, 1888. Serial No. 279,066. (No model.)

Claim.—1. The combination, in a machine for forming rectangular sheet-metal pipes or tubes, of the presser-bar consisting of a fixed central portion having projecting wings, and independent side strips, adjustable laterally on said wings, the opposite side dies, means for adjusting the latter, and the opposite gages for the strip to be bent, substantially as specified.

2. The combination, in a machine for forming rectangular sheet-metal pipes or tubes, of the presser-bar having adjustable side strips, the opposite side dies having laterally-projecting wings, the opposite gages carried by said wings, and means for laterally adjusting the presser-bar strips, side dies, and gages to suit the different sizes of pipe to be manufactured, substantially as specified.

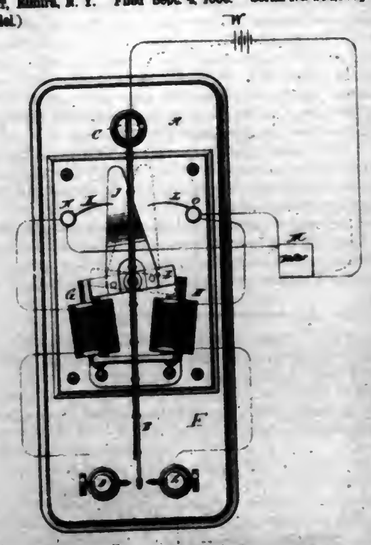


3. The combination of the presser-bar having a ribbed end with the side dies having ribbed projections forming counterparts of the ribbed end of the presser-bar to effect the crimping of the end of the pipe, all substantially as specified.

4. The combination of the presser-bar having a ribbed end with the side pressers laterally movable and also ribbed at one end, all substantially as specified.

5. The combination of the presser-bar having a ribbed end, the side dies having ribbed projections at one end, and the supplementary side pressers also ribbed at one end, all substantially as specified.

6. The combination of the presser-bar ribbed at the ends, the side dies having ribbed projections at the ends, the supplementary side pressers mounted on the side dies and also ribbed at the ends, and the connected cams for operating said side pressers, substantially as specified.

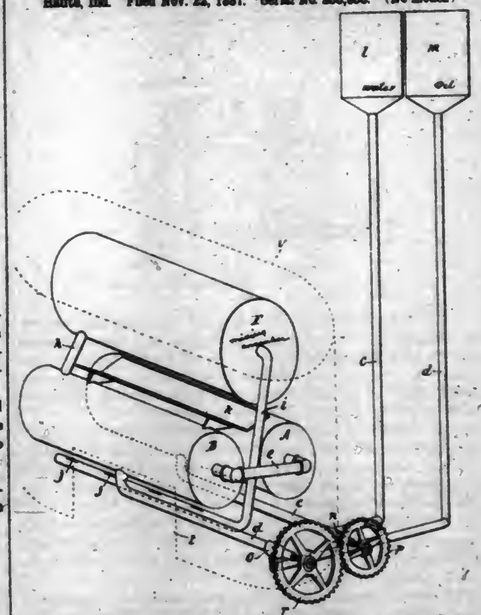


400,311. ELECTRIC MOTOR. ETHA H. DAVIS and REUBEN WESTERVELT, Elmira, N. Y. Filed Sept. 4, 1888. Serial No. 284,563. (No model.)

Claim.—1. In an electric motor, an electro-magnet and its armature, and an arm attached to the latter and having a yoke which carries a roller, all in combination with an adjustable pivoted contact-lever, within an opening in which the roller plays, as and for the purpose set forth.

2. In an electric motor, an electro-magnet and its armature, and an arm attached to the latter and having a closed yoke which incloses a portion of an adjustable pivoted contact-lever and is adapted to operate the same, as and for the purpose set forth.

400,312. THERMOSTAT. ETHA H. DAVIS and REUBEN WESTERVELT, Elmira, N. Y. Filed Sept. 4, 1888. Serial No. 284,570. (No model.)



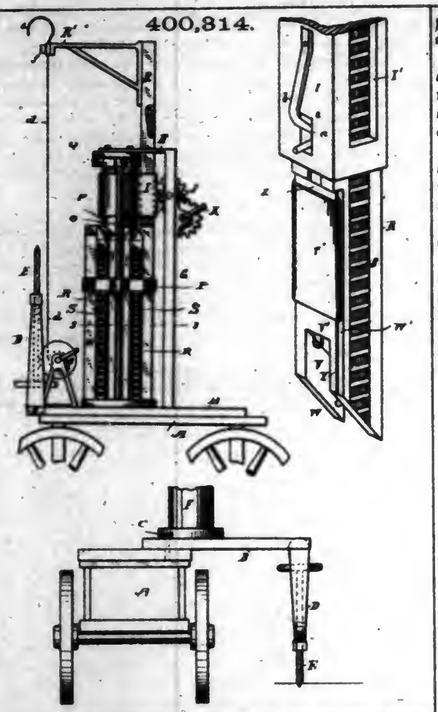
Claim.—1. In a thermostat, an expansible piece forming a terminal of an electric circuit, contact-pieces forming corresponding terminals, each located in a separate branch circuit, and a pair of electro-magnets—one in each branch—the two magnets having a common armature, all in combination with a short-circuit terminal on each side of the armature, whereby the contact-points on either side will be automatically short-circuited, as and for the purpose set forth.

2. In a thermostat, an expansible piece forming a terminal of an electric circuit, contact-pieces forming corresponding terminals, each located in a separate branch circuit, and a pair of electro-magnets—one in each branch—the two magnets having a common armature and a moving arm connected therewith, all in combination with a short-circuit terminal on each side of the armature, whereby the contact-points on either side will be automatically short-circuited, as and for the purpose set forth.

3. The combination, with an electro-magnetic motor and a pair of branch circuits connected therewith, of a thermostat adapted to close one branch or the other on an increase or decrease of the temperature, and an electro-magnetic cut-out for closing a short circuit around the thermostat-contacts, such cut-out consisting of a magnet in each branch circuit, the two magnets having a common armature, which co-operates in its reverse positions with the terminals of the short circuit, which are also elements of the combination, as and for the purpose set forth.

400,313. HYDROCARBON-VAPORIZER. HENRY C. DAVIS, Terre Haute, Ind. Filed Nov. 22, 1887. Serial No. 255,855. (No model.)

Claim.—1. The combination, with a stove having a grate, of a hydrocarbon-burner, a vaporizing-retort, a steam-generating retort, and a mixing-chamber, all situated within the fire-pot of the stove, a removable metal casing surrounding the said parts and resting on the grate, and having an opening, *t*, in its side adjacent to the grate, whereby heat from burning material upon the grate will pass through the said opening and heat the said parts when it is wished to start the burner, and a mass of refractory material within said casing, substantially as described.



2. In a hydrocarbon-burner, the combination of the water and oil retorts A and B, lying side by side, the burner situated below the said retorts, a reservoir, F, situated above the retorts, the deflector *k*, situated between the retorts and below the reservoir, the water and oil supply pipes *c* and *d*, lying side by side, the rotary needle-valves regulating the flow through the said pipes, and the gear-wheels *r* and *p*, mounted upon the stems of the said valves and meshing with each other, substantially as set forth.

400,314. FIRE-ESCAPE. EUGENE DELIA, Cincinnati, Ohio. Filed Sept. 3, 1888. Serial No. 284,685. (No model.)

Claim.—1. A fire-escape comprising a plurality of separate bars adapted for connection end to end, a revolving frame turning about a vertical axis and sustaining the same side by side in a vertical position, and a stationary guide for the bars, substantially as described.

2. A fire-escape comprising a plurality of separate bars adapted for connection end to end, a revolving frame turning about a vertical axis and sustaining the bars side by side in a vertical position, a stationary guide for the bars, and a flexible ladder attached to the upper end of the uppermost bar, substantially as described.

400,314.

3. A fire-escape comprising a plurality of separate bars adapted for connection end to end, a revolving frame turning about a vertical axis and sustaining the bars side by side in a vertical position, a stationary guide for the bars, a flexible ladder attached to the upper end of the uppermost bar, and a hook on the upper end of said ladder for supporting the same, substantially as described.

4. A fire-escape comprising a plurality of toothed bars adapted for connection end to end, a revolving frame turning about a vertical axis and sustaining the said bars side by side in a vertical position, a stationary guide for the bars, and a gear-wheel engaging said bars, substantially as described.

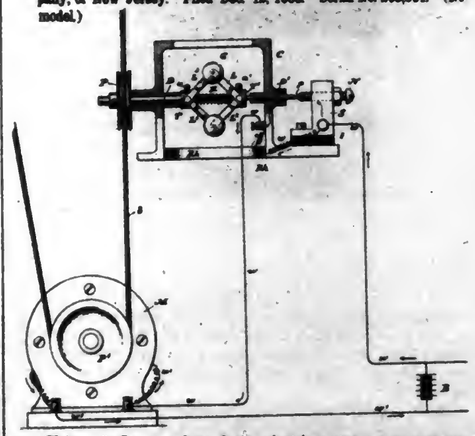
5. A fire-escape comprising a plurality of bars adapted for connection end to end, a revolving frame sustaining the bars, a stationary guide for the bars, and a spring applied to said frame for turning the same, substantially as described.

6. The combination, with a stationary column, of a plurality of bars adapted for connection end to end, a revolving table surrounding the base of the column, a revolving keeper-ring, also surrounding the column, vertical standards rigidly connected to said table and keeper-ring, and a stationary guide for the bars located above the keeper-ring, substantially as described.

7. The combination, with a stationary column, of a plurality of bars adapted for connection end to end, a revolving frame consisting of a table surrounding the base of the column, a revolving keeper-ring, also surrounding the column, and vertical standards rigidly connecting said table and keeper-ring, a stationary guide for the bars, and a coiled spring connected with the column and revolving frame for turning the latter, substantially as described.

8. A fire-escape comprising a plurality of bars, a revolving frame sustaining the same, and a stationary guide for the bars, said bars being provided upon their ends with interlocking mortises and tenons arranged at right angles to radial lines of the frame, whereby the bars may be connected with each other by the turning of the frame, substantially as described.

9. A fire-escape comprising a plurality of bars, a revolving frame sustaining the same, and a stationary guide for the bars, said bars being provided on their ends with interlocking mortises and tenons adapted to engage each other by a lateral movement of the bars, and slides on the bars for holding the same from disconnection, substantially as described.



10. The combination, with a revolving frame and stationary guide, of a plurality of bars provided with interlocking mortises and tenons, the shoulders of which are oblique, the ends of each tongue being provided with a groove containing a prong, and the sides of the tongues having detent-notches, and each mortise having an eye to fit over the prong, and lugs to engage the detent-notches, substantially as described.

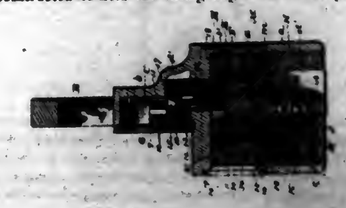
11. The combination, with a revolving bar-supporting frame and a stationary guide, of a plurality of bars provided with interlocking mortises and tenons and having guide-flanges adjacent to their ends, and slides engaged with said flanges for holding the bars from disconnection, substantially as described.

12. The combination, with a revolving bar-supporting frame and a stationary guide, of a plurality of bars provided with interlocking mortises and tenons and having guide-flanges adjacent to their ends, and slides engaged with said flanges, said stationary guide being provided with a spring-arm adapted to engage and move the slide, substantially as described.

13. The combination, with a fire-escape truck and an extensible column, of a platform supporting said column, said platform being pivoted by means of a vertical pivot to the truck, and an adjustable supporting-leg hinged to the outer or free end of said platform, substantially as described.

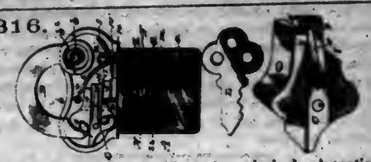
400,315. REGULATOR FOR ELECTRIC MOTORS. ROBERT S. DOBBIE, New York, N. Y., assignor to the American Electric Motor Company, of New Jersey. Filed Dec. 12, 1888. Serial No. 293,381. (No model.)

Claim.—1. In a regulator for an electric motor, a governor consisting of a two-part shaft connected together by hinged links and balls, one of said two-part shafts having longitudinal as well as rotary motion, substantially as described.



2. A regulator for an electric motor, consisting of the following combination of elements: a two-part shaft, one of which parts carries a pulley, the other being adapted to slide as well as rotate, a link or ball governor connecting said shafts, a spring normally holding the sliding shaft at its extreme position with a contact-point against which said sliding shaft may contact, and circuit-connections for connecting said regulator in circuit with the motor and source of electrical supply, substantially as described.

3. A governor adapted for use in an electric regulator, consisting of a two-part shaft connected together by links and an expansible spring, one of said shafts carrying a pulley and the other a contact-point, substantially as described.



4. A regulator for an electric motor, consisting of a metallic box or case sustaining a ball-governor connected to a two-part shaft, one of which parts carries a pulley and the other a contact-point, in combination with a rheostat and circuit-connections, substantially as described.

400,316. LOCK. WILLARD D. DORRIEN, Washington, D. C., assignor to the Corbin Cabinet Lock Company, New Britain, Conn. Filed Jan. 3, 1889. Serial No. 295,577. (No model.)

Claim.—1. In a lock, the combination, with the lock-shackle, of a tilting dog mounted on a stationary bearing, and a lock-spindle, the latter constructed to hold the tilting dog in its locked position and

400,316.

to release it and allow the shackle to be unlocked, substantially as set forth.

2. The combination, with the lock-shackle and a tilting locking-dog, of a lock-spindle constructed and arranged to support the locking-dog on its extreme end and provided with a cut-away portion to enable the dog to tilt and release the shackle, substantially as set forth.

3. The combination, with a lock-shackle and a dog for locking and releasing the shackle of the spindle, of a pin-tumbler lock and serial registering mechanism, said spindle being constructed to support the dog in its locked position and to allow it to tilt and release the shackle, substantially as set forth.

4. In a serial registering-lock, the combination, with a lock-shackle and a tilting dog for locking and releasing the shackle, of a series of registering-rings, a spindle and gearing for actuating said rings by turning said spindle, the latter being constructed to support the locking-dog in its locked position and to allow it to be released from the shackle when it is desired to unlock the lock, substantially as set forth.

5. In a lock, the combination, with a shackle and a tilting or pivoted dog adapted to be engaged with and released from the free end of the shackle, of a spindle constructed to support the dog in its locked position and to allow the dog to tilt and release the shackle, and a device for preventing the spindle from being rotated backwardly, substantially as set forth.

6. In a lock, the combination, with a shackle and a tilting or pivoted dog provided with a spring-actuated pawl, of a spindle provided with a cut-away portion at its end which allows the dog to tilt and release the shackle, the yielding pawl allowing the spindle to be rotated after the dog has tilted and released the shackle, substantially as set forth.

7. In a serial registering-lock, the combination, with a pivoted shackle and a pivoted or tilting dog, of a spindle constructed and arranged to support the dog in a position to lock the shackle, said spindle being provided with teeth or notches, and a spring-pawl adapted to engage the teeth and prevent the backward rotation of the spindle, substantially as set forth.

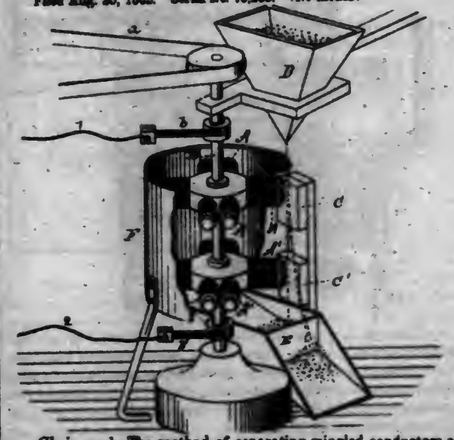
8. In a serial registering-lock, the combination, with a pivoted shackle a locking device engaging the free end of said shackle, and a spindle constructed and arranged to hold said locking device in contact with the free end of the shackle and release it from engagement therewith, of a series of registering-rings and means for locking the rings against forward movement after the entire series of numbers has been exposed to view, substantially as set forth.

9. In a serial registering-lock, the combination, with a pivoted shackle, a locking device engaging the free end of said shackle, and a spindle constructed and arranged to hold the locking devices in contact with the free end of the shackle and release it from engagement therewith, of a series of registering-rings arranged to encircle the spindle and be actuated thereby, substantially as set forth.

10. In a serial registering-lock, the combination, with a pivoted shackle, a locking device engaging the free end thereof, and a spindle constructed and arranged to hold the locking devices in contact with the free end of the shackle and release it from engagement therewith, of a series of registering-rings arranged to encircle the spindle, gearing for actuating said rings, and devices for preventing the rings from being rotated in either direction only when a ring is shifted to present a new number to view, substantially as set forth.

11. In a serial registering-lock, the combination, with a lock-casing, a shackle, and a locking device engaging the free end thereof, of a series of registering-rings fitted to and supported within the casing, a pin-lock secured within the outer end of the casing, and a spindle that is common to both the pin-lock and to the series of registering-rings, and arranged to hold said shackle-locking device in contact with the free end of the shackle and release it from engagement therewith, substantially as set forth.

12. A serial registering-lock comprising a pin-tumbler lock, a series of registering-rings, a pivoted or tilting dog for locking and releasing the lock-shackle, and a spindle constructed and adapted to actuate the pin-tumbler lock, the series of registering-rings, and to control the tilting dog, substantially as set forth.



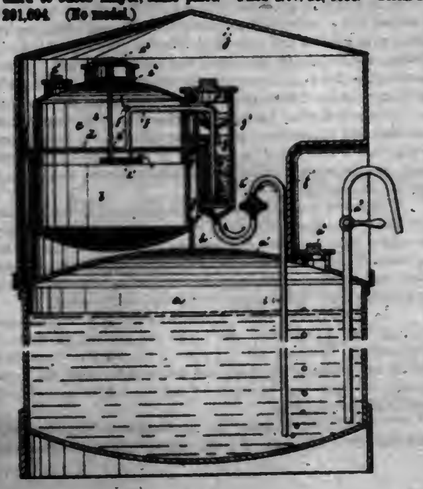
13. In a serial registering-lock, the combination, with the spindle of a pin-tumbler lock, of a tilting dog provided with an arm, which is engaged and moved by the free end of the shackle, so as to be supported by the end of the spindle, substantially as set forth.

14. In a serial registering-lock, the combination, with the spindle of a pin-tumbler lock and a series of registering-rings, of a tilting or pivoted dog provided at one end with an arm with which engages the free end of the shackle, a spring for tilting the dog to release the shackle therefrom, said spindle being constructed to support the dog in its locked position and to allow it to tilt and release the shackle, substantially as set forth.

15. In a lock, the combination, with a lock-shackle and a tilting locking-dog, of a lock-spindle, and stops to restrain the movement of the spindle in either direction when it has been rotated, so that the pin-tumblers register and permit of the withdrawal of the key, substantially as set forth.

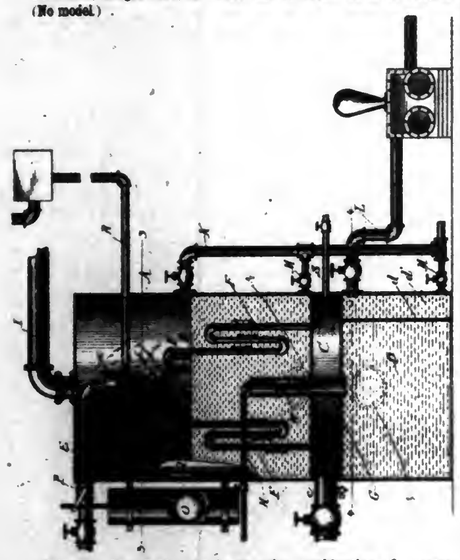
16. In a lock, the combination, with a cylindrical casing having an opening therein, of an adjustable ring encircling the casing, said ring being formed with an opening adapted to register with the opening in the casing, substantially as set forth.

400,317. ORE-SEPARATOR. THOMAS A. EDISON, Menlo Park, N. J., assignor to the Edison Ore Milling Company, (Limited,) New York, N. Y. Filed Aug. 20, 1883. Serial No. 70,289. (No model.)



Claim.—1. The method of separating mingled conductors and non-conductors of electricity, consisting in causing them to fall together through a magnetic field whose lines of force are constantly shifting, whereby the trajectory of the conducting substances is changed, substantially as set forth.

2. The combination of magnets and armatures which are relatively movable, and a hopper situated over the space between said magnets and armatures, whereby the trajectory of material falling from said hopper may be changed, substantially as set forth.



3. The combination of the revolving electro-magnets, the stationary armatures, and the hopper situated over the space between said magnets and armatures, whereby the trajectory of material falling from said hopper may be changed, substantially as set forth.

400,318. VESSEL FOR HOLDING LIQUIDS UNDER PRESSURE. JOHN A. FIELD and JOHN SEDGWICK, New York, N. Y., assignors of one-third to Jacob Mayer, same place. Filed Nov. 28, 1888. Serial No. 291,694. (No model.)

Claim.—The combination of vessel *a* with the vessels *b c*, tube *f*, vessel *g*, having double walls g^4 g^5, and offset g', resting upon flange g^6 of vessel *c*, and with the tubes *h i*, substantially as specified.

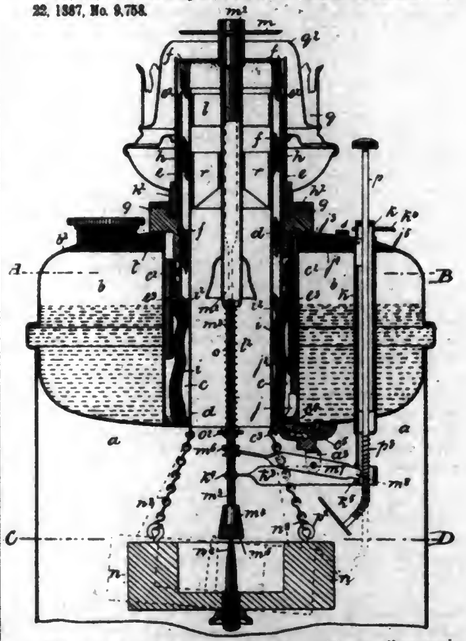
400,319. FEED-WATER HEATER AND PURIFIER. CHARLES E. FERREIRA, Morgan Park, Ill. Filed Jan. 15, 1889. Serial No. 296,446. (No model.)

Claim.—1. In a feed-water heater, the combination of a water-chamber provided with a water-inlet, a steam-chamber under the water-chamber, provided with a steam-inlet, a pipe communicating with the steam-chamber and extending into the water-chamber for conducting steam through the water, and an outlet for drawing off the water, substantially as described.

2. In a feed-water heater, the combination of a water-chamber provided with a water-inlet, a steam-chamber provided with a steam-inlet, a pipe communicating with the steam-chamber and extending into the water-chamber for conducting steam through the water, a settling-chamber, a pipe communicating between the water-chamber and the settling-chamber for conducting the water into the settling-chamber, and an outlet for drawing off the water, substantially as described.

3. In a feed-water heater, the combination of a water-chamber provided with a water-inlet, a steam-chamber under the water-chamber, provided with a steam-inlet, a pipe communicating with the steam-chamber and extending into the water-chamber for conducting steam through the water, a settling-chamber under the steam-chamber, a pipe communicating between the water-chamber and the settling-chamber for conducting the water into the settling-chamber, and an outlet for drawing off the water, substantially as described.

4. In a feed-water heater, the combination of a water-chamber provided with a water-inlet and a water-outlet, and a pipe communicating with a boiler and extending into the water-chamber for conducting steam through the water and terminating in a horizontal nozzle above the water-level, whereby the steam is distributed above the water and back-pressure prevented, substantially as described.



5. In a feed-water heater, the combination of a water-chamber provided with a water-inlet and a water-outlet, and a pipe communicating with a boiler and terminating in the water-outlet, whereby steam may be introduced directly into the outflowing water to superheat it, substantially as described.

6. In a feed-water heater, the combination of a water-chamber provided with a water-inlet and a water-outlet, a pipe communicating with a boiler and extending into the water-chamber for conducting steam through the water and terminating in a horizontal nozzle above the water-level, and a pipe communicating with the boiler and terminating in the water-outlet, substantially as described.

7. In a feed-water heater, the combination of a water-chamber provided with a water-inlet, and a pipe for drawing off the water, terminating at its upper end at a point in the chamber between the surface and bottom of the water and substantially below the surface, whereby the water may be drawn off and most of the impurities left, substantially as described.

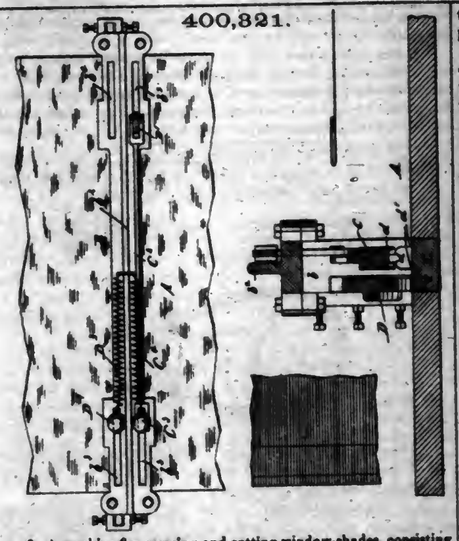
8. In a feed-water heater, the combination of a water-chamber provided with a water-inlet, a steam-chamber provided with a steam-inlet, a pipe communicating with the steam-chamber and extending into the water-chamber for conducting steam through the water, a settling-chamber under the steam-chamber provided with a vertical partition perforated in its lower portion, a pipe communicating between the water-chamber and the settling-chamber, terminating at its upper end at a point in the water-chamber between the surface and bottom of the water, and an outlet for drawing off the water, substantially as described.

400,320. OIL-LAMP. WILLIAM FRASER, London, County of Middlesex, England. Filed Sept. 23, 1887. Serial No. 250,512. (No model.) Patented in England Oct. 1, 1886, No. 12,456; in Belgium July 28, 1887, No. 58,167; in France July 28, 1887, No. 172,129, and in Germany Aug. 22, 1887, No. 9,758.

Claim.—1. In a lamp, the combination, with an oil-reservoir entirely closed above the oil-level, of an annular wick-chamber communicating with said oil-reservoir below the level of the oil, and a supplementary cover to said oil-reservoir forming a space communicating with said wick-chamber and provided with a ventilating-opening, substantially as described.

2. In a lamp, the combination, with an oil-reservoir, *b*, a central annular wick-chamber, *c*, and an intervening passage, c^2, of a valve, *j*, adapted to close said passage, and mechanism, substantially as described, for operating the same, as set forth.

3. In a lamp, the combination, with extinguisher-plate *m*, tube m^3, supporting said plate, and rod m^2, connected to tube m^3, of pivoted lever m^7, connected to said rod, and slide *k*, connected with said lever and provided with pusher k^2, all substantially as described.

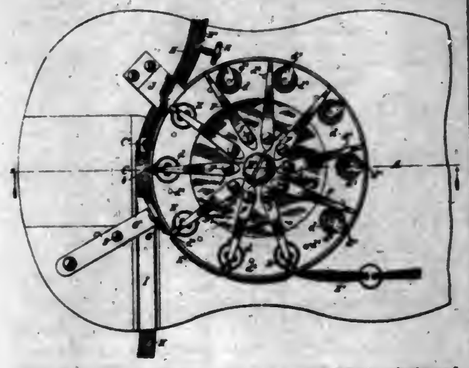


4. In a lamp, the combination, with deflector *m*, sliding tube m^3, rod m^2, spring *o*, pivoted lever m^7, and slide *k*, of sliding shutter *l*, rods l^2 l^3, and forked lever k^3, connected to said rods l^2 l^3 and to the slide *k*, substantially as described.

5. In a lamp, the combination, with deflector-plate *m*, and tubes m^2 m^3, supporting said deflector, of suspended weight *n*, spike n^3, projecting from said weight and supporting the tube m^2 m^3, sliding rod *p*, and plate p^3, the latter being arranged to contact with and displace said weight, thereby extinguishing the lamp, substantially as described.

400,321. MACHINE FOR CREASING AND CUTTING WINDOW-SHADE CLOTH. FRITZ GARTH, New York, N. Y., assignor to F. L. Hunninghaus & Co., same place. Filed Aug. 1, 1888. Serial No. 281,638. (No model.)

Claim.—1. A machine for creasing and cutting window-shades, which consists of a supporting-table having a transverse bar provided in its upper surface with two parallel longitudinal grooves, a vertically-reciprocating creaser above said bar, and provided with two parallel creasing-blades that can pass into the grooves of the bar, and a vertically-reciprocating cutting-knife, all combined substantially as set forth.



400,321.

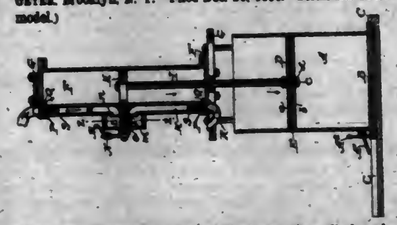
2. A machine for creasing and cutting window-shades, consisting of a supporting-table having a grooved transverse bar, a yoke-shaped supporting-frame having guide-recesses, a vertically-reciprocating creaser, and a vertically-reciprocating cutter sidewise of and parallel to said creaser, substantially as set forth.

3. The combination, with a supporting-table having a grooved transverse bar, a transverse yoke-shaped supporting-frame, a vertically-reciprocating creaser, elbow-levers for operating said creaser, and a vertically-oscillating cutting-knife operated by a fulcrumed and spring-actuated elbow-lever, said knife being located sidewise of and parallel to the creaser, substantially as set forth.

400,322. BUTTON-ATTACHING DEVICE FOR SEWING-MACHINES. MARSHALL GARDNER, Aurora, Ill., assignor, by mesne assignments, of two-thirds to Alice M. Ball, same place, and Elizabeth Florsheim, Chicago, Ill. Filed Dec. 1, 1887. Serial No. 256,594. (No model.)

Claim.—1. The combination, with the stitch-forming devices of a sewing-machine, of a revolving plate provided with a cylindric peripheral surface and with button-recesses near its margin, and notches extending therefrom outwardly through said cylindric surface, and independent clamps provided with prongs entering the notches for engaging and holding the tape or cord loops resting therein, substantially as described.

2. The combination, with the revolving plate D, provided with button-recesses near its periphery and notches extending therefrom outwardly through the peripheral surface of the plate, of independent spring clamp-arms F F, pivoted to the plate and provided with prongs f' f', entering said notches, substantially as described.



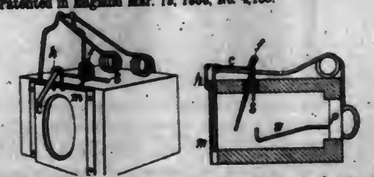
3. The combination, with the work-plate and needle of a sewing-machine, of a revolving plate provided with a cylindric peripheral surface and with button-recesses opening outwardly through the cylindric surface of the plate, said plate being mounted upon the work-plate with its margin in contact with said work-plate, and a presser in contact with the cylindric peripheral surface of the plate acting on the tape to force and hold the latter downwardly against the work-plate in passing the needle, substantially as described.

4. The combination, with the work-plate, needle, and presser-foot of a sewing-machine, of a revolving plate provided with a cylindric peripheral surface located adjacent to the needle and in contact with the presser-foot, said plate being provided with peripheral button-recesses opening outwardly through the said cylindric surface of the plate, and a roller, G, acting to press toward the work-plate the tape or cord placed about the said peripheral surface of the plate, substantially as described.

5. The combination, with the revolving plate D, provided with peripheral notches, as d', and with spring clamp-arms F, engaging the notches, of a stationary cam-plate located in position to engage said clamp-arms, substantially as described.

6. The combination, with the plate D, provided with button-recesses and with notches d' d', of spring clamp-arms F F, provided with prongs f' f', entering said notches d' d', and with prongs f^3 f^3, and a stationary cam-plate engaging said prongs f^3 f^3, substantially as described.

400,323. HYDRAULIC SAUSAGE-STUFFING MACHINE. HENRY GEYER, Brooklyn, N. Y. Filed Dec. 20, 1888. Serial No. 294,129. (No model.)

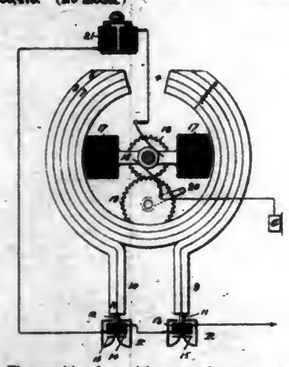


Claim.—1. The combination of the hydraulic cylinder, the piston working therein, the inlet-pipes communicating with either end of said cylinder, the rotating two-way valve controlling said pipes, the counterbalanced lever actuating said valve, and the spring-actuated valves governing the exhaust-port at each end of the cylinder, said valves being fitted within the inlet-pipes, each to be closed by the pressure of water admitted thereto and be automatically opened by its spring when the pressure ceases, substantially in the manner and for the purpose herein set forth.

2. The combination of the hydraulic cylinder, the piston working therein, the inlet-pipes communicating with either end of said cylinder, the rotating two-way valve controlling said pipes, the counterbalanced lever actuating said valve, the spring-actuated valves governing the exhaust-port at each end of the cylinder and fitted within the inlet-pipes, each to be closed by the pressure of water admitted thereto and be automatically opened by its spring when the pressure ceases, the pressing-cylinder mounted beneath the hydraulic cylinder, the piston therein connected with the piston of said hydraulic cylinder, the valve-actuating rod moving in unison with the piston, the lever projecting from the spindle of the rotating inlet-valve for the hydraulic cylinder, the tappets fitted on the valve-actuating rod to engage said lever, and the counterbalancing-lever projecting radially from said valve-spindle, whereby when said lever is carried by the movement of the actuating-rod to and by its center of gravity above the valve to close one inlet-port it will automatically drop to open the other port and thereby reverse the movement of the piston, substantially in the manner and for the purpose herein set forth.

3. The combination, with the inlet pipe and port of the hydraulic piston-cylinder, as described, of a discharge-pipe connected directly with said inlet-pipe beyond said port, a valve closing said discharge-pipe and subjected to the pressure within the inlet-pipe, and a spring actuating the valve to open it automatically when it is relieved from said pressure, substantially in the manner and for the purpose herein set forth.

400,324. ANIMAL-TRAP. DAVID GILMORE, Belfast, County of Antrim, Ireland. Filed Oct. 30, 1888. Serial No. 289,577. (Model.) Patented in England Mar. 19, 1888, No. 4,185.



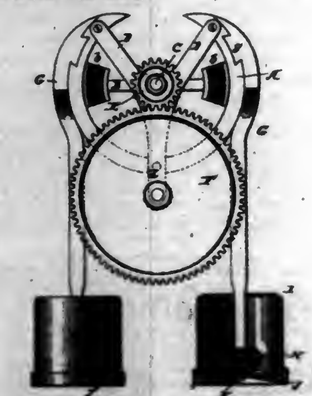
Claim.—1. In a setting device for a small-animal trap, the combination of a staple, *s*, having hinged to said staple a fork, *f*, said fork passing down through an aperture in the body of the trap to near the

under side of the hole or chamber, where the bait is placed, and a staple, *h*, having hinged to it a holder or catch, *e*, of flattened wire or sheet metal, to engage with the fork *f*, substantially as described.

2. A removable plug, *p*, having attached to it a wire bait-holder, *w*, the said plug *p* fitting into a hole in the back of trap, substantially as shown and described, and for the purpose set forth.

400,325. TELEPHONE. NOEL B. GINOCHIO, New York, N. Y., assignor of one-half to Elias M. Greene, same place. Filed July 20, 1888. Serial No. 280,475. (No model.)

Claim.—1. The combination, with an annular magnet, of an armature arranged to rotate therein, extension-pieces connected to the annular magnet, soft-iron cores mounted on said extension-pieces, and coils surrounding said cores connected in the main line, and diaphragms for said coils, substantially as described.



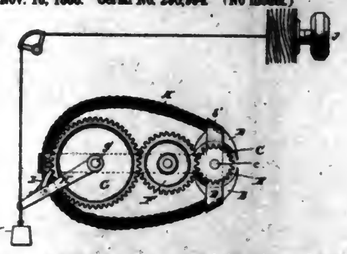
2. The combination, with the end of the permanent magnet, as 10, of a core mounted thereon sustaining a coil connected to the main line, a box also mounted on the magnet, a mouth-piece mounted in said box, and a case supporting a diaphragm connected to and operated by the mouth-piece, substantially as described.

3. A magneto-telephone having a permanent magnet, a core fixed thereon supporting a coil, a case surrounding the coil supporting a diaphragm, and means for adjusting the diaphragm and case with relation to the core and magnet, substantially as described.

4. In a magneto-telephone, a diaphragm of pyroxyline having magnetic material embedded in one surface thereof, the said material being distributed over the surface so as to be concentrated at or near the center of the diaphragm and gradually diminishing toward the edges thereof, substantially as described.

5. In a magneto-telephone, a diaphragm of pyroxyline having magnetic material embedded in one surface, substantially as described.

400,326. TELEPHONE. NOEL B. GINOCHIO, New York, N. Y., assignor of one-half to Elias M. Greene, same place. Filed Nov. 16, 1888. Serial No. 290,993. (No model.)

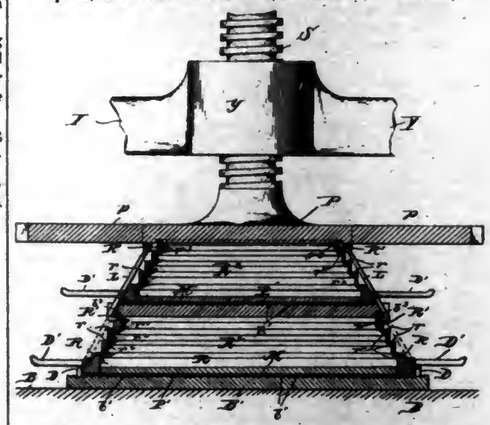


Claim.—1. The combination, with an annular magnet, of an armature arranged to rotate therein, extension-pieces connected to the magnet and formed with tapering ends, and coils secured to said ends, substantially as described.

2. The combination, with an annular compound magnet, of bearing-pieces secured to the sides thereof, an armature-shaft supported in said bearings and carrying an armature adapted to rotate within the magnet, and extension-pieces adapted to fit a portion of said magnet and to be secured thereto by dovetailed grooves, substantially as described.

3. The combination, with an annular compound magnet, of an armature arranged to rotate therein and supported in bearings secured to the sides of the magnet, extension-pieces connected to the annular magnet by dovetailed joints having tapering ends, and telephone-coils secured to said ends, substantially as described.

400,327. MAGNETO-ELECTRIC GENERATOR. NOEL B. GINOCHIO, New York, N. Y., assignor of one-half to Elias M. Greene, same place. Filed Nov. 16, 1888. Serial No. 290,994. (No model.)



Claim.—1. A permanent magnet consisting of a number of strands twisted together, each strand consisting of a series of independent steel wires, substantially as described.

2. A magneto-generator in which the permanent magnets are made up of a cable or rope composed of a series of strands of steel wires twisted together, polar extensions connected to said wires, an armature rotating between the poles, and driving-gear for said armature supported upon the magnet, substantially as described.

3. A hand-operated magneto-machine consisting, essentially, of a permanent magnet in the form of a cable made up of a number of strands of steel threads twisted together, polar extensions connected to said magnet, an armature rotating between said extensions, driving-gear mounted on said magnet, a drum connected to said gear, and a spring-retracted chain for operating said drum, substantially as described.

400,328. OIL-PRESS. LOUIS GIMONDI, Marseilles, France. Filed Apr. 12, 1888. Serial No. 270,509. (No model.)

Claim.—1. In a press of the class described, a holder composed of a plurality of telescopic elements provided with a flange at their upper and lower edges, the flange at the upper edge of one element interlocking with the flange at the lower edge of the element next above, substantially as and for the purposes specified.

2. In a press of the class described, a holder composed of a plurality of telescopic elements, the lower or inner edge of which is beveled, whereby when said elements are telescoped such inner edges will form a hollow truncated cone, substantially as and for the purpose specified.

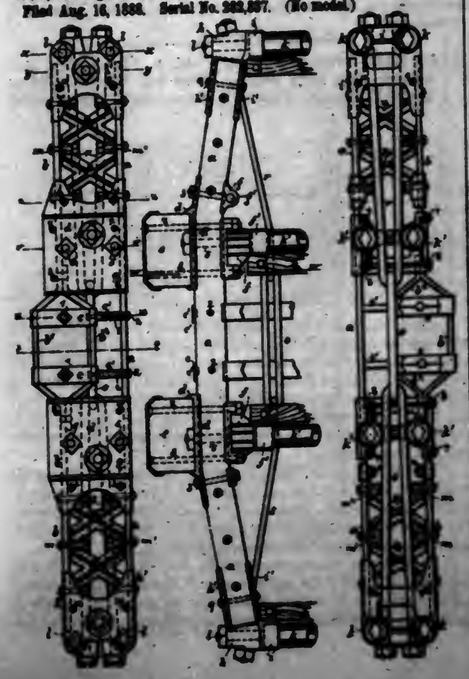
3. In a press of the class described, the combination of a power-screw and a platen or follower with a plurality of superposed holders for the material operated upon, each composed of a set of interlocking telescopic elements, and an impermeable channeled plate interposed between each two holders, substantially as and for the purpose specified.

4. In a press of the class described, the combination of a power-screw and a platen or follower with a plurality of superposed holders for the material operated upon, each composed of a set of interlock

ing telescopic elements, and a locking device for locking the inner or smaller element of the lower holder to the platen, substantially as and for the purpose specified.

5. In a press of the class described, the combination of a power-screw and a platen or follower with a plurality of superposed telescopic holders for the material to be operated upon, a locking device for locking the lowermost holder to the bed-plate of the press, and a locking device for locking the inner or smaller element of said lowermost holder to the platen, whereby all the superposed holders are locked to said platen, substantially as described.

6. In a press of the class described, the combination, with a plurality of superposed holders for the material operated upon, each composed of a set of interlocking telescopic elements, of a bottom plate for each holder, said bottom plate having its upper face channeled, and having a groove formed in its under side for the reception of the upper edge of the smaller element of the holder below it, substantially as and for the purposes specified.



7. In a press of the class described, the combination, of a power-screw and a platen with a plurality of superposed holders, plate or bottom for each holder having a channeled upper surface, and a groove formed in the lower face for the reception of the upper edge of the smaller element of the next holder below to lock the holders together, a locking device to lock the plate of the lower holder to the bed-plate of the press, and a locking device to lock the smaller element of said lower holder to the platen, substantially as and for the purpose specified.

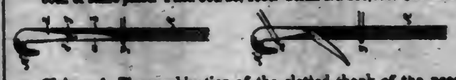
8. In a press of the class described, a telescopic holder for the material to be operated upon, in combination with a bottom for said holder, and stay-rods connected with said bottom and adapted to engage the smaller element of the telescopic sections of the holder to hold the same drawn out, substantially as described.

9. In a press of the class described, a telescopic holder for the material to be operated upon, in combination with a detachable bottom for such holder, having its upper face channeled, a foraminous plate interposed between the two, and a foraminous mat arranged upon the foraminous plate and within the holder, substantially as and for the purpose specified.

10. The herein-described hand-press, comprising a frame of the form of a letter-press, a power-screw carrying a hand-wheel at one end and a platen at the other, and a plurality of telescopic holders for the material to be operated upon, said holders being arranged one upon the other between the bed-plate and platen, and an impermeable dividing-plate between each two holders, having its upper face channeled, and a groove formed in the lower face thereof, into which fits the upper edge of the inner or smaller element of a telescopic section, substantially as and for the purpose specified.

400,329. END SILL FOR RAILWAY-CARS. JAMES T. GOODWILLOW, Huntingdon, Pa., assignor to the Iron Car Company, of Connecticut. Filed Aug. 16, 1888. Serial No. 282,857. (No model.)

Claim.—1. An end sill for railroad-car bodies composed of two or more horizontal boat plates, *a b*, the face-plate *d*, the central sills, *f f'*, the end caps, *h i*, and bolts for connecting the respective parts together, and the brace system of links *o*, *r*, and *s*, substantially as set forth.

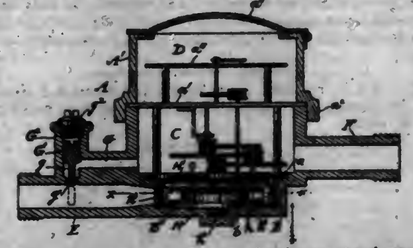


2. The combination, with the horizontal plate *a*, of the plate *b*, having a bowed portion, *b'*, the bowed plate *b²*, and the bracket-piece *e* and supports *e'*, substantially as set forth.

3. The combination, with the horizontal top and bottom plates, *a b*, of the central sills, *f f'*, connected therewith and adapted to receive longitudinal tubes, and the end caps *h*, connected to end caps *i*, and bolts for securing the said parts to the top and bottom plates, substantially as set forth.

4. The combination, with the horizontal top and bottom plates, *a b*, of the head-blocks *m m'* and bolts for connecting said head-blocks to said plates, and the X-shaped stude or frames *n*, adapted to be received between the plates *a b* and the blocks *m m'*, substantially as set forth.

5. The combination, with the horizontal top and bottom plates, *a b*, and the end caps, *h i*, of the two-part central sills, *f f'*, and the bolts for connecting the same to the top and bottom plates, the link-brace system *o*, *r*, and *s*, secured at its ends in the end caps, *h i*, and passing behind and bearing upon the sills *f'*, substantially as and for the purposes set forth.



400,330. KNITTING-MACHINE NEEDLE. SAMUEL H. GOODMAN, Philadelphia, Pa., assignor to Conyers Button and Martin L. Firstbrook, both of same place. Filed Oct. 26, 1888. Serial No. 289,066. (No model.)

Claim.—1. The combination of the slotted shank of the needle and the pivoted latch adapted to lie within the slot, with a latch-operator having a portion projecting inward beyond the shank of the needle at or near the hooked upper end of the same, said latch-operator being independent of the latch, all substantially as specified.

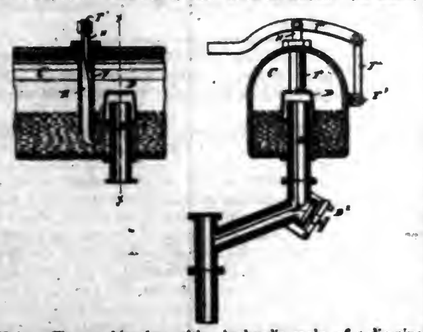
2. The combination of the slotted shank of the needle and the pivoted latch adapted to lie within the slot, with a pivoted lever bearing on said latch and having a portion projecting inward beyond the shank of the needle at or near the hook of the same, all substantially as specified.

400,331. WATER-METER. GEORGE A. GRAHAM, Chicago, Ill. Filed July 9, 1888. Serial No. 279,574. (No model.)

Claim.—In a water-meter, a metered and non-metered passage, the one communicating with the induction-pipe and the other with a duct leading to said induction-pipe, in combination with a screw-plug arranged in said duct and having an extension, *g'*, in communication with said induction-pipe, whereby said duct may be closed or opened at will or the water-passage in the induction-pipe more or less obstructed, substantially as described.

400,332. CHECK-HOOK. SAMUEL H. HAAS, Philadelphia, Pa. Filed June 23, 1888. Serial No. 277,977. (No model.)

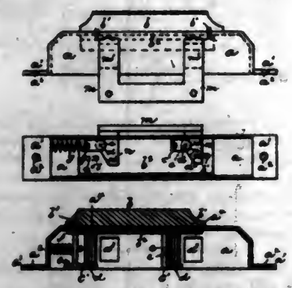
Claim.—1. A combined check hook and terret having a stationary jaw, a post stepped in said stationary jaw, a plate secured to said post and having a recess therein, a movable jaw with heel pivoted to said plate, a spring in said recess bearing against said heel, and a nut working on a screw-threaded lower end of said post, said parts combined substantially as described.



2. The combined check hook and terret herein described, con-

sisting of the stationary jaw A, with nose *b'*, and movable jaw with nose *b* and heel E, the bifurcated plate C, having recess G, the post H, stepped in jaw A, and the spring F, the said heel E being pivoted to plate C, and the spring F being seated in recess G and bearing against the heel E, and the said movable jaw being substantially in horizontal position when closed, said parts being combined substantially as described.

3. In a check hook and terret, a movable jaw with a removable supporting-post having the shoulder K and screw-stem H', in combination with a stationary jaw having an opening in its base portion, said stem being adapted to pass through said opening in base and portion of harness attached, and secured thereto by a nut on said stem below said harness, substantially as and for the purpose set forth.



4. A combined check hook and terret consisting of a fixed jaw with base having opening therein, a movable jaw with heel, a bifurcated plate with recess, a spring seated in said recess and bearing against the said heel, a supporting-post for said plate having the shoulder K and screw H' passing through the base of said fixed jaw, and a nut adapted to work on screw-stem, said parts being combined substantially as described.

400,883. SEAL FOR HYDRAULIC MAINS. ROBERT HABERTUR, New York, N. Y. Filed Dec. 8, 1888. Serial No. 293,082. (No model.)

Claim.—The combination, with a hydraulic main, of a dip-pipe extending through the bottom of the same and above the level of the liquid in the same, an inverted cap above the upper open end of said dip-pipe, a U-shaped rod, a lever pivoted to said rod, a guide-pipe extending from the top of the main into the liquid in the main, and a friction-spring interposed between the guide-rod and guide-pipe, so as to retain the sealing-cap in any suitable position, substantially as set forth.

400,884. BAG-LOCK. JULIUS HANNEMANN, Newark, N. J., assignor to R. Neumann & Co., same place. Filed Jan. 31, 1888. Serial No. 262,374. (No model.)

Claim.—1. In a bag-lock provided with a lock-case and hasp or tongue, a slide or finger piece, with studs or pins secured thereto, and anti-friction rollers revolving on said pins or studs and adapted to engage with slots in said hasp or tongue, as shown, and for the purpose set forth.

2. In a bag-lock provided with a lock-case and openings and a slide or finger piece, a tongue or hasp with tapering ends, and provided with slots adapted to receive and hold anti-friction rollers rotating on pins or studs attached to the finger-piece within the lock-case, as shown, and for the purposes set forth.

3. In a bag-lock, the combination of a lock-case provided with openings on the side, a slide or finger piece secured to said case and adapted to slide on said case, pins or studs secured to said finger-piece, rollers rotating on said pins, and a tongue or hasp with beveled end and semicircular sockets adapted to receive and hold said rollers, all as shown, and for the purpose set forth.

400,885. PLASTIC MINERAL COMPOSITION. JAMES L. HASTINGS, Philadelphia, Pa., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed Sept. 27, 1888. Serial No. 286,562. (No specimens.)

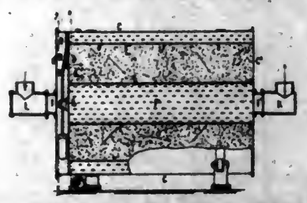
Claim.—1. A composition for forming a refractory compound, containing magnesium oxide, uranium oxide, calcium fluoride, starch, and a prepared gum or mucilaginous substance.

2. A composition for forming a refractory compound, containing magnesium oxide, uranium oxide, calcium fluoride, starch, and gum-tragacanth or bassorine, and a solution of one or more salts of acetate, chloride, or nitrate of magnesium, strontium, calcium, or aluminum.

400,886. PLASTIC MINERAL COMPOSITION. JAMES L. HASTINGS, Philadelphia, Pa., assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed Sept. 27, 1888. Serial No. 286,563. (No specimens.)

Claim.—A refractory compound containing strontia oxide, strontia carbonate, (native rock,) strontia sulphate, (native rock,) calcium oxide, calcium carbonate, magnesium oxide, magnesium carbonate, calcium fluoride, magnesium chloride, magnesium sulphate, uranium oxide, and starch, substantially as described.

400,887. BUTTON. GOTTLIEB HEIDMANN, EMIL HÜTTER, and CARL HOHN, Barmen, Prussia, Germany, assignors to Heidmann & Hüttger, same place. Filed Sept. 5, 1887. Serial No. 248,870. (No model.)

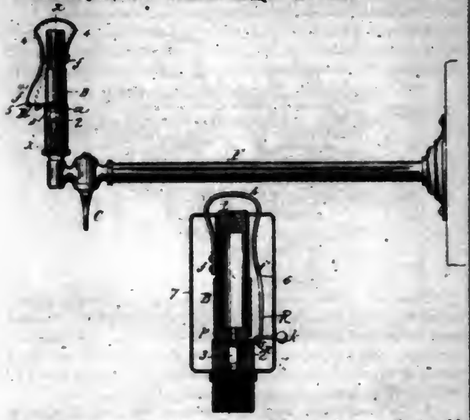


Claim.—1. As an improved article of manufacture, a blank for cloth-covered buttons, consisting of a button head or disk provided with an upturned peripheral flange, a cloth shank, and a dished or outwardly-flaring cloth-retaining plate, *f*, said parts being permanently assembled for the reception of the cloth cover, substantially as described.

2. As an improved article of manufacture, a button-frame for cloth-covered buttons, comprising the herein-described button head or disk, a cloth shank, a shank-retaining plate, and a cloth-cover-retaining plate, said parts being all united together, as described, and ready for the reception and securing thereto of the cloth covering through the medium of the cover-retaining plate, substantially as and for the purpose specified.

3. The herein-described button-frame, consisting of a button head or disk, a cloth shank, and a shank-retaining plate secured to the disk by upsetting the edges thereof over the edges of said plate, in combination with the dished or flaring cover-retaining plate or disk *f'*, connected with the other elements of the button-frame, substantially as described.

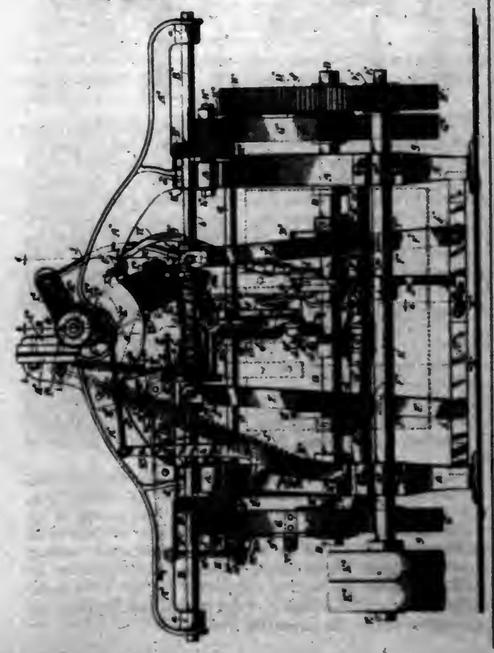
400,888. PNEUMATIC MALTING-DRUM. JULIUS HENNIES, Charlottenburg, near Berlin, Germany. Filed Sept. 20, 1888. Serial No. 286,772. (No model.) Patented in Belgium Feb. 20, 1888, No. 80,706.



Claim.—1. A rotating malting-drum having the head-plates C C², with central apertures, I I', the partition-plate D, and the perforated conduits E and F, in combination with means, substantially as described, for creating a current of air from one of the apertures I I' to the other, the conduit or conduits through which the air issues from the drum having their perforations widening out in the direction in which the air-current passes through them, substantially as and for the purpose described.

2. The combination, with a rotating malting-drum having the head-plates C C², with central apertures, I I', the partition-plate D, and the perforated conduits E and F, of the obturating-plate O, whereby the conduits E are closed during a part of the rotation of the drum, substantially as and for the purpose specified.

3. A rotating malting-drum having the head-plates C C², with central apertures, I I', the partition-plate D, forming with the plate C an air-passage, N, in one end of the drum, the peripheral conduits E, having inward apertures, and the central perforated or apertured conduit F, the partition-plate D having apertures opposite the chamber in the body portion of the drum, substantially as set forth.



400,889. AUTOMATIC SHUT-OFF FOR GAS-BURNERS. REMI J. HENRY, Jr., Jersey City, N. J., and WILLIAM J. KASSLER, Brooklyn, N. Y. Filed July 28, 1887. Serial No. 245,563. (No model.)

Claim.—1. In an automatic shut-off for gas-burners, the combination, with a gas pipe and burner, of a valve held in a suitable seat in the burner, and provided with an arm or stem, and a U-shaped expansion spring-plate placed over the burner-tip, having one end fixed and the other positively connected with the valve-stem, and freely movable therewith at all times to open and close the valve, the construction being such that the valve is kept closed by the spring-plate, whatever the condition of the cock, unless the gas is lighted, substantially as specified.

2. The combination, with the gas pipe and burner, of a valve provided with an arm and held in a suitable seat in the burner, a U-shaped expansion-plate placed over the burner-tip and having one end fixed and the other movable, but positively and permanently connected with the arm of the valve, the cylindrical casing 7, inclosing said valve-arm and expansion-plate, and a rod, R, provided with a projection that extends outside of said case through a suitable opening therein, substantially as specified.

400,840. SPRING-MAKING MACHINE. CHRISTIAN C. HILL, Chicago, Ill., assignor to Charles L. Ames and Abel H. Frost, same place. Filed July 5, 1888. Serial No. 279,001. (No model.)

Claim.—1. A machine for making conical wire springs, comprising two rotating conical mandrels arranged end to end, and which are movable longitudinally toward and from each other, and a wire-guide which is movable in a direction longitudinally of the mandrels, substantially as described.

2. A machine for making conical wire springs, comprising two rotating conical mandrels located end to end, with their smaller ends together, and an oscillating wire-guide moving in an arc approximately corresponding with the form or outline of one side of the mandrels, substantially as described.

3. The combination, with two conical mandrels placed end to end, of means for giving intermittent rotary motion to said mandrels, means for giving reciprocatory motion to said mandrels toward and from each other, and a wire-guide movable in a direction longitudinally of the mandrels, substantially as described.

4. The combination, with two conical mandrels arranged end to end, of two shafts supporting said mandrels, said shafts being mounted in bearings affording both longitudinal and rotary motion thereto, means for giving intermittent rotary motion to said shafts, means giving intermittent endwise reciprocatory motion to said shafts, and a wire guide movable endwise with relation to the mandrels, substantially as described.

5. The combination, with two conical mandrels arranged end to end, of two shafts supporting the same, said shafts being mounted in bearings affording both endwise and rotary motion of the shafts, said shafts being provided with longitudinal grooves, of rotating sleeves surrounding said shafts and provided with feathers engaging said grooves in the shafts, driving-connections engaging said sleeves and giving intermittent rotary motion thereto, levers arranged transversely with relation to the shafts and engaged at their ends therewith, a shaft provided with two cams acting upon said levers to give endwise motion to the shafts, and a wire-guide movable endwise with relation to the mandrels, substantially as described.

6. The combination, with the rotating and longitudinally-movable conical mandrels arranged end to end, of a wire-guide movable longitudinally with reference to the mandrels, a wire-gripper on one of said mandrels, and an intermittingly-acting wire-feeding device connected to and moving with said wire-guide, substantially as described.

7. The combination, with two rotating and longitudinally-movable conical mandrels arranged end to end, of a wire-guide movable longitudinally with reference to the mandrels, a wire-gripper on one of said mandrels, an intermittingly-acting wire-feeding device connected to and moving with said wire-guide, and a tension device, also connected and moving with the wire-guide, substantially as described.

8. The combination, with two revolving and longitudinally-reciprocating mandrels arranged end to end, of a wire-gripper upon one of said mandrels, a wire-guide movable longitudinally with relation to said mandrels, an intermittingly-acting feeding device movable with said wire-guide and engaging the wire passing through the same, and a cutting device arranged in alignment with the said wire-guide when the latter is at the limit of its movement away from the wire-gripper, substantially as described.

9. The combination, with two rotating and longitudinally-reciprocating conical mandrels, of a wire-guide movable longitudinally with relation to the mandrels, a wire-gripper upon one of said mandrels, an oscillating arm carrying said wire-guide, a feeding device mounted upon said arm, and a cutting device arranged opposite the larger end of the other of said mandrels, substantially as described.

10. The combination, with two longitudinally-reciprocating revolving conical mandrels arranged end to end, of an oscillating wire guide, a pivotally-supported arm carrying said wire-guide, and means for giving oscillatory movement to said pivoted arm, substantially as described.

11. The combination, with two rotating and longitudinally-reciprocating conical mandrels, of a wire-guide, a pivotally-supported oscillating arm carrying said guide, feeding-rollers mounted upon said arm and engaging the wire passing through the guide, a wire-gripper upon one of said conical mandrels, and means giving intermittent rotary motion to said feed-rollers constructed to turn the rollers as the wire-guide approaches said wire-gripper, substantially as described.

12. The combination, with two revolving longitudinally-reciprocating conical mandrels arranged end to end, of a wire-guide movable longitudinally with relation to the mandrels, a pivotally-supported swinging arm carrying a rigid arm extending outwardly from the said wire-guide-carrying arm, a rotating cam, a lever engaging said cam, and a connecting-rod connecting said lever with the said arm of the wire-guide-carrying arm, substantially as described.

13. The combination, with two rotating and longitudinally-reciprocating conical mandrels arranged end to end, of a wire-guide, a pivotally-supported oscillating arm carrying said guide, feed-rollers mounted upon said arm, one of said feed-rollers being movable toward and from the other feed-roller, means giving intermittent rotary movement to said feed-rollers, and means for moving one of said rollers toward and from the other roller, substantially as described.

14. The combination, with two rotating and longitudinally-reciprocating conical mandrels arranged end to end, of a wire-guide, a pivotally-supported oscillating arm carrying said wire-guide, feed-rollers mounted upon said oscillating arm, and means for giving intermittent rotary movement to said feed-rollers, comprising a shaft, K, connected with one of said feed-rollers, gearing connecting said shaft K with the other feed-roller, a shaft, K^2, arranged concentrically with relation to the pivotal axis of the said oscillating arm, gearing connecting said shafts K and K^2, an oscillating arm, K^3, a pawl-and-ratchet connection between said arm K^3 and the shaft K^2, and means for giving intermittent oscillatory movement to said arm K^3, substantially as described.

15. The combination, with the rotating and longitudinally-reciprocating conical mandrels C and C', of a wire-guide, a pivotally-supported arm carrying said wire-guide, feed-rollers mounted upon said arm, a shaft, K, mounted upon said arm and giving motion to said feed-rollers, a shaft, K^2, arranged concentric with the pivotal axis of the said arm, gearing connecting said shafts K and K^2, an oscillating arm, K^3, mounted concentrically with the shaft K^2, a pawl-and-ratchet connection between said oscillating arm K^3 and the shaft K^2, a lever, K^4, connected with the said oscillating arm K^3, a spring applied to said lever K^4 for moving the latter in one direction, and a drive-wheel, G, by which rotary motion is given to one of said mandrels, said wheel being provided with a cam, K', which engages and actuates the said lever K^4, substantially as described.

16. The combination, with the oscillating arm I and feed-rollers L L', of shafts K K', supporting said feed-rollers, an eccentric-plug, K^2, supporting the shaft K', an arm, L, attached to the said eccentric-plug K^2, toggle-arms L' L^2, connected with said arm L and with the arm I, and stops or detents L^4 L^5, engaging and moving said toggle-arms as the said arm I is oscillated, substantially as described.

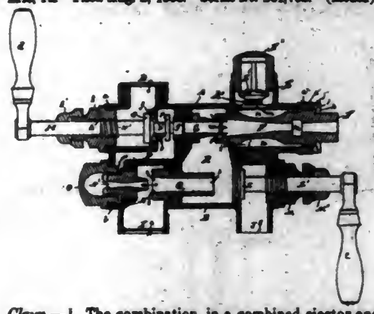
17. The combination, with the mandrels C C', an oscillating arm, I, and a wire-guide mounted thereon, of intermittingly-rotating feed-rollers mounted upon said oscillating arm I, shafts K and K', supporting said feed-rollers, an eccentric-plug, K^2, mounted in the arm and affording bearing for the shaft K', an arm, L, upon said eccentric-plug, toggle-arms L' L^2, connected with the arm I and with the said arm L, a spring, L^3, acting to hold said toggle-arms in their flexed position, a spring-detent, L^5, engaging one of said toggle-arms for flexing the same, and an arm, L^6, attached to the actuating-lever F' and acting upon said toggle-arms to straighten out the latter, substantially as described.

18. The combination, with two rotating longitudinally-reciprocating conical mandrels arranged end to end, of a wire-gripper on one of said mandrels, comprising a stationary jaw and a movable jaw, said movable jaw being attached to a sliding bar mounted in the mandrel and constructed for actuation by the endwise pressure of the other mandrel when said mandrels are brought together, substantially as described.

19. The combination, with two revolving and longitudinally-reciprocating conical mandrels arranged end to end, and a wire-guide movable endwise with relation to the mandrels, of stationary guard pins or fingers I^2 I^3 I^4, surrounding the end of one of the mandrels, substantially as described.

20. The combination, with two rotating longitudinally-reciprocating conical mandrels arranged end to end, and a wire-guide movable longitudinally with relation to the mandrels, of means for discharging finished springs, consisting of a plurality of revolving arms located beneath the said mandrels, and means giving intermittent rotary motion to said arms, substantially as described.

21. The combination, with rotating and longitudinally-movable conical mandrels arranged end to end, and a wire-guide movable longitudinally with relation to said mandrels, of a wire-cutting device embracing stationary and movable cutters arranged in alignment with the wire-guide when the latter is at the extreme limit of the forward movement, a pivoted lever supporting said movable cutter, a pivoted dog, N^4, connected with said lever, and a wheel carrying a pin, N^5, constructed to engage said dog for actuating the movable cutter, substantially as described.

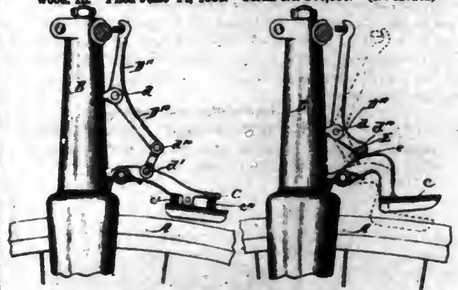


400,841. PEN-EXTRACTOR OR DEVICE FOR REMOVING PENS FROM THEIR HOLDERS. ADOLPH G. HOUSTATTER, New York, N. Y. Filed Jan. 19, 1889. Serial No. 296,801. (No model.)

Claim.—1. The pen-extractor consisting, substantially as described, of a piece of elastically-yielding material having a longitudinal transversely-curved slit in one end thereof.

2. The pen-extractor formed in two longitudinal divisions united at one end, and having a longitudinal transversely-curved groove in the inner face of the one division and a counterpart rib formed in the opposite face of the other division to enter said groove, substantially in the manner and for the purpose herein set forth.

400,842. COMBINED EJECTOR AND INJECTOR. PARKER P. HOUSE, Erie, Pa. Filed Aug. 2, 1888. Serial No. 281,782. (Model.)



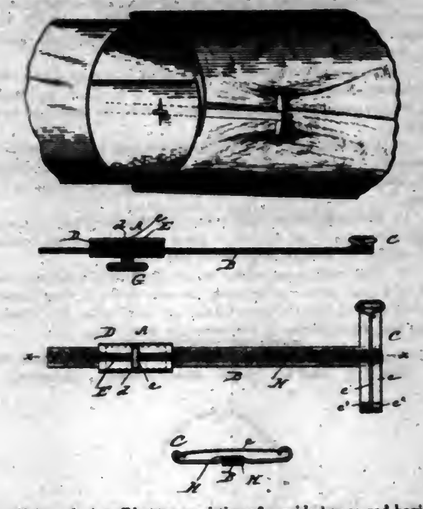
Claim.—1. The combination, in a combined ejector and injector having steam and water passages connecting them together, of a valve-stem, having a steam-inlet valve secured thereon and operating on a valve-seat, with a piston-valve secured on the end of said valve-stem, operating loosely in the end of injector-tube, substantially as and for the purpose set forth.

2. The combination, in an injector-tube, of a peripheral shoulder or flange on its inner end, adapted to fit tightly against a seat in the injector-body, with a flange on its outer end concaved out on one side, so as to adapt it to be forced up to and seated against the end of the injector-body, substantially as and for the purpose set forth.

3. The combination, in an injector valve-stem, of a steam-shut-off valve operating upon a seat and a piston-valve operating in the end of the injector jet-tube, with a valve on said stem between said first-named valves adapted to regulate the flow of steam, substantially as and for the purpose set forth.

400,843. VELOCIPEDE-BRAKE. THOMAS B. JEFFERY, Ravenswood, Ill. Filed June 14, 1888. Serial No. 277,036. (No model.)

Claim.—1. In a velocipede, in combination with the wheel and the head, the brake-carrying lever pivoted to the head, and an auxiliary lever, also pivoted to the head, and an intermediate piece pivoted to said auxiliary lever and actuating the brake-carrying lever, the distance from the pivot of the auxiliary lever to the contact of said intermediate piece with the brake-carrying lever, when the brake-shoe is in closest contact with the wheel, being nearly equal to the sum of the distances from the pivot of said auxiliary lever on the head to the pivot to said lever of the intermediate piece and the distance from the last-named pivot to the contact of the intermediate piece with the brake-carrying lever, substantially as and for the purpose set forth.



2. In combination with the wheel and the head, the brake-carrying lever pivoted to the head, and an auxiliary lever, also pivoted to the head, and a link connecting said auxiliary lever to the brake-carrying lever, the sum of the lengths of said link and the auxiliary lever being slightly greater than the distance between their pivots to said brake-carrying lever and head, respectively, when the brake-shoe is in contact with the wheel, substantially as and for the purpose set forth.

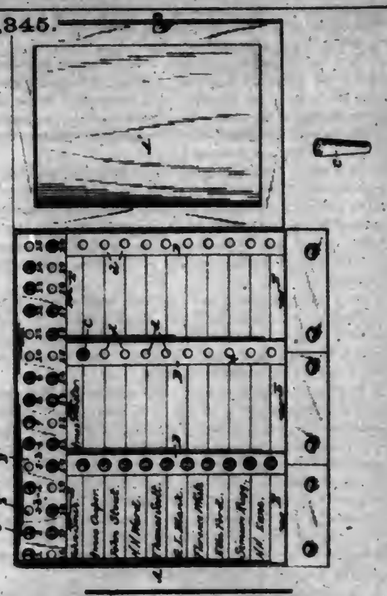
3. In a velocipede, in combination with the wheel and the head, the brake-carrying lever pivoted to the head, and an auxiliary lever, also pivoted to the head, the brake-carrying lever having an upwardly-extending arm, and a link connected from said arm to the auxiliary lever, the sum of the lengths of said links and auxiliary lever being slightly greater than the distance from the pivot of the auxiliary lever on the head to the pivot of the link to the brake-carrying lever when the brake-shoe is in contact with the wheel, substantially as and for the purpose set forth.

4. In a velocipede, in combination with the head and the wheel, the brake-carrying lever pivoted to the head, and the brake-shoe pivoted to said lever, and a spring reacting between the shoe and the lever forward of the pivot of the shoe to force the shoe toward the wheel, and a stop to limit such movement of the shoe about its pivot, substantially as and for the purpose set forth.

5. In a velocipede, in combination with the wheel and the head, the brake-carrying lever having the brake-shoe pivoted to it and provided with two springs, one in front and one behind its pivot, reacting between it and the lever, substantially as and for the purpose set forth.

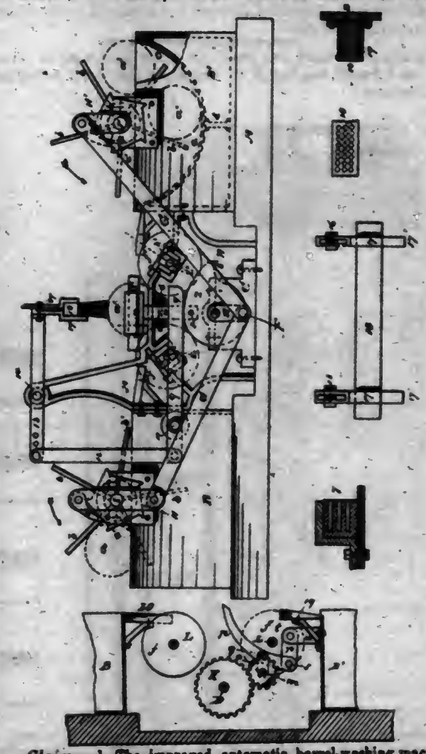
400,844. CUFF-HOLDER. GEORGE R. G. JOHN, Louisville, Ky. Filed Nov. 13, 1888. Serial No. 290,727. (No model.)

Claim.—1. A cuff-holder consisting of a guide bar or rod having a clasp at one end for detachably connecting the same to the wearer's sleeve, a sliding sleeve fitted on said bar to move longitudinally thereon and having a stud for attaching a cuff thereto, and a friction-spring arranged within and attached to the sliding sleeve to move therewith and normally bearing on said rod to hold the sliding sleeve at any desired longitudinal adjustment thereon, substantially as and for the purpose described.



2. A cuff-holder consisting, essentially, of a guide bar or rod, an adjustable sleeve fitted thereon, a tension-spring detachably connected to the sleeve and arranged within the latter between one of the sides thereof and the bar to normally ride against said bar, and a headed stud permanently secured to the sleeve exteriorly thereto, substantially as described.

3. A cuff-holder consisting of a guide bar or rod, a sleeve fitted thereon and having a transverse slot therein, and a spring arranged within the sleeve and having a raised rib at its middle, which rib fits in the slot to detachably connect the spring to the sleeve and permit both ends of said spring to bear against the bar and sleeve, substantially as described.



4. A cuff-holder consisting, essentially, of a guide bar or rod having longitudinal strips of fabric permanently united thereto, and an adjustable clasp fitted on said bar and provided with a spring which bears against the fabric strip to hold said clasp on the bar by frictional contact therewith, substantially as described.

5. A cuff-holder consisting of a guide-bar, an attaching-pin having a flat plate permanently secured to one end thereof, said plate having a pin pivoted to one end and a notched keeper at its other end, and an adjustable clasp fitted on the guide-bar to slide longitudinally thereon and having a friction-spring which is fitted within the sleeve between one of the sides thereof and the bar to normally bear against said bar, substantially as described.

400,845. [illegible]

400,846. BARREL-WASHING MACHINE. HENRY R. KLANT, Newark, N. J. Filed Apr. 12, 1888. Serial No. 270,468. (No model.)

Claim.—1. The improved automatic barrel-washing machine herein described, combining a tank adapted for filling the barrels with water, top and end brushes operated by levers for washing and scrubbing said barrels, a tank adapted for cleansing and rinsing the barrels after being washed and scrubbed, rollers to cause the barrel to revolve, and an arm for automatically transferring the barrel to the rinsing-tank, as and for the purposes set forth.

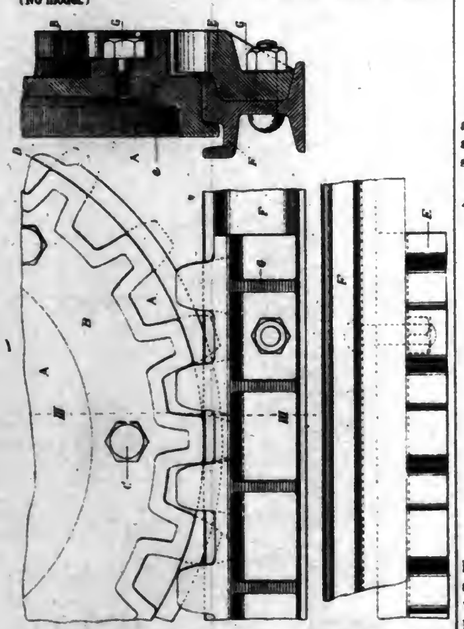
2. An automatic barrel-washer combining a plurality of washing-tanks, a carrier for conveying or transferring the keg or barrel from

400,845. INDICATOR. GEORGE W. KENNEDY, Zanesville, Ohio. Filed Jan. 11, 1888. Serial No. 296,081. (No model.)

Claim.—In a record device, a board or plate having holes or perforations formed therein and fixed numbers adjacent to the holes or perforations corresponding to the articles or books to be loaned and removable pegs to fit the holes or perforations, in combination with a name-column provided with holes or perforations to receive the numbered pegs when removed from the board or plate, substantially as and for the purpose set forth.

one tank to the next, and a scrubber or washer for removing the adhering dirt in the transfer, as set forth.

3. In a barrel-washing machine, a water-tank, a revolving shaft provided with arms for receiving, holding, and automatically discharging the barrel from the tank, pawl-and-ratchet wheel for regulating the motion of the shaft, crank, levers, and rods connecting said shaft with the main driving-shaft of the machine, substantially as described, and for the purposes set forth.



4. In a barrel-washing machine, a washing and scrubbing mechanism consisting of two revolving shafts provided with rubber rollers, on which the barrel rests and with which it revolves, brushes adapted and arranged to automatically brush and scrub the ends and sides of the barrel, and an arm disposed to automatically lift and remove the barrel from the rollers, substantially as described, and for the purposes set forth.

5. In a barrel-washing machine, the combination, with main driving-shaft D, provided with crank E, of tanks B B', shafts I I', cranks H H', arms *b b*, for holding the barrels, pawls and ratchets *c c'*, and rods G G', connecting cranks H H' to crank E, substantially as described, and for the purposes set forth.

6. In a barrel-washing machine, the combination, with main driving-shaft D, of gear-wheel K on said shaft, gear-wheel *l*, meshing into said gear-wheel K, crank *o*, and link *r*, arm *p*, pin *t*, cam-wheels 2 2 on main driving-shaft, pivoted levers 4 4, having their lower ends resting against said cam-wheels, brushes 7 7, secured to the upper ends of said levers, pivoted lever 9, having one end resting upon the periphery of cam-wheel 2 and operated by projection 8 on said cam-wheel, pivoted lever 13, rod 12, connecting levers 9 and 13, rocker-shaft 15, to which are secured levers 13 and 16, and brush and clamps 17, secured to the ends of levers 13 16, all said parts being arranged and combined as herein shown, and for the purposes set forth.

7. In a barrel-washing machine, the combination, with main driving-shaft D, provided with gear-wheel K, of a gear-wheel, *l*, shaft *m*, crank *o*, arm *p*, link *r*, pin *t*, and lugs *u u*, secured to the frame of the machine, all said parts being arranged and combined as shown, and for the purposes set forth.

400,347. RACK AND GEAR FOR INCLINED RAILWAYS. WALTER H. KNIGHT, New York, N. Y. Filed Oct. 16, 1888. Serial No. 288,243. (No model.)

Claim.—1. The combination, with the driving-wheel of a vehicle, of a gear-wheel having its pitch-circle substantially coincident with the tread of the wheel, and teeth terminating substantially at the pitch-circle.

2. The combination, with the bearing-rail of a railway, of a rack thereon having its teeth projecting above the tread of the rail, and a driving-wheel on a vehicle provided with a gear whose pitch-circle is substantially coincident with the tread of the wheel and whose teeth terminate at the pitch-circle.

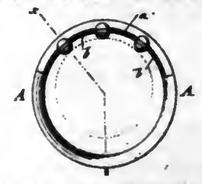
3. The combination, with the bearing-rail of a railway, of an outside rack attached thereto and a driving-wheel of a vehicle having a gear on the outside adapted to engage with the said rack, the said gear having its pitch-circle substantially coincident with the tread of the wheel and its teeth terminating at the pitch-circle.

4. The combination, with the bearing-rail of a railway, of a sectional rack-rail attached thereto, the sections of the rack terminating at a point between two adjacent teeth.

5. The combination, with a girder-rail on a railway having a contracted upright web, of a rack-rail fitted to the web of the said girder-rail and attached thereto, substantially as described.

6. The combination of a bearing-rail of a railway having a single contracted web, with a rack-rail fitted thereto, and fastening devices for the rack-rail passing through the web of the bearing-rail.

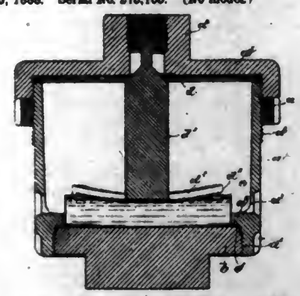
7. The combination of a bearing-rail of a railway having a contracted web and broadened bearing-flanges, with a rack-rail fitted thereto and having a substantially continuous bearing upon the bottom flange of said track-rail.



8. The combination of a bearing-rail of a railway with a rack-rail having a bearing by its under face on the track-rail, and fastening devices securing the rack-rail to the web of the track-rail, as set forth.

9. The combination, with the bearing-rail of a railway having a contracted web and broadened bearing-surface, of a separately-formed rack shaped to fit the said rail, and fastenings holding the rack in place.

10. The combination, with a bearing-rail of a railway, of a separately formed rack-rail secured in place by the side of the bearing-rail and having strengthening-ribs at intervals.



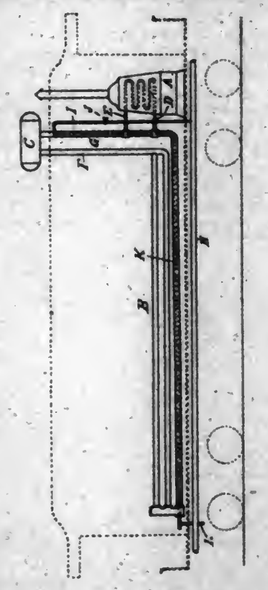
11. The combination, with a rack by the side of a railway-track rail, of a gear, fastenings securing the gear to the driving-wheel of the vehicle, and suitable intermediate stops holding the two wheels in place and thereby relieving the fastenings from strain.

400,348. CURTAIN-POLE RING. CHARLES W. LAWRENCE, New York, N. Y. Filed Nov. 8, 1888. Serial No. 290,311. (No model.)

Claim.—A curtain-pole ring provided with a central annular bead and a pivot-wire secured into said bead, and with anti-friction rollers applied to said wire and located in openings of the curtain-ring, substantially as set forth.

400,349. STEAM-TRAP. JOHN F. LIGHTFORD, Portland, Me., assignor to the Sewall Safety Car Heating Company, same place. Filed May 25, 1888. Serial No. 275,105. (No model.)

Claim.—1. In a steam-trap, the cylinder or shell *a*, containing at its lower end the thermostatic vessel and at its upper end the valve-seat, the thermostatic vessel consisting of an inverted-cup-shaped device secured by flanges to the shell, combined with the valve or plunger, as *d'*, resting upon the diaphragm of the thermostatic vessel and adapted to co-operate with the valve-seat, substantially as described.



2. In a steam-trap, the shell or case *a*, having exits, and the bottom plate, *b*, combined with the thermostatic vessel consisting of an inverted-cup-shaped device provided with flanges secured between the shell and bottom plate, and the valve or plunger resting upon said thermostatic vessel, and the valve-seat with which the said plunger co-operates, said plunger having guides at each end, substantially as described.

3. In a steam-trap, the shell *a*, having the flange a^3, and the bottom plate, *b*, combined with the inverted-cup-shaped shell *c*, having the flange *c'*, which, together with the said bottom plate, forms the thermostatic vessel, substantially as described.

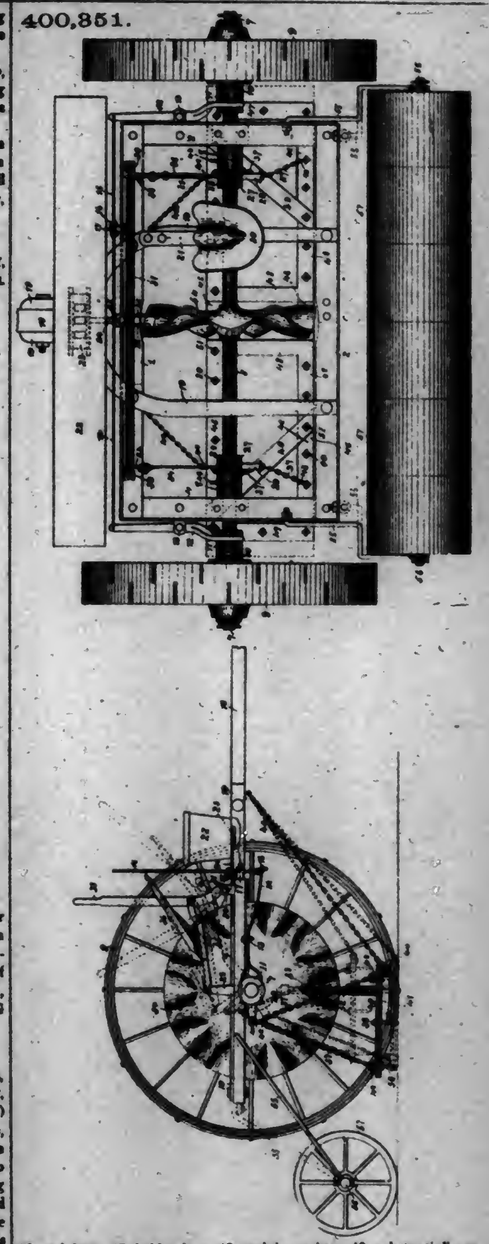
4. In a steam-trap, the shell *a*, having exits, the bottom plate, *b*, and shell *c*, combined with the vertically-movable plunger *d'*, having the spider d^3, spanning the diaphragm of the shell *c*, substantially as described.

5. In a steam-trap, the shell *a*, having lateral exits a^3, the bottom plate, *b*, and the inverted-cup-shaped shell *c*, rising above the bottom plate in front of the exits and secured by its flange between the shell *a* and bottom plate, combined with a valve moved by the said shell *c*, and the top plate and cap a^5, substantially as described.

400,350. SYSTEM FOR HEATING CARS. JAMES F. MCELROY, Lansing, assignor to the McElroy Car Heating Company, Detroit, Mich. Filed Dec. 2, 1887. Serial No. 256,764. (No model.)

Claim.—In a car-heating system, the combination, with the lower branch, K, of the radiating-pipes of a circulating hot-water system and the heater, of the riser G, connecting said branch with the expansion-drum, the steam-pipe I, entering the riser G near the top thereof and running downwardly through the riser and through the pipe K, and the outgoing and ingoing connections D E between the riser G and the heater, substantially as described.

400,351. SEEDER, HARROW, AND ROLLER. WM. G. MICHAEL, Harrison City, assignor of two-thirds to Low W. Bott and M. L. Painter, Greensburg, Pa. Filed June 4, 1888. Serial No. 275,905. (No model.)



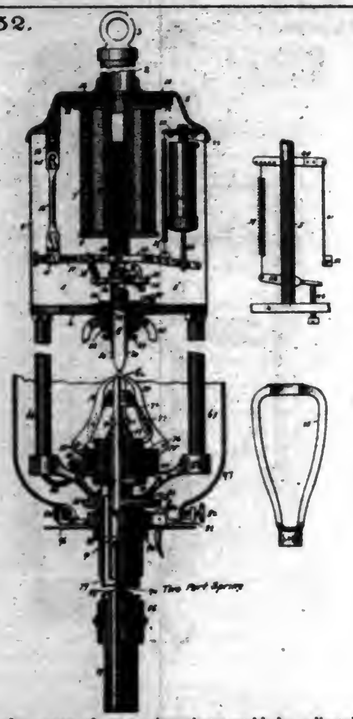
Claim.—1. The combination of the main frame, the drive-axle, the supporting-wheels, the rearwardly-extending arms secured to the front and rear plates of the main frame, the seed-hopper secured to the arms in front of the main frame, having a seed-slide, the swinging bar pivoted to the main frame, connected with the seed-slide, and having rearwardly-extending arms, and a cam-wheel fixed to the axle and working between the arms of the swinging bar, substantially as described and shown.

2. The combination of the main frame, the drive-axle, the bell-crank levers mounted on the axle, having upper and lower arms, the rock-shaft having a crank-arm at one end and a lever at the other end, a pitman connecting the crank-arm with one of the upper arms, a ratchet-bar connecting the lever with the other upper arm, a pawl pivoted to the lever and engaging the ratchet-bar, a harrow-frame, and chains by which the harrow-frame is suspended from the lower arms, substantially as described and shown.

3. The combination of the main frame, the drive-axle having a cam-wheel, the harrow-frame, the bell-crank levers by which the harrow-frame is suspended underneath the drive-axle, having vertical posts between which the cam-wheel works, and lever mechanism connected with the bell-crank levers, substantially as described and shown.

4. The harrow-frame constructed with a front bar, 45, rear bar, 46, end bars, 47, bridge-bars 48, and brace-bars 49, substantially as shown and described.

400,351.



400,352. ARC LAMP. WILLIAM H. MILLER, New York, N. Y. Filed June 26, 1888. Serial No. 278,251. (No model.)

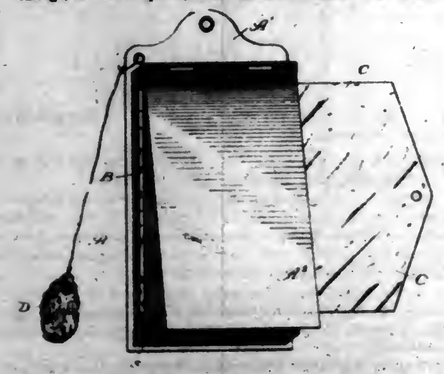
Claim.—1. In an arc lamp, the combination of an actuating-lever connected to the core of the controlling-magnet, and an adjustable hanger, to which said lever is pivotally connected by means of an interposed fulcrum-block carried by the lever and adjustable lengthwise therewith, substantially as described.

2. The combination of the hollow solenoid-core 18, lever 16, pivoted thereto, link 38, pivoted clutch-bar 34, having engaging edge or blade, and sleeve 32, to which said clutch-bar is pivoted, substantially as described.

3. In an arc lamp in which one of the carbons is propelled continuously through the aperture formed by abutments bearing against its breast behind the point, the combination, with a stationary frame

400,852.

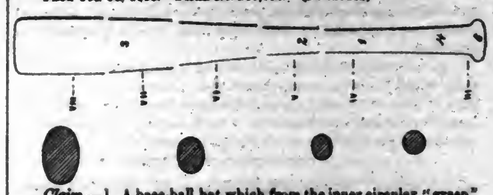
or holder, of a group of converging abutment-blades adjustable in said frame, and means for adjusting said blades in the frame or holder.



4. The combination of an abutment-frame with removable blades forming the abutment at their apex, substantially as described.

5. The combination of an abutment-frame, pivoted blades thereon converging toward a center above the pivotal level, and a movable adjusting device movable on said frame in operative connection with and adapted to effect the joint and simultaneous movement of said blades, substantially as described.

6. In an arc lamp, the combination, with the lower yoke and a tube projecting downwardly therefrom, of a globe-holder movable vertically on said tube and supported thereby below the yoke, a disk below said globe-holder, and a supporting-ring for said disk having a bayonet-lock on said tube, adapting it to vertical movement on the tube independently of the globe-holder.



7. In an arc lamp wherein one carbon is propelled constantly against a fixed abutment by a spring, the combination, with the carbon-inclosing tube and abutment, of a two-part spring composed of a main and supplementary part, the latter being adjacent to the carbon and constituting a removable section of the propelling-spring, substantially as described.

400,853. BUTTON AND ORNAMENT PASTER. MORRIS MOORE, Chicago, Ill. Filed Apr. 21, 1888. Serial No. 271,410. (No model.)

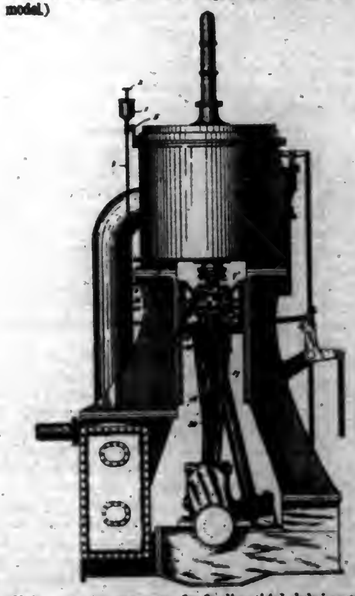
Claim.—As a new article of manufacture, a button and ornament paster comprising sheets of paper gummed on one side and fastened together into blocks toward two opposite edges, substantially as described.

400,854. BASE-BALL BAT. CHARLES H. MORRIS, Cincinnati, Ohio. Filed Oct. 31, 1888. Serial No. 289,696. (No model.)

Claim.—1. A base-ball bat which from the inner circular "grasp" gradually merges into an oval or approximately oval transverse section at the striking portion, substantially as and for the purposes set forth.

2. A base-ball bat which from a circular handle or inner grasp, 1, becomes gradually of oval cross-section to outer grasp, 2, and the striking portion 3, said handle being formed of gradually-greater circular cross-section 4 to the guard or hilt 5.

3. A base-ball bat which from the inner circular grasp gradually merges into an oval or approximately oval transverse section at the striking portion, and has a mark or sight, 6, on its edge portion," as designated.



400,855. PRESSER-FOOT FOR SEWING-MACHINES. WILLIAM A. NEELY, Lynn, Mass., assignor to The Wheeler & Wilson Manufacturing Company, Bridgeport, Conn. Filed Sept. 18, 1888. Serial No. 285,602. (No model.)

Claim.—1. In a sewing-machine having two closely-adjacent needles, the combination, with a roller presser-foot, of an independent presser-foot consisting of a thin blade-like device arranged edgewise vertically between said needles, substantially as set forth.

2. In a sewing-machine having two closely-adjacent needles, the combination, with a roller presser-foot, of an independent presser-foot consisting of a thin blade-like device arranged edgewise vertically between said needles and having a yielding or spring connection with the arm or shank to which it is attached, substantially as set forth.

400,856. LUBRICATOR. HENRY O'CONNELL and STEPHEN A. CAHILL, Manistee, Mich. Filed Aug. 2, 1888. Serial No. 281,812. (No model.)

Claim.—1. An apparatus for feeding thick lubricants to the moving parts of an engine, consisting of the combination of an externally-closed stationary grease-cup provided with a back-pressure plunger, an externally-closed pipe which communicates with said cup, and which has at opposite ends means of support on the stationary frame and on a moving part of the engine and flexible between such points of support, and a pipe or duct which communicates with the moving part to be lubricated, and which is connected to said flexible pipe at its point of support on the moving part of the engine, substantially as and for the purposes set forth.

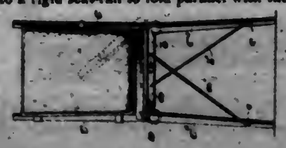
2. In an apparatus for feeding thick lubricants to the moving member of an engine, the combination of a stationary externally-closed grease-cup having a pressure-plunger and externally-closed pipes 4 14 16, connected by hollow hinged joints with each other and with the grease-cup and moving member, respectively, substantially as set forth.

3. In an apparatus for feeding thick lubricants to the moving member of an engine, the combination of the following elements, to wit: a stationary externally-closed grease-cup, 1, having a pressure plunger or follower, 2, a hollow jointed pipe, 4, leading therefrom, a pipe, 14, connected with said pipe 4 by a hollow hinge adapted to allow the passage of the lubricant without atmospheric contact, and a pipe, 16, hinged at one end to the free end of the pipe 14 by hollow joint and adapted to be connected at its other end to the moving member to be lubricated, the said joint having on one side a stud to fasten it to one of said pipes, a spindle, 8, having a flange, 9, occupying said joint, and a plug for holding the said spindle within said joint, substantially as set forth.

4. In an apparatus for feeding thick lubricants to the moving members of the engine, the combination of an externally-closed stationary grease-cup having means of optional back-pressure, the pipe 4, connected with said cup by the hollow stationary joint 7, to which said pipe is connected, the pipe 14, hinged to said joint and having connection therethrough with said pipe 4, the pipe 16, connected to said pipe 14 by hollow hinged joint at one end and having its other end communicatively connected with pipe 18 by a hinged joint adapted to be mounted on and communicate with the engine cross-head pin-strap and lubricate the pin, as set forth.

5. In an apparatus for feeding thick lubricants to the moving members of an engine, the combination of the externally-closed stationary grease-cup 1, having a pressure follower or plunger, 2, hollow-jointed pipes 14 16, connected thereto and supported on the engine cross-head pin-strap, the pipe or duct 18, connected both with the crank-pin and the said pipe 16, and also supported on said cross-head pin-strap, and a branch pipe or duct, 19, conducting to the said cross-head pin, substantially as set forth.

6. The combination of the grease-cup 1, the pipe 4, the stationary joint 7, connecting said pipe 4 with pipe 14 and supporting same, the swing or vibrating joint 15, the connecting-pipes 14 and 16, the stationary joint 7, adapted to be fixed to the engine cross-head pin-strap connecting and supporting pipes 16 18, and the branch pipe or duct 20 from pipe 18, all arranged and adapted to operate substantially as and for the purposes set forth.



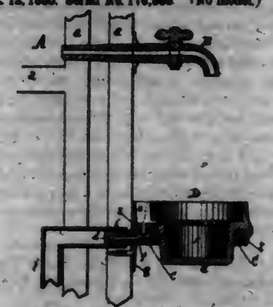
7. The combination of grease-cup 1, jointed pipes 14 and 16, connected thereto and supported on cross-head 17, pipe 18, connected with the crank-pin and the pipe 16, and also supported on said cross-head pin-strap, and a branch pipe, 19, connected with the cross-head pin, substantially as set forth.

8. The combination of grease-cup 1, pipe 4, stationary joint 7, connecting said pipe 4 with pipe 14 and supporting same, swing-joint 15, connecting-pipes 14 and 16, stationary joint 7', adapted to be fixed to cross-head pin-strap 17, and connecting and supporting pipes 16 and 18.

9. The combination of a stationary grease-cup, 1, having pipe 4 connected therewith, a stationary hollow joint, 7, to which said pipe is connected, the pipe 14, hinged to said joint and having connection therethrough with pipe 4, the pipe 16, connected to pipe 14 by a hollow hinged joint at one end, and having at its other end connection with a pipe, 18, by a hinged joint adapted to be mounted on the cross-head pin-strap of said engine, substantially as set forth.

400,857. FOLDING CHAIR. HUGH O'HARE, Mount Pleasant, Iowa, assignor to John F. Leech, same place. Filed Aug. 2, 1888. Serial No. 281,796. (No model.)

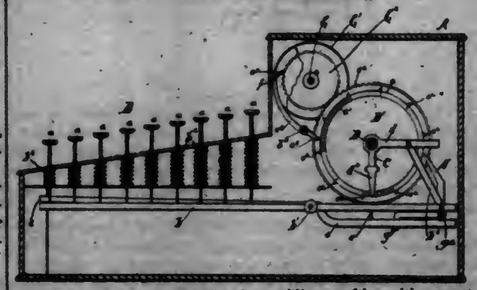
Claim.—1. In a chair, the combination of two parallel rigid sections, two hinged seat-rails connecting said sections, brace-rods pivoted at their lower ends to the respective sections, and at their upper ends to the hinged seat-rails of the opposite section, and the rigid seat-frame hinged to a rigid seat-rail to fold parallel with the sections.



400,857.

2. In a chair, the combination of two parallel rigid sections, two hinged seat-rails connecting said sections, brace-rods pivoted at their lower ends to the respective sections and at their upper ends to the hinged seat-rails of the opposite section, and a rigid centrally-divided seat-frame supported by the hinged seat-rails and connected to the rigid seat-rails to fold parallel with the chair-sections.

400,858. COMBINED GOBLET-HOLDER AND DRIP-CUP ATTACHMENT FOR REFRIGERATORS. ANDREW J. PAGE, Philadelphia, Pa. Filed Sept. 12, 1885. Serial No. 176,886. (No model.)



Claim.—1. The combination, with a cup having a peripheral shoulder, the said cup at or near the shoulder being non-circular in horizontal cross-section, and a perforated diaphragm located within the cup, of a bracket having an opening conforming in shape to the cup at the non-circular portion thereof and adapted to form a seat for the shoulder on the cup, substantially as set forth.

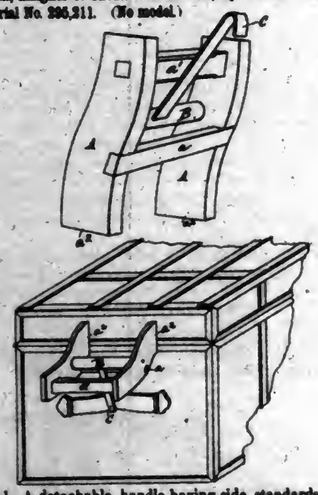
2. The combination, with a water-cooler and a detachable drip-cup located beneath the faucet of the cooler and provided with a diaphragm having an orifice through which the drip is adapted to fall directly from the faucet, of a waste-pipe leading from a point just beneath the diaphragm of the cup to the cooler-support, substantially as set forth.

3. The combination, with a water-cooler located within a refrigerator, of a drip-cup and goblet-holder supported beneath the faucet of the water-cooler, and a waste-pipe adapted to conduct the water from the drip-cup to the waste-pipe of the refrigerator, substantially as set forth.

400,859. ADDING-MACHINE. JOHN PFEIFER, Springfield, Ohio. Filed Aug. 29, 1888. Serial No. 284,070. (No model.)

Claim.—1. The combination, in an adding-machine, with a counting-wheel, a clutch mechanism, and its operating-lever, of a stop-lever arranged parallel with said operating-lever and pivoted so as to move in a parallel plane therewith, and a series of keys arranged over said levers, said key-stems each being provided with two bearing-faces adapted to engage the respective levers, whereby the stop-lever is forced into

an engagement with the counting-wheel when the key is depressed sufficiently to turn said counting-wheel a number of notches corresponding to the number on the said key, substantially as specified.

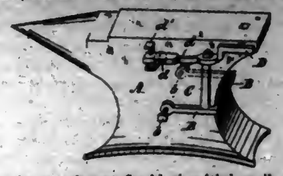


2. The combination, in an adding-machine, with a counting-wheel and its operating-lever and a series of keys over said operating-lever, of indicating-wheels geared to said counting-wheel, a stop-lever pivoted alongside of said operating-lever, the key-stems being provided with different bearing-faces adapted to engage said operating and stop levers, substantially as and for the purpose set forth.

3. The combination, with an operating-lever and its keys, as described, of a counting-wheel having a laterally-projecting rim and ratchet-teeth on the face thereof, and a clutch mechanism consisting of a bell-crank and a pivoted pawl connected to said operating-lever and adapted to engage with the teeth on said projecting rim, said pawl being pivoted within said rim and extended outwardly and downwardly, so as to engage by gravity with the teeth on said rim, substantially as specified.

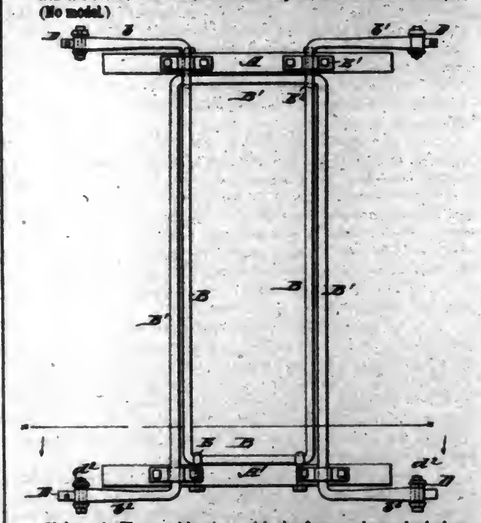
4. The combination, with the counting-wheels, the indicating-wheels geared thereto, and a laterally-projecting rim with projections on the periphery thereof, of a bell-crank lever adapted to be engaged on one arm by said projections and at the other to engage with the indicating-wheel of the next higher order, and a stop-lever connection adapted to be engaged by said projections and thus stop the counting-wheel of the next higher order when its indicating-wheel has moved one notch, substantially as specified.

5. The combination, in an adding-machine of the outer casing, of the keys arranged in series, the operating-levers under said keys, counting-wheels connected to said levers by suitable clutch mechanism, indicating-wheels geared to said counting-wheels, said indicating-wheels being provided with numerals on the periphery thereof adapted to show through openings in said casing, stop-levers alongside of said operating-lever and adapted to be engaged by a bearing-face on the key-stems and provided with projections adapted to engage and stop said counting-wheels when each key is depressed to the proper distance, and operating mechanism adapted to move the indicating-wheel of one column when the counting-wheel of the next preceding column has moved ten notches, and stop mechanism adapted to stop said counting-wheel when it has moved one notch of the next succeeding indicating-wheel.



400,360. DETACHABLE HANDLE. DANIEL PHILBRICK, Amesbury, Mass., assignor to Thomas Ira Marden, Rye, N. H. Filed Jan. 2, 1889. Serial No. 295,211. (No model.)

Claim.—1. A detachable handle having side standards, A, connected by upper and lower transverse braces, *a a'*, and provided intermediately of said braces with a revoluble roller, B, pivoted to said standards, said roller having midway of its length and at right angles thereto an extending hook, C, as and for the purpose indicated, substantially as described.

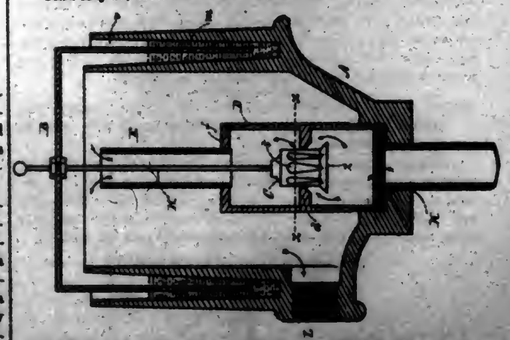


2. As a new article of manufacture, a detachable handle for temporary connection to removable packages, consisting of a pair of vertical standards, curved at their upper and lower ends in opposite directions, connected by under and upper transverse braces, *a a'*, and a roller pivoted to and between the standards, said roller having an extending hook and bar, C, adapted to mesh with the connections of a package and to be swung against the transverse braces, whereby when the lever ends a^2 of the standards are impinged against the surface of a package a compound leverage purchase will be secured, as and for the purpose indicated, substantially as described.

400,361. ATTACHMENT FOR ANVILS. BENJAMIN R. ROGERS, Lyn, Ontario, Canada. Filed Jan. 26, 1889. Serial No. 297,648. (No model.)

Claim.—An attachment for blacksmiths' anvils, comprising a yoke, B, provided at the ends with a clamping-screw, *b*, and having a post, C, a horizontal lever, D, sleeved pivotally on said post, and provided with a cam or key at one end to force the opposite end sidewise toward the anvil when the yoke is attached, as set forth.

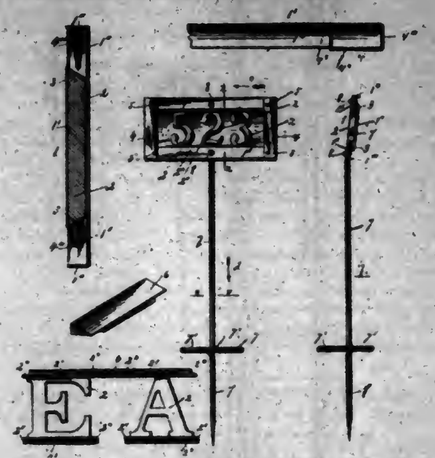
400,362. SPRING FOR VEHICLES. WILLIAM S. ROGERS and HORACE C. ROGERS, Townville, Pa. Filed May 16, 1888. Serial No. 274,058. (No model.)



Claim.—1. The combination, with the front and rear body-bars, of U-shaped springs, each secured to the inner face of one bar and to the under surface of the other bar and provided with outwardly-projecting arms, substantially as described.

2. The combination, with the front and rear body-bars, of U-shaped springs, each secured to the inner face of one bar and to the under face of the other bar and provided with outwardly-projecting arms carrying pivoted plates adapted to be secured to the side bars, substantially as herein shown and described.

3. The combination, with the front and rear body-bars, of U-shaped springs, each secured to the inner face of one bar and to the under face of the other bar and provided with outwardly-projecting arms, the arms of one spring being longer than the arms of the other, substantially as herein shown and described.



400,363. GAS-REGULATOR. JAMES H. REID, Providence, R. I. Filed May 28, 1888. Serial No. 275,150. (No model.)

Claim.—The combination of a gas-regulator body having a screw-threaded socket on the inner face of its bottom and a screw-threaded

inlet-opening of smaller diameter than said socket extending through said bottom, said body being provided with an annular groove for mercury and with an outlet, a dome movable in said mercury-groove, a vertical tube of larger diameter than said inlet-opening inserted in said socket and provided with an interior valve-seat and with a head at its upper end, a pipe of smaller diameter than said tube inserted in the head thereof, a valve within said tube, and a valve-rod connecting said valve with the dome, substantially as set forth.

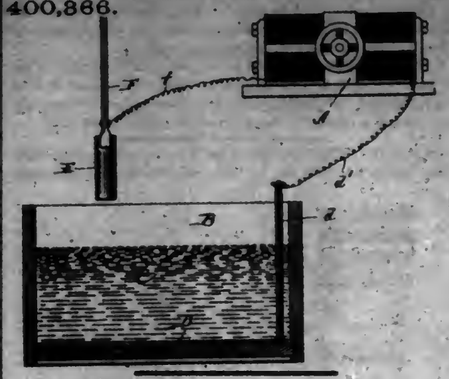
400,364. SIGN. GEORGE W. SANDERSON, Shirley Village, Mass. Filed Jan. 12, 1889. Serial No. 296,126. (No model.)

Claim.—1. In a sign or guide-board, the combination, with a sheet-metal back or frame having longitudinal grooves therein, of removable letters or symbols provided with extensions or flanges to extend into said grooves, and projecting ends to butt against each other, to serve as separating devices, and to retain the letters or symbols in their proper position on said back or frame, substantially as shown and described.

2. In a sign or guide-board, the combination, with a sheet-metal back or frame having longitudinal grooves therein, of removable letters or symbols to extend into said grooves, and supplemental separating-stops to extend between the letters or symbols to separate the same, substantially as shown and described.

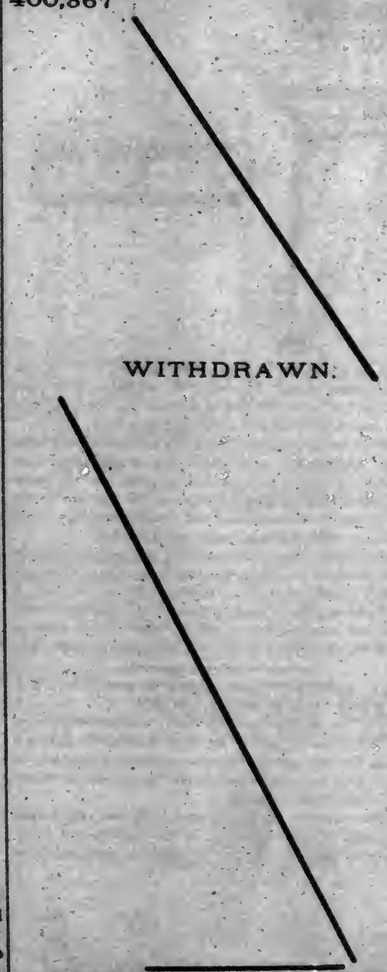
3. The combination, with a metallic sign or guide-board, consisting of a sheet-metal back or frame with longitudinal grooves therein, and removable letters or symbols held in said grooves, of a post or standard made of an iron rod, bent at its upper parts to receive the sign or guide-board, and bent at its lower part to furnish horizontal projecting surfaces for the purpose stated, substantially as shown and described.

400,365. SAFETY-HOOK. FRITZ SCHLEY, Berlin, Germany, assignor of one-half to Paul Bouvenne, same place. Filed Aug. 22, 1888. Serial No. 283,427. (No model.) Patented in Germany Oct. 11, 1887, No. 43,290.



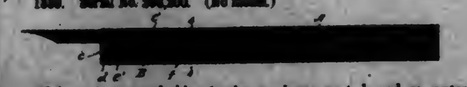
Claim.—1. A hook forming the one element of a safety-hook connection, and having a blade or tongue-piece, *c*, as described, and for the purpose stated.

2. The combination of a hook having the blade or tongue-piece *c* with a loop having thereon the elastic small plate *d'*, as described, and for the purpose stated.



400,366. PROCESS OF HARDENING STEEL. FREDERICK OTTO WERK, Oak Park, Ill. Filed July 7, 1888. Serial No. 279,302. (No model.)

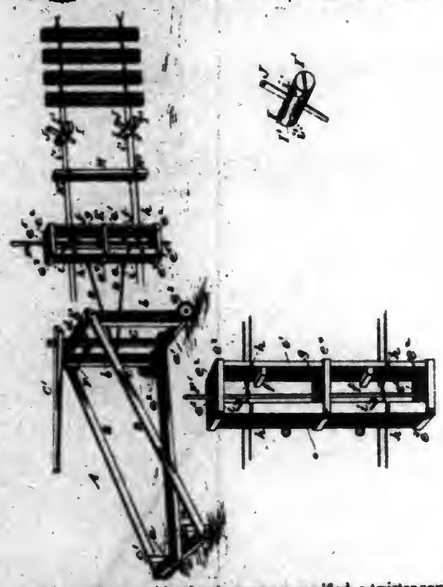
Claim.—The process of treating steel herein set forth, the same consisting in first heating the steel, then immersing it in a bath of cooling-liquid, and simultaneously passing an electric current through it and the liquid, substantially as specified.



400,366.

400,367

400,368. PEN-HOLDER. TOM R. STUART, Washington, D. C., assignor to the Eagle Pencil Company, New York, N. Y. Filed Jan. 12, 1889. Serial No. 296,203. (No model.)



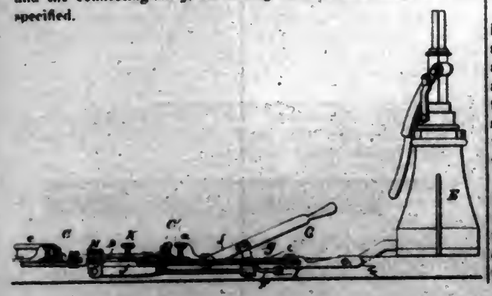
Claim.—1. A pen-holder having an inner part, *b*, and an outer part, C, between which two parts is the pen-slot *c*, said outer part, C;

being hinged or pivoted at or near its front end to the body of the holder, so as to be capable of tilting longitudinally with reference to the part *a*, as hereinbefore shown and described.

2. The combination, with the inner part, *b*, of the holder, of the outer part, C, hinged to the body of the holder at or near its front end and provided with a spring fastening device by which when it is turned down it is secured to the body of the holder, as set forth.

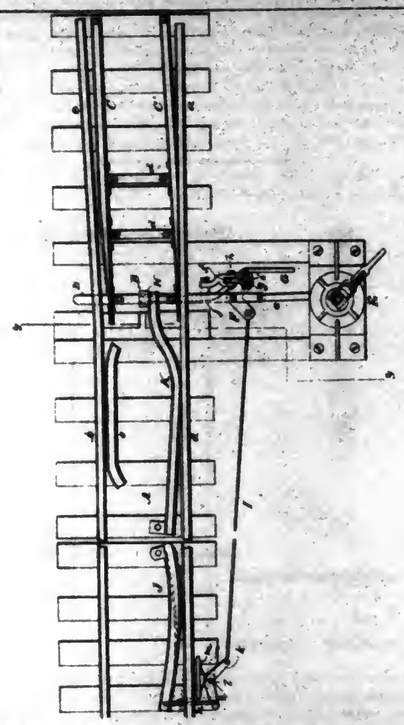
400,[illegible]. FENCE-MAKING MACHINE. CALVIN L. STULTING, Stribling [illegible], Va. Filed Jan. 15, 1889. Serial No. 296,434. (No model.)

Claim.—1. In a machine for the purpose specified, a twister comprising a body formed at each end with a slot extending lengthwise of said body, and with a handle passed through said body at right angles to said slots, substantially as shown and described.



2. In a device for the purpose described, a tension device consisting of the two uprights, the bars c^3 at the ends of said uprights between the same, the piece *g* between said uprights near the center thereof, the strap-bands around said uprights at the ends and center and the tension-rod F', removably inserted through openings in said bars c^3 and piece *g*, substantially as shown and described.

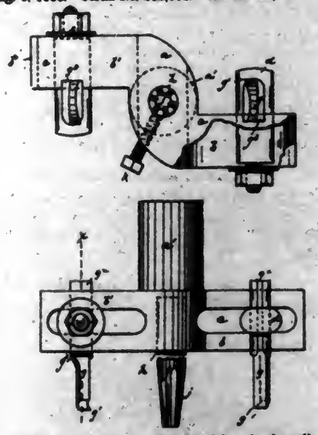
3. In a device for the purpose specified, the tension device described, composed of the two uprights *c* and *c'*, formed upon their opposite edges with the notches *h*, the end bars, c^3, the central piece, *g*, the strap-bands, the vertical removable tension-bar F', passed through openings in the end bars and piece *g*, and the hooks *i* in the edges of the upright *c*, all substantially as shown, and for the purpose specified.



400,870. RAILWAY-SWITCH. JAMES B. SUFFERN, Hilburn, N. Y. Filed Oct. 4, 1888. Serial No. 287,180. (No model.)

Claim.—1. The combination, with the switch-operating bar, of a slide placed on the bar, a locking device for holding the slide in a fixed position on the bar, and a track-lever arranged in proximity to one of the track-rails and adapted to engage the slide on the switch-operating bar, substantially as specified.

2. In a railway-switch, the combination, with the switch-operating bar and slide H, carried thereby, of the hand-lever G, bar *g*, and the connecting-rod *j*, for locking the said slide, substantially as specified.



400,870.

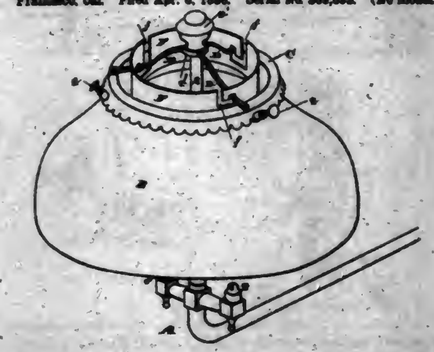
3. In an automatic railway-switch, the combination, with the switch-bar D, of the angled lever F, the hand-lever G, the bar *g*, connecting-rod *j*, the slide H, and the track-lever K, substantially as specified.

400,871. CUTTER-HEAD. CORNELIUS SULLIVAN, Newark, N. J. Filed Aug. 6, 1888. Serial No. 282,062. (No model.)

Claim.—1. The improved cutter-head herein described, consisting of a hub, *a*, a shank made integral therewith, a drill or reamer adapted to fit in a socket in the center of said hub as a center guide, arms extending from said hub, as described, longitudinal slots in said arms, cutter-stocks adjustable in said slots, and means for securing them to said arms, slots in said cutter-stocks adapted to receive the shanks of the cutters, and cutters formed as described and provided with shanks adapted to fit in the slots in the cutter-stocks, substantially in the manner as and for the purpose set forth.

2. The improved cutter-head herein described, consisting of a hub, a shank made integral therewith, a drill or reamer adapted to fit in a socket in the center of said head as a center guide, arms extending from said hub, as described, longitudinal slots in said arms, cutter-stocks adapted to fit into said slots, and means for securing them to said arms, slots in said cutter-stocks adapted to receive the shanks of the cutters, formed as described, and provided with shanks adapted to fit in the slots in the cutter-stocks, and transverse recesses in said arms adapted to receive and hold the shanks of said cutters, substantially in the manner and as and for the purpose set forth.

3. The improved cutter-head having arms extending from the hub, as described, so as to bring the cutters on a diametrical line with the hub, and provided with slots parallel to the edges of said arms, cutter-stocks secured in said slots, and curved cutters secured in cutter-stocks, substantially as and for the purpose set forth.



4. In a cutter-head provided with extending slotted or recessed arms, a cutting-tool curved in the form of a segment of a circle, as described, and provided with a shank, and means for securing said cutting-tool to said arm, substantially as described, and for the purposes set forth.

5. In a cutter-head provided with a central socket and extending slotted or recessed arms, a drill or reamer secured in said central socket as a center guide, and cutting-tools curved in the form of a segment of a circle, as described, and provided with shanks, and means for securing said cutting-tools to said arms, substantially as described, and for the purposes set forth.

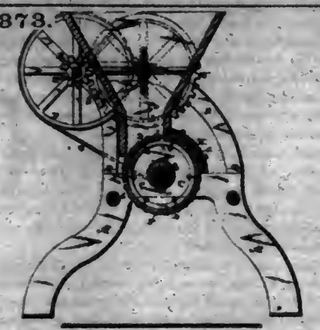
6. In a cutter-head provided with extending slotted or recessed arms, a cutting-tool curved in the form of a segment of a circle of the size of the hole to be cut and provided with shanks, and shoulders formed on said shanks, and means for securing said cutting-tool to said arms, substantially as described, and for the purposes set forth.

7. The combination, with a cutter-head provided with a central socket and extending slotted or recessed arms, of a drill or reamer and center guide, curved cutting-tools, said cutting-tools being provided with shoulder-shanks, and means for securing said drill or reamer and cutting-tools to said cutter-head, substantially in the manner and as and for the purposes set forth.

400,872. LAMP-SHADE PROTECTOR. GUSTAVE A. TANK, San Francisco, Cal. Filed Apr. 6, 1888. Serial No. 269,892. (No model.)

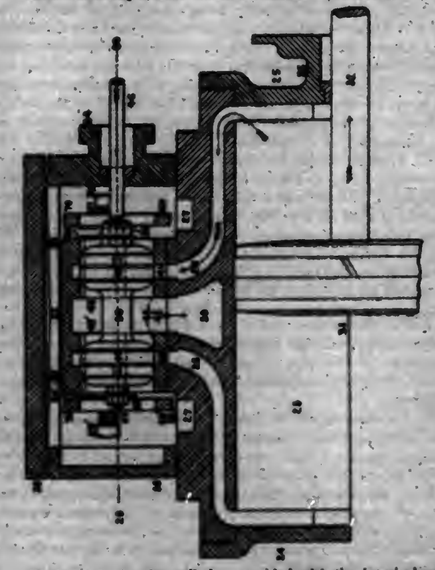
Claim.—1. In combination with the shade or globe, the protector E, of translucent or transparent material—such as mica—and the metal ring F, to which the protector is secured by its top, said ring passing up into and through the top of the shade, substantially as herein described.

2. In combination with the shade or globe and its supporting-ring with arms, the protector E, of translucent or transparent material—such as mica—the metal ring F, secured to the top of the protector, and a connection between the arms of the shade-supporting ring and the metal ring of the protector, substantially as herein described.



3. In combination with the shade or globe and its supporting-ring with arms, the protector E, of translucent or transparent material—such as mica—and the metal ring F, secured to the top of the protector and having the L-shaped slots *f*, whereby it may be suspended from the arms of the shade-holding ring, substantially as herein described.

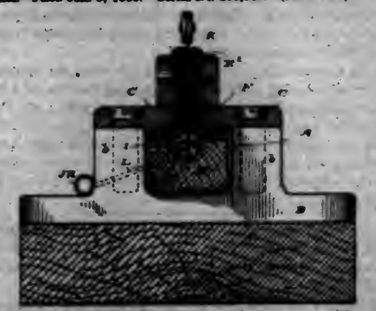
4. The protector for lamp and gas shades or globes, consisting of a ring of mica having a metal ring secured to its top, in which said metal ring are made L-shaped slots, whereby the protector may be suspended from the shade or globe holding frame, substantially as herein described.



400,873. COTTON-SEED MILL. WOODLIFFE B. TRAYLOR, Rocky Mount, N. C. Filed Aug. 3, 1888. Serial No. 282,203. (No model.)

Claim.—In a cotton-seed mill, the combination of a revolving cylinder provided with teeth F, arranged in spirals and slightly separated from each other, each tooth being provided with a cutting-edge and a vertical and an inclined side, with a concave also provided with teeth F, arranged in spirals, but extending in an opposite direction from those on the cylinder, substantially as shown.

400,873.



400,874. VALVE FOR LOCOMOTIVES. THOMAS TRIPP, Avon, assignor to the Tripp Anti-Friction Journal Bearing Company, Boston, Mass. Filed May 3, 1888. Serial No. 272,701. (No model.)

Claim.—1. A valve-cylinder provided with the interiorly-constructed ports extending from its supply port or ports to its exhaust-port, the connection between said supply-ports and exhaust-port being controlled by the puppet-plate devices, substantially as described.

2. The valve-cylinder 37, provided with ports 40, 41, and 42, 47, 51, 52, 53, 47', 51', 52', and 53', in combination with the puppet-plates 58 and 58', operatively constructed and arranged substantially as and for the purposes set forth.

400,875. PNEUMATIC FLEXIBLE-SLOT CONDUIT FOR ELECTRIC-RAILWAY CONDUCTORS. CHARLES J. VAN DEPOELE, Lynn, Mass. Filed Jan. 5, 1889. Serial No. 295,867. (No model.)

Claim.—1. A conduit for electric conductors, comprising a slotted exterior casing and means for supplying compressed air thereto and for maintaining an air-pressure therein, substantially as described

2. A conduit for electric conductors, comprising a slotted exterior casing, flexible slot-closing strips normally in contact to close the

conduit, and means for supplying compressed air to the interior of the conduit, substantially as described.

3. A conduit for electric conductors, comprising a slotted exterior casing, flexible slot-closing strips normally in contact to close the conduit, insulating-supports within the conduit and an electric conductor thereon, and means for supplying compressed air to the interior of the conduit, substantially as described.

4. A slotted conduit for electric conductors, comprising an exterior slotted casing, an interior insulating-support and an electric conductor thereon, flexible insulating slot-closing strips located between the casing and the interior insulation, and means for supplying compressed air to the interior of the conduit for excluding or expelling water, substantially as described.

5. A slotted conduit for electric conductors, comprising an exterior slotted casing, an interior insulating-support and an electric conductor thereon, flexible insulating slot-closing strips located between the edges of the casing and the interior insulation, and means for supplying compressed air to the interior of the conduit for excluding or expelling water, substantially as described.

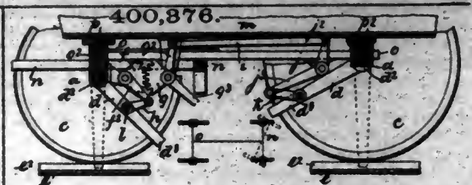
6. A slotted conduit for electric conductors, comprising an exterior casing, an interior insulating lining or support, an electric conductor or conductors upon said support, flexible insulating slot-closing strips located between the casing and the interior insulation, a thin traveling-contact device extending upwardly from the conductor and acting to forcibly separate the slot-closing strips during its passage, and means for supplying compressed air to the interior of the conduit for preventing the ingress of water around the traveling-contact device, substantially as described.

7. A slotted conduit for electric conductors, comprising an exterior metallic casing, an interior insulating lining or support, an electric conductor or conductors upon said support, flexible insulating slot-closing strips located between the metallic casing and the interior insulation, a thin traveling-contact device extending upwardly from the conductor and acting to forcibly separate the slot-closing strips during its passage, and means for supplying compressed air to the interior of the conduit for preventing the ingress of water around the traveling-contact device, substantially as described.

8. The combination, with a closed slotted conduit, of means for supplying compressed air thereto, comprising one or more air-compressors, and an inlet pipe or pipes connecting the conduit and compressors, whereby a substantially equal pressure may be maintained throughout.

9. A conduit for electric conductors, comprising an exterior metallic casing, an electric conductor within said conduit, and suitable insulating-supports therefor, slot-closing strips formed of flexible insulating material and located so as to close the surface-slot, means for supplying compressed air, comprising one or more air-compressors, a system of inlet-pipes from the air compressor or compressors to points along the conduit, and connections between said inlet-pipes, whereby a substantially equal pressure may be maintained in all parts thereof, substantially as described.

10. The combination, with a closed slotted conduit, of means for supplying compressed air thereto, comprising one or more air-compressors, and connecting-pipes leading therefrom to the interior of the conduit, a motor for actuating each compressor, and a motor-controlling device under the influence of and actuated by the variations of pressure in the air-pipes to start, stop, or regulate each motor, substantially as described.



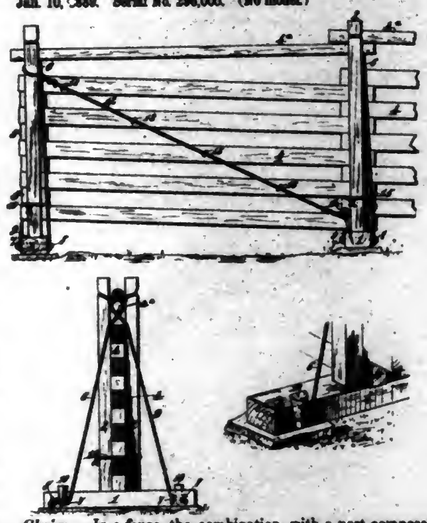
11. In a slotted conduit for electric conductors, the combination, with an exterior casing, of a tubular or hollow main-supply conductor or conductors within the conduit, a contact device extending from the exterior of the conduit into contact with the inner surface of said conductor or conductors, and flexible insulating slot-closing strips at the edges of the exterior casing and closing about the upward extension of the traveling-contact device.

12. In a slotted conduit for electric conductors, the combination, with an exterior casing and an insulating-lining therefor, of a tubular or hollow main-supply conductor or conductors within the lining, a contact device extending from the exterior of the conduit into contact with the inner surface of said conductor or conductors, and flexible insulating slot-closing strips at the edges of the exterior casing and closing about the upward extension of the traveling-contact device, substantially as described.

400,376. WHEELED VEHICLE. FRITZ B. VON WERNSDAR, Hanover, Germany. Filed Apr. 11, 1888. Serial No. 270,266. (No model.) Patented in Germany Apr. 5, 1887, No. 41,294, and in England Sept. 5, 1887, No. 11,906.

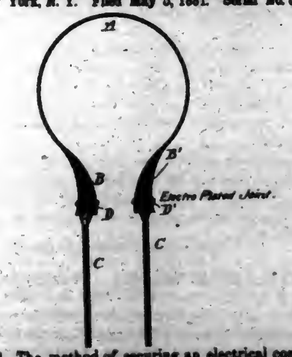
Claim.—1. A track-arm, d, with its inner end formed into a screw-box, d^2, for the taking upon a screwed part of the neck of an axle, for the purpose substantially as described and set forth.

2. Adjusting a wheel upon its axle-arm by means of a screw-box, d^2, of an arm, d, taking upon a screwed part, a^2, of a parallel axle-arm, a^2, which slides within an axle-box, b, whose inner flanged end



is connected with the inner returned or flanged end of the axle-box d^2, and which said parts are constructed and arranged in combination with the axle a, wheel c, and hub c^2, as described and set forth.

3. The combination, with the swiveling track-arm d, wheel c, and track $c\ c^2$, of the toothed quadrants $f\ g$, arms $f^3\ g^3\ g^4$, link h, connecting-rod i, and coupling-rod l of the fore part of a vehicle, substantially as described and set forth.

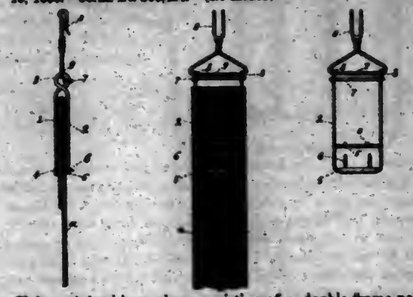


4. The combination, with the hind track-arm, d, of a vehicle, of a crank-lever, $j\ j^3\ j^3$, link k, and coupling-rod l, substantially as described and set forth.

400,377. FENCE. EDWARD A. WELDS, Reading, Mich. Filed Jan. 10, 1889. Serial No. 296,005. (No model.)

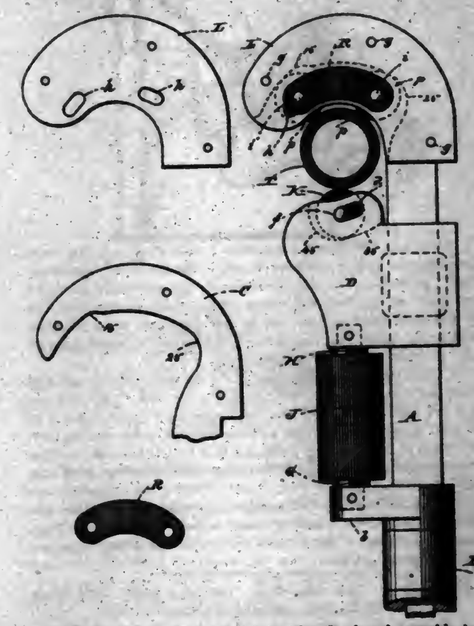
Claim.—In a fence, the combination, with a post composed of two parallel sections, between which the ends of the rails are inclosed, of independent wires attached to said sections above the rails and crossed over the upper rail, a sill supporting the post and having two connections on each side of the fence, the wire being passed through one of the connections and fastened to the other, and a wedge inserted between each pair of said connections and between the wire and the sill, substantially as shown and described.

400,378. INCANDESCENT ELECTRIC LAMP. EDWARD WESTON, Newark, N. J., assignor to the United States Electric Lighting Company, New York, N. Y. Filed May 5, 1881. Serial No. 32,553. (No model.)



Claim.—1. The method of securing an electrical connection between the carbon conductor and metallic wires of an electric lamp, which consists in securing their respective ends in contact, as described, and then submerging the joints thus formed in an electroplating-bath

until a metallic coating of the desired thickness is deposited on and around the same, as set forth.

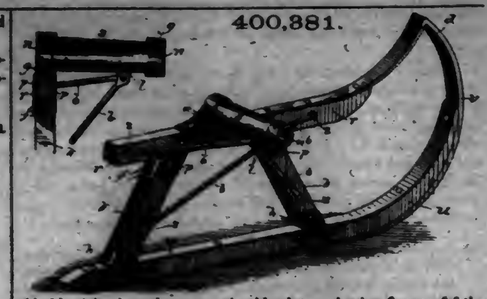


2. In an incandescent electric lamp, the combination of the supporting-conductors and a carbon strip attached thereto by electro-deposited metallic connections, substantially as described.

400,379. BUCKLE. HENRY P. WEBB, Buffalo, N. Y. Filed Jan. 15, 1888. Serial No. 296,431. (No model.)

Claim.—A buckle or clasp consisting of a double frame portion formed by wire doubled upon itself so as to form two frames with an opening between them, a tongue member pivoted to the lower end of one of the frame portions adapted to swing over and rest its end portions on the lower cross part of the other frame portion, and a holding-hook pivoted to the upper portion of the frame, substantially as described.

400,380. WRENCH. WILLIAM C. WORTHEN and GORDON PENDLETON, Jr., Boston, Mass., assignors to themselves and John D. Walworth, same place. Filed Nov. 9, 1888. Serial No. 290,367. (Model.)



Claim.—In a wrench provided with a fixed and movable jaw having involute recesses in their adjacent edges, the combination of two rolls journaled in curved slots in said fixed jaw and a single roll journaled in similar slots in the movable jaw, said slots being formed on the same circle and the fixed-jaw rolls connected by straps, whereby they maintain the same relative position to the roll in the movable jaw, substantially as set forth.

400,381. SLEIGH-RUNNER FOR WHEELED VEHICLES. DAVID G. WYETH, Newark, Ohio. Filed Mar. 2, 1883. Serial No. 286,941. (No model.)

Claim.—1. The combination, in a sleigh-runner for wheeled vehicles, of the thimble a, having the wings $w\ w$ and the lugs l, integral therewith, and having the grooves $g\ g$ and the packing $n\ n$, the side plates, p, with flanges $f\ f$, and the T-plates t with flanges $h\ h$, and the braces b, all substantially as set forth.

2. The combination, in a sleigh-runner for wheeled vehicles, of the

thimble a', having wings $w\ w$, the side plate, p, having flanges $f\ f$, the clip B, and the braces c, running from the rave and knees of the sleigh-runner from the inside to and so arranged with said clip as to make a working-joint at the connection of said braces and clip, all substantially as set forth.

3. The combination, in a sleigh-runner for wheeled vehicles, of the thimble a, having lugs l and wings $w\ w$, integral therewith, and the braces b, all substantially as set forth.

4. The thimble a, having wings $w\ w$ and lugs l, integral therewith, and having also the annular grooves $g\ g$ to receive a packing, substantially as set forth, for the purpose specified.

5. The thimble a', having wings $w\ w$ and the lugs l, integral therewith, substantially as shown, for the purpose specified.

6. The thimble a', having wings $w\ w$ and lugs l, integral therewith, substantially as shown, for the purpose specified.

7. The thimble a, having wings $w\ w$, integral therewith, and with annular grooves $g\ g$ for the reception of a packing, substantially as set forth, for the purpose specified.

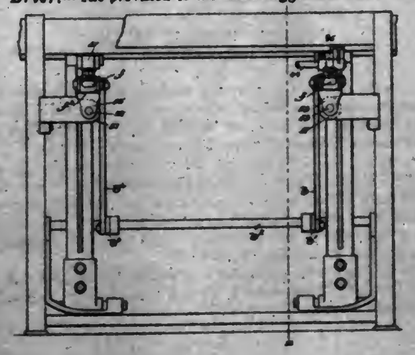
8. The combination, in a sleigh-runner attachment for wheeled vehicles, of the clamp C, packing R, and the side plate, P, having the pivotal point i, in connection with a detached thimble, a', and braces b, all substantially as set forth.

9. The combination, in a sleigh-runner for wheeled vehicles, of the clamp C, packing R, and the side plate, P, having the pivotal point i, substantially as set forth.

10. The combination, in a sleigh-runner for wheeled vehicles, of the clamp C, packing R, two side plates, P, one of said side plates having the pivotal point i, and both having flanges $f\ f$ in connection with unmortised and untenoned knees and rave $k\ k$ and r, substantially as set forth.

11. The combination, in a sleigh-runner for wheeled vehicles, of the thimble a', having wings $w\ w$ and lugs l, and the braces b, substantially as set forth.

12. The combination, in a sleigh-runner for wheeled vehicles, of two side plates, $p\ p$, each having four flanges, f, with unmortised and untenoned knees and rave $k\ k$ and r, substantially as set forth.

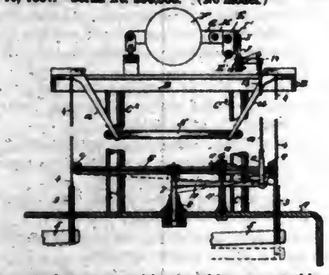


13. The combination, in a sleigh-runner for wheeled vehicles, of the thimble a', having wings $w\ w$, the clip B, and the braces c, substantially as set forth.

14. The combination, in a sleigh-runner for wheeled vehicles, of the thimble a', having the wings $w\ w$ and the lugs l, the braces b, and the side plates, p, all substantially as set forth.

15. The combination, in a sleigh-runner for wheeled vehicles, of the thimble a', having wings $w\ w$ and lugs l, the braces b, the shortened rave and runner r and n, and the extended shoe v, all substantially as set forth.

400,382. STOPPING MECHANISM FOR LOOMS. HORACE WYMAN, Worcester, Mass., assignor to the Crompton Loom Works, same place. Filed Jan. 30, 1888. Serial No. 262,206. (No model.)



Brief.—The provision of the extra dagger and bunter relieves

the parts from the strain encountered when but one set of devices is employed and lessens the danger of breakage of the lay and crank-shaft.

Claim.—The lay of the loom, its two lugs or projections rigidly attached thereto and extended toward the breast-beam, and the two bunters, and means to support them at opposite sides of the loom-frame at or near the breast-beam, combined with the rock-shaft b^3, extended across the loom, the arms b' b^2 thereon, and the links b b^4 intermediate said arms and bunters, whereby the two bunters at opposite sides of the loom are caused to move upward and downward in unison, and a device acting upon one of the said bunters to throw the bunters into position to engage the lugs on the lay, substantially as described.

400,883. TYPE-WRITING MACHINE. GEORGE W. N. YOST, New York, N. Y., and CHARLES R. MERRITT, Springfield, Mass., assignors to the Writing Machine Manufacturing Company, New York, N. Y. Filed May 16, 1887. Serial No. 238,353. (No model.)

Claim.—1. In a type-writing machine, the combination, with a letter-spacing mechanism, of a circular universal bar supported at its hub or center and arranged to operate as a lever of the second order, substantially as set forth.

2. In a type-writing machine, the combination, with the letter-space-feeding mechanism, of a universal lever made ring-like or circular, and connecting-rods arranged around said lever and adapted to operate the same, substantially as set forth.

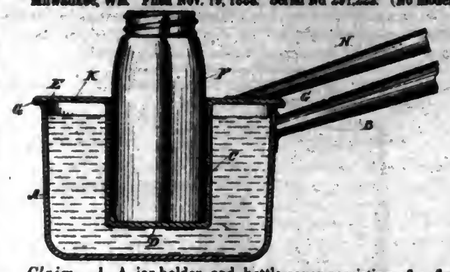
3. In a type-writing machine, a circular universal bar, in combination with a letter-space-feeding mechanism, type-bars, key-levers, and vertically-arranged connecting-rods, the latter being disposed about the periphery of said universal bar and adapted to actuate the same at each depression of a key-lever, substantially as set forth.

4. In a type-writing machine, the combination of a circular universal bar supported at its hub or center and arranged to act as a lever, the connecting-rods formed or provided with means, substantially as described, for actuating said bar, the rocker-bar, and connections between the latter and the universal bar, substantially as set forth.

5. In a type-writing machine, the combination of the circular universal bar mounted upon a sliding support, the connecting-rods formed or provided with projecting portions, the lever 10, the rocker-bar connected to said lever, and a spring for returning the several parts, substantially as set forth.

6. In a type-writing machine, the combination of the circular universal bar having a flaring opening in its hub, the sliding stem or support reduced in diameter within said opening, and the connecting-rods constructed to actuate said universal bar, substantially as set forth.

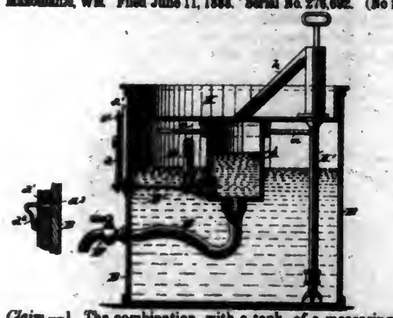
400,884. TYPE-WRITING MACHINE. GEORGE W. N. YOST, New York, N. Y., assignor to the Writing Machine Manufacturing Company, same place. Filed Sept. 10, 1887. Serial No. 249,231. (No model.)



Claim.—1. In a type-writing machine, the combination of a vertically-arranged connecting-rod, a horizontally arranged key-lever, or its described equivalent, and an offset or lateral connection between the two, substantially as and for the purpose set forth.

2. In a type-writing machine, and in combination, type-bars arranged in a circle, type-bar-operating rods arranged in a circle, means, substantially as described, for actuating said rods, and offsets or cross-connections of varying lengths between said means and said rods for such of said rods as lie substantially within the same longitudinal vertical planes, substantially as set forth.

3. In a type-writing machine, a connecting-rod provided with an offset, consisting of the socket 2, the arm 3, and the leg 4, as and for the purpose set forth.



400,885. JAR-HOLDER AND KETTLE-COVER. IDA ZABDER, Milwaukee, Wis. Filed Nov. 19, 1888. Serial No. 291,222. (No model.)

Claim.—1. A jar-holder and kettle-cover consisting of a flat sheet of metal with a downwardly-extending flange at its edge adapted to retain the cover in position on a kettle, which cover is turned downwardly centrally at a distance from its outer edge, forming a single well or receptacle with vertical walls, and an imperforate bottom for the reception of a fruit-jar therein, a spout leading from the wall to the outer edge of the cover, and a handle affixed rigidly to the cover for lifting it, in combination with a receiving and supporting kettle, substantially as described.

2. The combination of the receptacle formed of the case C and imperforate bottom D, integral therewith, with the flange E and spout I, substantially as described.

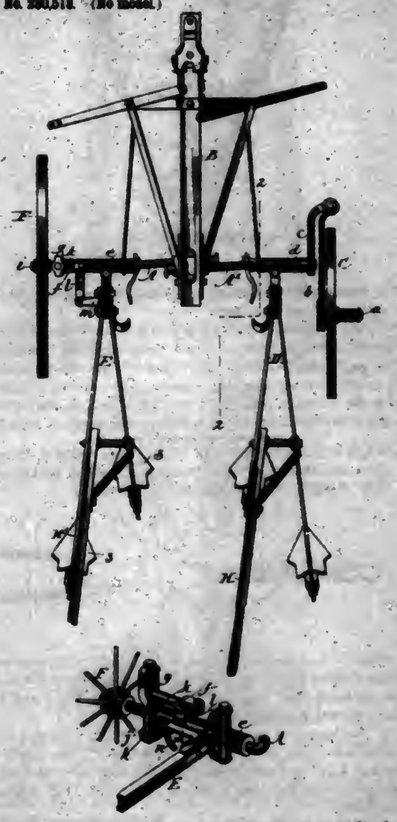
400,886. FLUID-MEASURING VESSEL. THOMAS R. ARMITSTEAD, Manomanie, Wis. Filed June 11, 1888. Serial No. 276,692. (No model.)

Claim.—1. The combination, with a tank, of a measuring-vessel carried by the tank, a level-tube pivoted in the side of the measuring-vessel, a pointer connected to the level-tube and working in front of a dial, a pipe leading from the bottom of the measuring-vessel through the tank to a faucet on one side of the said tank, and a pump for pumping the liquid from the tank into the measuring-vessel, substantially as herein shown and described.

2. The combination, with a tank, of a measuring-vessel supported within the tank, an angular tube pivoted in the side of the said vessel, a rod connected to said tube and projecting through the side of the tank, a pointer on the rod, a dial on the tank, a pipe leading from the bottom of the measuring-vessel to a faucet of the tank, and a pump for pumping the liquid from the tank into the measuring-vessel, substantially as described.

3. The combination, with a measuring-vessel, of a level-tube pivoted in the side of the measuring-vessel, a rod connected to the tube, a pointer on the end of the rod, and a dial provided with spring-stops, substantially as described.

400,887. CAR-AXLE BOX. STEPHEN J. AUSTIN, Terre Haute, Ind. Filed Oct. 22, 1888. Serial No. 288,781. (No model.)



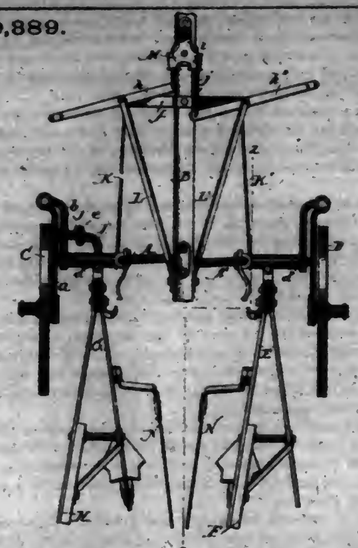
Claim.—1. The combination of the box provided with oil-chambers, axle, and a grooved collar rigidly secured to the axle and snugly fitted in the box in contact therewith and bearing thereon, said groove forming a chamber communicating with the oil-chambers of the box, substantially as and for the purpose set forth.

2. The combination of a box provided with upper and lower oil-chambers, axle, and a collar rigidly secured to the axle and having a groove forming an annular chamber communicating with the upper and lower chambers, substantially as and for the purpose set forth.

3. The combination of the box formed in two parts, each part having an oil-chamber, axle, collar secured to the axle and bearing on said box, and communication between the upper and lower oil-chambers and the bearing-surface between the collar and box, substantially as and for the purpose set forth.

4. The combination of a box having parts 4 and 5, oil-chambers 9 and 10 in the respective parts, ports 15 in the upper part of the box, opening 17 in the lower part of the box, axle, and collar 7 on the axle, substantially as set forth.

400,888. CULTIVATOR. ROBERT H. AVERY, Peoria, Ill., assignor to the Avery Planter Company, same place. Filed July 20, 1888. Serial No. 280,518. (No model.)



Claim.—In a cultivator, the combination of an arched axle or frame, swinging shovel-beams loosely connected with such axle or frame, a caster-wheel, C, on one side and wheel F on the other side supported on a short axle, *i*, pivotally connected with the main frame, and connections between such short axle *i* and the adjoining shovel-beam, whereby, when the shovels are moved out of line to the right or left, the wheels and frame will move in the direction in which the shovels travel, substantially as specified.

400,889. CULTIVATOR. LEONARD R. BURDICK, Peoria, Ill., assignor to the Avery Planter Company, same place. Filed Aug. 8, 1888. Serial No. 282,208. (No model.)

Claim.—1. In a cultivator, the combination of an arched axle, two caster-wheels, each supported by a bar, as *a*, pivoted at its forward end to an arm, as *b*, secured to the main part of the axle, plow-beams connected with the horizontal parts of the main axle and having vertical and lateral movement, and connections between one of the plow-beams and the support for one of the caster-wheels, whereby, when the plow-beam is moved to the right or left, the wheels and frame will be correspondingly moved, substantially as and for the purpose specified.

2. In a cultivator, the combination of a frame, a tongue, B, bar *f*, secured to the tongue, bars or levers *h k*, pivoted to the bar *f*, pulley *i*, chain *j*, and brace-rods L L', substantially as and for the purpose specified.

400,889.

3. In a cultivator, a feeder, M, consisting of a casting, *k*, provided with short lugs *m m'* and longer lugs, *n*, in combination with rods *l*, held in place between the lugs *m m'* by bending the longer lugs *n* over the rods, substantially as specified.

400,890. AUTOMATIC RAILWAY GATE AND SIGNAL. JOSEPH BOLZ, Schuylkill Haven, assignor of three-fifths to J. W. Meyer and John H. Williams, Pottsville, Pa. Filed July 2, 1888. Serial No. 278,726. (No model.)

Claim.—1. In a combined railway gate and signal, the shaft M, provided with pulleys N and pins *p* thereon, in combination with the slotted levers or arms I and suitable connections between said arms and the gate-arms, substantially as and for the purpose specified.

2. In a combined railway gate and signal, the shaft M, provided with trip device H', and the pulleys N with pins *p*, in combination with the slotted levers or arms I, the connections *j*, and weighted arms *i*, pivoted to the gate-arms, substantially as and for the purpose set forth.

3. In a combined railway gate and signal, the hinged or pivoted gate-arms F and the shanks *d*, in combination with the wire *l*, the shaft L, and the trip device G' thereon, substantially as and for the purpose specified.

4. In a combined railway gate and signal, the standards E, provided at their upper ends with tracks *a*, and the shanks *d*, supported in bearings on said standards, in combination with the hinged or pivoted gate-arms having extensions *g*, provided with anti-friction rollers *h*, substantially as and for the purpose described.

5. In a combined railway gate and signal, the hinged or pivoted gate-arms F and the shanks *d*, provided with arms *c*, in combination with the connecting-rod G, whereby said shanks and gate-arms will be operated upon simultaneously, substantially as and for the purpose specified.

6. In a combined railway gate and signal, the standards E, the hinged or pivoted gate-arms F, the shanks *d*, with arms *c*, and the slotted arms I, connecting with weighted arms *i*, in combination with the shaft M, having trip device H', and pulleys N, connecting with the slotted arms to operate them, and the rod G, connecting the arms *c*, substantially as and for the purpose set forth.

7. In a combined railway gate and signal, the combination, with suitable gate-arms and the wire *l* for operating them, of the shaft L, provided with trip device G', said shaft adapted to slide longitudinally in its bearings to bring the trip device from contact with the wheels of the train, and means for holding the shaft stationary, substantially as and for the purpose specified.

8. In a combined railway gate and signal, the sliding shaft L, having trip device G' connected thereto, in combination with the bell-crank lever D', notched wheel F', and pawl *n'*, for holding the shaft stationary, and means for operating the lever, substantially as and for the purpose described.

9. In a combined railway gate and signal, the sliding shaft L, provided with means for operating it and carrying the trip device G', in combination with means for bringing the shaft back to its normal position, consisting of the springs *m'* and *o'*, substantially as and for the purpose set forth.

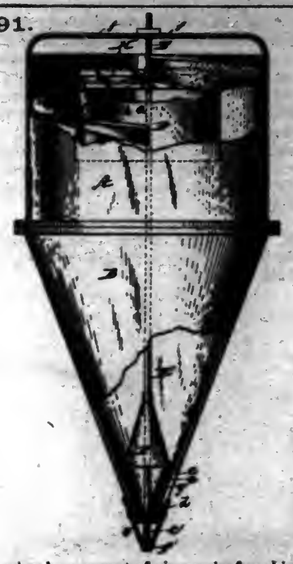
10. In a combined railway gate and signal, the shaft S and spring T and the tread-plate W, in combination with the wire *c'*, bell-crank lever D', and the shaft L, carrying trip device G', substantially as and for the purpose set forth.

11. In a combined railway gate and signal, the shaft M, provided with the trip device H', and intermediate means for connecting it with the gate-arms, in combination with the tread-plate W, the shaft S, shaft L, with the trip device G', and the several wire connections between the shafts and gate-arms, substantially as and for the purpose specified.

12. In a combined railway gate and signal, the shanks *d*, having hinged or pivoted gate-arms F, wire *l*, connecting therewith and with the shaft L, having trip device G', and the shaft S and tread-plate W, for operating it, in combination with the wire *r* and shaft M, to which it is connected, and the trip device H' on said shaft, and the wire *c'*, connecting the shaft S with means for operating the shaft L, substantially as and for the purpose set forth.

13. In a combined railway gate and signal, the shaft S and tread-plate W, for operating it, and the spring T, for bringing the shaft to its normal position after pressure is removed from the plate, in combination with the shaft L, provided with trip device G', and means for sliding said shaft longitudinally, consisting of the bell-crank lever D', and the wire connection *c'* between it and the shaft S, substantially as and for the purpose specified.

14. In a combined railway gate and signal, the combination, with the hinged or pivoted gate-arms and operating mechanism connecting therewith, and the wires *l r c'*, of the shafts M S L, the trip devices H' G', and means, substantially as described, for operating the shafts, substantially as and for the purpose set forth.

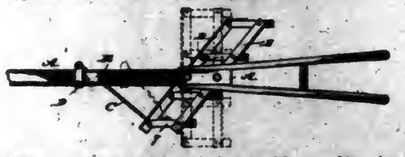


400,891. DUST-COLLECTOR. EUGENE BATTEY, Indianapolis, Ind., assignor to the Brutney Dust Collector Company, same place. Filed Sept. 22, 1887. Serial No. 250,623. (No model.)

Claim.—1. The combination, with a cylindrical dust-collecting chamber having a conical bottom provided with a suitable outlet-opening and a concentric tube within said chamber, of a spirally-curved or winding partition arranged between the inner surface of the wall of the chamber and the outer surface of the wall of the tube, said chamber having an inlet-opening adapted to receive the current of dust-laden air at a tangent to the wall of the chamber, and a suitable deflector, as set forth.

2. The combination, with a cylindrical dust-collecting chamber having a tapering bottom provided with a discharge-outlet, a tube secured within said chamber, a spirally-curved and inclined partition surrounding said tube, and an inlet in said chamber opening between the ends of said partition, of a deflector supported in the tapering bottom, so that the dust may escape between it and the wall of the bottom, as set forth.

3. The combination, with a cylindrical dust-collecting chamber having a conical bottom, inlet and outlet openings, and a concentric tube within said chamber, of a spirally-curved and inclined partition connecting the inner surface of the chamber with the outer surface



400,891.

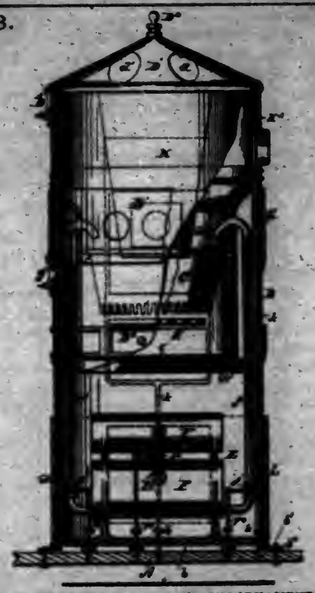
of the tube, whereby a current of air may be forced into said chamber, substantially as described.

4. The combination, with a cylindrical dust-collecting chamber having a conical bottom, inlet and outlet openings, and a spirally-curved and inclined partition, of a concentric tube having a slot in its wall, an air-spout entering said chamber, and a vent or opening adjacent to the mouth of said spout, whereby a draft is created through the slot in the tube above the partition, substantially as described.

400,892. HARROW AND CULTIVATOR. JOHN C. BRYAN, Fordyce, Ark., assignor of one-half to James G. Cheatham, same place. Filed July 16, 1888. Serial No. 280,134. (No model.)

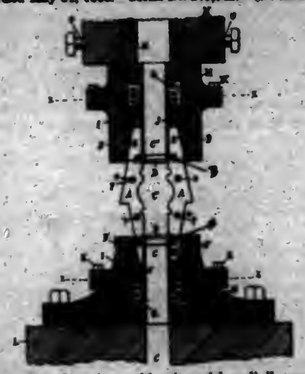
Claim.—1. A standard formed of a bar of flat metal bent between its ends, forming arms 1 and 2, the arm 2 being twisted at 6 at a point above the bend, such twist operating to hold the arms 1 and 2 apart to form the slot 4, substantially as set forth.

2. The improved standard herein described, consisting of a bar of metal bent upon itself, forming arms 1 and 2, the arm 2 being twisted at 6 and inclined rearwardly above such twist, and the arm 7 extended forward from the upper end of the arm 2, all substantially as set forth.



3. The combination of the beam, the cross-bars pivoted to the beam, and the standards formed of bars of metal bent upon themselves forming arms 1 and 2, the arms 2 being twisted at 6, and such arms being inclined rearwardly above such twist, and the arm 7 projected forward from the upper end of such arm 2, the standard being pivoted to the cross-bars, substantially as set forth.

400,893. SAFETY CAR-HEATER. MYRON M. BURTON, Rawsonville, Mich. Filed Mar. 5, 1888. Serial No. 266,195. (No model.)

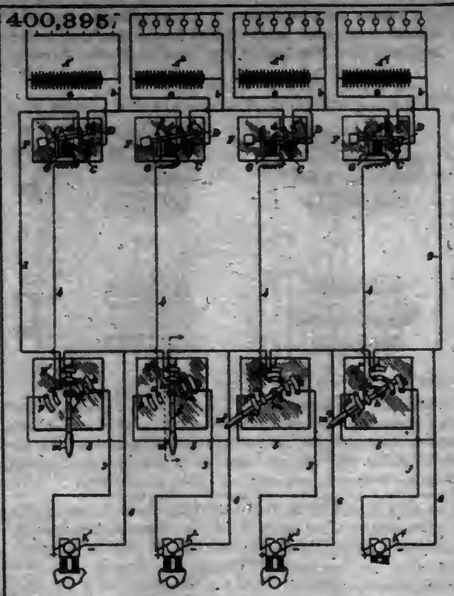


Claim.—1. A safety car-heater consisting of the combination, with a car-stove, of a chemical fire-extinguisher with discharge-pipes adapted to discharge its contents upon the bed of incandescent fuel, said chemical fire-extinguisher provided with valves to govern the commingling of its contents and the opening of its discharge-pipes, said valves having valve-rods connected with the floor of the car, the construction being such that as the stove is tilted or dislodged from place the strain upon said rods will bring the extinguisher into operation and open its discharge-pipes, substantially as and for the purpose described.

2. In a safety car-heater, the combination, with a car-stove and a chemical fire-extinguisher having pipes leading therefrom to the stove and adapted to discharge their contents upon the incandescent fuel, of valves situated in said pipes and connected to the car-floor by rods so arranged that the said valves will be opened when the heater is tilted and dislodged from place, substantially as described.

400,893.

400,894. MECHANISM FOR IMPRESSING ORNAMENTAL FORMS OR DESIGNS UPON METALLIC TUBING. JOHN BURKHARDT, New York, N. Y. Filed May 31, 1888. Serial No. 275,542. (No model.)



Claim.—1. Die-plates in combination with radially-grooved disks, substantially as and for the purpose specified.

2. The sectional chambered counter-dies D D', springs G, and tubular disk-holders J, in combination with the disks B, substantially as and for the purpose specified.

3. The set of die-plates A, retained in vertical planes, respectively, by the retracting spring-wires *y*, working in holes *z* of the die-plates, and the grooves in the inner faces of disks B, in combination with the counter-dies D D', substantially as described.

4. The triple-faced die-plates, with three series of undulating faces or working-edges, P Q R, for gradually forming indented designs or ornamental configurations upon the perimeters of tubing, substantially as described.

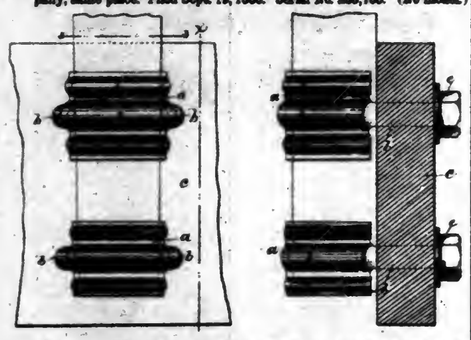
400,895.

400,895. ELECTRIC DISTRIBUTION BY STORAGE-BATTERIES. STANLEY G. G. CURRIE, Philadelphia, Pa., assignor to the United Electric Improvement Company, Gloucester, N. J. Filed May 16, 1888. Serial No. 274,061. (No model.)

Claim.—1. In a system of electrical distribution, the combination, with a main-line conductor, one or more electric generators normally out of circuit with said conductor, and an equivalent number of groups of accumulators, secondary batteries, or equivalent electric storage devices, of a manually-operated switch appropriated to each generator, constructed and arranged so as to throw said generator into or out of the main-line circuit, an electro-magnetically-operated switch having its operating-magnet in a shunt of the main-line circuit, constructed and arranged so as to throw its appropriate accumulator into or out of the main-line circuit, and of a conductor leading to the accumulator, whereby the operation of the manual switch will simultaneously throw its generator and accumulator into the main-line circuit, substantially as described.

2. In a system of electrical distribution, the combination, with a plural number of electric generators and a plural number of electric distributing devices, as storage-batteries or the like, and a main-line conductor, of a manually-operated switch, and an electrically-operated switch appropriated to each generator and connected by a conductor and so arranged that the movement of the manual switch will establish circuit through said electrically-operated switch, and thereby throw its generator and battery into the main-line circuit simultaneously, substantially as described.

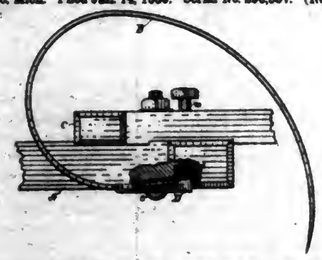
3. In a system of electrical distribution, the combination, with a main-line conductor and a plural number of accumulators or secondary batteries, of means comprising manually-operated and electrically-operated switches having contact-points connected with the main-line conductors and with conductors leading to said accumulators and connected by shunt-lines, whereby a generator and its appropriate accumulators may be simultaneously thrown into and out of the main-line circuit by the movement of a single lever, substantially as described.



4. In a system of electrical distribution, the combination, with the main-line conductor, an electric generator, an accumulator, a manually-operated switch, and an electro-magnetically-operated switch and a shunt-line connecting the two switches, of an automatic circuit-breaker arranged in said shunt-line and constructed and arranged to break the shunt-circuit, and thereby cause the switches therein to simultaneously cut out the generator and the accumulator from the main-line circuit, substantially as described.

5. In a system of electrical distribution, the combination of a plural number of electric generators, a plural number of accumulators or secondary batteries with a series of branch or supplementary main conductors, each permanently connected to one pole of an accumulator, and a switch by means of which said branch conductors may be electrically connected with the main conductor, and the said supplementary conductors having their terminals so arranged as to be readily connected, substantially as described.

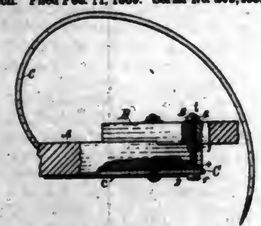
6. In a system of electrical distribution, the combination, with a main-line conductor, an electric generator, and an accumulator, of a supplementary main conductor, lamp circuits or wires connected to said main conductor, and an electric switch by means of which the supplementary conductor and the accumulator may be thrown in circuit with the main conductor, substantially as described.



7. In a system of electrical distribution, the combination of a main-line conductor, a number of electric generators, a number of accumulators, a number of branch or supplementary conductors, electrically-operated switches arranged one in the vicinity of each supplementary line, manually-operated switches connected to said electrically-operated switches by a shunt-line, and an automatic circuit-breaker arranged on said shunt, said circuit-breaker having its operating-magnet in an independent circuit controlled by the condition of the accumulator, substantially as described.

400,396. STAKE-POCKET FOR PLATFORM-CARS. CHARLES H. DUNHAM, Boston, Mass., assignor to the Dunham Manufacturing Company, same place. Filed Sept. 19, 1888. Serial No. 285,765. (No model.)

Claim.—1. The improved stake socket or holder composed of a single piece comprising the bent body and the screw-threaded bolts formed on the ends of said body, the latter being made wider than the diameter of the bolts and provided with longitudinal corrugations, whereby the body is strengthened and stiffened, as set forth.

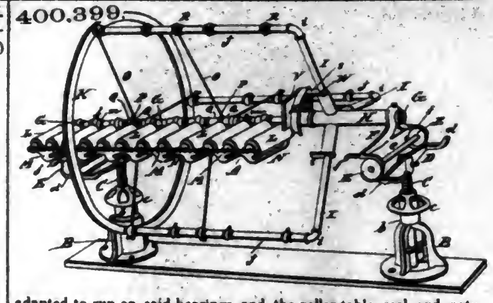


400,397. HARROW-TOOTH HOLDER. DAVID O. EVERETT, Pine Grove, assignor of one-half to the Williams Manufacturing Company, Kalamazoo, Mich. Filed Jan. 14, 1889. Serial No. 296,337. (No model.)

Claim.—1. The combination of a tooth-beam, a binding-plate, bolts attaching said plate to the beam, and a screw-bolt passed through the beam, and a tooth between the end of the screw-bolt and the plate, whereby the tooth and plate are adjusted, substantially as set forth.

2. The combination of the tooth-beam having the wedge-shaped recess, a tooth or share, a wedge-shaped plate, side bolts attaching said plate to the beam, and a screw-bolt passed through the beam for adjusting the tooth and plate, substantially as set forth.

400,398. HARROW-TOOTH HOLDER. DAVID O. EVERETT, Pine Grove, assignor of one-half to the Williams Manufacturing Company, Kalamazoo, Mich. Filed Feb. 11, 1889. Serial No. 299,465. (No model.)



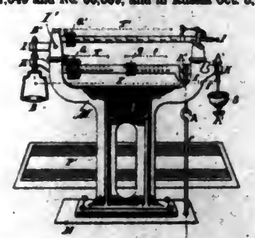
Claim.—The combination of a harrow-beam having the inclined recess, a tooth or share, a binding-plate clamping the tooth to the beam at one side of the recess, and an adjusting-bolt attached to the frame and to the shank of the tooth, substantially as set forth.

400,399. CUTTING-TABLE FOR BRICK OR TILE MACHINES. ROBERT M. FERRIS, Plymouth, and JOHN W. WOLCOTT, Fremont, assignors to Pate & Freese, Plymouth, Ohio. Filed Nov. 14, 1888. Serial No. 290,842. (No model.)

Claim.—1. The combination of the table, revolving cutting-reel, and automatic gate, substantially as and for the purpose set forth.

2. The combination of the fixed vertically-adjustable standards or supports, the table, reel, and gate forming parts of and moving in unison with the table, substantially as and for the purpose set forth.

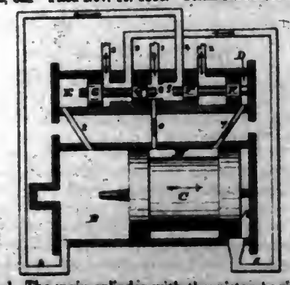
3. The combination of the fixed vertically-adjustable standards having horizontal bearings at their upper ends, the traveler-wheels



adapted to run on said bearings, and the roller-table, reel, and gate supported on bearings resting upon the traveler-wheels, substantially as and for the purpose set forth.

4. The combination of the fixed central shaft, adjustable roller-brackets, revolving cutting-reel, and revolving hubs for the attachment of the inner ends of the cutting-wires, substantially as and for the purpose set forth.

5. The combination of the fixed central shaft, adjustable roller-brackets, adjustable collars, and hubs adapted to revolve between the said collars and provided with means for the attachment of the inner ends of the cutting-wires, substantially as and for the purpose set forth.

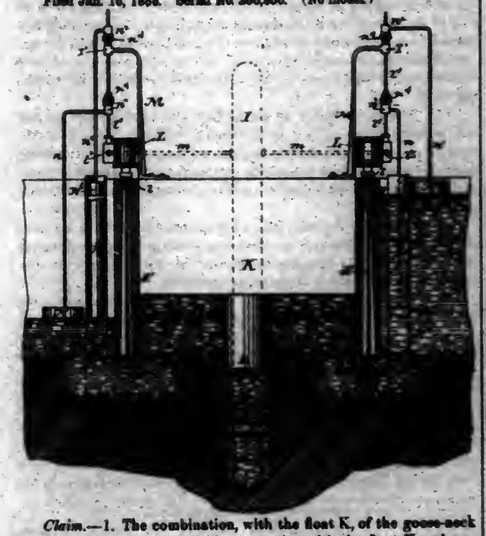


6. The combination of the revolving cutting-reel, the collars fastened adjustably upon the horizontal reel-arms, and provided with means for attachment of the cutting-wires, the cutting-wires, the hubs forming means of attachment for the inner ends of the wires, the fixed reel-shaft, and the table, substantially as and for the purpose set forth.

400,400. WEIGHING-MACHINE. PIERRE GUILLAUMIN, Voiron, France. Filed Jan. 9, 1888. Serial No. 260,248. (No model.) Patented in France May 2, 1881, and Sept. 19, 1887, No. 185,930; in England May 6, 1887, No. 6,686; in Belgium Sept. 9, 1887, No. 78,827; in Luxemburg Sept. 9, 1887, No. 890; in Italy Sept. 10, 1887, No. 22,944; in Germany Sept. 16, 1887, No. 43,850; in Austria-Hungary Sept. 21, 1887, No. 37,049 and No. 66,089, and in Russia Oct. 3, 1887, No. 8,760.

Claim.—In a weighing apparatus, the combination of the platform P', the levers L *l*, the connecting-lever C, the connecting-rod *o*, and the stand M, with the beams K K and I I, the counterpoise S, attached to said beam K K, the link A, attaching the beam K K and the connecting-rod *o*, the jointed link B', connecting the two said beams and supporting the receptacle B, the P'ˣ Q, *q*, and Q', the graduations T, *t*, and T', and the weights V, substantially as and for the purpose set forth.

400,401. PISTON WATER-METER. FREDERICK GUTZKOW, San Francisco, Cal. Filed Nov. 10, 1888. Serial No. 290,484. (No model.)



Claim.—1. The main cylinder with the piston having the chamber H, the valve-chamber with the two independent reciprocating valves having each two unequally-sized flanges or heads, and supply and discharge passages connecting with the cylinders, as shown, in

combination with the pipes or passages 6, 7, and 8, substantially as and for the purpose herein described.

2. In a meter, the main cylinder with a reciprocating piston having a chamber at its central portion, and a valve-chamber the ends of which are of larger diameter than the intermediate connecting portion, in combination with independent valves, each having heads or flanges of different diameters fitting the ends and intermediate portion of the valve-chamber, the supply and exhaust pipes opening into the valve-chamber, the pipes connecting the valve-chamber with the ends of the main cylinder, and the supplemental passages 6, 7, and 8, substantially as herein described.

400,402. WATER-MOTOR. JOHN H. HAGERTY, Lowell, Mass. Filed Jan. 16, 1888. Serial No. 260,850. (No model.)

Claim.—1. The combination, with the float K, of the goose-neck M, adapted to be reciprocated in connection with the float K and provided at its ends with a cupped collar, with the floats N N', their float-rods *n n'*, provided with eyes n^2, carrying the clamps n^4, and with the valve-stem P^1, passing through said clamps, and valves operated thereby, substantially as and for the purpose described.

2. In a water-motor, the combination, with the float K, of an upwardly-extending goose-neck attached to the said float and having a cup, I', a water-engine, its piston-rod, a valve connected with the said piston-rod, a valve-stem, P^1, of the said water-engine, a float having an upwardly-extending stem provided with an eye surrounding said stem P^1, and clamps n^4, hinged to said eye and arranged to be engaged by said cup as the said float K rises or falls, substantially as set forth.

3. The combination, with the water-engine, its valve-stem P^1, and a valve operated by said water-engine, of a float having an upwardly-extending stem provided with an eye surrounding said valve-stem, the clamps hinged to said eye, and a float having a goose-neck provided with a cup to engage said clamps, substantially as set forth.

4. The combination, with the float K, a water-engine, L, and the piston-rod of the latter, of the engine valve-stem P^1, the clutches n^4, the floats N N', by which said clutches are supported, a goose-neck, M, having a cup to operate said clutches, and a valve connected with the said piston-rod, substantially as set forth.

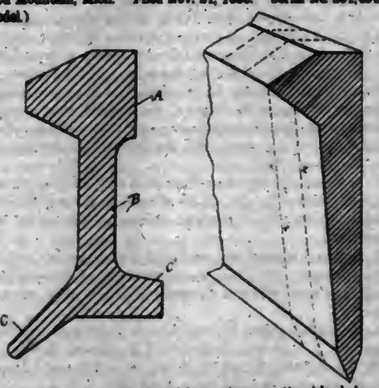
400,403. WINDOW-STOP. HERBERT A. HODGE, Jackson, Mich., administrator of William Pendleton, deceased. Filed Dec. 21, 1888. Serial No. 293,981. (No model.)

Claim.—The combination of a window-casing, vertically-playing inside blinds, suitable weights and cords, and a window-stop grooved

400,403.

in the back for the weights to run in between said stop and the casing, substantially as set forth.

400,404. SECONDARY BATTERY. RUDOLPH M. HUNTER, Philadelphia, Pa. Filed Jan. 14, 1889. Serial No. 296,288. (No model.)



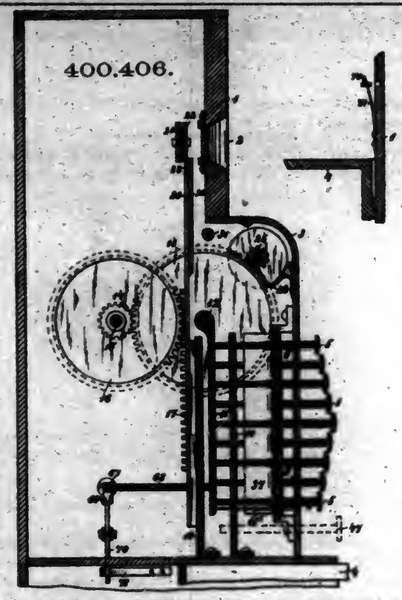
Claim.—1. A secondary-battery element or plate for holding active material, formed of lead, bismuth, and mercury, intimately associated, substantially as set out.

2. A secondary battery having both its positive and negative plates formed of lead, bismuth, and mercury, intimately associated, substantially as set forth.

3. A secondary battery having the bridging piece or pieces connecting the plates of one polarity formed of lead and a hardening metal—such as bismuth and mercury—intimately associated, substantially as set forth.

4. A secondary battery having its plates and bridging-pieces formed of lead and a hardened metal like bismuth and mercury, intimately associated and connected by a burned or fused joint, substantially as set forth.

400,405. MANUFACTURE OF RAILWAY-SPIKES. JOHN T. JONES, Iron Mountain, Mich. Filed Nov. 21, 1888. Serial No. 291,494. (No model.)



Claim.—The method of making railway-spike blank-bars from steel rails, which consists in rolling the said rail into the form of the desired spike-blank bar, and in this operation rolling or forcing into the web or body of the rail one of the flanges and bending down the remaining flange so that it shall be in line with and form a prolongation of said web, and shaping the bar to the form shown in Fig. 4, substantially as and for the purposes hereinbefore set forth.

400,406. CASH-INDICATOR. GEORGE F. KOLB, Philadelphia, Pa. Filed Apr. 21, 1888. Serial No. 271,400. (No model.)

Claim.—1. In a cash indicator and register, a casing, a shaft mounted therein, an arm depending loosely therefrom, a series of keys adapted to contact with the arm and move the same different distances, an indicator-plate having a row of different numbers thereon, and mechanism connected with said plate and operated by the movement of the arm to move the indicator-plate different distances to indicate the different numbers thereon, substantially in the manner and for the purpose described.

2. In a cash-register, a key, in combination with an oscillating arm, a rock-shaft with gear-wheel mounted thereon, a second shaft with wheel operated by the oscillation of said rock-shaft and wheel, a rising and falling rack meshing with said second wheel, and an indicator-plate secured to said rack, substantially as and for the purpose set forth.

400,406.

3. In a cash-register, indicating-plates lettered as described, and provided with arms or extensions 23, substantially as and for the purpose set forth.

4. In a cash-register, the combination of the board 21, with a leaf pivoted thereto, and an indicator-plate, 20, with extension or arm 23, adapted to engage and raise said leaf, substantially as and for the purpose set forth.

5. In a cash-register, keys having ribs 41 thereon, guides or uprights in which said keys are moved, and the pivoted spring-pressed plates 37, said parts being combined substantially as described.

6. In a cash-register, the keys having the ribs 41 thereon, in combination with the uprights 10, in which said keys are guided, the brackets 38, secured to the frame of said register, the pivoted plates 37, linked in pairs, and springs bearing against said plates and adapted to keep the plates in contact with the said ribs, substantially as and for the purpose set forth.

7. In a cash-register, the combination of the sliding bar 42 with guides and having the pins 44, the pivoted spring-pressed plates 37, and the keys with ribs 41 thereon, substantially as and for the purpose set forth.

8. In a cash-register, the combination of the key 47, with lug 50, the elbow-lever 46, the sliding bar 42, with pins 44, the spring-pressed plates 37, and keys with ribs 41, engaged by said plates, substantially as described

9. In a cash-register, the combination of the keys, an oscillating arm operated by said keys, a shaft with gear-wheel thereon rotated by said arm, a shaft with pinion 25 thereon, and having a registering-wheel, 26, thereon, substantially as described.

10. In a cash-register, the combination of a fixed shaft with pinion 25 and rotary units and tens registering wheels thereon, a second fixed shaft connected by arms to said first shaft, sleeves on said second shaft carrying the arms 33 35 and an arm, 36, and a pawl on said arm 36, adapted to engage with a ratchet on said tens-wheel, substantially as and for the purpose set forth.

11. The combination of a fixed shaft with the pinions 25 mounted thereon, and the rotary units and tens registering wheels with ratchets thereon, a second shaft connected by arms to said fixed shaft, sleeves loosely mounted on said second shaft carrying the arms 33, 35, and 36, a projection on said units-wheel adapted to engage the arm 34, and a pawl secured to the arm 36 and adapted to engage the ratchet of the tens-wheel, substantially as and for the purpose set forth.

12. In a cash-register, a fixed shaft with an angle-arm, a rotary sleeve on said shaft, and provided with an arm adapted to rest on said angle-arm of said shaft, substantially as and for the purpose set forth.

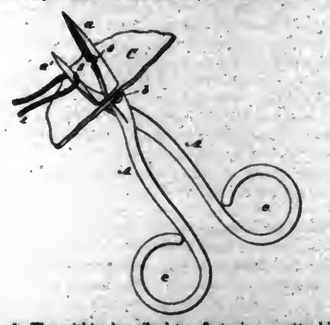
13. A fixed shaft with registering units and tens wheels thereon, a second shaft connected by arms to said fixed shaft and having an angle-arm, a sleeve carrying the arm 35, adapted to be engaged by a projection on the units-wheel, the arm 36, with pawl adapted to engage the ratchet of the tens-wheel, and the arm 33, adapted to abut against the angle-arm, thereby preventing further rotation of the sleeve, said parts being combined substantially as and for the purpose set forth.

14. In a cash-register, a series of sliding keys, in combination with a movable arm, gear-wheels operated by said movable arm, and a rising and falling indicator-plate, with rack operated by said gear-wheels, substantially as described.

15. The combination of an operating-key, an oscillating arm operated by said key, the pivoted sleeve 63×, with arms 64 and 65, the spring-bar 51, with lug 54× and spring 55 on outer end, the pivoted spring-lever 56, with hammer, and the alarm 59, substantially as described.

16. The combination of an operating-key, an oscillating arm operated by said key, a spring-bar with lug 54 thereon, and the spring-pressed lever 61, substantially as and for the purpose described.

17. In a cash-register, the combination of the casing, the spring 71, secured thereto at one end, the pivoted lever 70, having the other end of the spring 71 secured thereto, the sliding bar 67, pivotally connected to the upper end of said lever 70, and having the arm 68 connected thereto, the oscillating arms 11, and the cash-drawer 4, adapted when closed to engage said spring, substantially as and for the purpose set forth.



18. In a cash-register, an oscillating arm, keys for moving said arm different distances, gearing operated by said arm, and a rack carrying a plate or tablet combining different numbers, said rack being operated upon by said gearing to elevate the plate different heights to indicate the different numbers thereon, substantially in the manner described.

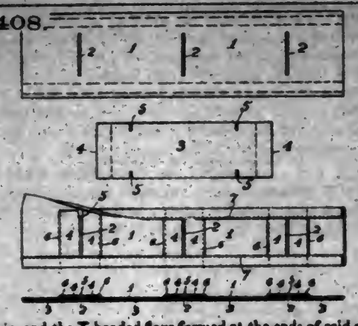
19. In a cash-register, indicating-tablets having each a row of different numbers thereon, in combination with gearing for elevating said tablets different distances to indicate the desired number or designation, substantially in the manner described.

20. In a cash-register, a shaft with movable arm thereon, keys for moving said arm different distances, gearing operated by the oscillation of said arm, and a tablet or plate containing different numbers operated upon by the gearing to elevate the tablet different distances to designate the desired number thereon, substantially in the manner described.

21. In a cash-register, the combination of a shaft, a sleeve on said shaft carrying a gear-wheel, a pinion meshing with said gear-wheel, a gear-wheel rotated by said pinion, a rack meshing with the said last-named gear-wheel, and an indicating-tablet carried by said rack having different numbers thereon adapted to be indicated by the movement of the rack, all substantially in the manner described.

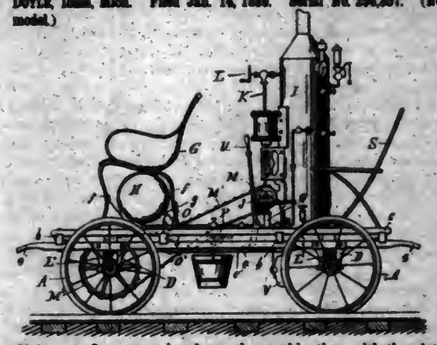
400,407. TAG-FASTENER. WILLIAM H. D. LUDLOW, Tecumseh, Nebr. Filed July 9, 1888. Serial No. 279,384. (No model.)

Claim.—1. The within-described tag fastening or attaching instrument, consisting of the pivoted crossing levers or limbs A A, having forward and shorter pointed arms, *a a'*, of unequal length and cross-grooved to receive and hold the cord when closed one against or within the other, substantially as specified.



2. As an improved article of manufacture, an instrument for attaching tags, consisting of the pivoted levers A A, having their shorter arms, *a a'*, pointed and formed with notches *c* and their longer arms provided with loops *e*, the arms *a a'* being of unequal length and the longer one grooved longitudinally to receive the shorter one, as set forth.

400,408. BUTTON-HOLE STRIP. HENRY W. LYON, Bridgeport, Conn. Filed Dec. 26, 1888. Serial No. 294,696. (No model.)



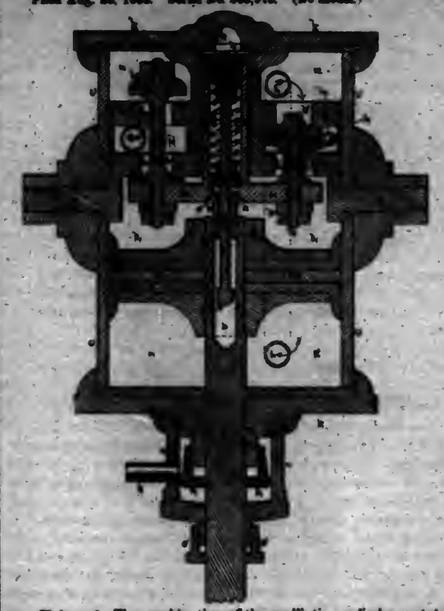
Claim.—1. In a button-hole strip provided with binding-edges, as described, the combination, with a body-strip having cut therein the button-holes, of separate short strips which extend beneath said body-strip between consecutive button-holes, and are provided with T-headed flaps, which are bound around the neighboring edges of said consecutive button-holes, substantially as set forth

2. The combination of the body-strip provided with binding-edges, as described, and having cut therein the button-holes, the separate strips which extend between consecutive button-holes beneath the body-strip, and the T-headed flaps formed at the ends of said separate strips and bound around the neighboring edges of said consecutive button-holes, the binding-edges of the body-strip being secured across the ends of the button-holes, substantially as shown, and for the purposes set forth.

400,408.

400,409. STEAM HAND-CAR. TIMOTHY MORRISSEY and JOHN DOYLE, Ionia, Mich. Filed Jan. 14, 1889. Serial No. 296,257. (No model.)

Claim.—1. In a steam hand-car, the combination, with the platform and car, of the generator I, supported on the rear end thereof, the engine mounted on the front side thereof and having its crank-shaft J in proximity to the platform, the sprocket-wheel M, mounted on said shaft, the sprocket-wheel M^3, mounted on the front axle of the car, the drive-chain M', and the idlers O and O', the latter having a yielding connection with the platform, substantially as described.



2. The combination, with a car provided with a platform, F, constructed substantially as described and mounted on springs E, of the seat G, supported on the front end of said car, the water-tank H, secured under said seat, the boiler I, mounted on the rear end of the car, the engine mounted upon the front side of the boiler and with its crank-shaft in proximity to the platform of the car, the sprocket-wheel M, mounted on said shaft, the sprocket-wheel M^3, mounted on the front axle of the car, the drive-chain M', the fixed idler O, and the idler O', secured in sliding bearings and provided with the spring *o*, substantially as described.

400,410. CHECK-HOOK. CHARLES H. MOSS, West Troy, N. Y. Filed May 1, 1888. Serial No. 272,402. (No model.)

Claim.—A safety check-hook which consists of a stationary body-piece, A, comprising a hook, 1, a main body, 3, having a pendent stud, 5, by which the device is secured to the harness, and an after-body, 4, of smaller diameter than said main body, said after-body having a collar, 10, provided with a tongue, 12, secured thereto, a sliding guard, B, having the form of a chambered sleeve and provided with an arm, 7, that is fitted to engage against the end of the hook 1, and having a slot, 13, in which the tongue 12 engages to guide said sliding guard, and a coiled spring, 9, which surrounds said after-body and is interposed between the collar 10 and a shoulder formed by the chambered bore of the sliding guard, the latter being fitted to have a sliding movement on and to be guided by the body 3 and collar 10, as and for the purpose herein specified.

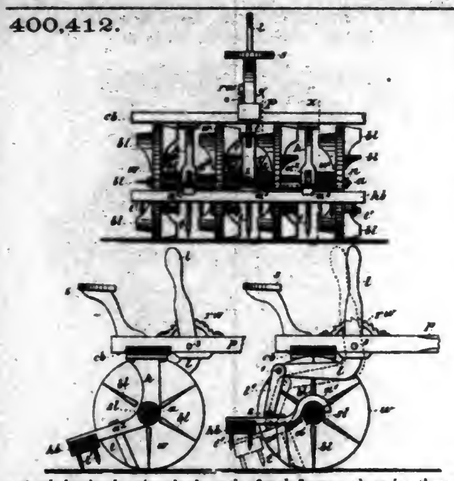
400,411. HYDRAULIC MOTOR. JOHN A. MYERS, Louisville, Ky. Filed Aug. 22, 1888. Serial No. 283,073. (No model.)

Claim.—1. The combination of the oscillating cylinder, a stationary casting which is placed therein and provided with four openings and corresponding valve-seats, a reciprocating-valve carriage to which all of the valves are connected, the piston, and a rod which connects the valve-carriage and piston together and operates the valve-carriage, substantially as described.

2. The combination of the oscillating cylinder, the piston, the stationary casting provided with the inlet and outlet openings and receiving and discharge chambers, the reciprocating-valve carriage, the valves secured to and operated by the carriage, and a connecting-rod which loosely connects the piston and the valve-carriage together, one end of the rod being made to extend into an opening in the piston-rod and the other end to extend through the valve-carriage, and provided with a head or stop upon each of its ends, substantially as set forth.

3. The combination of the oscillating cylinder, the stationary casting placed therein and provided with inlet and outlet openings and the inlet and outlet chambers, the pipes connected to the chambers, the valve-carriage, the valve secured thereto, the piston, the pipe which connects the two ends of the cylinder together, and the spring-actuated rod for connecting the valve-carriage and the piston together, substantially as shown.

4. The combination of the oscillating cylinder, the pipe T, for connecting its two ends together, the piston, the casting provided with inlet and outlet openings and inlet and outlet chambers, the pipes connected to the two chambers, the valve-carriage, the valve secured thereto, the endwise-moving rod for connecting the piston and valve-carriage together, and which is provided with a stop upon each of its ends, the bearings C, placed inside of the carriage, and the spring placed between the openings and the nut D', substantially as described.

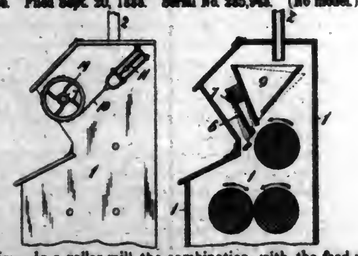


5. The combination of the cylinder, the piston-rod provided with an opening in its end, the projection X, the rod V, the casting in which the water-passages, the valve-seats, and the supply and escape chambers are formed, the valve-carriage, the valves secured thereto, a spring placed inside of the carriage, and the ends of the rod V being provided with stops, substantially as described.

6. The combination of the cylinder, the casting provided with water-passages, valve-seats, and a delivery and escape chamber, the valve-carriage, the valves secured to the carriage, the springs placed inside of the carriage, the bearings for the ends of the springs, the rod V, which extends through the carriage, the extension connected to the end of the piston-rod, the rod which is provided with stops upon its ends, and the piston, substantially as set forth.

400,412. COMBINED HARROW AND PULVERIZER. JOSEPH B. ORNY, Indianapolis, Ind., assignor of one-half to Joseph C. Worth, same place. Filed Oct. 15, 1888. Serial No. 288,128. (No model.)

Claim.—1. A combined harrow and pulverizer comprising a frame-work, hangers connected beneath the top thereof, a longitudi-

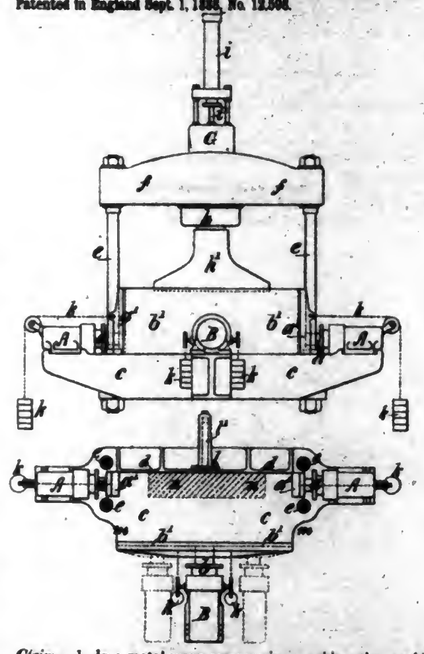


400,412.

sal axle having bearings in the ends of such frame and passing through sleeves upon which such hangers are mounted, wheels mounted on such axle comprising a central disk, with cutting-blades upon either side and at right angles to the plane thereof, a series of arms mounted upon the sleeves, through which the axle passes, and connected to such hangers and extending rearward, and a harrow connected to the rear end of such arms, with suitable mechanism for raising and lowering such harrow mechanism, substantially as shown and described.

2. In a combined harrow and pulverizer, a frame-work, a series of hangers connected beneath the top thereof, mounted upon sectional sleeves supported upon the axle, an axle having bearings in the ends of the frame and passing through such hangers, a series of wheels composed of central disks with lateral blades having sharpened edges mounted on such axle between the adjacent ends of the sleeves, arms also mounted upon the sleeves, connected to such hangers, and extending rearward between each pair of disks, a harrow-frame connected to such arms, and a series of cutting-teeth, also connected thereto between the axle of the machine and the harrow-frame, with means, substantially as described, for elevating and lowering such harrow mechanism.

400,413. ROLLER-MILL FEED-HOPPER. WILLIAM J. PURDY, Carberry, Manitoba, Canada, assignor of one-half to John H. Lyons, same place. Filed Sept. 20, 1888. Serial No. 285,948. (No model.)

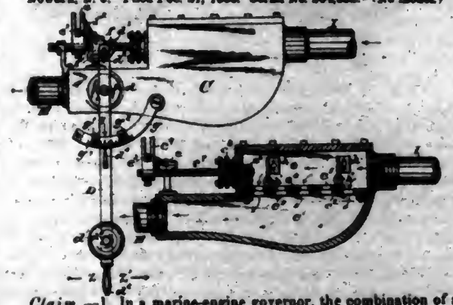


Claim.—In a roller-mill, the combination, with the feed-roller 3, of a hopper, 9, connected to a feed-board, 6, endwise pivoted or journaled through the mill-casing, a wheel, 19, on said journal to rock the feed-board, and a spring tension-regulator, 11, connected to said wheel by a chain or cord, 10, whereby the hopper, when overcharged, will overcome the resistance of the spring and actuate the feed-board to allow an abnormal quantity of grain to escape to the feed and reduction rollers until the tension of the spring overcomes the gravity of the hopper, the feed-board then returning to its normal position.

400,414. HYDRANT. WILLIAM RYLE, Paterson, N. J., assignor to Alfred B. Watson and James A. Watson, same place. Filed Sept. 24 1887. Serial No. 250,541. (No model.)

Claim.—A hydrant-nozzle cap consisting of an internally-screw-threaded brass bush open at each end and having one end of larger exterior diameter than the other end, and provided with a series of recesses, D, extending lengthwise in the tapering outer surface of the bush, substantially parallel with the internal screw-thread, in combination with an outer frame of iron cast about the said bush, closing the opening at the larger end of it and engaging with the said recesses, substantially as and for the purpose set forth.

400,415. APPARATUS FOR COMPRESSING SCRAP METAL. JAMES W. SUMNERS and TREVELYAN SHARP, Stalybridge, County of Lancaster, England. Filed Dec. 6, 1888. Serial No. 292,709. (No model.) Patented in England Sept. 1, 1886, No. 12,606.



Claim.—1. In a metal-scrap-compressing machine, the combination of the three horizontal hydraulic rams and ram-heads, with a third vertically-acting ram and head, which is forced downward to give the final pressure, substantially as set forth.

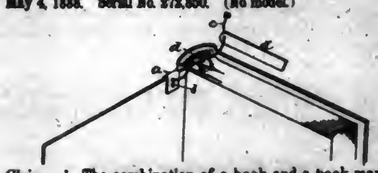
2. The combination of the two horizontal hydraulic rams *a a*, the third horizontal ram, *b*, the fourth vertical and downward acting ram, *A*, the solid-surfaced bed *c*, and the strong vertical wall *d*, substantially as and for the purpose set forth.

3. In a metal-scrap-compressing machine, the horizontally-acting hydraulic ram, in combination with the vertically downward-acting hydraulic ram provided with a hydraulic piston working in a cylinder, *i*, for raising the last-named ram after each pressure, substantially as set forth.

4. In a metal-scrap-compressing machine, the combination of horizontal hydraulic rams with a vertically-acting ram or pair or set of rams, a vertical wall, *d*, opposite one of the horizontal rams, and a discharging-ram situated in said wall, substantially as set forth.

400,416. GOVERNOR FOR MARINE ENGINES. DANIEL SWEENEY, Newark, N. J. Filed Feb. 21, 1888. Serial No. 264,862. (No model.)

Claim.—1. In a marine-engine governor, the combination of a sliding valve arranged within a chambered valve-box having induction and eduction pipes on opposite sides of said sliding valve, a connecting-rod secured to said sliding valve and projecting and working through said valve-box, a weighted lever pivotally secured to said valve-box, a crank co-operating with a fork arranged on said connecting-rod to move the same and the sliding valve, and an adjustable plate secured to said crank and pivotally and adjustably connected with one end of said weighted lever, for the purposes set forth.

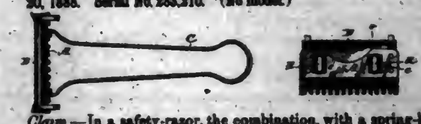


2. In a marine-engine governor, the combination of a sliding valve and a valve-seat provided with steam-ports therein, a valve-box in which said sliding valve and valve-seat are contained, a connecting-rod secured to said sliding valve and projecting and working through a stuffing-box on said valve-box, a fork attached to said connecting-rod, a crank engaging with said fork and journaled in suitable bearings, a slotted plate secured to said crank, a weighted lever pivotally secured to said valve-box and provided with a slot in the upper end thereof, and connecting-pin adjustably secured in the slotted plate attached to the crank and engaging with the slot in the end of the weighted lever, for the purposes set forth.

3. In a marine-engine governor, the combination of a sliding valve, a valve-box, a pivoted and weighted lever pivoted to said box, a connecting-rod whereby the movement of said lever is communicated to said valve, said rod projecting and working through a stuffing-box on said valve-box, a fork attached to said rod engaging with a crank journaled in suitable bearings, and adjustable stops with which the said swinging lever engages, for the purposes set forth.

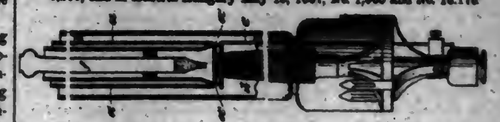
4. In a marine-engine governor, the combination of a sliding valve, a valve-box, a pivoted and weighted lever pivoted to said valve-box, a connecting-rod secured to said sliding valve and projecting and working through a stuffing-box on said valve-box, a fork attached to said connecting-rod engaging with a crank journaled in suitable bearings, a slotted plate secured to said crank, said plate having a handle thereon, the weighted lever being provided with a slot in the upper end thereof and a connecting-pin adjustably arranged in the slotted plate and attached to the crank and engaging with the slot in the end of the weighted lever, and an arm secured to said valve-box, having an indicator thereon and extending down along the path of the lever adjacent to a pointer on said lever, substantially as and for the purposes set forth.

5. In a marine-engine governor, the combination of a sliding valve, a valve-box, said valve-box being provided with a slotted plate having rollers adjustably secured to the sides of said box, a pivoted and weighted lever pivoted to said box and having a pointer thereon, connecting devices whereby the swinging movement of said lever is communicated to the valve, and an indicator on which the pointer on said swinging lever indicates the relative position of the valve to the swinging lever, said indicator being secured to said box and extending down along the path of the lever adjacent to the pointer, for the purposes set forth.



400,417. BOOK-MARKER. ISAAC J. TURNER, Princeton, N. J. Filed May 4, 1888. Serial No. 272,850. (No model.)

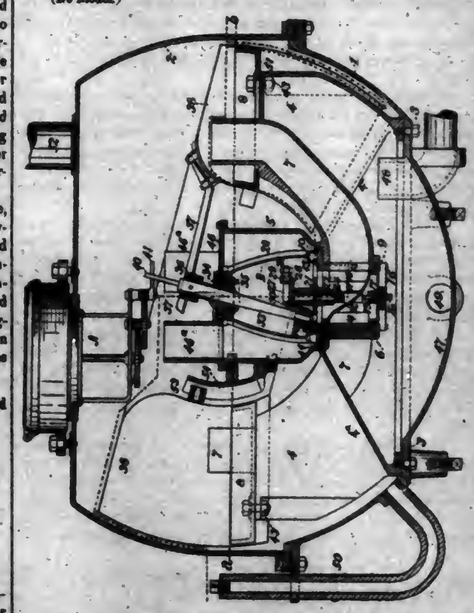
Claim.—1. The combination of a book and a book-marker consisting of a flexible cord attached to the book at or near its upper end and adapted to be arranged transversely across the top of the book, and having one or more markers loosely strung thereon and adapted to be arranged between the leaves of the book, substantially as set forth.



2. The combination of the book and a book-marker consisting of a flexible cord having markers loosely strung thereon and provided with a fastener attached to the book at or near its upper end, said flexible cord being adapted to be arranged transversely across the top of the book, and said markers being adapted to be arranged between the leaves of the book, substantially as set forth.

400,418. SAFETY-RAZOR. JOSEPH TURNER, Worcester, Mass., assignor to the J. R. Torrey Razor Company, same place. Filed Aug. 20, 1888. Serial No. 283,310. (No model.)

Claim.—In a safety-razor, the combination, with a spring-handle having inwardly-turned lips *c*, of a blade-holding guard-plate, A, provided in its rear side, between its ends, with ears or recesses to be engaged by the said lips, substantially as set forth.



400,419. APPARATUS FOR REGENERATING INCANDESCENT MANTLES. CARL AUER VON WELSBACH, Vienna, Austria-Hungary, assignor to the Welsbach Incandescent Gas Light Company, of New Jersey. Filed Mar. 31, 1888. Serial No. 269,190. (No model.) Patented in Germany Jan. 26, 1887, No. 44,016; in England Apr. 23, 1887, No. 6,238, and in Austria-Hungary May 13, 1887, No. 1,963 and No. 16,176.

Claim.—1. In an apparatus for applying a coating of regenerating-solution to mantles, the combination, with the tube *b*, having secured across its lower end a strip of porous material, *c*, of the tube *f*, centrally supported in the tube *b* above said porous material, and provided at its lower end with a small capillary opening for the escape of the regenerating-fluid, substantially as described.

2. In an apparatus for applying a coating of regenerating-solution to mantles, the combination of the tube *a*, having inward-turned projections *a'*, the tube *b*, supported within the tube *a* and resting on said projections, the strip of porous material *c*, secured across the lower end of the tube *b*, and the tube *f*, supported centrally in the tube *b* above said porous material, substantially as described.

400,420. FLUID-METER. GEORGE WESTINGHOUSE, Jr., and CHAUNCEY M. DUTTON, Pittsburg, Pa. Filed July 30, 1888. Serial No. 281,406. (No model.)

Claim.—1. In a fluid-meter, the combination of a substantially spherical inclosing-case provided with inlet and outlet pipes, an annular spherical sector measuring-shell divided into a series of separate compartments and adapted to receive a progressive wave-like movement about its center, and a valve connected to and actuated by the movements of the measuring-shell and controlling the flow of fluid to and from the several compartments thereof, substantially as set forth.

2. In a fluid-meter, the combination of an inclosing-case provided with inlet and outlet pipes, a measuring-shell composed of a series of compartments journaled on and adapted to successively oscillate about a common central bearing, and a valve connected to and actuated by the movements of the measuring-shell and provided with a partition and ports controlling the simultaneous admission of fluid to be measured into two or more adjacent compartments and its simultaneous delivery from two or more oppositely-arranged compartments, substantially as set forth.

3. In a fluid-meter, the combination of an inclosing-case, a diaphragm dividing said case into two compartments and provided with a central tube, a measuring-shell composed of a series of compartments adapted to oscillate successively about a common center in one of the compartments of the case, and a valve connected to and actuated by the measuring-shell and controlling the passage of fluid from one compartment of the case through the tube of the diaphragm into

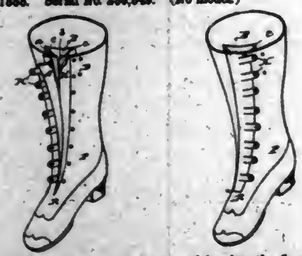
the measuring-compartments and from the measuring-compartments into the other compartment of the case, substantially as set forth.

4. In a fluid-meter, the combination of an inclosing-case, a diaphragm dividing said case into two compartments and provided with a central tube, a series of bosses or displacers projecting from the diaphragm into one of the compartments, a measuring-shell composed of a series of compartments which respectively surround the several bosses or displacers and are adapted to oscillate successively about a common center in the compartment of the case containing the same, and a valve connected to and actuated by the measuring-shell and controlling the passage of fluid from said compartment of the case through the tube of the diaphragm into the measuring-compartments and from the measuring-compartments into the other compartment of the case, substantially as set forth.

5. In a fluid-meter, the combination of a case adapted to contain a sealing-fluid, a series of measuring-compartments working within the case, and a series of equalizing-chambers, each fixed to the case and projecting within and fitting closely adjacent to the inner surface of one of the measuring-compartments, substantially as set forth.

6. In a fluid-meter, the combination of an inclosing-case, an annular measuring-shell divided into a series of compartments, a series of circularly-arranged displacers, each fixed to the case and projecting into one of the measuring-compartments, and a series of equalizing-chambers removably connected to the displacers, substantially as set forth.

7. In a fluid-meter, the combination of an inclosing-case in the form of a segment of a sphere and composed of two sections, a series of circularly-arranged displacers connected to the lower section of the case, and a series of equalizing-chambers connected removably to the displacers, the displacers and equalizing-chambers projecting above the upper face of the lower section of the case, substantially as set forth.

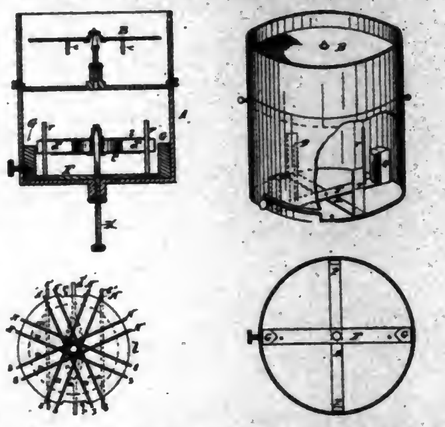


8. In a fluid-meter, the combination of an inclosing-case, a measuring-shell composed of a series of compartments journaled on and adapted to successively oscillate about a common central bearing, a series of tubes leading to the compartments and converging in a valve-casing concentric therewith, and a valve connected to and actuated by the measuring-shell and controlling the flow of fluid through the tube, substantially as set forth.

9. In a fluid-meter, the combination of a measuring-shell composed of a series of compartments arranged about a common center and having a progressive wave-like movement, a valve governing the flow of fluid to and from said compartments, and a guide or stop to prevent revolution of the measuring-shell around its center, substantially as set forth.

10. In a fluid-meter, the combination of an inclosing-case, a diaphragm arranged transversely of said case, pipes for conducting fluid to and from said case and connected thereto on opposite sides of the diaphragm, a valve controlling an opening through the diaphragm, and a sediment-chamber below the diaphragm, substantially as set forth.

11. In a fluid-meter, the combination of an inclosing-case provided with inlet and outlet pipes, a series of measuring-compartments, a valve controlling the flow of fluid to and from said compartments, mechanism connecting the measuring-compartments and valve, and a removable valve seat or support having the connecting mechanism attached thereto and removable therewith, substantially as set forth.



400,421. RUBBER BOOT. MARY T. WYNKOOP, Utica, N. Y. Filed Nov. 3, 1888. Serial No. 289,849. (No model.)

Claim.—A boot-leg open in front and having the flaps A *a* and H *b* on opposite sides, the said flaps being adapted to close one upon the other when the boot-leg is closed, and the gore or tongue B, having its edges attached to the inner sides of the flanges *a b*, substantially as described.

REISSUES.

10,991. SHIP'S COMPASS. LÉON SIRIEIX, San Francisco, Cal., assignor to the Sirietx Mariners Compass Company. Filed Feb. 26, 1889. Serial No. 301,296. Original No. 373,523, dated Feb. 22, 1888.

Claim.—1. A correcting-compass, *l l*, provided with two sets of magnetic bars, one set being underneath the card of the compass and the other set on its top, in combination with a prime compass having magnetic bars, substantially as set forth.

2. In a compensating compass, the combination, with a prime compass and a correcting-compass, of the soft-iron blocks G, mounted and moved with the correcting-compass, as set forth.

3. In a compensating compass, the combination, with a prime compass and a correcting-compass, of the soft-iron blocks G, mounted and moved with the correcting-compass, and means, substantially as described, for adjusting the said blocks and correcting-compass in a horizontal plane, as set forth.

4. In a compensating compass, the combination, with the prime compass and a correcting-compass, of the soft-iron blocks G G and bar F, on the ends of which they are mounted and the guides or stops *r r* on bar F, to hold the correcting-compass, as set forth.

5. In a compensating compass, the combination of a prime compass and a correcting-compass and the soft irons P, arranged and held in place on bar M, to compensate the influence due to the induced magnetism in the vertical and horizontal soft iron of the ship, substantially as described.

10,992. REFRIGERATOR. WILLIAM C. SWEET, Schenectady, N. Y. Filed Feb. 14, 1889. Serial No. 300,234. Original No. 355,067, dated Jan. 4, 1887.

Claim.—1. The combination, with a refrigerator having way or guide strips, of an ice-receptacle having rollers to travel thereon, and a flexible pipe connecting the ice-receptacle with an eduction pipe or opening, substantially as set forth.

2. A refrigerator comprising a casing and a lining of light porous wood, arranged to leave a space between them, and a filling in said space, consisting of salt, lime, and sawdust, substantially as set forth.

R. PETERS, Photo-Lithographer, Washington, D. C.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE YOUNG.

Decided December 18, 1888.

STATEMENT OF THE CASE.

The claims have been rejected on the ground that they cover a process which is "evidently and necessarily the operation contemplated in the construction of the machine" and "the inevitable result of such operation."

1. PROCESSES WHICH DEPEND UPON PARTICULAR MECHANISM.

It being conceded that a process is not patentable which is merely the effect or function of specific mechanism, the question necessarily arises in every case whether the process claimed is capable of being performed by a machine differently organized from that described, or even without an organized machine—by ordinary tools or by hand. *Held* in the case under consideration that the processes set forth in the claims do not depend for their performance on the particular machine described.

2. WHEN ENTITLED TO THE PROCESS.

An inventor who proceeds to invent a machine designed solely to carry out a particular process, and the only function of which is to execute that process, is entitled to protection. A process which is distinct and separate from the machine does not lose its identity because of any course pursued by the inventor in prosecuting his claims for a patent, or from the fact that he may not at the time of completing his machine have been fully conscious that he had also invented the process. Should applicant, however, take out his patent for the machine without defining or claiming his process, he probably would unconsciously dedicate the process to the public; but if at any time before he comes to the Office or takes out his patent he discovers or becomes conscious of the fact that his invention is of a twofold character—viz., that it constitutes both the machine and the process which it executes—and prepares his application accordingly, there can be no reason for holding that he has merged the two inventions or that the two are in fact one.

3. CONSCIOUS AND UNCONSCIOUS INVENTION, WHEN COMPLETED.

At the time applicant becomes conscious of the fact that there exists in his mental operations and discoveries a distinct process as well as a concrete machine he completes not only the invention of the process, but perfects his knowledge of it, and comes into the status of an inventor who may obtain the security of the patent laws.

4. DECISIONS REVIEWED.

APPEAL from Examiners-in-Chief.

ART OF AND MACHINES FOR MAKING BOXES, &c.

Application of McClintock Young filed August 30, 1886, No. 212,210.

Messrs. Baldwin, Davidson & Wright for the applicant.

HALL, *Commissioner.*

The invention described in this application consists in producing from a continuous strip of paper a series of connected, longitudinally-pasted, flattened box-tubes, having their surface printed upon, which, being separated from one another and expanded or opened, are converted into boxes. This continuous strip of box-blanks may be separated at will. Applicant has devised a complex machine by which the various steps of printing, creasing and cutting, pasting, and rolling are performed in their proper order. He has presented claims to cover the process by which the roll of completed box-blanks is produced and for some of the sub-processes, which are as follows:

1. As an improvement in the art of manufacturing boxes from a strip of paper, &c., the described method of preparing the connected blanks for pasting and folding, consisting in intermittingly advancing the strip, and during intermissions in its advance movement cutting and creasing to successively and completely form the respective blanks of a series of unfolded unpasted blanks connected at their ends by narrow necks, substantially as set forth.

2. As an improvement in the art of manufacturing boxes from a strip of paper, &c., the described method of preparing the connected printed blanks for pasting and folding, consisting in intermittingly advancing the strip, successively printing the respective blanks during intermissions in the advance movement of the strip, and cutting and creasing the other blank also during intermissions in the advance movement of the strip to successively complete the respective blanks of a series of unfolded unpasted blanks connected at their ends by narrow necks, substantially as set forth.

3. As an improvement in the art of manufacturing boxes from a strip of paper, &c., the described method of producing the connected box-tubes, consisting in intermittingly advancing the strip, during intermissions in its advance movement cutting and creasing it to successively completely form the respective unfolded unpasted blanks of a series with the narrow necks connecting them at their ends, applying paste to the successive blanks, and during intermissions in the advance movement of the strip folding previously cut and creased pasted blanks into flattened connected box-tubes, substantially as set forth.

4. As an improvement in the art of manufacturing boxes from a strip of paper, &c., the described method of producing and compactly bundling and compressing the connected box-tube, consisting in intermittingly advancing the connected cut and creased blanks, applying paste, folding into flattened connected box-tubes, and winding them under tension into a compact roll, substantially as set forth.

5. As an improvement in the art of manufacturing boxes from a strip of paper, &c., the described method of preparing the connected blanks and producing and compactly bundling and compressing the connected box-tubes, consisting in intermittingly advancing the strip, cutting and creasing it to successively form the respective blanks of a series with the narrow necks connecting them, applying paste to the blanks, folding the blanks, and finally winding them into a compact roll, substantially as set forth.

The examiner has rejected these claims on the ground that they cover a process which is "evidently and necessarily the operation contemplated in the construction of the machine," and "the inevitable result of such operation." In this position he has been affirmed by the Examiners-in-Chief. The authorities relied upon both by the Primary Examiner and the Examiners-in-Chief are *Burr* v. *Duryee*, (2 Whit., 69;) *Corning* v. *Burden*, (15 How., 252;) *New* v. *Warren*, (C. D., 1882, 371;) *Brainard* v. *Cramme*, (C. D., 1882, 382,) and the Commissioner's decision in *ex parte Harrison*, (C. D., 1876, 170.) The bearing of all these authorities on the propriety of allowing the claims under consideration is not strikingly apparent. The question in *Burr* v. *Duryee* was one relating to the reissue of a machine patent so as to cover a process

recognized by the court as known and practiced prior to the invention of the machine, and the court rightly declared against such reissue, saying:

Much less can any inference be drawn from the statute that an inventor who has made an improvement in a machine, and thus effects the desired result in a better or cheaper manner than before, can include all previous inventions and have a claim to the whole art, discovery, or machine he has improved.

In *Corning* v. *Burden* the question was on the interpretation of Patent No. 1,890, December 10, 1840, whether it was to be regarded as for a machine or a process. The claim was what is now called "functional," and really covered the accomplishment of the result by several distinct mechanisms, but in all the action of particular means was relied upon. The inventor stated, moreover, that his invention was for an "improvement in the process which consists in the employment of a new and useful machine for rolling puddling-balls." The court rightly held that such a patent was for a machine and not for a process, and, further, that a patent could not be granted for the function or abstract effect of a machine. A process was declared to be patentable as distinguished from a machine; but I do not see wherein the word "process" as defined by the court fails to include such processes as are the subject of the present claims.

In *New* v. *Warren* the court held that a machine patent could not be broadened in a reissue to cover a process described in the original, and declared that in addition to a patent on the machine there could not be a patent for its mere operation.

In *Brainard* v. *Cramme* it was held that the process claimed in the reissue was merely for the operation of the apparatus described in the original patent, but it was conceded that since everything essential to the process had been pointed out in the original patent nine years before and in the meantime other inventors had occupied the ground covered by the general subject-matter of the invention, whatever was therein pointed out and not claimed was to be deemed to be dedicated to the public. There is nothing in this case that bears on the question now before me.

In *ex parte Harrison* the Commissioner held that—

If in the present case we separate the process or method proper from the operation or effect of the machine, we have the simple process of charring wood in a closed vessel, which is too old to be patented.

This amounts to a rejection of the process claim for want of novelty, in view of the fact that in so far as the process depended on the operation of the machine it was not patentable.

The general consensus of these decisions, as well as the many others that might have been cited, is in accordance with what is said in *ex parte Herr*, (41 O. G., 463:)

The necessary effects or operations of specific mechanism are not necessarily processes or methods within the meaning of the patent law. * * * A method or process such as the law recognizes as patentable must have an existence independent of the machine or appliances by which it is carried out to its result. It must be a method or process that can be carried out by hand or by various kinds or forms of mechanism or appliances.

I am not able to fully agree with the examiner and Examiners-in-Chief in the position which they have taken. It being conceded that a process is not patentable which is merely the effect or function of specific mechanism, the question necessarily arises in every case whether the process claimed is of that character—that is, whether it is capable of being performed by a machine differently organized from that described, or even without an organized machine, by ordinary tools or by hand. If it is capable of being so performed, then, so far as the examiner's view is concerned, it may be a patentable process.

It is clear to my mind that the processes set forth in the claims do not depend for their performance on the particular machine described. They can be carried out by other organizations of mechanism, by machines more or less complex, by appliances not worthy to be classed as machines, or by simple hand-tools. It seems possible for an inventor with one of these claims before him, or with the finished product before him, to conceive of an organization of mechanism to carry out the process claimed, or to construct a machine to make the product, which would differ so materially from the applicant's machine as not to infringe it. Hence the processes claimed are not included among those processes which by the general consensus of decisions are held not to be patentable, but they are such as have, to quote again the language of *ex parte Herr*—

an existence independent of the machine or appliances by which they are carried out to their result.

That a process may be patented irrespective of the particular form of instrumentalities used to carry it out is clearly set forth in *Eastern Paper Bag Co.* v. *Standard Paper Bag Co.*, (41 O. G., 231,) in which *Cochran* v. *Deener* (94 U. S., 780) is quoted with approval. The court in the paper-bag case sustained Patent No. 258,272, granted to Daniel Appel May 23, 1882, the claim in which is as follows:

The herein-described improvement in the art or method of manufacturing satchel-bottom paper bags from a tube, which consists, first, in forming the diamond fold, then cross-folding the leading corner of the diamond fold, and subsequently completing the satchel-bottom by cross-folding the rearmost corner of the diamond fold, and together with it the main body of the bag-blank, on the line of this second cross-fold, substantially as and for the purpose described.

This process was carried out by machinery which produced the bags with such rapidity that the court said it was difficult to assign any limit to the speed with which they could be made. But irrespective of the machine the court held that the claim described a patentable process.

In *Globe Nail Co.* v. *United States Horse Nail Co.* (19 Fed. Rep., 819) the court held the following claim to be good:

The process of curving the bodies of nails and beveling their points by spreading the metal laterally and afterward forcing them through an open die to shear off superfluous metal, substantially as and for the purpose specified.

In *Wallace* v. *Noyes* (13 Fed. Rep., 172) the court said:

Where the patentee attained the result by a succession of processes, which, though separately old, had not been practically grouped together in the order in which he used them, it is a patentable novelty in process.

In all these cases in which mechanical processes are held to be patentable the inventor of the process has proceeded further to invent a machine designed particularly to carry it out, and when such a machine has been constructed its sole purpose and function must necessarily be to perform the process—that is to say, the process is "evidently and necessarily the operation contemplated in the construction of the machine," which has been regarded by the Primary Examiner and the Examiners-in-Chief as sufficient ground for refusal of the present claims. The decisions of the court do not appear to me to sustain such a position, but, on the contrary, to recognize as patentable novel mechanical processes, notwithstanding the fact that machines have been devised of which the processes are the evident and necessary operation.

In view of the decisions of the courts, and in view particularly of such claims as have been sustained by them, I see no reason why the claims now in controversy may not be accepted as valid for mechanical processes. I observe in this application that the claims rejected which relate to the processes set forth are joined with other claims covering the machine by which these processes are executed, and it has been suggested that these claims for the processes and for the machine are united in the same application. The legitimate and necessary inference is that the applicant invented the processes and the machine at the same time, and has chosen or elected to regard them as constituting but a single invention. So it may be said the invention of the processes has in this manner become merged in the invention of the machine and that applicant can only maintain these claims for the machine. This conclusion appears to be reached, probably, upon the ground that it is unlawful for an applicant to unite claims for two separate and distinct inventions in the same application. The proposition is stated in this wise:

If the inventor of a new and patentable process contrives subsequently a machine or apparatus by which to carry it out, it is evident that the two—the process and the machine—are not the same invention. They are distinct in their nature and distinct chronologically and cannot be identical. But when a case arises in which the inventor has never consciously discovered or contrived a new mechanical process, but has purposed to invent a machine only, it would appear that the operation of the machine, though perhaps a true and novel mechanical process, is in fact inseparable as an invention from the machine itself.

I am not able to accept this proposition, and do not see how it is possible for a process which is distinct and separable from the machine by which it may be executed to lose its identity in any way by the course which the inventor may pursue in prosecuting his claims for a patent, or from the fact that at the time he completed his machine he may not have been fully conscious of the fact that he had invented a distinct and separable process. It is of course difficult to say that a man can have invented a process of which he was not cognizant; but in the case supposed the inventor's attention may have been so occupied with the mechanical construction of his machine that for the time being he failed to know, by reason of his ignorance or otherwise, he had invented also a new process, and if his unconsciousness should not be removed and he should come to the Patent Office and apply for a patent without describing or defining or claiming his process, and should take out his patent accordingly, he probably would dedicate the process to the public as unconsciously as he had invented it, and thus be barred from asserting claim thereto; but if at any time before he comes into the Office or takes out his patent he discovers or becomes conscious of the fact that his invention is of a twofold character—viz., that it constitutes both the machine and the process which it executes—and prepares his application accordingly, there certainly can be no reason for holding that he has merged the two inventions or that the two are in fact one. At the time an applicant becomes conscious of the fact that there exists in his mental operations and discoveries a distinct process, as well as the concrete machine which he has created, he completes not only the invention of the process, but perfects his knowledge of it and comes into the status of an inventor who may obtain the security of the patent laws. In this case the application has been allowed to proceed to the present time without any objection being made to the fact that it contained claims for the process and claims for the machine. If the practice alluded to had been carried out originally, applicant would have been required to divide, and would then have occupied a status which would be fatal to the objection which is suggested in this particular.

The decision of the Examiners-in-Chief is reversed.

EX PARTE JAEGER.

Decided January 4, 1889.

PATENTABILITY—PROCESS.

A method or process which depends for its novelty upon the preparation of an adhesive stay and the various steps employed to carry such article forward to the final act of affixing it to the corners of boxes for the purpose of strengthening the corners *Held* to be not a proper method or process, but the mere operation of the machine.

APPEAL from Examiners-in-Chief.

PROCESS OF APPLYING CORNER-STAYS TO BOXES.

Application of Gustave L. Jaeger filed March 29, 1888, No. 268,830.

Messrs. Van Santvoord & Havff for the applicant.

HALL, *Commissioner:*

Applicant appeals from the decision of the Examiners-in-Chief affirming the action of the Primary Examiner in rejecting this application.

The claims appealed are as follows:

1. The method herein described of staying box-corners, which consists in preparing a series of detached superposed corner-stays, each of the required size, automatically picking up the stays one after another and carrying them over the corners of a box, automatically rendering the stays adhesive one after another in transit to the box-corners, and pressing the median line of the stays on the box-corners, substantially as set forth.

2. The method herein described of staying box-corners, which consists in preparing a series of detached corner-stays of the required size, superposing the said stays, automatically picking up the stays successively at uniform intervals and carrying them over the box-corners, and while in transit thereto automatically rendering them adhesive one after another, and pressing the stays on the box-corner.

The Examiners-in-Chief affirm the decision of the Primary Examiner in the following language:

We concur with the examiner in finding nothing in this case but the operation of the machine set forth and described in the application, and we affirm his decision.

I fully concur in the opinion of the Examiners-in-Chief. It may be well to add, however, that an examination of the application with its claims satisfies me for other reasons than those expressed by the Examiners-in-Chief that no method exists in this case. The result of the alleged method is the fastening of the side pieces of a box where they meet at the corners by means of an adhesive stay, which is prepared of the required size and rendered adhesive and then pasted over the corners of the box. The thing done is the staying of the corners of the box by this stay, which is conceded to be old and very common; but the applicant attempts to take the preparation of the stay itself as an independent article, divide it into "steps," as he calls them, and carry them forward to the final act of affixing the stay to the corner of the box, and by reason of these various steps he claims to have found a process. Now, it is apparent that the stay is

a separate and independent article until it has been applied to the corners of the box; that its being cut into rectangular shape, pasted, piled in convenient form, &c., are mere steps in its preparation and wholly independent of the final act affixing it to the corners of the box to accomplish the purpose of the supposed invention—viz., staying the corners of the box.

When properly considered, the only thing which is shown in the application or which can be claimed in the way of invention is the applying of rectangular pieces of paper, properly pasted, to the corners of the box for the purpose of strengthening or staying such corners. The supposed method or process of thus staying the box begins and ends with the applying of the stay to the corners of the box. It is impossible to carry that process or method back so as to embrace or include the steps which may be taken to prepare the stays. As well might it be attempted to claim a method for strengthening or staying the corners of the box by nails by beginning with the origin of the nails, their manufacture and form, following them through the devious processes of manufacture, and alleging that those various steps were steps in the process of strengthening and staying the box into which the nails were driven.

The action of the Examiners-in-Chief is affirmed.

EX PARTE LATIMER.

Decided March 12, 1889.

1. NATURAL PRODUCT OF NATURE NOT PATENTABLE.

A product of nature, although conceded to be valuable and useful, such as fiber which is procured, derived, or freed from a certain species of pine, by means of a new and novel process for which patent has been granted to applicant, *Held* to be not such a patentable invention as is required by the statute.

2. SAME.

The product has not been affected, changed, or altered by the process, and whatever there is of invention resides in or consists of the process itself, by which the fiber can be taken from the natural sheath or membrane of the leaf or pine-needle in which it has been developed or produced by the processes of nature.

3. SAME.

A contrary ruling would result in granting to one inventor the exclusive use of one species of fiber, and so on, successively, patents might be obtained upon the fibers of the various trees of the forest and the plants of the earth, which, because being natural products, are no more the subjects of patents when eliminated from their surroundings than wheat which has been cut by some new method of reaping can be patented *as wheat* cut by such a process.

APPEAL from Examiners-in-Chief.

FIBERS.

Application of William Latimer filed December 10, 1888, No. 293,067.

Messrs. Munn & Co. for the applicant.

HALL, *Commissioner:*

Applicant appeals from the decision of the Examiners-in-Chief upon the following claim:

As a new article of manufacture, the fiber herein described, consisting of the cellular tissues of the *Pinus australis* eliminated in full lengths from the silicious, resinous, and pulpy parts of the pine-needles and subdivided into long pliant filaments adapted to be spun and woven, as described.

In the original rejection a patent to Adolph Roque January 1, 1867, No. 60,940, and also a publication contained in the *Franklin Journal*, vol. 54, pp. 412–414, are cited.

The examiner held:

The claim and description do not set forth any physical characteristics by which the fiber can be distinguished from other vegetable fibers. The material out of which the fiber is made does not constitute a physical characteristic, nor does the length of the fiber distinguish it from the fiber produced from other vegetable substances, although it may from those derived from other species of pine. Hence, since the fiber claimed is not, and cannot be, distinguished from other fibers by any physical characteristic, the claim therefor must be refused. (See *Cochrane* v. *Badische Anilin and Soda Fabrik*, 27 O. G., 813.)

The claim is also refused, as the fiber produced from any vegetable substance does not differ from other vegetable fibers and is not the subject for patent protection. This exact question, so far as the examiner is aware, has never been considered by the courts or by the Commissioner; but analogous cases are found in paper-pulp made from various substances, which, as products, have been declared not to be patentable by the Commissioner in *ex parte Sturgis*, (MS. Dec., vol. 2, 145,) and *ex parte Cushman*, (MS. Dec., vol. 2, 64,) and by the Supreme Court in *The American Wood Paper Co.* v. *The Fibre Disintegrating Co.*, (23 Wall., 566, 593.)

After the case had been appealed to the Examiners-in-Chief it appears that applicant submitted to them a number of additional affidavits relative to the character and quality of the fiber produced by his process. The senior member of the Examiners-in-Chief, after intimating that the flax fiber produced from the needle of the *Pinus australis* was patentable, and that the views of the examiner, in so far as he held that such a fiber was not patentable *per se*, were erroneous, and, doubting the applicability of *The American Wood Paper Co.* v. *The Fibre Disintegrating Co.* to the question, remanded the application to the Primary Examiner, in order that he might take original jurisdiction of the application again with the new affidavits as a part of the record and make such action therein as he might see proper.

The Primary Examiner thereupon, having considered the evidence submitted through the order of the Examiner-in-Chief, returned the case to the Board with an affirmance of his former action. The majority of the Examiners-in-Chief then affirmed the action of the Primary Examiner, holding:

We are also of opinion that the said references furnish a substantial anticipation of the supposed new article of manufacture, and must therefore affirm the examiner's decision in refusal of the patent.

The references referred to are those originally given, viz: patent to Adolph Roque, No. 60,940, and the disclosure contained in the *Franklin Journal*.

The senior member of the Board entertained a doubt as to whether the invention was properly anticipated by these references, and held that the doubt should be resolved in favor of the applicant and the decision of the examiner reversed. Applicant, by appeal from the decision of the majority of the Examiners-in-Chief, has now brought the case before the Commissioner for his consideration.

Applicant has filed two applications, one for the process by which the fiber in question is taken from the needles of the *Pinus australis*, the other for the product itself. He has obtained a patent for his process, but his claim for the product has, as above stated, been rejected. What is this product which applicant claims? It is not asserted or pretended in the present application that the product, which is the result of applicant's process, is in any manner affected or produced by the process, or that its natural condition as a fiber has in any wise been affected, changed, or altered. Fiber, whether of plants—such as hemp, flax, cotton—or of the leaves of trees—such as the *Pinus sylvestris*—or of the wood of trees and shrubs, is a well-known material, the knowledge of which is almost coextensive with the human family. It has been

employed from time immemorial in the manufacture of threads, cordage, fabrics, and textiles. It is also well known that the pure fiber after it has been eliminated from the natural matrix of the leaf or stalk or wood in which nature forms and develops it is essentially the same thing and possesses the same construction. The chemical formula for this cellulose in all these varieties of plants, I am advised, is the same. The different fibers differ in characteristics as to length, strength, fineness, &c.; but these differences are not at all due to the processes by which they are removed from the matrices in which they have grown, but to the processes of nature in developing and growing them. The fiber of the needle of the *Pinus australis* grows from ten to twenty inches, while that of the leaf of the *Pinus sylvestris* is only three, four, or five inches in length, and this is true for precisely the same reason that the needle itself of the one is much longer than the leaf of the other. Nature made them so and not the process by which they are taken from the leaf or the needle.

It cannot be said that the applicant in this case has made any discovery, or is entitled to patent the idea, or fact, rather, that fiber can be found in the needle of the *Pinus australis*, or that it is a longer fiber than can be found in other leaves, or that it possesses more or less strength or fineness, because the mere ascertaining of the character or quality of trees that grow in the forest and the construction of the woody fiber and tissue of which they are composed is not a patentable invention, recognized by the statute, any more than to find a new gem or jewel in the earth would entitle the discoverer to patent all gems which should be subsequently found, so that generally it may be said that fiber such as is described in this application is old, and even if such were not the fact and this were the first time that man had discovered that a fiber existed in the leaves and needles of the trees which could be removed by certain processes and made useful for mankind, it is doubtful whether the invention would consist of anything more than the process by which the fiber could be taken from the natural leaf or needle in which it is produced by natural processes. Otherwise it would be possible for an element or a principle to be secured by patent, and the patentee would obtain the right, to the exclusion of all other men, of securing by his new process from the trees of the forest (in this case the *Pinus australis*) the fiber which nature has produced and which nature has intended to be equally for the use of all men. The result would be that an alleged inventor in Germany would acquire a patent which would give him the exclusive use of the *Pinus sylvestris*, the applicant in this case would secure a patent for the fiber of the *Pinus australis*, and thus, successively, patents might be obtained upon the trees of the forest and the plants of the earth, which of course would be unreasonable and impossible.

The references cited by the examiner show that the fiber of the leaves of the *Pinus sylvestris* has been taken from the leaves by a process very similar to that employed by applicant, although not identical with it. The fiber in all these cases is located within the external sheath or membrane of the leaf or needle, the intermediate space between the sheath and fiber being filled with resinous matter, and the intercellular spaces of the fiber itself being also filled with resinous matter. In order to obtain the fiber it is necessary to disintegrate and remove the material constituting the sheath, and also the resinous matter, and wash it entirely away, leaving the perfect and natural structure of the fiber free. This is accomplished by the process; but the fiber, when it is made free, is in nowise changed or different from its natural construction. There is no chemical combination effected by the treatment which frees it by which the fiber becomes something new or different from the fiber in its natural state. No chemical combination occurs or is alleged to occur by which the fiber is rendered stronger or possesses any new feature or characteristic, so that in selecting and obtaining this fiber from the trees the applicant has done little more than one who gathers the pebbles along the seashore, where the forces of nature have placed them. In the latter case the action of the waves has freed the pebbles from their surroundings or covering as in the former the applicant frees the fiber by his process. The invention resides wholly and exclusively in the process which enables him to procure the fiber in its natural free state. These views, I think, are well established by the decisions cited by the senior officer of the Examiners-in-Chief. In his opinion he says:

If a new article be produced by a new process from a sow's ear or potato-vine presenting a new stock for weaving or knitting into cloths or garments, it is essentially a new "manufacture" within the law.

I refer to this statement because it is a strong one, but, in my judgment, improperly applied to the conditions of this case. Unquestionably if the constituents of the ear or any portion of the stalk were to be treated so as to form a new material—for instance, a mucilaginous substance which could be drawn out into twine, and, by being dried, become a strong flexible twine—such article would be a new and useful product. The reason is that a new form has been produced, made out of the changed material and construction of matter in the flesh, and this new form is useful; but if there were within the ear a bone and the result of the process was to remove that bone in its natural condition, or, if the new process were to remove the bristles growing upon the ear, it is evident that the bone or the bristles, when removed by a new process, would still be the same bone or bristles which had formerly been removed by the knife or by the hand, and while the process itself might be new the product would be old and therefore not patentable. So in the present case the fiber not only is old, as shown by the citations made by the Primary Examiner, but it is a natural product and can no more be the subject of a patent in its natural state when freed from its surroundings than wheat which has been cut by a reaper or by some new method of reaping can be patented as wheat cut by such a process.

I have given this application no little consideration, and have experienced an anxiety, if possible, to secure to the applicant a patent. The alleged invention is unquestionably very valuable, and one, according to the statements presented to me, of immense benefit to the people of the country in which the *Pinus australis* grows. The fiber, it is said, is stronger, more durable, and can be produced at much less expense than jute, and will undoubtedly supersede that article in the

manufacture of many fabrics; but while the production may be thus regarded as a very valuable one, the invention resides, I am compelled to say, exclusively in the process and not at all in the product.

If applicant's process had another final step by which the fiber thus withdrawn or separated from the leaf or needle in its natural state were changed, either by curling it or giving it some new quality or function which it does not possess in its natural condition as fiber, the invention would probably cover a product, because the natural fiber, passing through the exigencies of such a process, would be treated and become something new or different from what it is in its natural state. Natural fibers, hair, and many other substances have been allowed as patentable products which have been changed by some such treatment; but I am not aware of any instance in which it has been held that a natural product is the subject of a patent, although it may have existed from creation without being discovered.

I think the authorities cited by the examiner fully support these propositions, and therefore affirm the decision of the Examiners-in-Chief.

BEARDSLEE *v.* MOESLEIN.

Decided March 16, 1889.

1. A patentee involved in interference who refused to take testimony, relying upon his record dates, and rested his case upon the weakness of his adversary's presentation rather than upon the strength of his own, will not be permitted, after testing the opinion of all the tribunals in the Office and after final decision, to have the case reopened on the ground "that the public interests require an investigation as to prior knowledge or use, and that two patents ought not to issue for the same invention."
2. An interference is declared between an applicant and a patentee for the sole purpose of determining whether a patent shall issue or be refused to the applicant, and when the question is settled the patentee has no further interest or concern in the case.
3. A degree of conclusiveness attaches to a correct decision based upon the record and the evidence which cannot be disturbed by a motion which admits a party's willful and deliberate omission to take evidence and simply asks, after trial, that the very evidence which might have been originally taken may now be introduced. If such a motion could prevail, there would be no end to interference proceedings.

MOTION for rehearing.

HAT SWEAT-BANDS.

Application of William F. Beardslee filed March 12, 1887, No. 230,588. Patent granted Valentine Moeslein December 28, 1886, No. 354,924.

Mr. John R. Bennett for Beardslee.

Mr. T. D. Stetson and *Mr. A. Pollok* for Moeslein.

HALL, *Commissioner:*

Moeslein, the senior party to this interference, is a patentee. Beardslee, the junior party, took his evidence. Moeslein declined to take evidence and submitted the case upon his record. The Examiner of Interferences awarded priority to Beardslee. This decision was reversed by the Examiners-in-Chief, who gave priority to Moeslein, and their decision was reversed by the Assistant Commissioner, by whom priority was awarded to Beardslee. A motion for rehearing was submitted to and denied by the Assistant Commissioner. Moeslein then presented a petition to the Commissioner, requesting that the case be reopened for the purpose of permitting him to take evidence in support of his preliminary statement, which carries his date of invention anterior to his record dates. This petition discloses no other reason for the request than that the petitioner, when he declined to take his evidence originally, did not think it was necessary to do so. He believed Beardslee's evidence insufficient—that is, he rested upon the weakness of his adversary's case rather than upon the strength of his own. He did not pretend that he had found any newly-discovered evidence or that he had been taken by surprise or was in any manner misled. He had simply made an error of judgment as to the force and effect of Beardslee's evidence. This request to have the case reopened was denied. Moeslein now comes and renews this request upon precisely the same grounds, supporting it by the affidavits of himself and several witnesses. His counsel urge that the public interests require an investigation as to prior knowledge or use, and that two patents ought not to issue for the same invention.

It is evident that Moeslein having received his patent is beyond the power or control of the Commissioner. An interference is declared between an applicant and a patentee for the sole purpose of determining whether a patent shall issue or be refused to the applicant, and when the question is determined the patentee has no further interest or concern. In this case the interference procedure was properly instituted and concluded. Having been correctly decided upon the record and the evidence, a degree of conclusiveness attaches to that decision which cannot be disturbed by a motion which admits the party's willful and deliberate omission to take evidence and simply asks to be allowed now, after trial, to take the very evidence which he might originally have taken. If such a motion could prevail, there would be no end to such proceedings and no final determination could be reached.

Moeslein asserts in his petition that he actually made the invention at an earlier date than his record shows, and that the evidence of the witnesses he names will establish the fact; but this is merely a repetition of the assertion he made in his original preliminary statement. He then had the very chance to do what he now proposes to do. He omitted or failed to establish the facts. From his omission there was a strong presumption that he was unable to do so. It is not at all unreasonable to assert that if the opportunity were again given him and his witnesses were subjected to the test of cross-examination he might fail to establish his alleged earlier dates, so that the adjudication in the case is stronger against the allegation of earlier invention than is his present *prima facie* showing, founded on his *ex parte* affidavit in favor of it.

Procedure of all kinds must be governed by rules which are to a greater or less extent general. This is especially true of motions and petitions of this character. It will sometimes occur in a particular instance that such rules operate with some appearance of injustice; but it is better that they be enforced, even in such instances, than to have no rules or than to have all cases special, for under the latter condition much greater injustice will necessarily follow.

In the present case there have been four trials in the Patent Office, which surely ought to be sufficient. The petition now urged ought to have been presented, if at all, long before the case reached the Examiners-in-Chief or the Commissioner. The petitioner, however, saw proper to test the opinion of all the tribunals, and, having been unsuccessful, he now seeks to go back and begin again. While it is true he asserts that a different result will be reached, yet, in view of what has already occurred, that is merely an opinion or belief.

There is no such thing known to the practice in this Office as a prior-knowledge-or-use inquiry, and while it is barely possible that two patents may be issued for the same invention I do not think it is a matter which justifies my interference with the regular and orderly procedure. Moeslein has his patent, and his status in the courts is secure. The Office has determined that Beardslee is now entitled to a patent. Any further controversy will appropriately be disposed of in the courts.

EX PARTE JOHNSTON.

Decided March 20, 1889.

A patentee who shows but does not claim a certain invention which is distinct and separate from that claimed in his prior patent, and which could not have been prosecuted in that application and ought not to have been shown in such patent, does not necessarily dedicate such unclaimed invention to the public.

APPEAL from Examiners-in-Chief.

EYEGLASS-FRAMES.

Application of George Johnston filed March 2, 1887, No. 229,441.

Mr. N. S. Wright and *Mr. E. C. Seward* for the applicant.

HALL, *Commissioner:*

Applicant appeals from the decision of the Examiners-in-Chief affirming the action of the Primary Examiner in rejecting the following claims:

1. The combination, with the glass-frames, of a connecting-spring, nose-guards engaged at the base with said glass-frames, and rigid angular arms offset from the plane of the glass-frames and provided with vertically-extended arms having a slot-and-tongue engagement with the upper extremities of said nose-guards, whereby said guards will be automatically adjustable, substantially as described.
2. The combination, with eyeglass-frames, of a connecting-spring, nose-guards engaged at the base with said frames, and rigid angular arms offset from the plane of the glass-frames having a slot-and-tongue engagement with the upper extremities of said guards, whereby the upper ends of said nose-guards will offset from the plane of the glass-frames and be automatically adjustable upon said frames, substantially as described.
3. The combination, with the eyeglass-frames, of a connecting-spring, nose-guards engaged at the base with lugs on said glass-frames, and angular arms offset from the plane of said glass-frames and engaged therewith by intervening posts *a a'*, said arms and said guards having a slot-and-tongue engagement, said posts flanged at their upper ends to engage the edges of said arms, substantially as and for the purposes described.
4. The combination, with the eyeglass-frames and their connecting-spring, of rigid offset arms and nose-guards engaged at one end upon said frames and at the other end having a self-adjusting engagement with said offset arms, substantially as described.

The rejection is based upon reference to two patents—one to the applicant himself, No. 348,018, patented August 24, 1886, and the other to Wells, No. 343,876, June 15, 1886. Johnston's patent shows the invention, but does not claim it. There are shown in that patent two figures illustrating eyeglass-frames, and originally the applicant presented a claim broad enough to cover both constructions; but upon reference being cited which anticipated the broad claim he eliminated it and presented a specific claim covering Figure 1 alone. The correct practice would then, in my judgment, have required that applicant should eliminate from the drawing Figure 2 and all reference thereto in the specification, for the reason that the two inventions shown by the respective figures, 1 and 2, were distinct and separate, and could not be claimed or prosecuted in the same application. This course was not pursued, however, and undoubtedly the applicant supposed that the claim which was allowed covered both figures of the drawing; but, inasmuch as he voluntarily eliminated the claim which covered one construction, he is now without remedy by reissue.

The rejection, both by the Primary Examiner and by the Examiners-in-Chief, is based entirely upon the doctrine that one who shows but does not claim an invention presented in his application and patent dedicates it to the public.

In *ex parte Roberts*, (C. D. 1887, 61) I had occasion to call attention to the practice in question, and held as follows:

> It is undoubtedly true that when a patent issues for an invention, all of which is shown but only part of which is claimed, there is a dedication to the public of that part which is unclaimed. In such case the law conclusively infers an intention to make the dedication and the inference cannot be overcome by evidence. The applicant, however, always has it in his power in a certain class of cases to prevent this inference from arising if he acts in time. In cases which are divisional—that is, when, as in the present case, the features not claimed in the first application are independent of those claimed—an applicant may expressly assert in his application a reservation of his right to claim them in another or subsequent application, and he should present and prosecute such application without delay. He may also file his second application so as to have it pending concurrently with the first. Such course anticipates and prevents the inference of dedication. This proposition is fully sustained by many authorities. (*The Suffolk Co. v. Hayden*, 6 Wall., 316; *Singer & Clark v. Braunsdorf & Weil*, 7 Blatch., 521; *McMillin et al. v. Rees et al.*, 17 O. G., 1222; *Graham v. McCormick*, 11 Fed. Rep., 859; *Hatch v. Moffit*, 15 Fed. Rep., 252; *ex parte Derby*, 26 O. G., 1309; *ex parte Holt*, C. D. 1884, 43; 29 O. G., 171.) It is to be observed, however, in this connection that the practice of inserting reservation clauses is not intended hereby to be sanctioned or approved. It not only increases the labor of the Office, but endangers the rights of the patentee. Should he be in error as to the fact of divisibility of his invention, not only does he increase the cost and expense of procuring his patents, but his first patent fails to cover the scope of his invention, and the second patent is void. Even though the invention be divisible, slight negligence or delay in filing his second application may be held equivalent to abandonment in the courts and his patent declared void.
>
> But when the invention is not capable of division and a patent issues, a different rule applies. (*Sickels v. The Falls Co.*, 4 Blatch., 508; *O'Reilly v. Morse*, 15 How., 62; *Odiorne v. The Amesbury Nail Factory*, 1 Robb, 300; *Smith v. Ely*, 5 McLean, 76; *Jones v. Sewall*, 3 Cliff., 575; *James v. Campbell*, 104 U. S., 356; *ex parte Ransom*, 39 O. G., 119 *ante* 22.)

I have neither the time nor the disposition to examine at length the decisions above cited to show that they relate to an invention in its entirety, where either features or elements thereof were omitted to be claimed in the original application. It results from the necessary conditions under which the patent issues that when an applicant fails to claim an element, part, or feature of his invention, which he might have claimed, he dedicates such unclaimed element to the public. The omitted thing is a part of the original invention, necessary to its operation and use; but in all these cases there was no proposition like the one now before me—viz., where an absolutely independent invention is shown, which had no connection by way of arrangement or combination with the other distinct and separate invention shown and claimed, would be dedicated to the public.

I think it must be apparent that there is a dividing line somewhere between inventions which are shown

and those which are claimed when the former are not dedicated to the public. For instance, if there be shown two such separate and distinct inventions, as an improvement upon a locomotive and an improvement upon a chair to be used in a sleeping-car, and the Office should fail to require division, or the elimination of the description of the chair for the sleeping-car, and the improvement upon the locomotive alone should be claimed in the patent, it seems to me absurd that the invention relating to the chair for the sleeping-car has been abandoned or dedicated. To explain somewhat more fully, take for illustration a patent containing a claim for a combination of three elements, A, B, and C. The element C is entirely new, and a claim for it could properly have been presented and prosecuted, but the applicant failed to do this. It is evident that no one can derive any benefit from the invention shown in the combination except when allowed to use the unclaimed element C. The dedication to the public is an inevitable necessity. So, too, it may be said, when the two inventions are so related to each other that one cannot be used without the employment of the other, the unclaimed one may be dedicated to the public, as in the case of process and apparatus. Yet in the *Eastern Paper Bag Co.* v. *Standard Paper Bag Co.* (30 Fed. Rep., 63) Judge Colt held, with reference to such a case, as follows:

> But it is said that the description of this process found in the Appel machine patent of August 31, 1880, operates as an abandonment of any claim Appel might have had for a process patent. The patent in suit was applied for September 29, 1881. The process forming its subject-matter was described, but not claimed, in the machine patent by the same inventor, dated August 31, 1880. A little more than a year elapsed between the date of the prior description and the date of the application for the patent in suit. Under these circumstances has the invention been abandoned to the public? The language of the Supreme Court in *Miller* v. *Brass Co.*, (104 U. S., 350;) *James* v. *Campbell*, (Id., 356,) and *Mahn* v. *Harwood*, (112 U. S., 354; 5 Sup. Ct. Rep., 174) is cited as sustaining the proposition that the omission of Appel to claim his process invention in the machine patent was in law a dedication of that invention to the public. The Supreme Court in these cases was dealing with the subject of reissues under the statute. In this case we are not dealing with the law of reissues. Appel could not have secured his claim to a process by reissuing his machine patent, because it is not for the same invention. (*Powder Co.* v. *Powder Works*, 98 U. S., 126; *Eachus* v. *Broomall*, 115 U. S., 429; 6 Sup. Ct. Rep., 229.) The question we have to decide is whether the description of another invention in a prior patent by the same inventor forfeits his right to take out a subsequent patent for such invention. I do not understand that the Supreme Court have held that such prior description is a dedication to the public of the second invention. The invention of a machine and a process employed in the use of the machine being different things, it is difficult to see how the application for a patent on one should operate as an abandonment of any claim to a patent on the other, provided, of course, the application for the second patent is made before the statutory forfeiture of two years' prior use has run. This view is in harmony with the decisions of the circuit court where the question has arisen. (*Vermont Farm-Machine Co.* v. *Marble*, 19 Fed. Rep., 307; 20 Fed. Rep., 117; *Graham* v. *McCormick*, 11 Fed. Rep., 850; *Graham* v. *Geneva Lake C. Manuf'g Co.*, Id., 138; *McMillin* v. *Rees*, 1 Fed. Rep., 722; *Hatch* v. *Moffitt*, 15 Fed. Rep., 252; *Cahn* v. *Wong Town On*, 19 Fed. Rep., 494; *Collender* v. *Griffith*, 18 Blatchf., 110, 2 Fed. Rep., 206.) The patent in suit having been applied for within two years from the date of the machine patent, there was no abandonment of the second invention, though a description of such invention was found in the prior patent.

The case before me is a much stronger one than this. The inventions are wholly separate and distinct, and neither is at all necessary for the employment, use, or enjoyment of the other. They are as separate and distinct (although closely allied to each other by reason of the narrowness of invention in view of the state of the art) as if one were for a hoisting-machine and the other for a steam-boiler. In such a case, in my judgment, there is no abandonment or dedication as matter of law.

It is proper to say in this connection that the patent to Wells, issued June 15, 1886, was not cited as a reference to Johnston's earlier application, nor was an interference declared, and the fact that the Wells patent issued is a distinct declaration by the Office as to the statement made by me that the invention as shown in the present application and in Fig. 2 of the original patent is a different invention from that claimed in the latter.

I therefore reverse the decision of the Examiners-in-Chief, and remand the application to the Primary Examiner.

DIGEST OF DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS

IN THE MATTER OF

PATENTS, TRADE-MARKS, &c.

OFFICIAL GAZETTE—January–March, 1889.

DIGEST OF DECISIONS.

[Decisions of United States courts designated by an asterisk (*), and of State courts by a double dagger (‡).]

ABANDONMENT.

INVENTION SHOWN BUT NOT CLAIMED.

A patentee who shows but does not claim a certain invention which is distinct and separate from that claimed in his prior patent, and which could not have been prosecuted in that application and ought not to have been shown in such patent, does not necessarily dedicate such unclaimed invention to the public. [*Ex parte* Johnston, 1641.

AGENTS.

(See Service of Process.)

AGGREGATION.

(See Combinations.)

1. COMBINATION—COACTION.

A claim consisting of a number of elements which do not coact to produce a new and useful result is a mere aggregation and not a patentable combination.

[*Brinkerhoff *v.* Aloe, 338.

2. SAME—BETTER RESULTS NOT PROOF OF INVENTION.

Where several old elements are so combined as to produce a better instrument than was formerly in use, but each of the old elements does only what it formerly did in the instrument from which it was borrowed and in the old way, *Held* that the combination is not a patentable one. [*Id.

AMENDMENTS.

(See Interference, 3.)

1. AMENDMENT REFUSED.

Applicant proposes to amend his claim so as to limit his invention to a metallic diaphragm, and such amendment has been refused admission. [*Ex parte* Gray, 1277.

2. RIGHT TO AMEND LOST.

When the Office has called the attention of an applicant to his right to cover in his claim certain specific matter and advised him to amend accordingly, and the applicant, declining to do so, enters into an interference contest upon the broad issue, in which he is finally defeated, he cannot, after acquiescing for a long period in such award of priority and waiting nearly ten years after filing his application, return to the Office for the purpose of proposing the amendment suggested by the Office and declined by him, and which, if admitted, would result in a new interference. [Id.

3. DECISIONS ON ISSUE IN INTERFERENCE CONCLUSIVE.

The tribunals adjudicating the interference discussed and considered the specific invention and intimated that a motion to dissolve and re-form the issue would be entertained; but applicant declined to avail himself of the suggested remedy. *Held* that the decisions, involving the very question presented in the amendment now insisted upon, are final and conclusive upon Gray's right to claim the subject-matter presented in the proposed amendment. [Id.

ANALOGOUS DEVICES.

(See Particular Patents, 5, 9, 10, 16.)

ANTICIPATION.

(See Construction of Specifications and Patents.)

MATERIAL NOT ESSENTIAL.

Where an element of a claim does not depend for its novelty in the material of which it is made it will be anticipated by a like element in a like instrument of different material.

[*Brinkerhoff *v.* Aloe, 338.

APPEALS.

(See Division of Application, 1.)

APPEALS TO COMMISSIONER AND EXAMINERS-IN-CHIEF, RESPECTIVELY.

There is no rule or requirement that an appeal which, though made because relating to form, involves the absolute merits of a claim shall be taken to the Commissioner merely to save applicant the appeal fee. If applicant be put to the trouble and expense of a second appeal after the requirement of division has been complied with and the application has reached the stage for full consideration upon its entire merits, the fault is with applicant who has presented his application under such conditions rather than due to the Office or its practice.

[*Ex parte* Carter, 1391.

APPLICATIONS.

(See Continuous Application; Priority of Invention, 2.)

ASSIGNMENT OF VOID PATENTS.

VOID PATENT NOT ASSIGNABLE.

As a patent thus obtained confers no title or right upon the patentee, a court of equity will not order him to assign it.

[*Kennedy *v.* Hazelton, 973.

ASSIGNMENTS.

(See Rehearing, 5.)

1. ENFORCEMENT OF CONTRACT UNDER VOID PATENT.

A court of chancery cannot decree specific performance of an agreement to convey property which has no existence, or to which defendant has no title.

[*Kennedy *v.* Hazelton, 973.

2. SAME.

A bill by vendee against vender for specific performance, which does not show any title in defendant, is bad on demurrer.

[*Id.

3. ASSIGNMENT OF A PATENT DOES NOT CARRY CLAIMS FOR PAST INFRINGEMENTS UNLESS SPECIFICALLY STATED THEREIN.

Mere intention, not signified in an assignment of Letters Patent, to include therein claims for infringements previously committed, will not suffice to invest the assignee with any equitable title to those claims, and such assignee, after bill filed, in a suit for infringement brought by him, having procured an assignment of said claims, will not be permitted in that suit to set up by a supplemental bill this post assignment.

[*Emerson, Smith & Co., (Limited,) *v.* Hubbard *et al.*, 976.

CAVEATS.

1. Practice of Withholding Notice to Caveators until Question of Patentability is Settled.
Decision in *ex parte Kenney* (C. D., 1869, 97) considered and modified and the following practice directed: Whenever an application is filed showing subject-matter interfering with any pending caveat, the notice which the statute provides shall be sent to the caveator should be sent at once and not delayed until the invention shall have been favorably passed upon and the application found to be ready for allowance.
[*Ex parte* Ward, 1513.

2. Rights of Caveator.
The statute confers no rights upon the caveator, nor does it give him any status in the Office as an applicant. It extends, as matter of grace, to him the right to be notified of the pendency of an application relating to the subject-matter of his caveat. It is not intended that he shall have the benefit of an examination of his caveat before he has filed an application, which substantially results when the notice is withheld until the patentability of the invention of another applicant is determined.
[Id.

3. Rights of Applicant.
An applicant who has completed his invention and diligently and successfully prosecuted his application for patent ought not to be delayed in the issuance of his patent by a caveator who is under no obligation to be diligent or to file his application for patent.
[Id.

4. How far a Caveat may be used as Evidence of Invention in an Interference Proceeding.
The statute authorizing the filing of a caveat does not intend to confer upon the caveator any right as an inventor, nor to save him from the effect of negligence or give him any advantage over any other inventor who has conceived the invention and prosecuted his application with diligence. The statute authorizing a caveat does not compel a caveator to file any application. It is not intended as a stimulus to prod and drive him to perfect his invention, nor is it intended to extend the time in any manner within which he may complete the invention; but it simply provides, as matter of grace, that the caveator shall be notified of the filing of any application which comes into the Office within a year, covering the subject-matter of his caveat.
[Elges *v.* Miller, 1514.

5. Same.
The filing of a caveat does not give to the caveator the standing of an applicant with respect to what is called "Constructive Reduction to Practice." The caveat is a procedure kept in the secret archives of the Office and in itself contains no declaration or purpose on the part of the caveator that he will ever complete or finish his invention or give it to the world. The statute does not contemplate that a caveator shall stand as an obstruction to the diligent efforts of other inventors in the same field of art.
[Id.

CHANGE OF MATERIAL.

(See Anticipation; Construction of Specifications and Patents.)

CHANGE OF STRUCTURE.

Infringement—Change of Location of Parts.
A change in the position of a part of a machine will not avoid infringement where the part transposed continues to perform the same function as before. (Citing *Adams* v. *Manufacturing Company*, 3 Banning & A., 1.)
[*Schlicht & Field Company *v.* Chicago Sewing Machine Company *et al.*, 1394.

CITIZENSHIP.

Validity of Patent—Oath as to Citizenship.
It is not a valid defense to a suit for the infringement of Letters Patent granted under the Revised Statutes that the patentee in his application therefor made oath that he was a citizen of the United States when he was not, such misstatement as to his citizenship having been made innocently through mistake, without any improper design whatever.
[*Tondeur *v.* Chambers, 1110.

CLAIMS.

(See Division of Application.)

COMBINATIONS.

(See Division of Application.)

Second Claim is an Aggregation and Void.
The second claim of the Brinkerhoff patent covers a slotted tube having an incline and a slide. *Held* that the incline acted precisely as it did when placed in the forward end of a slotted tube not provided with a slide, and that therefore the claim covered an aggregation only and was void.
[*Brinkerhoff *v.* Aloe, 338.

CONSTRUCTION OF CLAIMS.

(See Anticipation.)

CONSTRUCTION OF RULES.

(See Particular Patents, 6, 7.)

CONSTRUCTION OF SPECIFICATIONS AND PATENTS.

(See Aggregation; Assignment of Void Patents; Change of Structure; Citizenship; Combinations; Invention, 1, 2; Joint Invention; Limitation of United States Patents by Foreign Patents Previously Granted; Particular Patents; Patents; Public Use.)

Material not Essential.
The slide employed in the Brinkerhoff instrument and covered, broadly, by the first claim of the patent is made of metal. The patent makes no mention of any novelty existing in the material of which the slide is composed. *Held* that the claim is anticipated by a glass slide in a similar instrument.
[*Brinkerhoff *v.* Aloe, 338.

CONSTRUCTION OF STATUTES.

(See Limitation of United States Patents by Foreign Patents Previously Granted; Oath of Applicant, 1; Patents, 2.)

CONTINUOUS APPLICATION.

Continuing Applications.
A second application cannot legally be considered a continuation of a first or earlier application by the same inventor unless it contains *the same invention*.
[Green *v.* Hall *et al.*, 1515.

CONTRACTS.

(See Assignments, 1; Rehearing, 5.)

COPYRIGHTS.

1. Copyright.
Although there can be no copyright in the opinions of judges, or in the work done by them in their official capacity as judges, yet there is no ground of public policy on which a reporter who prepares a volume of law reports, of the character of those in this case, can, in the absence of a prohibitory statute, be debarred from obtaining a copyright for the volume, which will cover the matter which is the result of his intellectual labor.
[*Callaghan *et al. v.* Myers, 585.

2. Same—Rights of Reporter of Decisions Thereto.
Even though a reporter may be a sworn public officer, appointed by the authority of the government which creates the court of which he is made the reporter, and even though he may be paid a fixed salary for his labors, yet, in the absence of any inhibition forbidding him to take a copyright for that which is the lawful subject of copyright in him, or reserving a copyright to the government as the assignee of his work, he is not deprived of the privilege of taking out a copyright, which would otherwise exist.
[*Id.

CORPORATIONS.

(See Service of Process.)

CORRECTION OF DEFECTIVE PATENT.

(See Defective Patents, 3, 4, 5.)

COURT OF CHANCERY.

(See Assignments, 1.)

DAMAGES AND PROFITS.

(See Suits for Infringement.)

What Profits to be Accounted for.
In this instance there can be no accounting for profits earned subsequently to the suit, which was not tenable at the date of its commencement.
[*Marsh *et al. v.* Nichols, Shepherd & Company, 239.

DATE OF DEFECTIVE PATENT.

(See Defective Patents, 4, 5.)

DEDICATION TO THE PUBLIC.

(See Abandonment.)

DEFECTIVE PATENTS.

(See Damages and Profits; Patents, 3.)

1. Statement—Patent Defective by Reason of the Omission of the Signature of the Secretary of the Interior—Proceedings Against.
The patent had not at the date of the suit been signed by the Acting Secretary of the Interior, but was subsequently signed by him. The circuit court dismissed the bill. Complainant took an appeal in 1885 to this Court. In 1887 Congress passed an act for relief of patentees, making the patent legal, valid, complete, and operative from its original date, December 28, 1880. *Held*, while a patent of the United States can be attacked for defects upon its face only by regular proceedings instituted for that purpose, and is not open to collateral attack, except where specially provided by statute, this rule applies only to such patents as have been in fact executed under proper authority, and does not apply to any others.
[*Marsh *et al. v.* Nichols, Shepherd & Company, 239.

2. Same—Certain Defects Specified.
Thus it may be shown that the patent was never executed by the person whose name appears on it, or that it was wrongly dated, or was never signed by the person who appeared to have signed it, or was signed after the official was out of office.
[*Id.

3. Defective Grant may be Corrected by Existing Officers of the Department.
Such grants, if defective from insufficient execution, may be corrected subsequently, upon application to the proper Department; but the correction must be made by the existing officers of the Department.
[*Id.

4. Same—But Date of Correction becomes the True Date of Patent.
The correction by the same Acting Secretary of the Interior is sufficient, the Commissioner of Patents remaining the same at the date of the correction, which is the true date of the patent.
[*Id.

5. Date of Correction may be Established by Proof.
In this instance the actual date of correction, being more than six months after the date written in the patent, may be shown by proof.
[*Id.

DEFECTS.

(See Interference, 1, 2.)

DEFENSE.

(See Citizenship; Joint Invention, 1.)

DELAY.

(See Amendments, 2, 3; Priority of Invention, 2; Rehearing, 1, 8, 10, 11.)

DELAY IN BRINGING SUIT.

Infringement—Delay in Bringing Suit.
While there was such delay in bringing suit as to preclude recovery of damages for prior infringement, there was neither conduct nor negligence which could be held to destroy the right to prevention of further injury.
[*Menendez *et al. v.* Holt *et al.*, 971.

DEMURRER.

(See Assignments, 2.)

DESIGNS.

(See Trade-Marks, 3.)

DIVISION OF APPLICATION.

(See Appeals; Process.)

1. Jurisdiction of Examiners-in-Chief in Cases Involving Merits.
One of the claims in an application has been rejected because it covered an illegitimate combination or an aggregation of elements. Applicant appealed from such rejection to the Examiners-in-Chief. The Board refused to take jurisdiction of the appeal and remanded the case to the Primary Examiner for reconsideration and such action as would dispose of the merits of all the claims. The examiner referred the case to the Commissioner for instructions. Whenever a claim for an illegitimate combination is presented in an application which also contains claims for different elements constituting distinct and separate inventions which ought not to be claimed in the same application, a vital objection as to form is presented, and the claim may be rejected for the purpose of enabling the Office to require division. Such a rejection, though relating to form, involves merits, and an appeal therefrom should lie to the Examiners-in-Chief.
[*Ex parte* Carter, 1391.

2. Reasons for Requiring Division.
Division must be required for two reasons: *first*, because the distinct subjects of invention ought not to be embraced in one application; *second*, because the applicant has not the right by aggregating claims to any number of distinct inventions under a false claim to a combination to force the Office to examine and act upon his several inventions.
[Id.

ENLARGEMENT OF CLAIMS.

(See Particular Patents, 12; Reissues.)

EQUITABLE RIGHTS.

(See Rehearing, 5.)

EVIDENCE.

Evidence—Tests.
An *ex parte* test made by the defendant and a defective test made by the complainant *Held* to be entitled to no weight in evidence.
[*Fernoline Chemical Company *v.* Carolina Oil and Creosote Company, 974.

EVIDENCE OF INVENTION ABROAD.

Evidence of Invention in Foreign Country.
Evidence of invention in a foreign country cannot be received in an interference proceeding unless such evidence is in the form of a publication or patent, or is for the purpose of showing that some one of the contestants is not an original inventor.
[Green *v.* Hall *et al.*, 1515.

INFRINGEMENT.

(See Assignments, 3; Change of Structure; Particular Patents, 1, 4, 5, 6, 7, 9, 10, 12, 16, 19; Suits for Infringement.)

SHOREY—MACHINE FOR FORMING STAPLE-SEAMS IN LEATHER—INFRINGEMENT.
The infringement of the third claim of Letters Patent No. 136,340, granted February 23, 1873, to Samuel W. Shorey, for an improvement in machines for forming staple-seams in leather by the use of defendant's rest or supporter, which has no incline or bevel, doubtful. Motion for injunction denied.
[*Thompson *et al.* v. Rand-Avery Supply Company, 1112.

INJUNCTION.

(See Suits for Infringement.)

INTERFERENCE.

(See Amendments, 2, 3; Caveats; Evidence of Invention Abroad, 1; Rehearing.)

1. DEFECTS CURED BY VERDICT.
It is a fundamental principle in the common law of pleading that when there is any defect, imperfection, or omission, whether in substance or form, which would have been a fatal objection upon demurrer, (motion to dissolve or re-form,) if the issue joined be such as necessarily required on the trial proof of the facts so defectively or imperfectly stated or omitted, or without which it is not to be presumed either that the judge would have directed the jury to give or the jury would have given the verdict, such defect, imperfection, or omission is cured by the verdict.
[*Ex parte* Gray, 1277.

2. SAME.
In the matter of issues in interferences there is no rule applicable except that which provides the motion to dissolve. Clearly, however, when an issue has received a construction as to its meaning by the court and has been tried under that construction and the parties have acquiesced in it the case becomes one in which the issue must be held to be complete and to read according to the construction thus given it.
[Id.

3. ADJUDICATION OF PETITIONS TO REOPEN CONCLUSIVE AS TO PROPOSED AMENDMENT.
The adjudication of the petitions to reopen the interference is conclusive as to the subject-matter of the proposed amendment.
[Id.

4. PURPOSE OF INTERFERENCE.
An interference is declared between an applicant and a patentee for the sole purpose of determining whether a patent shall issue or be refused to the applicant, and when the question is settled the patentee has no further interest or concern in the case.
[*Beardslee v. Moeslein, 1640.

INVENTION.

(See Aggregation; Process, 1, 2, 3.)

1. PATENTABILITY—WHAT DOES NOT AMOUNT TO INVENTION.
A speculum consisting of a tube with a slide and a closed end was old. *Held* that adding an incline to the closed end to prevent the impaction of pile-tumors did not involve invention.
[*Brinkerhoff v. Aloe, 338.

2. SAME—THIRD CLAIM VOID FOR WANT OF INVENTION.
The third claim of the Brinkerhoff patent covers a speculum composed of a tube with a closed end and a slide and having an incline at the closed end. *Held* void for want of invention.
[*Id.

3. NATURAL PRODUCT OF NATURE NOT PATENTABLE.
A product of nature, although conceded to be valuable and useful, such as fiber which is procured, derived, or freed from a certain species of pine, by means of a new and novel process for which patent has been granted to applicant, *Held* to be not such a patentable invention as is required by the statute.
[*Ex parte* Latimer, 1638.

4. SAME.
The product has not been affected, changed, or altered by the process, and whatever there is of invention resides in or consists of the process itself, by which the fiber can be taken from the natural sheath or membrane of the leaf or pine-needle in which it has been developed or produced by the processes of nature.
[Id.

5. SAME.
A contrary ruling would result in granting to one inventor the exclusive use of one species of fiber, and so on, successively, patents might be obtained upon the fibers of the various trees of the forest and the plants of the earth, which, because being natural products, are no more the subjects of patents when eliminated from their surroundings than wheat which has been cut by some new method of reaping can be patented *as wheat* cut by such a process.
[Id.

INVENTION SHOWN BUT NOT CLAIMED.

(See Abandonment.)

JOINT INVENTION.

1. JOINT INVENTOR CANNOT IMPEACH HIS OATH TO DESTROY ANOTHER'S INTEREST IN THE PATENT.
A party applying for a patent as a joint invention of himself and another should be estopped as against a *bona fide* owner of the patent from defeating it by proof tending to show that he took a false oath or otherwise imposed upon the Patent Office. Having given life to the patent by one oath, he cannot be heard to destroy it by another.
[*Schlicht & Field Company v. Chicago Sewing Machine Company *et al.*, 1394.

2. JOINT INVENTORS.
Where two parties work together in the making of an invention, each making suggestions to the other, the invention covered by a joint patent will generally be considered as the result of their joint efforts or contributions.
[*Id.

JURISDICTION:

(See Rehearing, 5; Service of Process.)

LIMITATION OF UNITED STATES PATENTS BY FOREIGN PATENTS PREVIOUSLY GRANTED.

1. TERM OF PATENT AS AFFECTED BY THE TERM OF A CANADIAN PATENT.
Where the Canadian statute under which the extensions of the Canadian patent were granted was in force when the United States patent was issued, and also when that patent was applied for, and where, by the Canadian statute, the extension of the patent for Canada was a matter entirely of right, at the option of the patentee, on his payment of a required fee, and where the 15 years' term of the Canadian patent has been continuous and without interruption, the United States patent does not expire before the end of the 15 years' duration of the Canadian patent.
[*Bate Refrigerating Company v. Hammond *et al.*, 689.

2. TERM OF PATENT AS LIMITED BY THE UNITED STATES STATUTES BY REASON OF FOREIGN PATENT PREVIOUSLY OBTAINED.
The provisions of the act of 1870 and of the Revised Statutes mean that the United States patent shall not expire so long as the foreign patent continues to exist, not extending beyond 17 years from the date of the United States patent, but shall continue in force, though not longer than 17 years from its date, so long as the foreign patent continues to exist. Under section 4887, although the United States patent may on its face run for 17 years from its date, it is to be so limited by the courts, as a matter to be adjudicated on evidence *in pais*, as to expire at the same time with the foreign patent, not running in any case more than 17 years; but, subject to the latter limitation, it is to be in force as long as the foreign patent is in force.
[*Id.

3. NOT NECESSARY THAT THE UNITED STATES PATENT SHOULD ON ITS FACE BE LIMITED IN DURATION TO THE DURATION OF THE FOREIGN PATENT.
While it may be proper in a case where the date of a foreign patent issued prior to the granting of a United States patent to the same patentee for the same invention is made known to the Patent Office prior to the granting of the United States patent, to insert in that patent a statement of the limitation of its duration, in accordance with the duration of the foreign patent, it does not affect the validity of the United States patent if such limitation is not contained on its face.
[*Id.

MACHINES AND PROCESS.

(See Process, 1, 2, 3.)

MECHANICAL SKILL.

(See Aggregation, 2; Invention, 1.)

MODEL.

(See Priority of Invention, 2.)

OATH OF APPLICANT.

(See Assignment of Void Patents; Citizenship; Trade-Marks, 4.)

1. VALIDITY OF PATENT—APPLICATION—OATH.
The patent law makes it essential to the validity of a patent that it shall be granted on the application, supported by the oath of the original and first inventor.
[*Kennedy v. Hazelton, 973.

2. SAME—SAME—WHEN VOID.
A patent which is not supported by the oath of the inventor, but applied for by one who is not the inventor, is unauthorised by law, and void.
[*Id.

OLD ELEMENTS.

(See Aggregation, 2; Combinations.)

PARTICULAR PATENTS.

(See Infringement.)

1. ANDERSON—DRAWERS.
Letters Patent No. 265,783, granted October 10, 1882, to Robert H. Anderson, for an improvement in drawers, not infringed by an article manufactured by the appellees for more than two years prior to the appellant's application for a patent.
[*Anderson v. Miller *et al.*, 448.

2. BATE—PRESERVING MEATS DURING TRANSPORTATION AND STORAGE.
Letters Patent No. 197,314, granted to John J. Bate November 20, 1877, for the term of 17 years, did not expire with the term of the first Canadian patent obtained for 5 years, but continued in force till the end of the extended term of 15 years—to wit, January 9, 1892—said Canadian patent having never ceased to exist, but having been in force continuously from January 9, 1877.
[*Bate Refrigerating Company v. Hammond *et al.*, 689.

3. BRINKERHOFF—RECTAL SPECULUMS.
The first claim of Letters Patent No. 224,991, granted to A. W. Brinkerhoff March 2, 1880, for an improvement in rectal speculums, is for a slide extending the entire length of the tube. *Held* anticipated by the older art.
[*Brinkerhoff v. Aloe, 338.

4. GORHAM—WASH-BOARD FRAMES.
Letters Patent No. 223,338, granted January 8, 1880, to John M. Gorham, for an improvement in wash-board frames, construed and *Held* not to cover a protector which does not have the yielding, elastic, or resilient function described in claim 3, and is not accompanied by a spring or constructed substantially as described in the specification.
[*Sargent *et al.* v. Burgess, 693.

5. SAME—INFRINGEMENT.
Said patent is not infringed by a protector constructed in accordance with the description contained in Letters Patent No. 255,555, granted to Charles H. Williams March 28, 1882, having no spring and no elastic or resilient quality, and which does not yield to pressure, and has no capacity of returning automatically to its normal position.
[*Id.

6. GRAHAM—HARVESTERS.
Letters Patent No. 74,342, granted to Alvaro B. Graham February 11, 1868, for an improvement in harvesters, construed, and claims 1 and 2 *Held*, in view of the state of the art and of the special limitations put upon them on the requirement of the Patent Office, to be limited to the special construction and arrangement set forth in the claims.
[*McCormick *et al.* v. Whitmer, 443.

7. SAME—SAME—INFRINGEMENT.
Under this construction of claims 1 and 2 of the plaintiff's patent the defendants have not infringed.
[*Id.

8. HANSEN AND SMITH—APPARATUS FOR DISTILLING WOOD.
Letters Patent No. 333,750, granted to Hansen and Smith January 5, 1886, for improvement in apparatus for distilling wood, compared with the Stanley reissue Patent No. 10,689, granted February 6, 1883, for an apparatus for distilling turpentine, and *Held* to cover substantial improvements.
[*Fernoline Chemical Company v. The Carolina Oil and Creosote Company, 974.

9. KENDALL—CULTIVATORS.
The essential characteristics of Letters Patent No. 174,664, granted March 14, 1876, to Thomas W. Kendall, for an improvement in cultivators, are the rigidity of the runners and the resulting automatic action, and are not infringed by the appellee's machine, which does not contain runners constructed as the Kendall runners are, in the rigid form, and operated by the draft of the team to keep them off, or by the weight of the plows to keep them on, the ground, and so lacks the distinctive features of the Kendall patent, and which is not automatic, but requires manipulation every time the use is changed.
[*Pattee Plow Company v. Kingman & Company *et al.*, 1107.

10. LEARY—SHADE OR GLOBE HOLDERS FOR CANDLES.
Letters Patent No. 257,027, granted April 25, 1882, to David Leary, for an improvement in shade or globe holders for candles, *Held* valid, and infringed by the defendant's device, which is a copy of the plaintiffs', which latter, while not made according to the specific device described in the patent, is equivalent thereto and accomplishes the same result in the same manner
[*Leary *et al.* v. Hohenstein, 1518.

11. PATTEE—CULTIVATORS—No. 187,899.
Letters Patent No. 187,899, granted February 27, 1877, to Henry H. Pattee, for an improvement in cultivators covering the use of parallel bars and the attachment of the bars to the end plates, embraces nothing that is not old and really nothing that is patentable—that is, which involves invention rather than mechanical skill.
[*Pattee Plow Company v. Kingman & Company *et al.*, 1107.

12. PATTEE—CULTIVATORS—REISSUE No. 6,080.
Reissue Letters Patent No. 6,080, granted to James H. Pattee October 6, 1874, for an improvement in cultivators, *Held* to have been illegally expanded. Even if valid, when limited to what alone could be claimed as new, is not infringed by the appellee.
[*Id.

13. ROOT—CABLE RAILWAYS.
Letters Patent No. 262,162, granted August 1, 1882, to Henry Root, for an improvement in the construction of cable railways, declared invalid by reason of public use more than two years prior to application.
[*Root v. Third Avenue Railroad Company, 1393.

14. SHANNON—TEMPORARY BINDERS.
The first claim of Letters Patent No. 217,907, granted July 29, 1879, to James S. Shannon, for improvements in temporary binders, as modified by a disclaimer limiting the combination by the addition of the words, "when the fixed and vibrating wires are used in pairs, whether operating simultaneously or each separately," *Held* void, in view of the prior state of the art, as a mere duplication.
[*The Schlicht & Field Company v. The Sherwood Letter File Company, 242.

15. SHANNON—PAPER-FILE.
The first claim of Letters Patent No. 254,847, granted March 14, 1882, to James S. Shannon, for an improvement in paper-files, *Held* void as covering only an aggregation of parts, and not a patentable combination.
[*The Schlicht & Field Company v. The Sherwood Letter File Company, 243.

16. SMITH AND SHANNON—PAPER-HOLDERS.
The first, second, third, fourth, fifth, and seventh claims of Patent No. 217,909, granted July 29, 1879, to Frederick W. Smith and James S. Shannon, for an improvement in paper-holders, sustained, (citing *Shannon* v. *Printing Company*, 9 Fed. Rep., 205,) and *Held* to be infringed by a letter-file having its receiving-wires arranged to rock forward instead of backward out of contact with its arched wires.
[*Schlicht & Field Company v. Chicago Sewing Machine Company *et al.*, 1394.

17. STANLEY—APPARATUS FOR DISTILLING TURPENTINE, &c.
Reissued Letters Patent No. 10,689, granted to James D. Stanley February 16, 1886, for an apparatus for distilling turpentine and for the purification of the crude products of the distillation thereof, *Held* to rest for its validity upon a very narrow margin of invention.
[*Fernoline Chemical Company v. Carolina Oil and Creosote Company, 974.

18. STUART—COMPOSITE PAVEMENTS.
Letters Patent No. 269,490, granted December 19, 1882, to Peter Stuart, for an improvement in composite pavements, again sustained and *Held* not anticipated by Patent No. 90,825, June 1, 1869, to Dotch and Duempelman.
[*Stuart v. Thorman *et al.*, 342.

19. TONDEUR—GLASS-ANNEALING FURNACES.
Letters Patent No. 258,156, dated May 16, 1882, granted to Cleon Tondeur, for improvements in glass-annealing furnaces, sustained, and the defendants adjudged to infringe the same. (Following *Tondeur* v. *Stewart*, 28 Fed. Rep., 561.)
[*Tondeur v. Chambers, 1110.

PARTIES IN INTEREST.

(See Interference, 4.)

PATENTABILITY.

(See Aggregation; Invention; Process, 1, 2, 3.)

PATENTS.

(See Assignment of Void Patents; Damages and Profits; Defective Patents; Joint Inventors, 2; Oath of Applicant, 1.)

1. PATENTS DEFINED—WHAT IS SECURED BY THE GRANT.
A patent for an invention conveys nothing which the Government owns or its predecessor ever owned, is the evidence of the inventor's exclusive right, and creates for him a property interest, which Government secures to him by a grant.
[*Marsh *et al. v.* Nichols, Shepherd & Company, 239.

2. WHAT IS REQUIRED TO SECURE THE GRANT.
This grant, however, is regulated by statute, and requires the signatures of all the officials required by statute. [*Id.

3. PATENT PRIMA FACIE EVIDENCE OF VALIDITY.
A patent issued to an applicant is only *prima facie* evidence that he is the inventor.
[*Kennedy *v.* Hazelton, 973.

PETITION TO REOPEN.

(See Rehearing, 1.)

PRACTICE IN THE COURTS.

(See Appeals; Defective Patents, 1, 2; Delay in Bringing Suit; Evidence.)

PRACTICE IN THE PATENT OFFICE.

(See Abandonment; Amendments, 2; Caveats; Continuous Application; Division of Application; Evidence of Invention Abroad; Interference; Priority of Invention; Process, 1, 2, 3; Rehearing, 1, 3, 5, 7, 10, 11.)

PRIMA FACIE EVIDENCE.

(See Patents, 3.)

PRIORITY OF INVENTION.

(See Evidence of Invention Abroad; Rehearing, 10.)

1. PRIORITY WITH INVENTOR WHO REDUCES TO PRACTICE.
The purpose of the law is to benefit the public as well as to protect the inventor, and the inventor who reduces his invention to practice in such a complete way that he at once perfects it as an invention, and at the same time practically demonstrates its utility, is clearly to be preferred to one who merely made hints and suggestions to others and failed himself to act upon them. [Green *v.* Hall *et al.*, 1515.

2. MODELS NOT EVIDENCE OF REDUCTION TO PRACTICE.
It is well-settled law that a working model, designed and intended as such, is not a reduction to practice. Mere working models, allowed to rest in oblivion for many years, will not prevail to establish priority when application for patent is delayed and not filed until after another and more diligent inventor has entered the same field of invention and established his claim as an independent inventor. [Id.

PROCESS.

(See Invention, 3, 4, 5.)

The claims have been rejected on the ground that they cover a process which is "evidently and necessarily the operation contemplated in the construction of the machine" and "the inevitable result of such operation."

1. PROCESSES WHICH DEPEND UPON PARTICULAR MECHANISM.
It being conceded that a process is not patentable which is merely the effect or function of specific mechanism, the question necessarily arises in every case whether the process claimed is capable of being performed by a machine differently organized from that described, or even without an organized machine—by ordinary tools or by hand. *Held* in the case under consideration that the processes set forth in the claims do not depend for their performance on the particular machine described. [*Ex parte* Young, 1635.

2. WHEN ENTITLED TO THE PROCESS.
An inventor who proceeds to invent a machine designed solely to carry out a particular process, and the only function of which is to execute that process, is entitled to protection. A process which is distinct and separate from the machine does not lose its identity because of any course pursued by the inventor in prosecuting his claims for a patent, or from the fact that he may not at the time of completing his machine have been fully conscious that he had also invented the process. Should applicant, however, take out his patent for the machine without defining or claiming his process, he probably would unconsciously dedicate the process to the public; but if at any time before he comes to the Office or takes out his patent he discovers or becomes conscious of the fact that his invention is of a twofold character—viz., that it constitutes both the machine and the process which it executes—and prepares his application accordingly, there can be no reason for holding that he has merged the two inventions or that the two are in fact one. [Id.

3. CONSCIOUS AND UNCONSCIOUS INVENTION, WHEN COMPLETED.
At the time applicant becomes conscious of the fact that there exists in his mental operations and discoveries a distinct process as well as a concrete machine he completes not only the invention of the process, but perfects his knowledge of it, and comes into the status of an inventor who may obtain the security of the patent laws. [Id.

4. PATENTABILITY—PROCESS.
A method or process which depends for its novelty upon the preparation of an adhesive stay and the various steps employed to carry such article forward to the final act of affixing it to the corners of boxes for the purpose of strengthening the corners *Held* to be not a proper method or process, but the mere operation of the machine. [*Ex parte* Jaeger, 1637.

PRODUCT OF NATURE.

(See Invention, 3, 4, 5.)

PROPERTY INTERESTS.

(See Patents, 1.)

PUBLIC USE.

(See Particular Patents, 1, 13.)

PUBLIC USE.
Use of an invention for business purposes or profit and in which the test of its success and value was only incidental will defeat a patent if it occurred more than two years before application. [*Root *v.* Third Avenue Railroad Company, 1393.

REDUCTION TO PRACTICE.

(See Priority of Invention.)

REHEARING.

(See Interference, 4.)

Statement of the litigation growing out of the several interferences declared between the patents granted to A. G. Bell and the applications of later applicants; the inventions distinguished and compared with the previous state of the art, and the decisions rendered by the various tribunals in the Office considered and discussed.

1. GRAY'S PETITION TO REOPEN.
Held that the petition "is of no avail for any purpose whatever;" that Gray proposes no new evidence as to dates, nature, or the character of his own invention; that it was conclusively shown in the evidence that Gray, at the time of filing his caveat, while having a conception of the telephone, did not understand the invention, and was unable to explain the mode of its operation; that he adhered to the idea that articulate speech must be transmitted upon the multiple-telegraph principle; that he positively conceded that he did not reduce his invention to practice for a long time after the issuance of patent to Bell; that he regarded the invention patented to Bell as trivial, and called it a "scientific toy," and turned his attention to other and, in his opinion, more important inventions; that he negligently omitted to file his application for a patent until 2 years after the grant of Bell's patent, and was then stimulated to do so only by other parties, who had acquired an interest in his inventions; and that his present petition, filed without notice to the adverse parties, was delayed for 3 years and 5 months after the decision of the Examiner of Interferences awarding priority to Bell, and was then accompanied by a request that it should not be acted upon until further motion was made.
[McDonough *v.* Gray *et al.*, 1345.

2. CHARGES OF FRAUD.
For reasons stated, the charges in Gray's petition that Bell had fraudulently secured access to his caveat, purloined his invention, and interpolated a description thereof in his application *Held* not sustained. [Id.

3. PRIORITY OF INVENTION AND VALIDITY OF BELL'S PATENT.
Held that the decision of Commissioner Butterworth, of March 3, 1885, was elaborately considered and deliberately rendered, and that a rehearing could only be justified upon clear and satisfactory evidence showing in such decision error in the conclusions of fact or in the application of the law, and that evidence could be produced establishing that Gray could antedate Bell's invention, that he could prove a prior conception and reduction to practice, or that, having made an earlier conception, he had diligently prosecuted it to a reduction to practice. In the absence of showing the existence of such evidence, upon the testimony filed before and considered by the various tribunals in the Office, *Held* that "the award of priority of invention was justly given to Bell," and in view of the construction given by the Office and the courts to the patent, the grant was properly issued, and the protection afforded the inventor was authorized. [Id.

4. EXTENDING THE MONOPOLY.
The public has a direct and immediate interest in the further prosecution of Gray's application for a patent. If the award of priority given to Bell can be vacated and set aside, it should only be done upon a showing of merits that would entitle Gray to a patent. Such patent would run for a period of 17 years from its date, and would dominate and control all devices relating to the telephone for another period of 17 years. The effect would be to subject the public to a renewed monopoly in all nearly, if not quite, thirty-four years. Such result would be in contravention of the spirit of the statute, and, in view of the liberal provisions of the patent system, cannot be tolerated except when the inflexible rules of law and justice compel it, especially in the present case, wherein it is clearly shown that the Bell Company is the "equitable if not the legal owner of Gray's telephone inventions." [Id.

5. TITLES AND RIGHTS UNDER ASSIGNMENTS.
The Commissioner has no equitable jurisdiction over the rights of parties claiming under assignments and grants of inventions and patents. He cannot set aside or vacate such instruments, nor can he recognize equitable rights growing out of transactions between inventors and applicants and other parties. While the Commissioner is authorized to recognize formal legal assignments, and when they have been filed in the Patent Office before patent issues may give the assignee control of the management and prosecution of an application and direct the patent to issue in the name of the assignee, yet he cannot recognize equitable rights under executory or other equitable contracts; but where the relief asked, as in a petition for rehearing, is founded upon an alleged state of the title to the invention, the Commissioner possesses the power to determine the allegation as to title in order to exercise his discretion in granting or refusing the relief. [Id.

6. MCDONOUGH'S PETITIONS.
As to the petition of McDonough that he be allowed to demonstrate the operativeness of the make-and-break principle, the Commissioner holds the decisions of his predecessors are conclusive on that question; that McDonough never claimed to be the original inventor of the telephone, but a mere improver upon Reis's instruments; that he accepted and still accepts the make-and-break system of Reis as the foundation of his invention; and, in view of the settled judgment of the Patent Office that speech cannot be transmitted by an instrument which operates solely by the making and breaking of the circuit, and also in view of the fact that the Supreme Court of the United States has also definitely settled this question with reference to Reis, he must regard the matter *res adjudicata*. [Id.

7. NO INTERFERENCE BETWEEN MCDONOUGH AND BELL.
As to the petition to reopen on the merits, the Commissioner holds that McDonough's original claim for the receiver having been rejected on reference to Bell's patent, and he submitting thereto and canceling the claim, and McDonough having been brought into the interference in consequence of the later applicants, so as to compel them to establish an earlier date of invention than himself, it follows, inasmuch as there could have been no interference between McDonough and Bell alone, that when Gray and the other later applicants were defeated and taken out of the interference there could be left no contest between McDonough and Bell. [Id.

8. CLAIMS VOLUNTARILY CANCELED.
Whether an applicant who has voluntarily eliminated his claims and apparently abandoned them should be permitted, after the invention has been publicly introduced and made commercially valuable, to return after 11 years and amend and claim an interference with a patent so long outstanding is a serious question, and the right to relief should be most convincing. [Id.

9. PETITIONS DENIED—INSUFFICIENT SHOWING.
Petitions denied because the showing is deemed insufficient to justify the Commissioner in setting aside former decisions and decrees, since he is fully convinced that another trial on the question of priority would result in another award in favor of Bell. [Id.

10. REFUSAL TO TAKE TESTIMONY.
A patentee involved in interference who refused to take testimony, relying upon his record dates, and rested his case upon the weakness of his adversary's presentation rather than upon the strength of his own, will not be permitted, after testing the opinion of all the tribunals in the Office and after final decision, to have the case reopened on the ground "that the public interests require an investigation as to prior knowledge or use, and that two patents ought not to issue for the same invention."
[Beardslee *v.* Moeslein, 1640.

11. A degree of conclusiveness attaches to a correct decision based upon the record and the evidence which cannot be disturbed by a motion which admits a party's willful and deliberate omission to take evidence and simply asks, after trial, that the very evidence which might have been originally taken may now be introduced. If such a motion could prevail, there would be no end to interference proceedings. [Id.

REISSUES.

REISSUES—ENLARGEMENT OF ORIGINAL PATENT.
It is well settled that a reissue can only be granted for the same invention intended to be embraced by the original patent, and the specification cannot be substantially changed, either by the addition of new matter or the omission of important particulars, so as to enlarge the invention as intended to be originally claimed.
[*Pattee Plow Company *v.* Kingman & Company *et al.*, 1107.

REJECTED CLAIMS.

(See Division of Application, 1; Rehearing, 7, 8.)

SERVICE OF PROCESS.

1. JURISDICTION—SUIT AGAINST NON-RESIDENT CORPORATION—SERVICE OF PROCESS.
A corporation not a resident of this district cannot be sued in this court. Service of process upon the agent or officer of a non-resident corporation insufficient.
[*Preston *v.* Fire Extinguisher Manufacturing Company *et al.*, 124.

2. SAME—SAME.
A corporation created and existing solely under the laws of another State, and having its principal office and place of business in another State and district, cannot be said to be an inhabitant of this district and be sued here, even though such corporation may do business in this district through agents.
[*Id.

SIGNATURE TO PATENTS.

(See Defective Patents, 1, 2; Patents, 2.)

STATE OF THE ART.

(See Particular Patents, 3, 6, 11, 14.)

SUITS FOR INFRINGEMENT.

(See Assignments, 3; Citizenship; Delay in Bringing Suit; Service of Process.)

EXPIRATION OF PATENT—INJUNCTION THEREAFTER.
Under the law the monopoly secured by a patent ceases with the expiration of the patent, and articles made during the life of the patent in infringement of it cannot be enjoined after its expiration, and an injunction already granted as to such articles will be dissolved.
[*Westinghouse *v.* Carpenter, 344.

TERM OF PATENT.

(See Limitation of United States Patents by Foreign Patents Previously Granted.)

TESTIMONY IN INTERFERENCE PROCEEDINGS.

(See Rehearing, 10, 11.)

TITLE TO PATENT.

(See Joint Invention, 1.)

TRADE-MARKS.

1. EXCLUSIVE PROPERTY IN EMBLEMS USED BY SOCIETIES.
Applicant presented for registration as a Trade-Mark an exact representation of the well-known badge of the Grand Army of the Republic, which he proposed to use as a water-mark on writing-paper. The fact that the Grand Army of the Republic have adopted a certain design for their badge, or for the letter-head of writing-paper used by them, does not secure to such organization such exclusive property in the particular representation as would deprive an applicant who has complied with all the requirements of the statute of his right to register the same as a Trade-Mark. It is well settled that emblems which have been used by societies possess no sanctity or sacredness which precludes their being used and applied as Trade-Marks.
[*Ex parte* King, 119.

2. TRADE-MARKS WHICH EMBELLISH.
The objection of the examiner that the Trade-Mark embellishes the paper is not approved. It may be said that scarcely any Trade-Mark can be applied to paper without incidentally embellishing it. If the design is a legitimate subject of a Trade-Mark and is not prohibited by law, the fact that it incidentally embellishes the page on which it appears cannot deprive it of its lawful quality as a Trade-Mark. [Id.

3. REPRESENTATIONS PATENTED AS DESIGNS NOT BARRED FROM REGISTRATION AS TRADE-MARKS.
The fact that the Grand Army of the Republic have previously obtained a Design patent for this representation, the term of which has expired, does not constitute a legitimate bar to the employment of this design as a Trade-Mark in commerce with foreign nations. The mere fact that the organization originated the design would make no difference whatever if the design has been donated to the world to be used in all the ways of which it is capable. The Grand Army of the Republic retained no proprietary right after the term of their design patent expired. There is no property in the Design itself vested in any one. Any person may apply the design as a Trade-Mark to a certain class of merchandise, and when thus applied it acquires the quality of property and becomes vested in him who first makes such new and distinct application of the design, and registration will be granted, provided the applicant has complied with all the requirements of the statute and the mark is used in commerce with foreign nations. [Id.

4. OFFICE BOUND BY THE OATH OF APPLICANT.
The Patent Office has not the means to investigate the question whether the applicant in the present case is simply seeking to obtain the guise of security round his Trade-Mark, when he really means to use it as an attractive embellishment for a particular class of persons in this country. The Office is bound by the oath of the applicant, and such a question as the above must be settled by the courts. [Id.

WORDS DESCRIPTIVE OF A CLASS OF GOODS CANNOT BE APPROPRIATED AS A TRADE-MARK.
The name "Goodyear Rubber Company" is not one capable of exclusive appropriation as a Trade-Mark. "Goodyear Rubber" are terms descriptive of well-known classes of goods produced by the process known as Goodyear's invention. Names which are thus descriptive of a class of goods cannot be adopted as Trade-Marks and be thereby appropriated to the exclusive right of any one.
[*Goodyear's India Rubber Glove Manufacturing Company *et al. v.* Goodyear Rubber Company, 122.

6. SAME—ADOPTED AS A CORPORATE NAME.
Nor will the incorporation of a company in the name of an article of commerce, without other specification, create any exclusive right to the use of the name. [*Id.

7. RIGHT ACQUIRED BY THE PUBLIC IN THE USE OF WORDS.
It appearing that the mode in which the complainants packed their cigars, the kind of boxes used by them, the number of cigars in each bunch, the particular color of ribbon or tape around each bunch, and the size and shape of the cigars were all old in the trade, and that the name "La Normanda" had been used for cigars resembling the "La Norman 1" cigars in size and shape, &c., in different parts of the country several years prior to the adoption of the words "La Normand!" by the complainants or their assignor, the adoption of these words as a Trade-Mark and their registration could not take away the right previously acquired by the public in the use of the words "La Normanda" as indicating a particular kind of cigars.
[*Stachelberg *et al. v.* Ponce, 337.

8. THE WORD "SLEUTH."
The word "Sleuth," being a word having a place and meaning in the language, cannot be appropriated as a Trade-Mark for a book or periodical.
[†Munro *v.* Beadle *et al.*, 448.

9. FLOUR.
Messrs. Holt & Co., New York, N. Y., adjudged to have acquired and to hold the exclusive right to the use of the words "La Favorita," registered by them February 28, 1882, as a trade-mark for flour.
[*Menendez *et al. v.* Holt *et al.*, 971.

Aspinwall Manufacturing Company. (See Aspinwall, Lewis A., assignor.)						
Atchison, George M., assignor of one-half to J. Picken, West Troy, N. Y. Weft stop mechanism for looms	400,159	Mar. 26	2051	537	46	1559
Atkinson, Charles E., Pennsville, N. J. Cultivator	397,484	Feb. 12	581	151	46	697
Atkinson, Herbert, and G. W. Hull, Wallingford, Conn.; said Atkinson assignor to said Hull. Whistle	398,213	Feb. 19	1667	441	46	920
Atterbury, Thomas B., Pittsburg, Pa. Manufacturing ornamental glass	398,995	Mar. 5	281	77	46	1168
Atwood, Benjamin S., Whitman, Mass. Shipping-case	397,214	Feb. 5	173	46	46	609
Atwood, Dustin, Milwaukee, Wis. Fastening for railway-stringers	399,232	Mar. 12	677	177	46	1273
Atwood, Julia E., Swanton, Vt. Suspenders	397,061	Jan. 29	2651	692	46	553
Aughenbangh, Robert M., Beaver, and G. E. Ruffley, Glenfield, Pa. Magazine fire-arm	399,464	Mar. 12	1015	266	46	1338
Auguste, Armand, Paris, France. Machine for sawing stone	398,113	Feb. 19	1526	404 / 405	46	893
Augustine, William R., Aspen, Colo. Letter-box	395,306	Jan. 1	6	2	46	4
Austin, Alonzo O. (See Stone and Austin.)						
Austin, Frederick C. (See Durkee, George B., assignor.)						
Austin, Stephen J. Terre Haute, Ind. Car-axle box	400,387	Mar. 26	2400	628	46	1624
Austin, William W., Lowell, Mass. Carbureting-lamp	397,485	Feb. 12	582	151	46	697
Autenrieth, Ernst F. (See Hutchinson and Autenrieth.)						
Autenrieth, Ernst F., New York, assignor to Glen Cove Machine Company, (limited,) Green Point, Brooklyn, N. Y. Variable driving mechanism for machinery	395,471	Jan. 1	243	62, 63	46	53
Autenrieth, Ernst F., New York, assignor to Glen Cove Machine Company, (limited,) Green Point, Brooklyn, N. Y. Mechanical movement	398,214	Feb. 19	1668	441	46	920
Automatic Battery Company. (See Williams and Roovers, assignors.)						
Automatic Selling Machine Company. (See Leavitt, Frank M., assignor.)						
Averell, John D., Brooklyn, N. Y., assignor, by mesne assignments, to J. F. Toraya, Philadelphia, Pa. Apparatus for the manufacture of gas	398,306	Feb. 19	1813	479	46	951
Avery, Andrew J., Norway, Me. Paneling and striping implement	399,233	Mar. 12	678	177	46	1273
Avery Manufacturing Company, W. G. (See Avery, William G., assignor.)						
Avery Planter Company. (See Avery, Robert H., assignor.)						
Avery Planter Company. (See Berrien, Leonard B., assignor.)						
Avery, Richard B., New York, N. Y. Apparatus for generating and burning gaseous fuel	398,873	Mar. 5	84	23, 24	46	1130
Avery, Robert H., assignor to Avery Planter Company, Peoria, Ill. Cultivator	400,388	Mar. 26	2400	628	46	1625
Avery, William G., assignor to W. G. Avery Manufacturing Company, Cleveland, Ohio. Belt-fastener	399,902	Mar. 19	1762	455	46	1493
Avis, Theodore C., *et al.* (See Randall, Franklin S., assignor.)						
Ayer, Ellery S., Boston, Mass. Salt-box	397,104	Feb. 5	2	1	46	579
Ayer, Richard L., Cincinnati, Ohio. Mechanical movement	395,415	Jan. 1	158	40	46	34
Ayers, William C., Plymouth, N. C. Garlic-separator	396,678	Jan. 22	2088	537	46	430
Aylward, Francis M., Memphis, Mo. Fire-wood drag-saw	397,957	Feb. 19	1278	341	46	847
Aylworth, George H., Brighton, Ill. Sash-fastener	396,320	Jan. 15	1545	390	46	318
Ayres, Romeyn B., *et al.* (See Huson, Lewis C., assignor.)						
Ayres, Saxton T., Philadelphia, Pa. Machine for packing flour	397,411	Feb. 5	465	122 / 123	46	667
Ayton, Phinehas E., and S. Hill; said Hill assignor to T. Pemberton & Sons, Birmingham, England. Door spring and check	398,996	Mar. 5	282	77, 78	46	1169
Baatz, August F., Bellingham, Wash. Ter. Automatic fog-horn	398,367	Feb. 26	1919	505	46	979
Babbitt, Benjamin T., New York, N. Y. Ordnance	400,160	Mar. 26	2052	537	46	1559
Babin, Telesphore. (See Trahan and Babin.)						
Bach, Conrad, St. Gallo, Switzerland. Automatic picture-exhibitor	396,455	Jan. 22	1755	449	46	366
Bach, Jacques. (See Kranich and Bach.)						
Bachman, Joseph A., Austin, Tex. Shutter-fastener	399,724	Mar. 19	1411	362	46	1424
Badan, Alcide C., New York, N. Y. Smoke-consumer	399,817	Mar. 19	1560	404	46	1453
Badische Anilin and Soda Fabrik. (See Bohn, René, assignor.)						
Bagaley, Ralph, and F. M. Rites, assignors to Westinghouse Machine Company, Pittsburg, Pa. Crank-case door	397,002	Jan. 29	2651	692	46	553
Bailey, Cyrus, Akron, Ohio. Rotary-engine reversing-gear	395,646	Jan. 1	530	132 / 133	46	106
Bailey, Cyrus, Akron, Ohio. Rotary engine	395,647	Jan. 1	532	133 / 134	46	107
Bailey, Ephraim E. E. (See Ruddock and Bailey.)						
Bailey, Farrell & Co. (See Franklin, Edward A., assignor.)						
Bailey, Royal F., Galva, Ill. Dust-pan	398,997	Mar. 5	283	78	46	1169
Bailey, Sterling L., Hyde Park, Ill. Ventilation of buildings	398,674	Mar. 5	86	24, 25	46	1130
Baily, Percy H., London, county of Middlesex, England, assignor of one-half to B. F. Smith, Chicago, Ill. Biscuit	396,456	Jan. 22	1756	.....	46	367
Bainbridge, William, Omaha, Nebr. Wire-coupling	399,465	Mar. 12	1016	266	46	1338
Bains, James, Cincinnati, Ohio. Oil-burner	396,525	Jan. 22	1861	478	46	386
Baird, Joseph H., Oakville, Conn. Sectional jack	396,331	Jan. 15	1546	391	46	318
Bairstow, William H., Kidderminster, county of Worcester, England. Double-pile-fabric loom	395,472	Jan. 1	244	63 / 64 / 65	46	53
Baker, Albert R. (See Brown, John F., assignor.)						
Baker, Carr & Co. (See Baker, Joseph, assignor.)						
Baker, Clayton L., Englewood, assignor of one-half to Abbott Buggy Company, Chicago, Ill. Dash-board for vehicles	397,329	Feb. 5	343	90	46	643
Baker, Edward F., Chicago, Ill. Package of fly-paper	400,035	Mar. 26	1868	485	46	1522
Baker, Frank A. (See McErlain, John J., assignor.)						
Baker, George C., Des Moines, Iowa. Making rods, rails, &c.	395,684	Jan. 8	592	148	46	128
Baker, John D. (See Barrow, Jacob, assignor.)						
Baker, Joseph, assignor to Baker, Carr & Co., Andover, N. H. Molding-machine	398,568	Feb. 26	2195	578 / 579	46	1033
Baker, Owen T., Fort Worth, Tex. Door-check	398,763	Feb. 26	2492	660	46	1092
Baker, Scipio E., Springfield, Ohio. Portable grave-vault	395,537	Jan. 1	344	87, 88	46	72
Baker, William R., assignor to McCormick Harvesting Machine Company, Chicago, Ill. Mower	398,307	Feb. 19	1814	479	46	951
Baker, William S. G., Baltimore, Md. Car-truck	399,466	Mar. 12	1017	267	46	1339
Baker, William S. G., Baltimore, Md. Car-axle box	399,467	Mar. 12	1019	267 / 268	46	1339
Baker, William S. G., Baltimore, Md. Car-truck	399,468	Mar. 12	1021	268 / 269	46	1339
Baldwin, Arthur, and J. Clement, Prairie du Sac, Wis. Fence-wire-winding machine	398,215	Feb. 19	1670	442	46	920

Barron, Andrew F. (See Clarke, Reuben, assignor.)						
Barrow, Jacob, assignor of one-half to J. D. Baker, Windfall, Ind. Pressure-regulator	397,063	Jan. 29	2653	683	46	553
Barth, Gustav A., assignor to P. Chouteau, St. Louis, Mo. Direct-acting engine	397,166	Feb. 5	99	26	46	596
Barth, Gustav A., assignor to P. Chouteau, St. Louis, Mo. Carriage for direct-acting rock-drills	397,622	Feb. 12	813	212	46	739
Barth, Gustav A., assignor to P. Chouteau, St. Louis, Mo. Carriage for direct-acting rock-drills	397,827	Feb. 12	1101	294 295	46	795
Barth, Gustav A., assignor to P. Chouteau, St. Louis, Mo. Direct-acting steam or pneumatic engine	397,958	Feb. 19	1281	341 342	46	847
Barth, Gustav A., assignor to P. Chouteau, St. Louis, Mo. Direct-acting engine	397,959	Feb. 19	1282	342	46	848
Barth, Gustav A., assignor to P. Chouteau, St. Louis, Mo. Cock	398,117	Feb. 19	1534	400 407	46	895
Barth, Gustav A., assignor to P. Chouteau, St. Louis, Mo. Tool for mining purposes	398,308	Feb. 19	1817	480	46	952
Barth, Gustav A., assignor to P. Chouteau, St. Louis, Mo. Trunnion for cylinders	398,571	Feb. 26	2198	580	46	1033
Barth, Gustav A., assignor to P. Chouteau, St. Louis, Mo. Steam-actuated valve	398,930	Mar. 5	175	46	46	1147
Barth, Gustav A., assignor to P. Chouteau, St. Louis, Mo. Piston-rod-guide packing	398,931	Mar. 5	177	47	46	1147
Bartholomew, Albert W., assignor of one-third to T. C. Ashley, Boston, Mass. Die-stock	395,686	Jan. 8	593	149	46	129
Bartholomew, Francis A., Bloomfield, N. J. Rail-support for elevated roads	398,023	Feb. 19	1402	370	46	869
Bartholomew, Francis A., Bloomfield, N. J. Switch for center-rail elevated railways	400,164	Mar. 26	2059	539	46	1560
Bartlett, Charles M., Chicago, Ill. Wheel-pit and mechanism for the admission of water thereto	398,309	Feb. 19	1818	480	46	952
Bartlett, Edward C., assignor to J. L. McCague, Omaha, Nebr. Seal-lock	398,371	Feb. 26	1923	506 507	46	980
Bartlett, Elbridge G. W. (See Venn, Isaac H., assignor.)						
Bartlett, George H., Short Hills, N. J. Tool-holding box	400,286	Mar. 26	2246	588	46	1506
Bartlett, George H., Short Hills, N. J. Tool-holding box	400,287	Mar. 26	2248	588	46	1506
Bartlett, George H., Short Hills, N. J. Tool-holding box	400,288	Mar. 26	2250	589	46	1506
Bartlett, John W., assignor to Moline Plow Company, Moline, Ill. Check-row device for planters	398,485	Feb. 26	2062	548	46	1011
Bartlett, Jonathan, Epping, and G. B. Wiggin, South New Market, N. H., assignors of one-half to J. W. Hoard, Providence, R. I. Sewing-machine	397,579	Feb. 12	733	190	46	724
Bartlett, Jonathan, Epping, and G. B. Wiggin, South New Market, N. H., assignors of one-half to J. W. Hoard, Providence, R. I. Sewing-machine	399,818	Mar. 19	1561	404	46	1453
Bartlett, Jonathan, Epping, and G. B. Wiggin, South New Market, N. H., assignors of one-half to J. W. Hoard, Providence, R. I. Sewing-machine	400,037	Mar. 26	1870	486 487	46	1522
Bartlett, Marcus J., Providence, R. I. Animal-trap	395,309	Jan. 1	7	2	46	4
Bartlett, Samuel H. (See Rogers and Bartlett.)						
Bartley, Joseph D., Bridgeport, Conn. Combined book mark and clip	395,473	Jan. 1	247	65	46	53
Barton, Charles B. (See Barton, George F., assignor.)						
Barton, George F., assignor of one-half to C. B. Barton, Warehouse Point, Conn. Boiler for cleaning or boiling rags	395,416	Jan. 1	161	41	46	34
Barton, Martin V., Bath, N. Y. Pipe-wrench	398,118	Feb. 19	1535	407	46	895
Barwick, William H., Everett, assignor to himself, C. O. Benton, Cambridge, and F. J. Hutchinson, Boston, Mass. Railway-switch	396,679	Jan. 22	2089	537	46	430
Bascom, Frank A., Greenville, Pa. Sash-fastener	396,386	Jan. 22	1646	423	46	345
Bascom, John R. (See Wolfe, Harvey R., assignor.)						
Baskam, Mendel, New York, N. Y. Ornamental box	395,417	Jan. 1	162	41	46	34
Bassett, Carrol P. (See Chichester, Lewis S., assignor.)						
Bassett, Dewitt C., Woonsocket, Dak. Ter. Car-coupling	397,412	Feb. 5	466	123	46	668
Bassett, Fred R. (See Le Sner and Bassett.)						
Bassett, Herbert H. (See Clarke and Bassett.)						
Bassett, Nathan H. (See Ransweiler, William, assignor.)						
Bassford, Isaac F., assignor of one-half to D. Young, Springfield, Ohio. Mowing-machine cutter-bar	397,685	Feb. 12	904	239	46	757
Batchelder, James H. (See Maloy, Michael T., assignor.)						
Batcheller, Alfred H. (See Lytle, Harry S., assignor.)						
Bates, David, Bonham, Tex. Liniment	398,024	Feb. 19	1403	.....	46	869
Bates, Emory H., Washington, D. C. Shifting seat for vehicles	396,062	Jan. 15	1166	296	46	247
Bates, Francis G. (See Ruprecht and Bates.)						
Bates, John C., *et al.* (See Prince, Jerome, assignor.)						
Batman, John J., Sunbury, Pa. Radial drill	395,943	Jan. 8	989	254	46	205
Battey, David C., Florence, Kans. Water or liquid elevator	397,889	Feb. 19	1182	317	46	830
Bauer, Edward H., Carbon Centre, Pa. Gate	397,216	Feb. 5	175	47	46	609
Bauer, Fred, *et al.* (See Shannon, Patrick H., assignor.)						
Baughn, Ollie, Tobias, Nebr. Potato-planting attachment	398,119	Feb. 19	1536	407	46	895
Baumann, Eugen, Freiburg, Baden, assignor to Farbenfabriken, vormals Fr. Bayer & Co., Elberfeld, Germany. Sulphur compound	396,526	Jan. 22	1863	.....	46	387
Baumgarten, Albert. (See Morgan, Edgar H. and C., assignors.)						
Baumgarten, Christian, Schulenburg, Tex. Cotton seed cleaner	399,819	Mar. 19	1562	404	46	1453
Bauschke, Joseph, assignor to E. M. Heiber, Breslau, Prussia, Germany. Boiler-cleaner	395,649	Jan. 1	535	135	46	108
Bautain, Auguste C. T., Paris, France. Wagon-brake	399,471	Mar. 12	1027	270	46	1341
Baxter, Whitfield W. (See Fisher, John E., assignor.)						
Bay State Whip Company. (See Cowles, Henry A., assignor.)						
Bayaud, George D. (See O'Kelly, James M., assignor.)						
Bayer, Friedrich, assignor to Farbenfabriken, vormals Friedr. Bayer & Co., Elberfeld, Germany. Manufacture of dye-stuffs or coloring-matters	395,474	Jan. 1	248	.....	46	53

Belcher, Henry F., Irvington, N. J. Making mosaics	396,912	Jan. 29	2443	628	46	511
Belfield, Reginald, assignor to Westinghouse Electric Company, Pittsburg, Pa. Electric discharge device. (Reissue)	10,986	Feb. 19	1915	504	46	970
Bell, David, Toronto, Ontario, Canada. Paint	397,105	Feb. 5	2	.....	46	579
Bell, Harold J., Woodbury, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Incandescent gas-burner	396,253	Jan. 15	1447	369	46	301
Bell, Harold J., Woodbury, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Incandescent gas-burner	396,254	Jan. 15	1449	369	46	302
Bell, Harold J., Gloucester City, assignor to Welsbach Incandescent Gas Light Company, Jersey City, N. J. Gas-incandescent	396,322	Jan. 15	1547	391	46	318
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Atmospheric gas-burner	396,255	Jan. 15	1451	369	46	302
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Atmospheric gas-burner	396,256	Jan. 15	1452	370	46	302
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Gas-regulating burner	396,257	Jan. 15	1453	370	46	302
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Gas-regulating burner	396,258	Jan. 15	1454	370	46	303
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Gas-regulating burner	396,259	Jan. 15	1456	370	46	303
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Incandescent gas-burner	396,260	Jan. 15	1457	371	46	303
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Incandescent gas-burner	400,166	Mar. 26	2063	540	46	1561
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Incandescent gas-lamp	400,167	Mar. 26	2063	540	46	1561
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Atmospheric gas-burner	400,168	Mar. 26	2065	540	46	1562
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Incandescent gas-burner	400,169	Mar. 26	2066	541	46	1562
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Gas-governor	400,170	Mar. 26	2067	541	46	1562
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Gas-governor	400,171	Mar. 26	2069	541	46	1562
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Gas-governor	400,172	Mar. 26	2069	541	46	1562
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Gas-governor	400,173	Mar. 26	2070	542	46	1563
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Air-regulating device for atmospheric gas-burners	400,174	Mar. 26	2071	542	46	1563
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Gas and air mixer	400,175	Mar. 26	2072	542	46	1563
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Gas and air mixer	400,176	Mar. 26	2074	543	46	1563
Bell, Harold J., Gloucester City, N. J., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Gas and air mixer	400,177	Mar. 26	2075	543	46	1564
Bellows, Edwin S., New York, N. Y. Scarf-tip	399,730	Mar. 19	1420	365	46	1426
Belton, Guy M., Knoxville, Tenn. Car-step	395,687	Jan. 8	895	149	46	129
Bement, Clarence E., Lansing, Mich. Harrow	399,731	Mar. 19	1421	365	46	1426
Bemis, Jason, Owatonna, Minn. Grain-tally	396,063	Jan. 15	1167	296	46	248
Bemis, Sumner A., Springfield, Mass., and L. Pingst, New York, N. Y. Railway	398,687	Feb. 26	2381	632	46	1009
Bender, Albert N., Manhattan, Kans. Sash-fastener	400,220	Mar. 26	2251	589	46	1596
Bender, Edouard, and E. Stevens, Brussels, Belgium. Door-spring	400,641	Mar. 26	1978	489	46	1524
Bender, Fritz, Frankfort-on-the-Main, assignor to A. Leonhardt & Co., Mulheim-on-the-Main, Germany. Production of coloring-matter	396,527	Jan. 22	1863	.....	46	387
Bendick, Max, New York, N. Y. Machine for perforating paper patterns	398,572	Feb. 26	2109	580	46	1033
Bending, William P., assignor of nine-sixteenths to V. S. Seltzer, A. B. Robinson, and W. H. Slade, Columbus, Ohio. Domestic or railway-car heater	398,573	Feb. 26	2200	580	46	1033

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr'g.	Vol.	Page.
Benedict, Elias U., Aurora, Ill. Stock-car	399,821	Mar. 19	1568	406	46	1455
Benedict, George H., Chicago, Ill. Scale for surface measurement	397,686	Feb. 12	965	239 240	46	757
Benedict, Theodore H. (See Fry, Frederick, assignor.)						
Benét, Laurence V., Washington, D. C., assignor to Hotchkiss Ordnance Company, (limited,) of England. Hinge	399,964	Mar. 19	1764	456	46	1494
Bengel, Edward. (See Heine and Bengel.)						
Benjamin, Frank P., New York, N. Y. Railway signaling device	399,474	Mar. 12	1685	272	46	1342
Benjamin, George H. (See Richards, William G., assignor.)						
Benjamin, George H., New York, N. Y., assignor to Safety Car Heating and Lighting Company, of New Jersey. Apparatus for heating railway-cars	398,487	Feb. 26	2064	549	46	1011
Benkendorf, Otto A., Wilmot, Kans. Air-draft engine	395,418	Jan. 1	162	41	46	34
Benker, Christ, assignor of one-half to E. B. Matthews, Pittsburg, Pa. Machine for forming skelp-iron	398,120	Feb. 19	1537	408	46	895
Benner, Lorenzo D., Peoria, Ill. Bag	396,388	Jan. 22	1648	424	46	345
Benner, Lorenzo D., Peoria, Ill. Bag	396,389	Jan. 22	1649	424	46	346
Benner, Lorenzo D., Peoria, Ill., assignor to Union Paper Bag Machine Company, Philadelphia, Pa. Paper bag	397,217	Feb. 5	176	47	46	610
Benner, Lorenzo D., Peoria, Ill., assignor to Union Paper Bag Machine Company, Philadelphia, Pa. Paper-bag machine	397,772	Feb. 12	1022	273 274	46	780
Bennett, Franklin, assignor of two-thirds to Billings Brothers, Canal Fulton, and Ohio Stoneware Company, Akron, Ohio. Crock-press	399,178	Mar. 5	588	151	46	1228
Bennett, George, Philadelphia, Pa. Drawing-pen	400,178	Mar. 26	2076	544	46	1564
Bennett, Isaac E., Newton, Iowa. Harness-buckle	398,372	Feb. 26	1928	507	46	981
Bennett, Martin, Eureka, Cal. Handle for crosscut-saws	397,580	Feb. 12	736	191	46	725
Bennett, Sanford S. (See Regan, Daniel S., assignor.)						
Bennett, Walter E., Boston, Mass. Attaching shank-buttons to fabrics	397,960	Feb. 19	1284	342	46	848
Bennett, Walter E., assignor to Morley Button Sewing Machine Company, Boston, Mass. Loop removing and spreading mechanism for button-sewing machines	399,179	Mar. 5	589	151 152	46	1228
Bennion, Charles. (See Pearson and Bennion.)						
Benoit, Charles H., San José, Cal. Shuttle for sewing-machines	397,269	Feb. 5	245	64	46	623
Benson, Phillip G., Aurora, Ill. Attachment for brick-machines	398,813	Mar. 5	2	1	46	1115
Benson, William H., assignor of one-half to C. F. Heller, Reading, Pa. Combination bank-book	398,875	Mar. 5	88	25	46	1131
Benster, Emory M., Toledo, Ohio. Wheel	399,475	Mar. 12	1039	273	46	1343
Bentley, Charles E., New York, N. Y. Velocipede	399,003	Mar. 5	297	81	46	1172
Bentley, Edward M., New York, N. Y. Electric-railway plow	400,038	Mar. 26	1873	488	46	1522
Bentley, Edward M., New York, N. Y. Electric-railway contact	400,179	Mar. 26	2078	544	46	1564
Bentley, Edward M., New York, N. Y. Electric-railway plow	400,180	Mar. 26	2080	544	46	1565
Bentley, Edward M., New York, N. Y. Detecting grounds in an electric distributing system	400,181	Mar. 26	2082	544 545	46	1566
Bentley, Edward M., New York, N. Y. Fault-detector for electric railways	400,182	Mar. 26	2083	545	46	1566
Benton, Colbee O., *et al.* (See Barwick, William H., assignor.)						
Benton, Francis E., Stoughton, Mass. Fastening for whip-sockets	396,321	Jan. 15	1548	391	46	318
Berbecker, Julius, New York, N. Y. Sheet-metal knob	399,476	Mar. 12	1040	273	46	1343
Berdrow, James G., and F. A. Pelkey, Seward, Nebr. Fire-escape	396,852	Jan. 29	2354	603 604	46	493
Berg, Per T., Braddock, Pa. Valve-seat for hot-blast stoves	398,933	Mar. 5	179	47, 48	46	1147
Berger, John C., Michigan City, Ind. Refrigerator	396,361	Jan. 15	1458	371	46	303
Berger, Wilson C., Canton, Ohio. Metal roofing	399,004	Mar. 5	300	82	46	1172
Bergman, Claes. (See Reilley and Bergman.)						
Bergmann, Sigmund, New York, N. Y. Insulating pipe-coupling	397,218	Feb. 5	178	47	46	610
Bergmann, Sigmund, New York, N. Y. Equalizer for electric currents	398,121	Feb. 19	1538	408	46	896
Bergmann, Theodor F., Lilienstein, near Königstein, Saxony, Germany. Assaying-glass for testing wine	397,961	Feb. 19	1285	343	46	848
Beriew, Daniel, Springfield, Ohio. Horse-power	397,219	Feb. 5	178	48	46	610
Berlin Machine Works. (See Perry, James L., assignor.)						
Berlizheimer, Louis. (See Tysdal, John, assignor.)						
Bernhardt, Ernst, Newport, Ky. Cigar-perforating machine	396,801	Jan. 29	2287	585	46	477
Bernstein Electric Light Manufacturing Company. (See Bussmann, Oscar S., assignor.)						
Berri, William, Brooklyn, N. Y. Printing-cylinder	396,390	Jan. 22	1650	424	46	346
Berrien, Leonard B., assignor to Avery Planter Company, Peoria, Ill. Cultivator	400,389	Mar. 26	2402	629	46	1625
Berry, Henry C., Philadelphia, Pa. Device for leveling billiard-tables	399,126	Mar. 5	490	131	46	1209
Berry, Marcellus F., Brooklyn, N. Y. File-binder	398,574	Feb. 26	2202	580 581	46	1034
Berry, Thomas, North Fork, Ky. Stacker	398,934	Mar. 5	180	48	46	1148
Berry, William E., Williamsport, Pa. Support for ironing-boards	400,290	Mar. 26	2252	589	46	1597
Berry, William F., Blanchard, Iowa. Cultivator	396,853	Jan. 29	2356	604	46	493
Berryman, Edwin C. (See Geer, Adelbert L., assignor.)						
Berryman, Mathew W., assignor to M. N. Johnson, New York, N. Y. Printer's quoin	399,368	Mar. 12	881	229	46	1310
Berst, Conrad, Kansas City, Mo. Churn-dasher	398,488	Feb. 26	2085	549	46	1011
Berteaux, Georges V. A. (See André, Oscar, assignor.)						
Bertrand, Peter, South Lyon, Mich. Flower-stand	396,459	Jan. 22	1760	451	46	368
Bess, Albert, Hamilton, Ohio. Paper-cutter	398,575	Feb. 26	2204	581	46	1035
Bessire, Albin E. (See Bovet and Bessire.)						
Beth, Adolph. (See Morhard, Joseph, assignor.)						
Betts, Lewis F., assignor of two-thirds to R. E. Dietz Company, New York, and Steam Gauge and Lantern Company, Rochester, N. Y. Lantern	397,624	Feb. 12	814	213	46	739
Betts, Lewis F., assignor of two-thirds to R. E. Dietz Company, New York, and Steam Gauge and Lantern Company, Rochester, N. Y. Tubular lantern	397,625	Feb. 12	815	213	46	740
Beu, Christian, assignor of one-half to J. D. Dunlap, Moline, Kans. Shock-binder	398,935	Mar. 5	182	48	46	1148
Beveridge, Winfield E., Baltimore, Md. Steam-cooker	397,687	Feb. 12	907	240	46	757
Bicknell, John E., Oil City, Pa. Purifying paraffine-wax	400,042	Mar. 26	1679	489	46	1524
Bicknell, John E., Oil City, Pa. Purifying paraffine-wax	400,043	Mar. 26	1681	489	46	1524
Bidauld, Louis, Lyons, France. Screw-propeller	395,539	Jan. 1	346	88	46	73
Biddison, Samuel M. (See Biddison, Stella D., assignor.)						
Biddison, Stella D., Fort Worth, Tex., assignor to S. M. Biddison, Chicago, Ill. Retort vaporizer and superheater	400,291	Mar. 26	2253	589 590	46	1597
Biddlecombe, Thomas. (See Brown and Biddlecombe.)						
Bideiman, Robert M. (See Bury and Bideiman.)						
Bierline, Jacob. (See Bierline, Michael and J.)						
Bierline, Michael and J., Chaska, Minn. Machine for tempering clay	398,373	Feb. 26	1929	507	46	981
Bigley, Richard, Toronto, Ontario, Canada. Sectional water-heater	395,688	Jan. 8	566	149	46	129

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr'g.	Vol.	Page.
Billings, Andrew W., Brooklyn, N. Y. Manufacturing beer or ale	398,374	Feb. 26	1930	508	46	981
Billings Brothers *et al.* (See Bennett, Franklin, assignor.)						
Billings, George W., Cleveland, Ohio. Vapor-burner	398,689	Feb. 26	2383	633	46	1070
Billings, George W., Cleveland, Ohio. Mechanism for preventing the pulsation of burning jets in vapor-stoves	398,690	Feb. 26	2385	633	46	1070
Billings, George W., Cleveland, Ohio. Initial lighting device for gasoline-vapor stoves	398,691	Feb. 26	2386	633	46	1070
Bills, Edwin P. (See Duren and Bills.)

Björkström, Adolf F., Kansas City, Mo. Plow	397,891	Feb. 19	1185	318	46	831
Black Diamond Mining Tool Company. (See Moats, Andrew T., assignor.)						
Blackburn, James. (See Bower and Blackburn.)						
Blades, Harry H., Detroit, Mich. Device for controlling electric motors	396,725	Jan. 29	2162	554	46	452
Blades, Harry H., Detroit, Mich. Regulating-switch for electric motors	397,773	Feb. 12	1026	274	46	781
Blades, Harry H., Detroit, Mich. Electric blast-blower	399,822	Mar. 19	1570	407	46	1453
Blair, John A., Philadelphia, Pa. Inside calipers or gage	396,064	Jan. 15	1168	296	46	248
Blair, John B., assignor to himself and U. Blickenederfer, Chicago, Ill. Electric railway	399,236	Mar. 12	682	178	46	1274
Blair, William H., assignor of one-third to C. A. Stix, St. Louis, Mo. Smoke-consumer	398,688	Feb. 26	2383	632	46	1070
Blaisdell, Harry, assignor of one-third to C. A. Stix, St. Louis, Mo. Smoke-consumer	399,739	Mar. 19	1421	366	46	1426
Blake, Edward, Boston, Mass. Electric-railway switch	396,065	Jan. 15	1169	296	46	248
Blake, Edwin D., assignor of two-fifths to F. Scales, Chicago, Ill. Wagon-tongue support	396,977	Jan. 29	2331	654	46	530
Blake, Evans, Rockford, Ill. Clutch-pulley	395,476	Jan. 1	251	66	46	54
Blake, Francis, Weston, Mass. Speaking-telephone						
Blake, Henry, East Pepperell, Mass., assignor to himself and J. A. Greene, Brooklyn, N. Y. Belt-fastener	396,528	Jan. 22	1864	478	46	367
Blake, Henry H., Pittsburg, Pa., assignor to himself and T. A. Noble. Automatic folding chair	400,183	Mar. 26	2084	545	46	1567
Blake, Henry T., New Haven, Conn. Electrical tramway	398,814	Mar. 5	3	1, 2	46	1115
Blake, John A., Watertown, assignor to Prentiss Vise Company, New York, N. Y. Vise	396,066	Jan. 15	1170	297	46	248
Blake, Thomas J., Wilkinsburg, Pa. Starching-machine	400,184	Mar. 26	2085	546	46	1567
Blakeman, George H., Birmingham, Conn. Vehicle-spring	395,608	Jan. 1	457	116	46	94
Blakeman, Wilbert C., Shelton, Conn. Toy fortune-wheel	398,576	Feb. 26	2205	581	46	1035
Blakeslee, John R., Cuyahoga Falls, Ohio. Machine for general forging	395,606	Jan. 8	788	204 205	46	164
Blanke, Ferdinand J., Whitewater, Wis. Swivel-plow	396,460	Jan. 22	1760	451	46	368
Blankman, John S., Washington, D. C. Sight for fire-arms	395,944	Jan. 8	991	254	46	205
Blasdel, Henry G., San Francisco, Cal. Ore-washer	397,581	Feb. 12	737	191	46	725
Blaxter, George H. (See Herman, Reinhold, assignor.)						
Blazier, Oscar V., Gillette, N. J. Snap-hook	399,005	Mar. 5	301	82	46	1172
Blessing, James H., Albany, N. Y. Apparatus for purifying water	395,651	Jan. 1	538	135	46	108
Blickenderfer, Ulric. (See Blair, John B., assignor.)						
Blickenderfer, Ulric, Chicago, Ill. Ditching-machine	396,391	Jan. 22	1652	425	46	346
Bliss, William H., deceased, Newport, R. I.; E. Newton administrator. Furnace for destroying refuse matter	395,807	Jan. 8	792	205 206	46	165
Blood, Arthur J., *et al.* (See Blood, Charles O., assignor.)						
Blood, Charles O., assignor to A. J. and L. K. Blood, Lynn, Mass. Nutmeg-grater	399,823	Mar. 19	1572	407	46	1455
Blood, Lillebridge K., *et al.* (See Blood, Charles O., assignor.)						
Bloom, John C., Kalamazoo, Mich., assignor of one-half to Emerson, Talcott & Co., Rockford, Ill. Mower	396,023	Jan. 8	1113	283	46	228
Bloomer, Charles G., Pawtuxet, R. I. Card for buttons or studs	399,824	Mar. 19	1573	407	46	1456
Blount, Eugene L. (See Currier and Blount.)						
Blount, James R. (See Southerland, Milton B., assignor.)						
Blount, John G., Boston, Mass. Belt-tightener for buffing-machines	395,732	Jan. 8	650	168	46	142
Bluntschli, Theodor, Schaffhausen, Switzerland. Machine for cutting and polishing precious stones, &c.	399,006	Mar. 5	301	82	46	1172
Blydenburgh, Charles M., Riverhead, N. Y. Vehicle	395,870	Jan. 8	889	228	46	186
Blydenburgh, Charles M., Riverhead, N. Y. Vehicle-gear	396,978	Jan. 29	2332	654	46	530
Blydenburgh, Charles M., Riverhead, N. Y. Vehicle-gear	395,539	Jan. 1	347	88	46	73
Bockenbenser, Christian, Kenosha, Wis. Combined chair and step-ladder	397,270	Feb. 5	246	64, 65	46	622
Boda, Abia Z., Columbus, Ohio. Electric railway-signal	395,945	Jan. 8	993	255	46	205
Boda, William J., Dayton, Ohio. Finishing of house interiors						
Bodenstab, William. (See Marohn, Ferdinand, assignor.)						
Bodey, Howard, Norristown, Pa. Kindergarten teaching apparatus	396,067	Jan. 15	1171	297	46	249
Boehme, Emil, assignor to S. Leutner & Co., Breslau, Prussia, Germany. Friction-clutch	399,733	Mar. 19	1423	366	46	1426
Boehncke, Max A. T., assignor to Continuous Kiln Company, Omaha, Nebr. Combined brick drier and kiln	395,689	Jan. 8	598	150 151	46	130
Boersig, Richard, New Albany, Ind. Stove	398,694	Feb. 26	2390	634	46	1071
Bofinger, Gustav, New York, N. Y. Type-writer ciphograph	396,529	Jan. 22	1865	478 479	46	367
Bogenschutz, Charles, Jr., Covington, Ky. Molder's flask	398,219	Feb. 19	1677	444	46	922
Bogue & Mills Manufacturing Company. (See Mills, Mortimer B., assignor.)						
Bohm, William D., Acton, London, county of Middlesex, England. Apparatus for accelerating the passage of liquids through filter-beds	400,185	Mar. 26	2087	546	46	1567
Bohmann, Joseph, Chicago, Ill. Violin-rest	397,454	Feb. 5	538	141	46	681
Bohn, Adam, Mercer, Pa. Pruning implement	399,370	Mar. 12	884	229	46	1311

Clark, Edward L., Pittsburg, Pa. Rolling-mill plant	397,339	Feb. 5	356	93, 94	46	646
Clark, Edward L., Pittsburg, Pa. Rolling metal strips	397,693	Feb. 12	914	242	46	759
Clark, Edward L., Pittsburg, Pa. Rolling-mill plant	400,192	Mar. 26	2097	549	46	1569
Clark, Edward W., Rochester, Minn. Bag-holder	400,191	Mar. 26	2096	549	46	1569
Clark, Gates A., assignor to Clark's Coking and Smokeless Furnace Company, Rochester, N. Y. Coking-furnace	399,378	Mar. 12	901	234	46	1314
Clark, Gates A., assignor to Clark's Coking and Smokeless Furnace Company, Rochester, N. Y. Coking-furnace	399,379	Mar. 12	902	234	46	1314
Clark, George H., Boston, Mass., assignor to Clark Relasting and Shoe Treeing Company, Portland, Me. Manufacture of boots and shoes	399,637	Mar. 19	1500	412	46	1459
Clark, Henry A. (See Tregurtha, Alfred T., assignor.)						
Clark, Isaac, Morris Plains, N. J. Thill-coupling	397,633	Feb. 12	628	216	46	742
Clark, James T., deceased, Milwaukee, Wis.; M. F. Clark administratrix. Railway-crossing	396,907	Jan. 29	2296	587 588	46	479
Clark, John M., assignor of one-half to C. L. Hinton, Dayton, Ohio. Coal-oil burner or heating apparatus	397,971	Feb. 19	1297	346	46	850
Clark, John T., La Grange, Ga., assignor of three-fourths to L. C. Pressley, New York, N. Y. Automatic air-supply for propelling cars	400,302	Mar. 26	2272	594	46	1601
Clark, Leander. (See Fisher and Ballard, assignors.)						
Clark, Mary F., administratrix. (See Clark, James T.)						
Clark, Morris W., Camden, N. J. Spring-block	395,545	Jan. 1	355	91	46	74
Clark, Oliver H., Pittsburg, Pa. Railway-crossing gate	396,072	Jan. 15	1179	299 300	46	250
Clark Relasting and Shoe Treeing Company. (See Clark, George H., assignor.)						
Clark, Stephen S. (See Taylor and Clark.)						
Clark, Thomas, assignor to A. J. Clark, Brooklyn, N. Y. Device for advertising	395,953	Jan. 8	1004	257	46	208
Clark, Walter B., Covington, Ky. Brake for street-railway cars	399,740	Mar. 19	1431	368	46	1428
Clark, William H., assignor to H. G. Bird, Chicago, Ill. Sand-box for railway-cars	396,352	Jan. 15	1588	402	46	330
Clarke, Charles D., Merrill, Wis. Lumber-pile	397,490	Feb. 12	588	153	46	698
Clarke, Fred, and H. H. Bassett, Piqua, Ohio. Lathe attachment	397,694	Feb. 12	916	242	46	759
Clarke, Freeman. (See Scofield, Henry L., assignor.)						
Clarke, George, Jersey City, N. J., assignor to H. G. Phillips, Wilmington, Del. Coffer-dam for vessels	398,232	Feb. 19	1700	449	46	927
Clarke, James W. (See Clarke, Jeanie P. and J. W.)						
Clarke, Jeanie P. and J. W., Boston, Mass. Game	398,233	Feb. 19	1701	450	46	928
Clarke, John, and R. W. Savage, Tyler, Tex. Radial-tube boiler	396,393	Jan. 22	1655	425	46	347
Clarke, Reuben, Toronto, assignor of one-half to A. F. Barron, Sarnia, Ontario, Canada. Door-hanger	395,693	Jan. 8	604	154	46	131
Clarke, Robert, Gravesend, N. Y. Manufacture of plumbers' traps	399,243	Mar. 12	692	180	46	1275
Clarke, Samuel, Child's Hill, county of Middlesex, England. Cup for food-warmers	399,741	Mar. 19	1434	369	46	1429
Clark's Coking and Smokeless Furnace Company. (See Clark, Gates A., assignor.)						
Clans, John. (See Crevert and Clans.)						
Claviger Cycle Company. (See Golding, William, assignor.)						
Clayton, John N., assignor of one-half to J., J. E., C. R., and B. L. Lambert, Ypsilanti, Mich. Vapor-burner	396,353	Jan. 15	1590	403	46	398
Cleary, James K., Washington, D. C. Can or similar vessel	398,234	Feb. 19	1704	450	46	928
Cleaveland, John B., Indianapolis, Ind. Fence	397,110	Feb. 5	7	2	46	560
Cleaver, Frank C., Terre Haute, Ind. Slide-valve	397,170	Feb. 5	107	28	46	598
Clement, Francis M., Marion, Ky. Bee-hive	399,742	Mar. 19	1435	369	46	1429
Clement, John. (See Baldwin and Clement.)						
Clements, Thomas, and G. H. Royce, assignors to J. Cunningham Son & Company, Rochester, N. Y. Apparatus for framing and setting up vehicle-bodies	395,485	Jan. 1	265	68	46	56
Clemson, George N., Middletown, N. Y. Hack-saw	400,057	Mar. 26	1900	494	46	1528
Cleveland Burial Case Company. (See Weckmiller, Adolph, assignor.)						
Cliff, Edward, Rochester, N. Y. Bolster-spring for wagons	399,638	Mar. 19	1501	412	46	1460
Cliff, James, Scriba, assignor of one-half to L. E. Todd, Oswego, N. Y. Wagon-bolster spring	397,632	Feb. 12	1107	296	46	797
Clifford, John, assignor to L. Wolff Manufacturing Company, Chicago, Ill. Hose-nozzle	399,654	Mar. 19	1313	336	46	1405
Cline, George J., Goshen, Ind. Fence-machine	398,377	Feb. 26	1934	509	46	981
Clinton, Merle E., Washington, D. C., assignor to Schicht & Field Company, New York, N. Y. File-box	395,312	Jan. 1	10	3	46	4
Closson, David B., Boston, assignor of one-half to W. B. Rice, Quincy, Mass. Boot or shoe	396,542	Jan. 22	1680	483	46	390
Clotworthy, William P., Baltimore, Md. Preserving cocoanut	400,303	Mar. 26	2273	.....	46	1601

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Cloud, William H., assignor of one-half to W. Styer, Kokomo, Ind. Pump	396,193	Jan. 15	1359	349	46	284
Clouette, Narcisse, assignor of one-half to E. C. Willey, Manchester, N. H. Combined trap and dirt-collector	395,313	Jan. 1	10	3	46	4
Clough, Edwin R., and E. M. Easley, Lebanon, Mo. Leveling-instrument	397,695	Feb. 12	917	243	46	759
Clough, Edwin R., and F. Jones, Lebanon, Mo. Fire-kindler	397,696	Feb. 12	917	243	46	759
Clow, George E., Chicago, Ill. Detachable leg and standard for stools or tables	397,225	Feb. 5	186	49	46	611
Coad, Theophilus, Forest Gate, county of Essex, England. Voltaic battery	395,169	Jan. 8	708	182	46	151
Coates, John, Erie, Pa. Water-motor	396,729	Jan. 29	2168	556	46	453
Cobb, Henry B., Wilmington, Del. Underground system of electric wires	396,543	Jan. 22	1881	484	46	390
Cobb, John J., assignor to S. Hall and M. L. Sweet, Grand Rapids, Mich. Coupling for bent sleigh-knees	395,679	Jan. 1	578	145	46	117
Coble, Anthony, and J. H. Mounts, Montgomery City, Mo. Car-coupling	396,268	Jan. 15	1467	373	46	305
Coburn, George H., Laconia, N. H. Knitting-machine	395,314	Jan. 1	11	3, 4	46	5
Cochler, George W., Belleville, Kans. Gage-head for pocket-rules	396,808	Jan. 29	2298	588	46	479
Cochran, Hugh M., McConnelsville, Ohio. Respirator	396,809	Jan. 29	2298	588	46	480
Cockburn, Arthur C., London, England. Safety device for use in electric circuits	395,421	Jan. 1	166	42	46	35
Codd, Donald, assignor to R. D. Richardson, Winnipeg, Manitoba, Canada. Pencil-sharpener	399,529	Mar. 19	1592	413	46	1460
Codling, Robert B., Bristol, Conn. Machine for finishing caster-rollers	398,378	Feb. 26	1935	509	46	982
Codman & Shurtleff. (See Shurtleff, Asahel M., assignor.)						
Coerper, Carl, Cologne, Prussia, assignor to Helios Actien-Gesellschaft für Elektrisches Licht und Telegraphenbau, Ehrenfeld, Germany. Electro-dynamic machine	396,989	Jan. 15	1468	373	46	305
Coffin, Charles L., Detroit, Mich. Electric welding	395,678	Jan. 8	899	231	46	187
Coffin, Charles L., Detroit, Mich. Electric welding	396,270	Jan. 15	1469	374	46	305
Coffin, Charles L., Detroit, Mich. Electric welding	399,019	Mar. 5	320	86	46	1176
Coffin, David W. (See Reed, John C., assignor.)						
Coffin, John, Johnstown, Pa. Apparatus for toughening steel bars	399,381	Mar. 12	905	235	46	1315
Coffin, John, Johnstown, Pa., assignor to Cambria Iron Company, of Pennsylvania. Toughening steel axles	399,380	Mar. 12	903	235	46	1314
Coffin, John, Johnstown, Pa., assignor to Cambria Iron Company, of Pennsylvania. Continuously annealing and plating wire	399,382	Mar. 12	907	235	46	1315
Cogan, Jesse J., and E. A. Said, assignors of one-third to F. H. Ellis, St. Louis, Mo. Envelope	398,768	Feb. 26	2499	663	46	1094
Coghlan, John, assignor to C. W. Sherburne, Boston, Mass. Hose-coupling	396,684	Jan. 22	2099	539	46	432
Cohen, Robert L., Camden, N. J., assignor of one-half to W. F. Anderson, Philadelphia, Pa. Dynamo	397,340	Feb. 5	359	94	46	646
Cohn, Reuben, New York, N. Y. Ear-protector	397,583	Feb. 12	739	192	46	725
Cohn, Rika, *et al.* (See Mundt, Wilhelm, assignor.)						
Coiner, Gabriel D., Koiner's Store, Va. Tension device for use in making fences	399,383	Mar. 12	909	236	46	1315
Colam, William N., London, county of Middlesex, England. Cable-tramway gripper	395,422	Jan. 1	167	43, 44	46	35
Colam, William N., London, county of Middlesex, England. Pulley-carrier for cable tramways	395,423	Jan. 1	169	44, 45	46	36
Colam, William N., London, county of Middlesex, England. Cable tramway	395,424	Jan. 1	170	45	46	36
Colam, William N., London, county of Middlesex, England. Cable tramway	395,425	Jan. 1	171	45	46	37
Colbert, John M., Mantua, assignor to J. H. and F. Ferguson, Bridgeton, N. J. Can-soldering machine	399,020	Mar. 5	321	86	46	1176
Colby, Arthur. (See Colby and Coppersmith, assignors.)						
Colby, Caleb K., Brooklyn, and W. Coppersmith, New York, assignors to themselves and A. Colby, Brooklyn, N. Y. Bracelet	397,833	Feb. 12	1109	297	46	797
Colby, Edward J., Chicago, Ill. Galvanic battery	397,111	Feb. 5	9	2	46	580
Colby, Edward J., Chicago, Ill. Gas-regulator	398,881	Mar. 5	96	26	46	1132
Colby, Edward J., Chicago, Ill. Hotel-call	400,304	Mar. 26	2273	595	46	1601
Cole, Charles H., Little Rock, Ark. Carpet-lining	400,193	Mar. 26	2098	549	46	1569
Cole, George P., Johnstown, N. Y. Buckle	398,028	Feb. 19	1408	371	46	870
Cole, Henry, Denver, Colo. Manure and urine conduit	398,379	Feb. 26	1937	509	46	982
Cole, James A., Julian, Cal. Reversible plow	396,142	Jan. 15	1279	328	46	270
Cole, Jay F., and E. W. Parno, Greene, Iowa. Roof-connection for railway-cars	400,305	Mar. 26	2274	595	46	1601
Cole, Marshal T., Claremont, Minn. Clevis	396,859	Jan. 29	2363	606	46	495
Coleman, John A., Providence, R. I. Machine for feeding horseshoe-nails	396,467	Jan. 22	1771	453, 454, 455	46	370
Coleman, John A., Providence, R. I. Horseshoe-nail	397,896	Feb. 19	1193	320	46	832
Coleman, John P., Swissvale, Pa. Electric signaling apparatus	395,315	Jan. 1	12	4	46	5
Colhapp, John L., assignor of two-thirds to C. Chamberlain, Chicago, Ill. Paper pail	396,028	Jan. 8	1119	284	46	229
Collins, Albert W. (See Carter and Keeble, assignors.)						
Collins, Harry C., Springfield, Mass. Device for supporting and giving vibrating motion to hose-pipes	395,611	Jan. 1	460	117	46	94
Collins, James F., Allegheny, Pa. Spike-machine	399,500	Mar. 12	1069	279	46	1347
Collins, Paul E., Lynn, Mass. Boat-propelling mechanism	398,703	Feb. 26	2404	638	46	1075
Collyer, Robert H., New Orleans, La. Machine for decorticating fibrous plants	397,536	Feb. 12	653	171	46	710
Colquitt, George F., Purcell, Indian Ter. Tobacco-pipe	395,486	Jan. 1	267	69	46	56
Colton, Arthur L., Cleveland, Ohio. Fastener	398,819	Mar. 5	12	3	46	1116
Colton, George A., Phœnix, N. Y. Letter-box indicator	397,341	Feb. 5	360	94	46	646
Colwell, Evander N., assignor of one-half to C. F. Kenneweg, Allegheny, Pa. Car-coupling	397,277	Feb. 5	260	67	46	625
Colwell, Evander N., Allegheny, assignor of one-half to C. F. Kenneweg, Allegheny County, Pa. Producing forged articles from scraps of metal	397,278	Feb. 5	261	68	46	625
Combination Nail Machine Company. (See Chase and Foster, assignors.)						
Comrie, Jennings, Gloversville, N. Y. Glove	395,954	Jan. 8	1005	258	46	208
Comstock, Frank A., Columbus, Ohio. Vehicle-seat	396,194	Jan. 15	1300	349	46	285
Conacher, Alexander, Windsor, county of Berks, England. Refrigerating-machine	396,730	Jan. 29	2169	556, 557	46	453
Conacher, Alexander, Augusta, Ga. Air-pump	397,780	Feb. 19	1035	277	46	783
Conant, Luther, Oak Park, Ill. Feed-gage for printing-presses	399,384	Mar. 12	910	236	46	1316
Condict, George H., Philadelphia, Pa. Regulator for electrical machinery	399,509	Mar. 12	1231	318	46	1376
Condit, Ezekiel C., Kansas City, Mo. Furnace	397,697	Feb. 12	918	241	46	759
Conkey, Leonard L., Benton Harbor, Mich. Buckle	395,742	Jan. 8	672	172	46	141
Conklin, Edward R., Wauseon, Ohio. Wheel-cultivator	396,468	Jan. 22	1779	455, 456	46	371
Conklin, Theodore F., assignor of one-half to N. S. Lapperr, Chicago, Ill. Bluing-package	399,974	Mar. 19	1778	461	46	1496
Connelly, John S., *et al.* (See Wiedling, Carl T. A. H., assignor.)						
Connelly, Thomas E., *et al.* (See Wiedling, Carl T. A. H., assignor.)						
Conner, Edward G., Valatie, assignor to Tompkins Brothers, Troy, N. Y. Electrical stop-motion mechanism for knitting-machines	397,537	Feb. 12	655	171, 172	46	710

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Conner, Francis M., Aurelia, Iowa. Sled	395,879	Jan. 8	900	231	46	187
Conner, William A., Pittsburg, Pa. Electric cable	395,546	Jan. 1	356	91	46	74
Conniff, James F., Oconto, Wis. Steam-sled	400,058	Mar. 26	1901	494	46	1528
Connor, John P., Boston, Mass. Pastry-oven	398,380	Feb. 26	1938	510	46	982
Considine, Thomas A., Chicago, Ill. Molding-machine	398,704	Feb. 26	2406	638	46	1075
Consolidated Agency Company of London. (See Frampton, Robert C., assignor.)						
Consolidated Patents Company. (See Goodell, Etta A., assignor.)						
Continuous Kiln Company. (See Boehncke, Max A. T., assignor.)						
Converse, Edmund C., New York, N. Y. Tubing	399,244	Mar. 12	893	180	46	1276
Converse, Edmund C., New York, N. Y. Manufacture of tubing	399,245	Mar. 12	895	181	46	1276
Conway, Harrison V., Boone, Iowa. Car-coupling	400,306	Mar. 26	2275	595	46	1601
Conyers, Walter P. (See Luce, David S., assignor.)						
Cook, Frederick W., San Francisco, Cal. Saw-mill set-works	398,942	Mar. 5	191	51	46	1150
Cook, George W., Mountain View, Cal. Track-clearer	397,524	Feb. 12	740	192	46	726
Cook, John A., Buffalo, N. Y. Page-index	400,059	Mar. 26	1902	494	46	1528
Cook, John H., Washington, D. C. Combination-tongs	398,129	Feb. 19	1540	411	46	808
Cook, Winfield S. (See Westbrook and Cook.)						
Cooper, Charles. (See Cooper, George, assignor.)						
Cooper, Charles F. (See Hermite, Paterson, and Cooper.)						
Cooper, Frank J., Emporia, Kans. Shears	397,698	Feb. 12	919	243	46	760
Cooper, George, assignor of one-half to C. Cooper, Bennington, Vt. Circular-knitting machine	397,417	Feb. 5	473	125	46	609
Cooper, George L. (See Rhind and Cooper.)						
Cooper, Henry H., *et al.* (See Shannon, Patrick H., assignor.)						
Cooper, John W., Atlanta, Ga. Car-wheel	400,307	Mar. 26	2276	595	46	1601
Cooper, Jonathan H., Marshall, Tex. Watch-case bow	399,840	Mar. 19	1593	413	46	1460
Cooper, William M., and E. J. Cashmore, Toronto, Ontario, Canada; said Cashmore assignor to said Cooper. Magazine fire-arm	398,130	Feb. 19	1549	411	46	808
Co-Operative Foundry Company. (See Brayer, Nicholas, assignor.)						
Cooprider, Henry, Jr., Clay City, Ind. Traction-tongue for thrashing-machines	395,547	Jan. 1	357	91	46	74
Coplen, John D., Denver, Colo. Combined separator and concentrator	397,585	Feb. 12	742	192	46	726
Coplen, John D., Denver, Colo. Ore-crusher	399,600	Mar. 12	1234	318	46	1377
Coppersmith, William. (See Colby and Coppersmith.)						
Corbett, George, Bradford, Pa. Rig for drilling and pumping wells	396,544	Jan. 22	1883	484, 485	46	390
Corbett, Joseph, New York, N. Y., assignor to G. H. Hobart, Jersey City, N. J., and S. G. Donaldson, New York, N. Y. Snow-plow	395,548	Jan. 1	358	92	46	75
Corbin, Amasa, Jr., Gouverneur, N. Y. Vehicle-axle	398,925	Feb. 19	1705	450	46	928
Corbin Cabinet Lock Company. (See Doremus, Willard D., assignor.)						
Corey, John H., Pittsfield, Mass. Bottle-stopper	398,495	Feb. 26	2095	552	46	1013
Cork, Harrison T., Marshall, Ill. Folding step	398,496	Feb. 26	2096	552	46	1014
Corken, George C., *et al.* (See Simpson, David J., assignor.)						
Corliss, Emily A., administratrix. (See Corliss, George H.)						
Corliss, George H., deceased, Providence, R. I.; E. A. Corliss administratrix. Machine for finishing engine-bed castings	396,967	Jan. 29	2544	657	46	532
Cormack, George H., Rockford, Ill. Preparing grain. (Reissue)	10,978	Jan. 1	580	146	46	118
Cornely, Emil, Paris, France. Embroidering-machine	395,549	Jan. 1	360	92	46	75
Cornish, John A., Nashville, Ark. Grate	398,131	Feb. 19	1552	411	46	899
Cornwall, George L. (See Andrews, L. Edwin, assignor.)						
Cornwall, John D., Sanford, Fla. Construction of vessels	396,648	Jan. 22	2049	526	46	422
Corser, Frederic G. (See Camp and Corser.)						
Corssen, Dettmar J. M., Effingham, Ill. Oiler	397,050	Jan. 29	2635	679	46	549
Cortright Metal Roofing Company. (See Carroll, John E., assignor.)						
Cory, George W., Kane, Ill. Embroidery-frame	396,073	Jan. 15	1184	300	46	251
Cory, Henry W. (See Kennard and Cory.)						
Cosbie, William, San Francisco, Cal. Horse-collar	399,841	Mar. 19	1594	413	46	1460
Cosh, William M., Baltimore, Md. Apparatus for the manufacture of gas	400,060	Mar. 26	1903	495	46	1528
Costigan, Joseph P., St. Paul, Minn. Fishing-reel	396,469	Jan. 22	1780	456	46	372
Coston, Samuel B., Scranton, Pa. Griddle greasing and oiling utensil	396,860	Jan. 29	2364	607	46	495
Coulston, Joseph W., Philadelphia, Pa. Signal-light for vessels	395,880	Jan. 8	901	231	46	188
Coursen, George H., Baltimore, Md. Combined tobacco-pipe and cane	395,426	Jan. 1	172	45	46	37
Court, Nicholas, Will's Creek, Ohio. Egg-tester	398,236	Feb. 19	1707	450	46	929
Courtad, Henry, Sandusky, Ohio. Whiffletree	398,705	Feb. 26	2407	638	46	1075
Covel, Milo, Chicago, Ill. Saw-sharpening machine	398,030	Feb. 19	1410	372	46	870
Covel, Milo, Chicago, Ill. Device for holding and dressing saws	398,031	Feb. 19	1411	373	46	871
Covel, Milo, Chicago, Ill. Saw-swaging machine	398,032	Feb. 19	1413	373, 374	46	871
Covel & Osborn, *et al.* (See Snedden, George, assignor.)						
Covel, William L., Biloxi, Miss. Railway-car	398,029	Feb. 19	1409	372	46	870
Cowan, Alexander, Urbana, Ohio. Flood-fence	395,770	Jan. 8	1708	189	46	151
Cowan, Harry W., Gros, Dak. Ter. Automatic grain-measure	395,743	Jan. 8	673	172, 173	46	145
Cowen, Robert, assignor to Boston Woven Hose Company, Boston, Mass. Device for securing hose to couplings	396,582	Feb. 26	2216	586	46	1037
Cowles, Alfred H. (See Cowles, Eugene H. and A. H.)						
Cowles, Eugene H., Cleveland, Ohio. Manufacturing iron or steel	397,491	Feb. 12	589	.....	46	698
Cowles, Eugene H. and A. H., Cleveland, Ohio. Alloy	397,609	Feb. 12	920	.....	46	760
Cowles, Henry A., assignor to Bay State Whip Company, Westfield, Mass. Whip	397,456	Feb. 5	541	142	46	681
Cowles, William, Brooklyn, N. Y. Steam-boiler	396,545	Jan. 22	1887	485, 486, 487	46	391
Cowley, James T., Lowell, assignor to Lamson Store Service Company, Boston, Mass. Store-service apparatus	395,316	Jan. 1	14	4, 5	46	5
Cox, Henry F., Altoona, Pa. Rail-chair	398,381	Feb. 26	1939	510	46	983
Cox, Samuel B., and J. W. Anderson, Lancaster, Pa.; said Cox assignor to said Anderson. Fifth-wheel	396,810	Jan. 29	2299	588	46	480
Cox, William H., Virden, Ill. Gate	398,706	Feb. 26	2408	638, 639	46	1075
Coxon, Samuel. (See Venables and Hughes, assignors.)						
Cozans, Luke F., *et al.* (See Balet, Joseph W., assignor.)						
Crabb, Walter H. (See Heath, Emery, assignor.)						
Crafts, Francis H., assignor to E. & B. Holmes, Buffalo, N. Y. Pressure-plate for planing-machines	395,467	Jan. 1	289	69	46	57
Crafts, Francis H., assignor to E. & B. Holmes, Buffalo, N. Y. Chip-breaker	397,834	Feb. 12	1110	297	46	797

Fay, Winslow L., Elyria, Ohio. Tricycle	397,348	Feb. 5	367	96	46	647
Fear, Frederick, New York, N. Y. Electro-magnetic attachment for eyeglasses	397,790	Feb. 12	1053	281	46	768
Fearey, Frederick T. (See Gartner, Alfred, assignor.)						
Felbel, Jacob, and A. W. Steiger, assignors to Writing Machine Manufacturing Company, New York, N. Y. Type-writing machine	400,200	Mar. 26	2106	552	46	1571
Feld, John A., and J. Siebrecht, assignors of one-third to J. Mayer, New York, N. Y. Vessel for holding liquids under pressure	400,318	Mar. 26	2294	600	46	1605
Fell, Ambrose G., New York, N. Y. Making a lead pigment	396,275	Jan. 15	1477	.....	46	306
Felt, Dorr E., assignor to himself and R. Tarrant, Chicago, Ill. Adding-machine	396,034	Jan. 8	1125	286	46	230
Felt, Dorr E., assignor of one-fourth to R. Tarrant, Chicago, Ill. Lathe-chuck	396,035	Jan. 8	1126	286	46	231
Felt, Seth C., New Boston, Mich. Road-cart	398,242	Feb. 19	1716	452	46	931
Fenerty, Edward L., Halifax, Nova Scotia, Canada. Shovel	398,887	Mar. 5	101	28	46	1133
Fenner, George H. (See Fenner, Henry J. and G. H.)						
Fenner, Henry J., Brookeholme, St. John's Park, Blackheath, county of Kent, and G. H. Fenner, 38 Hillsboro Road, Dulwich, county of Surrey, England. Apparatus for the manufacture of naphthaline	399,139	Mar. 5	521	136	46	1216
Ferdinand, Anthony B., Oshkosh, Wis. Telephone or analogous electric system	397,176	Feb. 5	124	30, 31	46	599
Ferguson, Frank, *et al.* (See Colbert, John M., assignor.)						
Ferguson, George J., Greenville, Tex. Recording door-lock	395,319	Jan. 1	19	5, 6	46	6
Ferguson, Harry, New York, N. Y. Machine for finishing poles or rods	398,243	Feb. 19	1717	453	46	931
Ferguson, Hugh, *et al.* (See Wellens, Robert, assignor.)						
Ferguson, James H., *et al.* (See Colbert, John M., assignor.)						
Ferguson, Robert G., assignor of one-half to O. A. Day, Saratoga Springs, N. Y. Portable steam generator and radiator combined	399,512	Mar. 12	1094	285, 286	46	1351
Fernau, Magnus, Flatonia, Tex. Bedstead-tie	397,708	Feb. 12	931	247	46	762
Ferrall, Thomas R., Boston, Mass. Anti-friction bearing	399,662	Mar. 19	1325	339	46	1406
Ferreira, Charles E., Morgan Park, Ill. Feed-water heater and purifier	400,319	Mar. 26	2295	600, 601	46	1606
Ferriott, Charles L., assignor to J. M. Weems, Dawson, Tex. Peach-stoner	399,513	Mar. 12	1097	286	46	1352
Ferris, Henry L., Harvard, Ill., assignor to Hunt, Helm & Ferris. Hay-carrier	399,140	Mar. 5	523	136	46	1216
Ferris, Sherwood B., Lakewood, N. J. Clasp or buckle	395,965	Jan. 8	1024	261	46	212
Fessenden, Edward H. (See Harper, William, assignor.)						
Fessenden, William N., Candor, N. Y. Snap-hook	398,599	Feb. 26	2240	593	46	1041
Fest, Charles P., assignor of one-half to W. G. Toplis, Germantown, Pa. Air-heating apparatus	398,715	Feb. 26	2429	644	46	1080
Fetherstonhaugh, Frederic B., Toronto, Ontario, Canada. Corn-cob holder	395,698	Jan. 8	610	154	46	132
Ffrost, Henry C. A., Sydney, New South Wales. Means for reciprocating ink-distributing rolls of printing-machines	395,966	Jan. 8	1024	261	46	212
Field, Isaac F., Sandy Lake, Pa. Washing-machine	397,349	Feb. 5	367	96	46	647
Field, Stephen D., Stockbridge, Mass. Vibratory multiplex telegraphy	395,556	Jan. 1	372	95, 96	46	77
Field, Wallace L., assignor to J. Strange, Menasha, Wis. Pulley	397,978	Feb. 19	1318	352	46	854
Fiester, John C., Reading, Pa. Hat-block	397,117	Feb. 5	12	4	46	562
Figarotta, Vincent L. (See Leach and Figarotta.)						
Filer, William H., Grove City, Pa. Steam cooking apparatus	397,709	Feb. 12	931	247	46	762
Filley, Giles F., St. Louis, Mo. Heating-stove	397,710	Feb. 12	933	248	46	762
Filley, Giles F., St. Louis, Mo. Cooking-stove	397,844	Feb. 12	1124	301	46	800
Finch, John M., Crockett, and J. R. Cross, San Francisco, Cal. Separator	400,201	Mar. 26	2108	553	46	1572
Finch, John M., and W. D. Gray, assignors to E. P. Allis & Company, Milwaukee, Wis. Rotary bolt	398,388	Feb. 26	1949	512, 513	46	985
Finch, John W., and J. B. Park, Clay Centre, Kans. Bier	398,776	Feb. 26	2510	667	46	1096
Finch, Thomas F. N., Worcester, county of Worcester, England. Car-axle lubricator	395,887	Jan. 8	913	234	46	190
Finckel, Martin L., *et al.* (See Goodman, Samuel N., assignor.)						
Findley, John P., Blanchard, Pa. Index	400,070	Mar. 26	1918	500	46	1532
Finn, Richard, Chicago, Ill. Supply and waste valve	396,151	Jan. 15	1291	331	46	272
Finnegan, James, and W. Mies, Ferney, Dak. Ter. Wheel-harrow	398,600	Feb. 26	2241	593	46	1042
Finnegan, John, assignor to T. Devlin & Co., Philadelphia, Pa. Transom-lifter	396,357	Jan. 15	1594	404	46	327
Firestone, Truman L. (See Smith and Firestone.)						
Firm, Joseph L., Jersey City, N. J. Printing newspapers or pamphlets	399,659	Mar. 19	1319	338	46	1406
Firth, Edwin A. and I. Tompkins, Troy, N. Y. Die for making axle-nuts	396,864	Jan. 29	2370	608	46	497
Firth, Edwin A., and I. Tompkins, Troy, N. Y. Making axle-nuts	396,865	Jan. 29	2371	608	46	497
Fischer, August, Winchester, assignor of one-half to J. F. Potts, Whitehall, Ill. Stem winding and setting watch	400,202	Mar. 26	2110	553	46	1572
Fish, Peter, *et al.* (See Dyer, Isaac T., assignor.)						
Fish, Samuel H., Hinsdale, Ill. Paper-punch	395,320	Jan. 1	24	6	46	7
Fisher, Alfred G., assignor to M. D. Goetting, Springfield, Mass. Temporary binder	397,845	Feb. 12	1125	301	46	801
Fisher, Charles C. (See Fisher, Samuel C. and C. C.)						
Fisher, Ebenezer. (See McBride and Fisher.)						
Fisher, Harvey L., and J. W. Ballard, assignors of one-third to L. Clark, Toledo, Iowa. Railway-scales	398,624	Mar. 5	18	5	46	1117
Fisher, Henry H., New Paris, Ind. Washing-machine	399,960	Mar. 19	1786	463	46	1498
Fisher, James S., Chicago, Ill. Sash-fastener	395,321	Jan. 1	25	6	46	7
Fisher, John E., assignor of one-third to W. W. Baxter, Boston, Mass. Vehicle-wheel	397,711	Feb. 12	934	248	46	762
Fisher, Joseph H., Deerfield, assignor to A. J. Sands, Chicago, Ill. Can-opener	399,252	Mar. 12	707	184	46	1278
Fisher, Marion O., assignor to S. C. McClure, Dayton, Ohio. Coupon pass-book	397,494	Feb. 12	595	154	46	699
Fisher, Samuel, Mount Washington, Md., assignor of one-half to W. J. Cauthers, Fordham, N. Y. Bridle-bit	398,319	Feb. 19	1835	484	46	955
Fisher, Samuel C. and C. C., Steubenville, Ohio. Draw-bar for railway-cars	398,716	Feb. 26	2430	644	46	1080

Frederick, Samuel C., Arcadia, Kans. Metallic roofing	397,460	Feb. 5	544	143	46	682
Fredericks, John H., Lock Haven, Pa., assignor of one-half to St. Louis Stamping Company, St. Louis, Mo. Cooking utensil	397,847	Feb. 12	1128	302	46	801
Frederiksen, Johan D. (See Jespersen, Wilhelm, assignor.)	395,890	Jan. 8	916	235	46	190
Freeman, Leander W., Liberty, Ind. Machine for making wire fencing	397,846	Feb. 12	1127	301	46	801
Freeman, Thomas F., Brooklyn, N. Y. Amalgamator	400,399	Mar. 26	2418	633, 634	46	1628
Freese, Egbert M., Plymouth, and J. W. Wolcott, Fremont, assignors to Fate & Freese, Plymouth, Ohio. Cutting-table for brick or tile machines	395,775	Jan. 8	715	184	46	152
Freiner, Emil. (See Dufner and Freiner.)	397,637	Feb. 12	833	217	46	743
French, Francis J., assignor to J. E. Killian, Miles Grove, Pa. Clothes-drier	395,490	Jan. 1	272	70	46	57
French, John C., Concord, N. H. Car-axle box	397,282	Feb. 5	266	69	46	627
French, Matthew, Haverhill, Mass. Device for feeding and watering poultry	395,776	Jan. 8	717	185	46	153
Frenzel, Franz, Jr., New York, N. Y. Tubular racing-boat	397,848	Feb. 12	1129	302	46	801
Frey, Gustave. (See Frey and Buscher, assignors.)	399,255	Mar. 12	710	185	46	1278
Frey, John, Van Wert, Ohio. Car-coupling	399,865	Mar. 19	1025	421	46	1466
Frey, Rudolph E., and J. Buscher, assignors of one-third to G. Frey, St. Louis, Mo. Book-binding	396,333	Jan. 15	1565	396	46	321
Friedgen, G. William. (See Behr, Hermann, assignor.)	399,396	Mar. 12	924	240	46	1319
Friedrich, John, Iron Mountain, Mich. Condenser for charcoal-kilns	398,888	Mar. 5	102	28, 29, 30	46	1133
Friend, John T., Irvine, Ky. Weighing-scales	398,247	Feb. 19	1722	454	46	932
Frienschner, Paul. (See Behan and Frienschner.)	399,029	Mar. 5	329	.....	46	1177
Frita, Milton C., La Harpe, Ill. Gate	399,256	Mar. 12	712	185	46	1279
Frommel & Brother, Oscar. (See Lindsey, George W., assignor.)	397,229	Feb. 5	192	51	46	612
Frost, Abel H., *et al.* (See Hill, Christian C., assignor.)	397,421	Feb. 5	481	126	46	671
Frost, Abel H., *et al.* (See Wagner, Awsbert H., assignor.)	395,746	Jan. 8	677	173	46	145
Fry, Dan T. (See Fulmer and Fry.)	395,491	Jan. 1	273	70	46	58
Fry, Ellwood E., Brooklyn, N. Y. Snare-strainer for drums	396,554	Jan. 22	1905	491, 492	46	394
Fry, Frederick D., assignor of one-half to T. H. Benedict, Danbury, Conn. Wire-twisting machine	399,397	Mar. 12	925	240, 241	46	1319
Fry, Henry, Eugene City, Oreg. Plane	395,492	Jan. 1	273	70	46	58
Fry, Laura A., Camp Dennison, Ohio. Decorating pottery-ware	396,382	Jan. 15	1637	420	46	334
Frye, George C., Portland, Me. Show-case supporter and card-holder	397,039	Feb. 12	835	218	46	743
Fryer, Aaron. (See Van Decar, Emery, assignor.)	399,809	Mar. 19	1630	422	46	1467
Füchter, Bernhard, assignor to J. Lighton, Syracuse, N. Y. Coin-controlled lifting-machine	397,870	Feb. 12	1059	282	46	787
Fuel Gas and Electric Engineering Company. (See Wellman, Samuel T., assignor.)	397,795	Feb. 12	1060	282	46	787
Fuermann, Henry, Chicago, Ill. Cartridge-reloading implement	397,849	Feb. 12	1130	302	46	802
Fuller, Charles, and J. H. Cunningham, Ludell, Kans. Vehicle brake-gear						
Fuller, Charles A. (See Jacoby and Fuller.)						
Fuller, Charlotte W., Lincoln, Me. Bread-board						
Fuller, Frank R. (See Jacoby and Fuller, assignors.)						
Fuller, Frank T., *et al.* (See Abbott, Alpheus A., assignor.)						
Fuller, George W. (See Powers, Daniel E., assignor.)						
Fuller, Hiram E., London, England. Rolling nails						
Fuller, Hiram E., London, England. Machine for rolling nails						
Fuller & Johnson Manufacturing Company. (See Hart, Henry C., assignor.)						
Fuller, Samuel S., *et al.* (See Bowman and Widdifield, assignors.)						
Fuller, William H., Bladen, Nebr. Cultivator						
Fullerton, George A., Boston, Mass. Machine for making compound fabrics						
Fullerton, George A., Boston, Mass., assignor to Facile Bottle Stopple Company, of New York. Bottle-stopper						
Fullerton, James A., Mounts, Ind. Corn-planter						
Fullford, Edwin, and H. T. Van Laun, London, England. Regenerative gas-burner						
Fullford, Edwin, and H. T. Van Laun, London, England. Regenerative gas-burner						
Fulmer, George W., and D. T. Fry, Water Valley, Miss. Car-axle box and bearing

			Spec.	Dr'g.	Vol.	Page.
Getz, William, assignor of two-thirds to J. B. Miller and V. E. Underwood, Kent, Ohio. Match-making machine	398,322	Feb. 19	1837	485	46	956
Geyer, Henry, Brooklyn, N. Y. Hydraulic sausage-stuffing machine	400,323	Mar. 26	2304	603	46	1607
Gibbins, James, Springfield, Mass. Clutch	396,079	Jan. 15	1193	302, 303	46	252
Gibbon, Thomas H., assignor to Metallic Street Railway Supply Company, Albany, N. Y. Street-railway track	396,036	Jan. 8	1128	286	46	231
Gibbons, James, Jersey City, N. J. Burner	398,505	Feb. 26	2116	555	46	1016
Gibbs, Jacob S., Norristown, Pa., assignor to Bridgeport Twine Binder Company. Tension device for grain-binders	399,872	Mar. 19	1633	423	46	1468
Gibson, Charles D. P., New York, N. Y. Storage-battery plate	397,796	Feb. 12	1061	283	46	787
Gibson, Franklin S., *et al.* (See Randall, Franklin S., assignor.)						
Gibson, George W., Kimbolton, Ohio. Corn-cutter	396,152	Jan. 15	1293	331	46	272
Giese, August. (See Rupp and Giese.)						
Gifford, Cyrus P., North East, Pa. Child's adjustable chair	397,851	Feb. 12	1133	303	46	802
Gifford, George S., *et al.* (See Roberts, Henry P., assignor.)						
Gifford, Livingston. (See Parrott, Richard D. A., assignor.)						
Gilbert, Charles, Omaha, Nebr. Oil-burner	399,517	Mar. 12	1104	287	46	1353
Gilbert, Clarence S. (See Woodring and Gilbert.)						
Gilbert, Edmund D. (See Gordon and Gilbert.)						
Gilbert, George H., Philadelphia, Pa. Circular-knitting machine	398,145	Feb. 19	1571	416	46	901
Gilbert, James, assignor of one-half to C. E. Lee, Omaha, Nebr. Smoke-consuming furnace	397,353	Feb. 5	371	97, 98	46	648
Gilbert, James, assignor of one-half to C. E. Lee, Omaha, Nebr. Gas-generating furnace	397,907	Feb. 19	1211	324	46	835
Gilbert, Oscar L., St. Paul, Minn. Brake	397,120	Feb. 5	21	5	46	583
Giles, Charles K., Chicago, Ill. Watch-case	399,606	Mar. 12	1241	320	46	1379
Giles, Edwin A. (See Burton, Benjamin, assignor.)						
Gilham, Thomas H., Cortez, Nev. Can-opener	396,555	Jan. 22	1906	492	46	394
Gill, Owen A., Baltimore, Md. Mechanism for weighing package tea, coffee, &c	399,192	Mar. 5	612	159	46	1232
Gillespie, George C., Brooklyn, N. Y. Machine or engine for the application of explosive energy to mechanical power	396,739	Jan. 29	2192	561	46	458
Gillett, Lester A., Leonardville, Kans. Combined harvester and thrashing-machine	396,153	Jan. 15	1294	331, 332	46	273
Gilliam, John A., Kansas City, Mo. Pipe-joint	396,080	Jan. 15	1195	303	46	253
Gillies, George, Gananoque, Ontario, Canada. Spring-tooth harrow	395,699	Jan. 8	611	154	46	132
Gilman, John H., assignor to King & Hamilton Company, Ottawa, Ill. Corn-sheller	398,146	Feb. 19	1572	416, 417	46	902
Gilmore, David, Belfast, county of Antrim, Ireland. Animal-trap	400,324	Mar. 26	2307	603	46	1607
Gilmour, Robert H., and F. G. Kellogg, Huntington, Ind. Apparatus for extinguishing the fires in railway-car stoves	399,398	Mar. 12	928	241	46	1319
	399,323	Mar. 12	811	210	46	1298
Gilson, Henry E., Somerville, Mass. Trunk-trimming	396,334	Jan. 15	1566	397	46	321
Gilson, Samuel H., Salt Lake City, Utah Ter. Overhead insulator	399,259	Mar. 12	717	186	46	1280
Gilstrap, Abner L., Macon, Mo. Steam-generator						
Ginna, Stephen A., *et al.* (See Hipperling, William, assignor.)						
Ginochio, Noel B., assignor of one-half to E. M. Greene, New York, N. Y. Telephone	400,325	Mar. 26	2308	604	46	1608
Ginochio, Noel B., assignor of one-half to E. M. Greene, New York, N. Y. Telephone	400,326	Mar. 26	2310	604	46	1608
Ginochio, Noel B., assignor of one-half to E. M. Greene, New York, N. Y. Magneto-electric generator	400,327	Mar. 26	2311	604	46	1608
Giovanni, Balzarini, San Francisco, Cal. Hand-guard for rock-drills	395,700	Jan. 8	612	154	46	132
Giraud, John M., Warwick, Md. Fifth-wheel	396,476	Jan. 22	1791	450	46	374
Giroux, Eugene L., Albina, Oreg. Ore separator and amalgamator	397,542	Feb. 12	664	173, 174	46	712
Gismondi, Louis, Marseilles, France. Oil-press	400,328	Mar. 26	2312	605	46	1608
Given, John L., Melrose, Mass. Pneumatic cash-carrier apparatus	397,354	Feb. 5	373	98	46	648
Gladding, George S., Chester, Conn. Cylindrical brush	397,076	Jan. 29	2673	691	46	556
Glasgow, William, Chicago, Ill. Signal-operating device for trains	399,193	Mar. 5	614	160	46	1232
Glass, John C., Verona, Pa. Pressure-regulator	399,663	Mar. 19	1326	340	46	1407
Glatz, Josef. (See Trench, Arthur W., assignor.)						
Glauber, Isaac N., Cleveland, Ohio. Hose-strap	397,180	Feb. 5	124	34	46	600
Glazebrook, Henry G. T., Woodhouse, Ontario, Canada. Hydraulic engine	396,556	Jan. 22	1908	492, 493	46	395
Glen Cove Machine Company. (See Autenrieth, Ernst F., assignor.)						
Glen Cove Machine Company. (See Hutchinson, Alfred B., assignor.)						
Glen Cove Machine Company. (See Hutchinson and Autenrieth, assignors.)						
Glenck, Hans H., Notting-Hill, county of Middlesex, England. Hair-tonic	398,890	Mar. 5	112	.....	46	1135
Glendinning, John. (See Wilkinson and Glendinning.)						
Glidden, Charles W., Lynn, assignor to J. W. Brooks, trustee, Cambridge, Mass. Manufacturing heels	399,607	Mar. 12	1242	320	46	1379
Glidden, Charles W., Lynn, assignor to J. W. Brooks, trustee, Cambridge, Mass. Heel-cutting die	399,608	Mar. 12	1243	320	46	1379
Glidden, Elliott E. (See Glidden, Greenlief, assignor.)						
Glidden, Greenlief, assignor to E. E. Glidden, Buchanan, Mich. Hand plow and weeder	399,143	Mar. 5	527	137	46	1216
Gmeblin, Paul, New York, N. Y. Piano-case	397,121	Feb. 5	22	5, 6	46	583
Gmür, Berthold, Schänis, and O. Flatz, Niederurnen, Switzerland, assignors of one-half to B. Deisenberg, Travnik, Bosnia, and J. Gmür, Schänis, Switzerland. Dynamo for telegraphic purposes	396,557	Jan. 22	1916	493, 494	46	395
Gmür, Joseph, *et al.* (See Gmür and Flatz, assignors.)						
Godding, Milon O., Monrovia, Cal. Bevel-gage	395,433	Jan. 1	182	48	46	39
Goddu Improvement Company. (See Goddu, Louis, assignor.)						
Goddu, Louis, Winchester, assignor to J. W. Brooks, trustee, Cambridge, and F. F. Stanley, associate trustee, Boston, Mass. Wire-nailing machine	398,606	Feb. 26	2249	596	46	1043
Goddu, Louis, Winchester, Mass., assignor to Goddu Improvement Company, Portland, Me. Nail-making machine	398,891	Mar. 5	113	30, 31	46	1135
Godefroy, Richard, Washington, D. C. Rotary fan	395,630	Jan. 1	477	121, 122	46	97
Godfrey, Alfred H., Jamaica, Iowa. Gate	396,558	Jan. 22	1913	494	46	395
Goetting, Mary D. (See Fisher, Alfred G., assignor.)						
Gold, Edward E., New York, N. Y. Steam-trap	398,719	Feb. 26	2435	645, 646	46	1081
Golden, Richard H., South Norwalk, Conn. Ankle-supporter	398,892	Mar. 5	116	31	46	1136
Golding, William, Moss Side, county of Lancaster, assignor to Claviger Cycle Company, (limited,) Manchester, England. Velocipede	400,304	Mar. 26	2112	553, 554, 555, 556	46	1573
Goldsmith, John S., New York, N. Y. Ventilated garment	397,543	Feb. 12	668	174	46	712

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr'g.	Vol.	Page.
Goldsmith, Nathaniel O. (See Weir and Goldsmith.)						
Goldsmith, Nathaniel O., assignor to Weir Frog Company, Cincinnati, Ohio. Street-railway switch	398,248	Feb. 19	1723	454	46	932
Gonon, Paul E. (See Diemer and Gonon.)						
Good, Brent. (See Gotendorf, James N., Jr., assignor.)						
Good, John, Chicago, Ill. Grinding-mill	399,518	Mar. 12	1105	287	46	1353
Goodell Company. (See Oaks, William A. C., assignor.)						
Goodell, Etta A., assignor to Consolidated Patents Company, Chicago, Ill. Ventilator	397,122	Feb. 5	24	6	46	583
Goodfellow, James T., Huntingdon, Pa., assignor to Iron Car Company, of Connecticut. End sill for railway-cars	400,329	Mar. 26	2314	606	46	1609
Gooding, Albert R. (See Hayden and Desant, assignors.)						
Goodman, Herbert E. (See Sperry, Elmer A., assignor.)						
Goodman, John R., Calumet, Mo. Drag and harrow	398,960	Mar. 5	216	59, 60	46	1155
Goodman, Samuel N., assignor to C. Button and M. L. Finckel, Philadelphia, Pa. Knitting-machine needle	400,330	Mar. 26	2316	606	46	1609
Goodrich, Harry C. (See Barnum, Russel S., assignor.)						
Goodrich, Harry C., Chicago, Ill. Ruffler and gatherer for sewing-machines	397,908	Feb. 19	1213	325	46	835
Goodrich, Harry C., Chicago, Ill. Guiding attachment for sewing-machines	399,873	Mar. 19	1634	424	46	1468
Goodrich, Joseph F., New Haven, Conn. Vehicle-seat	397,590	Feb. 12	754	196, 197	46	728
Goodsell, Charles H. (See Helms, Charles H., assignor.)						
Goodwillie, David H., New York, N. Y. Internasal tube	399,985	Mar. 19	1705	465	46	1500
Goodwin, George A., and W. F. How, Westminster, county of Middlesex, England. Manufacture of lock-nuts	396,477	Jan. 22	1792	459	46	374
Goodwin, James S., Emerald, Wis. Mail-bag fastening	399,986	Mar. 19	1706	466	46	1500
Goodyear, Andrew, assignor to South Bend Chilled Plow Company, South Bend, Ind. Wheel-plow	398,961	Mar. 5	218	60	46	1155
Gordon, Alexander, and D. De Garmo, Rochester, N. Y. Machine for cutting tobacco	397,544	Feb. 12	669	174	46	713
Gordon, Charles M. (See Morgan, Edward D., assignor.)						
Gordon, Fred. W., assignor to Gordon, Strobel & Laurean, Philadelphia, Pa. Converter	395,434	Jan. 1	183	48	46	39
Gordon, Strobel & Laureau. (See Gordon, Fred. W., assignor.)						
Gordon, William, Melrose, Mass. Sole-edge-burnishing tool	399,609	Mar. 12	1244	320	46	1379
Gordon, William J., and E. D. Gilbert, Philadelphia, Pa. Sheet-metal pipe-elbow	399,664	Mar. 19	1328	340	46	1407
Gore, Henry A. (See Ru Ton and Gore.)						
Gore, Henry A., assignor of two-thirds to E. W. Walker and H. W. Ru Ton, Goshen, Ind. Carpet-sweeper	395,654	Jan. 1	544	136	46	109
Gorham, Chester R. (See Gorham, Ezra S. and C. R.)						
Gorham, Ezra S. and C. R., Euclid, Ohio. Rotary-cutting veneer-machine	397,181	Feb. 5	125	34	46	600
Gortner, Henry, New Albany, Ohio. Lifting-jack	400,205	Mar. 26	2119	556	46	1573
Gorton, James S., assignor to Wilcox & Gibbs Sewing Machine Company, New York, N. Y. Automatic tension apparatus for sewing-machines	397,640	Feb. 12	837	218	46	744
Gorton, William E., Moline, Ill. Belting-reel	399,874	Mar. 19	1637	424	46	1468
Gosling, Charles, Brooklyn, N. Y. Raised stone incrusted letter	395,563	Jan. 1	388	99	46	80
Goss, Frederick L., Chicago, and S. G. Goss, Englewood, Ill. Paper-folding machine	399,987	Mar. 19	1708	466, 467	46	1500
Goss, Lucius, Upper Montclair, N. J. Stereotype-plate	395,435	Jan. 1	186	48, 49	46	39
Goss, Lucius, Upper Montclair, N. J., and S. W. Trew, Brooklyn, N. Y. Machine for trimming, planing, and sawing stereotype-plates	396,478	Jan. 22	1793	459	46	374
Goss, Samuel G. (See Goss, Frederick L. and S. G.)						
Goss, Sherman M., Council Bluffs, Iowa. Parallel ruler	398,928	Mar. 5	23	7	46	1119
Goss, William H., Yonkers, N. Y. Washing-machine	399,610	Mar. 12	1245	321	46	1379
Gosselin, Frank X., West Troy, N. Y. Thimble	395,322	Jan. 1	25	7	46	8
Gotendorf, James N., Jr., Paris, France, assignor to B. Good, New York, N. Y. Button-machine	396,081	Jan. 15	1196	303, 304	46	253
Gott, Mamie B., *et al.* (See Roberts, Thomas, assignor.)						
Gottschald, Ernst L., Dresden, Germany, assignor to J. Bister, Brooklyn, N. Y., and J. Schmitt, Hoboken, N. J. Making ferrules	396,037	Jan. 8	1128	287	46	231
Gould, Aaron P., Canton, Ohio. Surgical chair	397,077	Jan. 29	2673	691, 692	46	556
Gould, Aaron P., Canton, Ohio. Head-rest	398,893	Mar. 5	117	32	46	1136
Gould, Albert J., Pittsburg, Pa. Splash-board holder for boats	398,989	Feb. 26	1950	513	46	985
Goulden, William, Lea Bridge Road, Clapton, county of Middlesex, England. Velocipede	400,075	Mar. 26	1998	503	46	1533
Grace, Frederick A., Hickory, N. C. Device for sharpening rock-drills	397,230	Feb. 5	193	51	46	612
Grace, John D., New Orleans, La. Street-car truck	398,040	Feb. 19	1425	376, 377	46	873
Grace, Mary A., *et al.* (See Harney, Michael C., assignor.)						
Graeser, George A., Chicago, Ill. Water-meter	400,331	Mar. 26	2317	606	46	1609
Graf, Anton, Georgetown, assignor of two-thirds to A. McDuffee and R. Carleton, Haverhill, Mass. Fire-box for steam-generators	397,852	Feb. 12	1134	303	46	802
Graf, Anton, Georgetown, assignor of two-thirds to G. H. Meader, Boston, Mass. Packing for safes, &c	398,607	Feb. 26	2250	596	46	1044
Graham, Charles T., assignor to G. W. Plumley, Philadelphia, Pa. Watch-movement box	397,853	Feb. 12	1135	303	46	803
Graham, James, *et al.* (See Kelsey, Frank N., assignor.)						
Graham, James A., assignor to Milwaukee Harvester Company, Milwaukee, Wis. Knotter for grain-binders	397,355	Feb. 5	375	98, 99	46	649
Graham, James A., assignor to Milwaukee Harvester Company, Milwaukee, Wis. Binder-shifting mechanism	397,356	Feb. 5	377	99, 100	46	649
Graham, James A., C. Martincourt, and H. F. Crandall, assignors to Milwaukee Harvester Company, Milwaukee, Wis. Harvester	398,349	Feb. 19	1704	455	46	932
Graham, John W., Nyack, N. Y. Extension car-step	395,625	Jan. 8	814	212	46	171
Graham, Nancy J., Jackson, Ohio. Stove	399,630	Mar. 5	330	88	46	1177
Granger, Albert S. (See Curley and Granger.)						
Grant, George B., Maplewood, Mass. Gear-cutting machine	398,506	Feb. 26	2113	556	46	1017
Grant, James A., Mount Pleasant, Iowa. Ribbon-holder	395,701	Jan. 8	613	154	46	132
Grant, Jott, Boston, Mass. Water-filter	399,675	Mar. 19	1642	424	46	1469
Grant, Oscar F., Pittsburg, Pa. Fountain-pen	397,123	Feb. 5	25	6	46	583
Grant, Perrin, Baltimore, Md. Dynamo-electric machine	396,867	Jan. 29	2373	609	46	498
Graves, Henry B. (See Norcross, Leander N., assignor.)						
Gray Company, G. A. (See Erdman, Herman, assignor.)						
Gray, John, Jefferson, Iowa. Hame and tug coupling	397,182	Feb. 5	128	35	46	601
Gray, John B. (See Burnett, William, assignor.)						
Gray, Joseph, Chicago, Ill. Hot-air furnace	397,979	Feb. 19	1390	352	46	854

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Gray, William D. (See Finch and Gray.)						
Graydon, James W., Washington, D. C., assignor to R. S. Lawrence, London, England. Circuit-closing device for electrical torpedo-fuses	399,876	Mar. 19	1643	425	46	1469
Graydon, James W., Washington, D. C., assignor to R. S. Lawrence, London, England. High-explosive shell	399,877	Mar. 19	1644	425	46	1469
Graydon, James W., Washington, D. C., assignor to R. S. Lawrence, London, England. High-explosive charge	399,878	Mar. 19	1645	425	46	1470
Graydon, James W., Washington, D. C., assignor to R. S. Lawrence, London, England. Electrical fuse for ordnance-shells	399,879	Mar. 19	1646	425	46	1470
Graydon, James W., Washington, D. C., assignor to R. S. Lawrence, London, England. Tail-guide for projectiles	399,880	Mar. 19	1647	426	46	1470
Graydon, James W., Washington, D. C., assignor to R. S. Lawrence, London, England. Shell	399,881	Mar. 19	1648	426	46	1470
Graydon, James W., Washington, D. C., assignor to R. S. Lawrence, London, England. Revolving pneumatic gun	399,882	Mar. 19	1650	426	46	1471
Graydon, James W., Washington, D. C., assignor to R. S. Lawrence, London, England. High-explosive charge	399,883	Mar. 19	1653	427	46	1471
Graydon, Thomas W. (See Sullivan, John J., assignor.)						
Greaves, Charles, Mount Lebanon, N. Y. Fertilizer-distributer	399,399	Mar. 12	930	241	46	1320
Greaves, John, St. Louis, Mo. Demagnetizing watches, &c	397,423	Feb. 5	485	127	46	671
Greely, Benjamin J., Boston, Mass. Trousers, overalls, &c	396,926	Jan. 29	2462	634	46	515
Greely, Harvard, Ellsworth, Me. Combined funnel and can-top	398,390	Feb. 26	1951	513	46	985
Green, Benjamin P., Etchetah, Mont. Ter. Planter	395,655	Jan. 1	544	136	46	109
Green, Frank D. (See Green, Robert M. and F. D.)						
Green, John C., Peoria, Ill. Nippers for cutting pegs from boots or shoes	397,909	Feb. 19	1216	325	46	936
Green, John E., Bremond, Tex. Fish-trap	400,206	Mar. 26	2120	556	46	1574
Green, Myron S., New York, N. Y. Inhaling-tip	395,436	Jan. 1	186	49	46	46
Green, Robert M. and F. D., Philadelphia, Pa. Measuring-faucet	397,854	Feb. 12	1136	304	46	803
Green, Thomas, East Davenport, Iowa. Calipers and dividers	396,479	Jan. 22	1794	460	46	374
Greenaway, Alfred, Louisville, Ky. Device for holding tile-settings	400,016	Mar. 26	1929	503	46	1534
Greene & Co., William C. (See King, Thomas, assignor.)						
Greene, Elias M. (See Ginochio, Noel B., assignor.)						
Greene, J. Ashton. (See Blake, Henry, assignor.)						
Greene, Wallace. (See Cutler, Lyman B., assignor.)						
Greenio, Harris S., St. Louis, Mo. Truss	397,545	Feb. 12	670	175	46	713
Greenwood, William H. (See Kelsey, John R., assignor.)						
Gregg, Solomon L., Greene, Pa. Apparatus for filling and packing cans	399,884	Mar. 19	1653	427	46	1471
Gregory, David J., Scranton, Pa. Dining-table fan	398,250	Feb. 19	1725	455	46	932
Greider, Jacob M. (See Minnich, Simon B., assignor.)						
Grelle, Henry W., New Orleans, La. Filter	399,031	Mar. 5	331	80	46	1178
Grenfell, Hubert H., assignor to W. G. Armstrong, Mitchell & Co., (limited,) Newcastle-upon-Tyne, county of Northumberland, England. Luminous sight for fire-arms	399,144	Mar. 5	528	138	46	1217
Gretzler, Frederick, Bennington, N. Y. Brake for sleds	397,231	Feb. 5	195	52	46	613
Griebel, William J., Fort Wayne, Ind. Folding bedstead	397,183	Feb. 5	129	35	46	601
Griest, John M., Bayonne, N. J., assignor to Singer Manufacturing Company of New Jersey. Box	397,980	Feb. 19	1320	352	46	854
Griffin, George H., Abingdon, Va. Nut-lock	396,691	Jan. 22	2111	542	46	434
Griffin, James. (See Haughey, Micheal, assignor.)						
Griffin, John B., assignor to J. F. Griffin and T. H. Keefe, Chicago, Ill. Pedal bell-signal device	396,668	Jan. 29	2376	609	46	498
Griffin, John H., assignor of one-half to Churchill & Alden, Brockton, Mass. Sewing-machine	398,323	Feb. 19	1841	486	46	956
Griffin, Julia F., *et al.* (See Griffin, John B., assignor.)						
Griffith, Amenzo, Springfield, and H. A. Burbank, Westfield, Mass. Telephone call-box	397,284	Feb. 5	270	70	46	627
Griffiths, Owen J., Chicago, Ill. Album	399,324	Mar. 12	813	210	46	1298
Griffiths, Owen J., Chicago, Ill. Album	399,325	Mar. 12	814	210	46	1298
Griggs, Albert C., Wilmington, Del. Coupling for electric circuits	399,326	Mar. 12	815	211	46	1298
Griggs, John J., *et al.* (See Lumley, Edwin J., assignor.)						
Grimmett, Samuel T., West Plains, Mo. Car-coupling	395,437	Jan. 1	18	49	46	40
Grinnell, Frederick, Providence, R. I. Automatic fire-extinguisher	399,520	Mar. 12	1107	288	46	1354
Grinnell, Frederick, Providence, R. I. Automatic fire-extinguisher	399,521	Mar. 12	1109	289	46	1354
Grinnell, Frederick, Providence, R. I. Automatic fire-extinguisher	399,522	Mar. 12	1111	289	46	1354
Grinnell, Frederick, Providence, R. I. Automatic fire-extinguisher	399,523	Mar. 12	1112	289	46	1355
Grinnell, Frederick and R. W., Providence, R. I. Automatic fire-extinguisher	399,519	Mar. 12	1106	288	46	1354
Grinnell, Richard W. (See Grinnell, Frederick and R. W.)						
Gripp, John, *et al.* (See Rosamyer, Henry, Jr., assignor.)						
Griscom, William W., Haverford College, and H. N. Weidner, assignors to Electro Dynamic Company, Philadelphia, Pa. Connection of electrical circuits	397,424	Feb. 5	485	127	46	672
Griswold, Fred E., assignor of one-half to L. E. Munsell, Naples, N. Y. Cultivator	398,041	Feb. 19	1496	377	46	874
Groeschel, Anton. (See Schwemberger and Groeschel.)						
Groh, Jacob, Coshocton, Ohio. Draw-iron for wagons	395,389	Jan. 1	124	32	46	27
Grosscup, Manias G., Milwaukee, Wis. Hay-carrier track	397,124	Feb. 5	26	7	46	583
Grove, David, Berlin, Germany. Shower-bath	398,894	Mar. 5	118	32	46	1136
Grubb, John M., Ironton, Ohio. Sash-holder	395,894	Jan. 8	924	238	46	192
Grubbs, John W., Fair Play, S. C. Tether	396,276	Jan. 15	1479	375	46	306
Grün, Gottfried, assignor to Farbenfabriken, vormals Fr. Bayer & Co., Elberfeld, Germany. Printing of induline dye-stuffs	396,692	Jan. 22	2112	.....	46	434

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Hart, George R., Viola, Iowa. Cultivating-plow	398,303	Feb. 26	1954	514	46	986
Hart, Henry C., Wannakee, assignor to Fuller & Johnson Manufacturing Company, Madison, Wis. Adjustable cultivator-shovel	396,377	Jan. 15	1480	375	46	306
Hartford, Joseph R., Carthage, Ill. Paper-hanging machine	398,154	Feb. 19	1584	420, 421	46	904
Hartley, Kedar, assignor of one-half to J. Hanson, Philadelphia, Pa. Loom for weaving chenille and fringe	396,905	Jan. 15	1379	352, 353	46	288
Hartley, Marcellus, New York, N. Y., and A. J. Hobbs, assignors to Union Metallic Cartridge Company, Bridgeport, Conn. Shot-cartridge	395,897	Jan. 8	988	238	46	192
Hartman, Edward S., Allegheny, Pa. Plow-standard cap	398,631	Mar. 5	26	8	46	1119
Hartman, H. W. (See McCool, William A., assignor.)						
Hartman, H. W. (See McCool and Hartman.)						
Hartman, John M., Philadelphia, Pa. Blast apparatus for blast-furnaces	399,262	Mar. 12	720	187, 188	46	1280
Hartman, John M., Philadelphia, Pa. Tuyere	399,263	Mar. 12	722	188	46	1281
Hartshorn, Edwin A., Troy, N. Y. Retting flax	396,158	Jan. 15	1307	.....	46	274
Hartshorn, Henry A., West Haven, Conn. Buckle	397,717	Feb. 12	944	251	46	764
Hartung, Emil, Denver, Colo. Cut-off and governor	397,361	Feb. 5	383	101	46	650
Hartung, Hugo, Berlin, Germany. Fire-bar	396,482	Jan. 22	1803	461, 462	46	376
Harvey, Hayward A., Orange, N. J. Railway-spike	395,898	Jan. 8	927	239	46	192
Harvey, Wirt B., Memphis, Tenn. Electric-circuit protector	399,400	Mar. 12	932	242	46	1321
Harwood, Harrison, *et al.* (See Newell, Benjamin B., assignor.)						
Harwood, Harrison, Natick, Mass. Machine for winding balls	397,362	Feb. 5	384	101	46	651
Harwood, Henry G., *et al.* (See Newell, Benjamin B., assignor.)						
Hasey, Harvey W., New York, N. Y. Brush	398,043	Feb. 19	1428	378	46	874
Hasey, Sydney P., New York, N. Y. Photographic camera	395,899	Jan. 8	929	239	46	192
Haskell, Frank, Westbrook, Me. Machine for spooling yarn	396,816	Jan. 29	2307	590, 591	46	482
Haskin, Samuel E., Avoca, N. Y. Vulcanizing wood	399,196	Mar. 5	618	160	46	1233
Haskins, David G., Cambridge, Mass. Sub-surface water-motor	400,209	Mar. 26	2122	557	46	1574
Haslett, William B. (See Wilson, David Y., assignor.)						
Haslup, William, Sidney, assignor of one-half to J. H. Doering, Wapakoneta, Ohio. Vehicle-wheel	397,078	Jan. 29	2676	692	46	557
Hassman, William, Richmond, Va. Tire-heating apparatus	397,593	Feb. 12	760	198	46	729
Hastie, Robert B., Washington, D. C. Matrix impression-guard for type-forms	397,232	Feb. 5	195	52	46	613
Hastings, James L. (See Stewart and Hastings.)						
Hastings, James L., Philadelphia, Pa., assignor, by mesne assignments, to Welsbach Incandescent Gas Light Company, Gloucester City, N. J. Producing refractory compounds	396,693	Jan. 22	2113	.....	46	434
Hastings, James L., Philadelphia, Pa., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Plastic mineral composition	400,335	Mar. 26	2321	.....	46	1610
Hastings, James L., Philadelphia, Pa., assignor to Welsbach Incandescent Gas Light Company, of New Jersey. Plastic mineral composition	400,336	Mar. 26	2323	.....	46	1610
Hastings, John B., assignor of two-thirds to J. M. Tripp and J. M. Lively, Jackson, Ohio. Wire-nail machine	397,496	Feb. 5	488	128	46	672
Hat Sweat Manufacturing Company. (See Beardslee, William F., assignor.)						
Hatch, Andrew J., San Francisco, Cal. Drier	396,502	Jan. 22	1919	495	46	397
Hatch, George, South Windham, Conn. Instrument-holder	398,508	Feb. 26	2116	556	46	1017
Hatch, Moses E. (See Waters, Benjamin E., assignor.)						
Hatcher, George W. and S. D., Cleveland, Ohio. Step-ladder	397,913	Feb. 19	1221	326	46	837
Hatcher, Singleton D. (See Hatcher, George W. and S. D.)						
Hathaway, Jerome W. (See Everitt, Jesse, assignor.)						
Hatt, Samuel, assignor to G. Sanderson, Montreal, Quebec, Canada. Brake-shoe	399,665	Mar. 19	1329	340	46	1407
Haughey, Michael, assignor of one-half to J. Griffin, St. Louis, Mo. Street-sprinkling apparatus	397,287	Feb. 5	275	71	46	628
Haven, William H., Jr., Oxford, assignor of one-half to J. Ritchie, Brookline, Mass. Channeling-machine	398,155	Feb. 19	1585	421	46	904
Havey, Michael, Chicago, Ill. Water-heater	395,396	Jan. 1	31	8	46	9
Haviland, J. C., *et al.* (See Lumley, Edwin J., assignor.)						
Hawes, Elisha, Sacramento, Cal. Fencing	400,083	Mar. 26	1938	506	46	1536
Hawke, James, assignor of one-half to E. F. Dush, Long Run, Ohio. Plow-point	397,855	Feb. 12	1137	304	46	803
Hawkins, Franklin P., Plano, Ala. Oiling-machine	395,778	Jan. 8	721	185, 186	46	153
Hawkins, Frederick H., New York, N. Y. Apparatus for collecting and conveying ashes, &c	397,718	Feb. 12	946	251	46	765
Hawkins, John W., *et al.* (See Chatterson, Wright, assignor.)						
Hawkins, Lucian B., assignor of one-half to J. Schwartz, Danville, Ind. Grocer's bin	399,197	Mar. 5	620	161	46	1233
Hawkins, Orren W., *et al.* (See Chatterson, Wright, assignor.)						
Hawkins, William, St. Louis, Mo. Feed-trough	396,563	Jan. 22	1922	496	46	397
Hawley, Wallace A., Napoleon, Mich. Fence-making machine	399,040	Mar. 5	347	93	46	1180
Haworth, George. (See Ormerod and Haworth.)						
Hay, Abraham T., Burlington, Iowa. Sponge for reducing gold and silver and other ores	399,527	Mar. 12	1117	.....	46	1356
Hay, Abraham T., Burlington, Iowa. Manufacturing steel	399,528	Mar. 12	1118	.....	46	1356
Hay, Abraham T., Burlington, Iowa. Reducing gold, silver, &c	399,529	Mar. 12	1118	.....	46	1356
Hay, Abraham T., Burlington, Iowa. Manufacture of iron	399,611	Mar. 12	1246	.....	46	1379
Hay, Abraham T., Burlington, Iowa. Manufacture of steel	399,612	Mar. 12	1247	.....	46	1379
Hayden, Horace, Jr., and W. F. Z. Desant, assignors of one-third to A. R. Gooding, New York, N. Y. Electrical railway-signal	398,613	Feb. 26	2259	600	46	1045
Haydock, William T. (See Rice, James N., assignor.)						
Hayes, Charles C., Penn Yan, N. Y. Vehicle-spring	398,156	Feb. 19	1586	421	46	904
Hayes, Edward J., and J. T. Ochs, Baltimore, Md. Float for fishing-lines	395,900	Jan. 8	932	240	46	193
Hayes, Hammond V., Cambridge, and A. C. White, Boston, Mass. Electrical measuring apparatus	395,974	Jan. 8	1034	264	46	214
Hayes, Henry T., Oakland, Cal. Fire extension-ladder	396,564	Jan. 22	1924	496	46	398
Hayes, Henry T., Oakland, Cal. Fire extension-ladder	396,565	Jan. 22	1926	496	46	398
Hayes, Joel A., San Francisco, Cal. Dynamo-armature	399,328	Mar. 12	818	212, 213	46	1290
Hayes, John, St. Louis, Mo. Steering apparatus	395,565	Jan. 1	300	99, 100	46	80
Hayes, Richmond S., East Bloomfield, N. Y. Dental articulator	396,566	Jan. 22	1927	496	46	398
Hayes, Thomas E., and A. J. Read, Milwaukee, Wis. Journal-box	400,210	Mar. 26	2125	557	46	1575
Hayes, William, Los Angeles, Cal. Car-axle	395,901	Jan. 8	932	240	46	193
Haynes, Daniel, Sealy, Tex. Making mattresses	399,641	Mar. 5	349	94	46	1181
Hayward, James J., Ballston, N. Y. Leather-dressing	399,893	Mar. 19	1664	.....	46	1474

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Hayward, Oliver C., New York, N. Y. Indicator for elevators	396,159	Jan. 15	1308	335	46	274
Hazard, Vincent G., Wilmington, Del. Paper-machine	39-,394	Feb. 26	1955	514	46	986
Hazlett, John C., Muscatine, Iowa. Indicating device for cash registers and indicators	396,483	Jan. 22	1803	462	46	376
Head, Dallas F., Arcadia, assignor of one-half to N. W. Warren, Mount Lebanon, La. Wagon-seat	398,252	Feb. 19	1729	456	46	933
Healey, Charles, *et al.* (See Slocum, George S., assignor.)						
Healey, Frank E., Morrisville, Vt. Book-support	396,741	Jan. 29	2194	562	46	458
Healey, George H., Stoneham, Mass. Last	399,227	Mar. 5	668	174	46	1243
Healy, Clarence L., Brooklyn, N. Y. Quadruplex telegraphy	398,614	Feb. 26	2261	600	46	1046
Hearitey, George W. (See McDonald, Theodore R., assignor.)						
Heath, Emery, assignor of one-half to W. H. Crabb, Curtis, Nebr. Poke	397,079	Jan. 29	2677	692	46	557
Heath, George H. (See Anderson, J. Burnham, assignor.)						
Heath, Starling F., and H. A. Thayer, Fitchburg, Mass. Car-coupling	395,391	Jan. 1	128	32	46	28
Heathman, Wilber. (See Garst, Edwin, assignor.)						
Heathorn, Thomas B., London, England. Apparatus for propelling and steering vessels	399,530	Mar. 12	1119	290, 291	46	1356
Hebden, Frank, Philadelphia, Pa. Shuttle-box pattern mechanism for looms for weaving fabrics having end borders	399,613	Mar. 12	1248	321	46	1380
Heberer, Adam, Alameda, Cal. Feed-water purifier	395,779	Jan. 8	722	186	46	154
Heberer, Adam, Alameda, Cal. Steam-boiler	395,780	Jan. 8	724	186	46	154
Heer, David. (See Koehler and Heer.)						
Heermans, Thaddeus W., Chicago, Ill. Car-motor	398,723	Feb. 26	2443	647	46	1062
Heermans, Thaddeus W., Chicago, Ill., assignor to Crane Elevator Company, of Illinois. Hydraulic valve	396,206	Jan. 15	1384	354	46	289
Heermans, Thaddeus W., Chicago, Ill., assignor to Crane Elevator Company, of Illinois. Variable-pressure hydraulic elevator	398,044	Feb. 19	1420	378, 379	46	874
Heffner, William E., Huntingdon, Pa. Car-axle box	397,233	Feb. 5	197	52	46	613
Heiber, Emile M. (See Banschke, Joseph, assignor.)						
Heidel, Gustavos, assignor to National Self Heating Sad Iron Company, St. Louis, Mo. Self-heating sad-iron	396,998	Jan. 29	2559	661	46	535
Heidenreich, Eyvind L. (See Dybite and Heidenreich.)						
Heidmann, Gottlieb, E. Höttges, and C. Egen, assignors to Heidmann & Höttges, Barmen, Prussia, Germany. Button	400,337	Mar. 26	2324	607	46	1610
Heidmann & Höttges. (See Heidmann, Höttges, and Egen, assignors.)						
Heidt, Allen P., assignor to himself and J. C. Divine, New York, N. Y. Window-blind	395,902	Jan. 8	934	240	46	193
Heikes, Rolla O., Dayton, Ohio. Gun hand-protector	397,719	Feb. 12	948	251	46	765
Heimsoeth, Bartholomaeus, Coblentz, Prussia, Germany. Means for safely coupling or uncoupling the pipes of pneumatic brakes or steam-heating apparatus on railway-trains	399,894	Mar. 19	1665	430	46	1474
Heindl, Joseph J., Brooklyn, N. Y. Steam-engine valve-gear	399,531	Mar. 12	1121	291	46	1356
Heine, August, Silver Creek, N. Y. Grain-scourer	397,720	Feb. 12	948	252	46	765
Heine, Frederick, and E. Bengel, Cincinnati, Ohio. Device for operating hatchway-gates	398,615	Feb. 26	2263	600	46	1046
Heinemann, Henry, St. Louis County, Mo. Sulky	399,231	Mar. 5	672	175	46	1243
Heinrichs, Charles F., assignor of one-half to W. F. Widmayer, New York, N. Y. Electric battery	396,870	Jan. 29	2379	610	46	499
Heinrichs, Charles F., assignor of one-half to W. F. Widmayer, New York, N. Y. Electric battery	396,871	Jan. 29	2381	611	46	499
Heinsohn, Ernst T., and J. Hoffmann, Freiseburg, Tex. Motor	397,288	Feb. 5	276	71	46	628
Heisel, Charles T., Cleveland, Ohio. Folding case or package	397,914	Feb. 19	1222	326	46	837
Helbig, Charles W., assignor to G. C. Dressel, New York, N. Y. Lens-holder for signal-lamps	398,253	Feb. 19	1731	456	46	933
Held, Christian, Indianapolis, Ind. Machine for making maccaroni and noodles	396,567	Jan. 22	1930	497	46	399
Heliker, Benjamin S., *et al.* (See Jones, John B., assignor.)						
Helios Actien-Gesellschaft für Elektrisches Licht und Telegraphenbau. (See Coerper, Carl, assignor.)						
Hellen, William F., assignor of one-half to T. A. Mitchell, Washington, D. C. Drafting-ruler	396,568	Jan. 22	1931	497	46	399
Heller, Charles F. (See Benson, William H., assignor.)						
Helms, Charles H., assignor to himself and C. H. Goodsell, Poughkeepsie, N. Y. Heel-burnishing machine	396,999	Jan. 29	2560	661	46	535
Helms, Charles H., assignor to himself and C. H. Goodsell, Poughkeepsie, N. Y. Heel-trimmer	397,000	Jan. 29	2561	662	46	535
Helms, Charles H., assignor to himself and C. H. Goodsell, Poughkeepsie, N. Y. Heel-trimmer	397,001	Jan. 29	2562	662	46	535
Helms, Charles H., assignor to himself and C. H. Goodsell, Poughkeepsie, N. Y. Heel-trimming machine	397,055	Jan. 29	2643	681	46	551
Hemenway, Charles F., assignor of two-thirds to J. F. McKissock, Lowell, Mass. Device for opening and closing doors	397,498	Feb. 12	600	155, 156	46	699
Henckels, Johann A., Solingen, Germany. Button-hole scissors	398,509	Feb. 26	2117	557	46	1017
Henderson, Charles C., Jamestown, N. Y. Burglar and fire alarm	398,254	Feb. 19	1731	456	46	934
Henderson, Homer, and F. N. Johnston, Columbus, Ohio. Oven-thermometer	397,127	Feb. 5	33	7	46	584
Henderson, Mary F., St. Louis, Mo. Movement-cure machine	398,255	Feb. 19	1733	457	46	934
Henderson, William A., Malden, Mass. Joint for soft-metal pipes	396,654	Jan. 22	2057	528	46	424
Hendrick, Alexander W., Paw Paw, Mich. Hay-binder	396,278	Jan. 15	1481	375	46	306
Hendricks, Gay, Beardstown, Tex. Nail-box	398,724	Feb. 26	2445	647	46	1062
Hendricks, Simeon B., assignor to Skandia Plow Company, Rockford, Ill. Harrow	399,614	Mar. 12	1249	322	46	1380
Hendrickson, Joseph G. (See Clamer and Hendrickson.)						
Hendy, John H. (See Hendy, Joshua and J. H.) (Reissue.)						
Hendy, Joshua and J. H., San Francisco, Cal. Ore-feeder. (Reissue)	10,983	Feb. 5	574	149	46	687
Henion, William, Ritchey, Ill. Electric signaling apparatus	396,207	Jan. 15	1385	355	46	289
Henius, Max W., Bridgeport, Conn. Corset-clasp	396,484	Jan. 22	1805	463	46	376
Henjum, Ole, Minneapolis, Minn. Pump-operating mechanism	396,485	Jan. 22	1807	463	46	376
Henkle, Benjamin F., Woodensburg, Md. Inkstand	397,963	Feb. 19	1324	353	46	855
Henkle, Leonard, Rochester, assignor to C. S. Upton, New York, N. Y. Wick-raiser for lamps	398,725	Feb. 26	2446	647, 648	46	1062
Henkmann, Richard, Berlin, Germany. Bottle-stopper	398,832	Mar. 5	27	8	46	1119
Henley, Micajah C., Richmond, Ind. Fence-machine	396,279	Jan. 15	1462	376	46	307
Henley, Thomas C., Randleman, N. C. Drawing board or table	397,427	Feb. 5	491	128, 129, 219, 220	46	673
Hennessy, David, New York, N. Y. Hose-pipe coupling for railway-cars	397,645	Feb. 12	842	220	46	745
Henney, Burnett M., Springfield, Ill. Incrustation preventive	397,547	Feb. 12	673	72	46	713
Henning, Charles F., Chicago, Ill. Garment-collar	397,229	Feb. 5	278	72	46	627
Henning, Julius, Charlottenburg, near Berlin, Germany. Pneumatic malting-drum	400,338	Mar. 26	2325	608	46	1610
Henry, Benjamin T., New Haven, Conn. Axle-box	397,731	Feb. 12	950	252	46	765

Herron, John, *et al.* (See Herron, Michael, assignor.)						
Herron, Michael, assignor of one-half to J. and J. Herron, Bordentown, N. J. Chute for dredging-machines	397,985	Feb. 19	1327	354	46	855
Herron, William J., *et al.* (See Hoke, Quinton J., assignor.)						
Herwig, Hermann, Media, Pa. Clock	396,655	Jan. 22	2058	528	46	424
Hess, Edward B., New York, N. Y., and W. X. Stevens, Washington, D. C.; said Stevens assignor to said Hess. Refrigerator	397,984	Feb. 19	1326	353, 354	46	855
Hess, Nels P., and C. Vestergard, Belgrade, Minn. Windmill	396,084	Jan. 15	1201	304, 305	46	254
Hesselbom, Eric M., Rushford, Minn. Snow-plow	399,895	Mar. 19	1666	431	46	1474
Hester, Stephen J., Fulton, Ky. Scale-measure	397,128	Feb. 5	34	8	46	585
Hetherington, Frederick A., Brooklyn, assignor of one-half to H. A. W. Wood, New York, N. Y. Magazine plate-holder for photographic plates	396,656	Jan. 22	2059	529	46	424
Hetherington, John M., Manchester, county of Lancaster, England. Apparatus for controlling the grinding of carding-engine flats	399,533	Mar. 12	1125	292	46	1357
Heverly, James M., Coalport, Pa. Railway block-signal	398,256	Feb. 19	1735	457	46	934
Hewes, Fletcher W., Bloomfield, N. J. Indexing-machine	396,742	Jan. 29	2196	562, 563	46	458
Hewett, Reginald W., Birmingham, county of Warwick, England. Boiler	397,915	Feb. 19	1222	326, 327	46	837
Hewitt, Horace L., Indianapolis, Ind. Grain-cradle	396,743	Jan. 29	2203	564	46	459
Hewlett, Maddra J., Paducah, Ky. Letter-box	396,360	Jan. 15	1609	411	46	330
Heysinger, Isaac W., Philadelphia, Pa. Crossing-conduit for electric railways	398,963	Mar. 5	225	63	46	1157
Heywood, Benjamin, New York, N. Y. Commutator for dynamo-electric machines and electric motors	399,329	Mar. 12	819	213	46	1299
Hickok, Franklin K., and R. M. Lambie, New York, N. Y. Combined carriage-jack, wrench, and bit-stock	397,499	Feb. 12	603	156	46	700
Hicks, Frank M., Chicago, Ill. Tile-machine	396,985	Jan. 15	1202	305, 306	46	255
Hicks, Horatio F., Ashland, Oreg. Vehicle-wheel	396,872	Jan. 29	2382	611	46	499
Hicks Induction-Light and Motor Company. (See Hicks, Thomas H., assignor.)						
Hicks, Isaac, Hartford, Wis. Harness attachment	400,211	Mar. 26	2126	557	46	1575
Hicks, James J., Hatton Gardens, county of Middlesex, England. Specific-gravity apparatus	398,726	Feb. 26	2447	648	46	1063
Hicks, Thomas H., Detroit, Mich., assignor to Hicks Induction-Light and Motor Company, of Michigan. System of electrical distribution and conversion	399,534	Mar. 12	1127	292	46	1357
Higby, Charles W., Jackson, Mich. Corset-waist	397,801	Feb. 12	1067	284, 285	46	789
Higgins, Frederick H. W., London, England. Printing-telegraph	398,833	Mar. 5	28	8, 9, 10	46	1119
Higgins, John C. (See Springer and Higgins.)						
Higgins, John D., Mount Liberty, Ohio. Animal-poke	395,372	Jan. 1	129	33	46	28
Higgins, John J., New York, N. Y. Photographic camera	397,428	Feb. 5	492	129, 130	46	673
Higgins, John J., New York, N. Y. Photographic camera	397,429	Feb. 5	496	130, 131	46	674
Higham, Charles C., Rome, N. Y. Slack-adjuster for car-brakes	398,257	Feb. 19	1736	457	46	935
Higham, Daniel, Philadelphia, Pa. Dynamo-electric machine	399,403	Mar. 12	938	242	46	1321
Higham, Daniel, Philadelphia, Pa., assignor to Higham Electric Light Company, Rockland, Me. Prevention of sparking in dynamo-electric machines and electric motors	399,401	Mar. 12	935	242	46	1321
Higham, Daniel, Philadelphia, Pa., assignor to Higham Electric Light Company, Rockland, Me. Prevention of sparking in electric generators and motors	399,402	Mar. 12	936	242	46	1321
Higham, Daniel, Philadelphia, Pa., assignor to Higham Electric Light Company, Rockland, Me. Dynamo-electric machine	399,404	Mar. 12	938	243	46	1322
Higham Electric Light Company. (See Higham, Daniel, assignor.)						
Highfield, William E., Philadelphia, Pa. Machine for changing the angle of the flanges of Z and angle bars	399,896	Mar. 19	1667	431, 432	46	1475
Hill, Alexander, Kansas City, Mo. Plastering-trowel	397,129	Feb. 5	35	8	46	585
Hill, Christian C., assignor to C. L. Ames and A. H. Frost, Chicago, Ill. Spring-making machine	400,340	Mar. 26	2328	608, 609	46	1611
Hill, Harry W., Cleveland, Ohio. Friction-clutch	400,212	Mar. 26	2128	557, 558	46	1575
Hill, Henry, Chester Cross Roads, Ohio. Evaporator	397,916	Feb. 19	1223	327	46	837
Hill, Samuel. (See Ayton and Hill.)						
Hill, Thomas, Quincy, Ill. Metallic wheel	399,989	Mar. 19	1802	467	46	1501
Hill, Warren S., Boston, Mass. Electric switch	398,510	Feb. 26	2118	557	46	1017
Hiller, Gustav, Zittau, Saxony, Germany. Tool or instrument for cutting cords and tying strips of sheet metal	397,290	Feb. 5	279	72	46	627
Hiller, Michael L., New York, N. Y. Ornamenting fabrics	399,897	Mar. 19	1669	432	46	1475
Hilliard, George. (See Lane and Hilliard.)						
Hillman, William, and J. F. Ripple, Schulenburg, Tex. Baling-press	397,917	Feb. 19	1225	327, 328	46	838

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Hills, Carl C. (See Hills, Cleon L. and C. C.)						
Hills, Cleon L. and C. C. Bloomington, Ill. Self-raising flour	395,747	Jan. 8	678	.....	46	145
Himes, John C. (See Himes Joseph B., assignor.)						
Himes, Joseph B. assignor of one-half to J. C. Hines, Ladoga, Ind. Cultivator	397,185	Feb. 5	132	36	46	602
Himmel, Robert, assignor to L. Seligsohn, Berlin, Germany. Producing fancy-figured wooden plates	400,085	Mar. 26	1939	507	46	1536
Hiney, Jacob W., Albany, N. Y. Candlestick	398,395	Feb. 26	1956	515	46	986
Hinrichsen & Co., Adolph. (See Bannier, Otto, assignor.)						
Hinsburg, Oskar, Barmen, assignor to Farbenfabriken, vormals Fr. Bayer & Co., Elberfeld, Germany. Phenacetine	400,086	Mar. 26	1941	.....	46	1537
Hinson Car Coupler Company. (See Hinson, James A., assignor.)						
Hinson, James A., assignor to Hinson Car Coupler Company, Des Moines, Iowa. Car-coupling	398,324	Feb. 19	1843	486	46	957
Hinton, C. L. (See Clark, John M., assignor.)						
Hipkins, Henry, Birmingham, county of Warwick, England. Sleeper	396,160	Jan. 15	1309	335	46	275
Hipkins, Stephen, Jr., Martin's Ferry, Ohio. Glass-mold	397,186	Feb. 5	133	36	46	602
Hipperling, William, New York, N. Y., assignor to S. A. Ginna, Plainfield, N. J., and R. A. Donaldson, Brooklyn, N. Y. Can-soldering machine	399,042	Mar. 5	350	94	46	1181
Hirschfeld, John H. (See Beeson and Hirschfeld.)						
Hirschler, Sigmund S. (See Welti, Jacob, assignor.)						
Hirst, Matthew, Philadelphia, Pa., assignor to L. De Geer, New York, N. Y. Hitching device	398,780	Feb. 26	2516	668	46	1097
Hitchcock, Charles A., *et al.* (See Burnley, William, assignor.)						
Hitchcock, Charles A., assignor of two-thirds to S. A. Davenport and W. Burnley, North East, Pa. Telephone-transmitter	399,666	Mar. 19	1329	340	46	1407
Hitchcock, William F., Homer, N. Y. Positive shuttle-motion for looms	395,829	Jan. 8	892	213	46	172
Hitchcock, William F., Homer, N. Y. Positive shuttle-motion for looms	398,964	Mar. 5	228	63	46	1158
Hixenbaugh, John, Smithton, Pa. Pulley	400,213	Mar. 26	2129	558	46	1576
Hjort, Axel F., assignor to Brunswick-Balke-Collender Company, Chicago, Ill. Machine for ornamenting billiard-cue handles, &c.	395,494	Jan. 1	277	71	46	58
Hoadley, Silvester, Gosport, Ind. Drafting-instrument	397,500	Feb. 12	604	156	46	700
Hoard, John W. (See Bartlett and Wiggin, assignors.)						
Hobart, George H., *et al.* (See Corbett, Joseph, assignor.)						
Hobbie, Alonzo D., Bergen Point, N. J. Folding or knockdown crate	396,727	Feb. 26	2448	{648 649}	46	1063
Hobbs, Alfred J. (See Hartley and Hobbs.)						
Hobson, Joseph W., Bergen Point, N. J. Pawl-and-ratchet clutch mechanism	397,802	Feb. 12	1069	285	46	789
Hodge, Herbert A., administrator. (See Pendleton, William.)						
Hodges, Charles C., *et al.* (See Howard, Charles A., assignor.)						
Hodges, Henry C., *et al.* (See Howard, Charles A., assignor.)						
Hodkinson, Samuel, Steubenville, Ohio, and G. E. Raymond, Chicago, Ill. Machine for waxing paper	396,402	Jan. 22	1671	429	46	350
Hoefer, Frederick W. (See Devore and Hoefer.)						
Hofele, Ferdinand W., assignor to E. S. Allen, New York, N. Y. Clothes-line frame	396,817	Jan. 29	2309	591	46	482
Hofele, Ferdinand W., assignor to Allen & Co., New York, N. Y. Sled	397,060	Jan. 29	2678	693	46	558
Hofele, Ferdinand W., assignor to Allen & Co., New York, N. Y. Sled	397,061	Jan. 29	2679	693	46	558
Hoffman, Charles E. (See Carlisle, Frederick, assignor.)						
Hoffmann, Anton B. (See Danforth, George E., assignor.)						
Hoffmann, Carl, assignor to Siemens & Halske, Berlin, Germany. Synchronizing device for dynamo-electric machines	396,086	Jan. 15	1210	306	46	256
Hoffmann, Carl G., Leipsic, Saxony, Germany. Telethermometer	397,548	Feb. 12	674	{175 176}	46	713
Hoffmann, John. (See Heinsohn and Hoffmann.)						
Hoffmeier, Amos K., Lancaster, Pa. Railway-tie	399,330	Mar. 12	890	213	46	1300
Hofmeister, Louis, and O. E. Schwabe, New York, N. Y. Overflow-alarm	395,830	Jan. 8	823	213	46	172
Hofstatter, Adolph G., New York, N. Y. Pen-extractor or device for removing pens from their holders	400,341	Mar. 26	2336	609	46	1612
Hogan, John, St. Louis, Mo. Attachment for chairs, lounges, &c	395,975	Jan. 8	1039	{264 265}	46	215
Hogan, Peter, Milton, N. Y. Fertilizer	397,056	Jan. 29	2645	.....	46	552
Hogeland, Israel, Indianapolis, Ind. Car-wheel	398,325	Feb. 19	1844	486	46	957
Hogue, Parker P., Erie, Pa. Combined ejector and injector	400,342	Mar. 26	2337	610	46	1612
Hoke, Quinton J., Yorkville, assignor to himself, W. J. Herron, Winnsborough, J. R. Lindsay, and S. L. Miller, Yorkville, S. C. Spark extinguisher and arrester	397,363	Feb. 5	385	{101 102}	46	651
Holcomb Brothers & Co. (See Morton, William F., assignor.)						
Holcombe, Alfred G., assignor to Equitable Electric Company, New York, N. Y. Electric communicating system	397,364	Feb. 5	388	{102 103}	46	651
Holden, Burton, Geneva, Ohio. Carpet-stretcher	395,903	Jan. 8	935	240	46	194
Holden, Horace, East Orange, N. J. Sounding-lead	398,396	Feb. 26	1957	515	46	986
Holland, James M., Mount Pleasant, Iowa. Road-grading machine	397,291	Feb. 5	280	72	46	629
Holle, Gustav, Philadelphia, Pa. Opera-glass	396,657	Jan. 22	2060	529	46	424
Hollerith, Herman, New York, N. Y. Compiling statistics	395,781	Jan. 8	725	{187 188}	46	154
Hollerith, Herman, New York, N. Y. Compiling statistics	395,782	Jan. 8	736	{188 189}	46	156
Hollerith, Herman, New York, N. Y. Apparatus for compiling statistics	395,783	Jan. 8	739	189	46	156
Holley, Clarence E., assignor of two-thirds to H. J. Palmer and L. K. Cary & Co., Fort Fairfield, Me. Sled-brake	399,405	Mar. 12	940	243	46	1322
Holley, William A., and U. Malin, Holland, Mich. Electro-magnetic grain-scale	397,594	Feb. 12	762	199	46	730
Hollis, Charles R., Pittsfield, Mass. Garment fastener and support	398,046	Feb. 19	1433	380	46	875
Holloway, William, Gilroy, Cal. Gang-plow	395,831	Jan. 8	824	213	46	173
Hollowell, Harry, Longville, Pa. Stump-extractor	396,067	Jan. 15	1212	306	46	256
Holmes, Booth & Haydens. (See Limont, Alexander H., assignor.)						
Holmes, K. & B. (See Crafts, Francis H., assignor.)						
Holmes, George H., Ogdensburg, N. Y. Saw	397,646	Feb. 12	844	220	46	745
Holmes, John P., Oak Valley, Kans. Air-ship	397,647	Feb. 12	845	{220 221}	46	745
Holt, Arthur J., deceased, Grand Rapids, Mich.; F. S. Holt administratrix. Regulator for dynamo-electric machines	396,932	Jan. 29	2472	637	46	517
Holt, Frances S., administratrix. (See Holt, Arthur J.)						
Holt, Hiland A., Nashua, N. H. Lock	397,501	Feb. 12	605	156	46	700
Holt, Newton W., Bennington, Vt. Dentist's lathe	399,406	Mar. 12	941	243	46	1322
Holton, John L., and L. H. Britton, New Lisbon, Ohio. Hose-coupling	397,187	Feb. 5	134	36	46	602
Holzmark, Isaac, Kansas City, Kans. Dish-drainer	395,393	Jan. 1	130	33	46	29

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Holzworth, Louis, assignor to Eagle Pencil Company, New York, N. Y. Pen-holder	399,043	Mar. 5	353	94	46	1182
Homan & Co. (See Homan, Louis, assignor.)						
Homan, Louis, assignor to Homan & Co., Cincinnati, Ohio. Candle-molding machine	397,918	Feb. 19	1226	328	46	838
Homan, William C., assignor to E. Miller & Company, Meriden, Conn. Suspension device for lamps	397,462	Feb. 5	547	144	46	662
Homan, William C., assignor to E. Miller & Company, Meriden, Conn. Gas-cock	398,610	Feb. 26	2264	601	46	1047
Hooper, Henry O., San Francisco, assignor of one-half to J. Breamen, Eureka, Cal. Safety attachment for elevators	398,728	Feb. 26	2450	649	46	1063
Hooper, William J., Rincon, N. Mex. Ter. Combined head-chair and connecting-rod	396,487	Jan. 22	1809	463	46	377
Hoover, Francis A., Kimeo, Kans. Door-check	396,488	Jan. 22	1810	464	46	377
Hoover, Isaac W., Avery, Ohio. Potato-digger	396,818	Jan. 29	2309	591	46	482
Hopkins, Charles H., Lyndonville, assignor to S. S. Thompson, Lyndon, Vt. Jack-screw	398,617	Feb. 26	2266	601	46	1047
Hopkins & Dickinson Manufacturing Company. (See Fiske, William G., assignor.)						
Hopkins, George L., Manchester, N. H. Circuit-closer for railway-car telegraphs	399,228	Mar. 5	669	174	46	1243
Hopkins, Herbert, and J. R. Perry, Wilkes-Barré, Pa. Heating-stove	395,327	Jan. 1	34	9	46	9
Horne Vacuum Company. (See Horne, William L., assignor.)						
Horne, William L., Meriden, assignor to Horne Vacuum Company, Hartford, Conn. Electric-lighting system	400,214	Mar. 26	2131	558	46	1576
Hornig, Julius L., Jersey City, N. J. Steering apparatus	397,919	Feb. 19	1227	328	46	838
Hornig, Julius L., Jersey City, N. J. Steering apparatus	398,326	Feb. 19	1845	487	46	957
Horrocks, William, assignor of one-half to F. F. Lathrop, Herkimer, N. Y. Drawer-guide	399,752	Mar. 19	1451	373	46	1432
Horry, William S. (See Kitson and Horry.)						
Horton Manufacturing Company. (See Treadway, Charles S., assignor.)						
Horton, Thomas, and J. P. Whitehouse, Garrett, Ill. Sod-cutter, stalk-cutter, and roller	397,502	Feb. 12	607	157	46	701
Hosack, Samuel G., Ann Arbor, Mich. Siding-gage	399,698	Mar. 19	1669	432	46	1475
Hosford, Frederick J., Brooklyn, N. Y. Record or other file	396,068	Jan. 15	1213	307	46	257
Hoshall, David W., Little Rock, Ark. Planter	397,549	Feb. 12	676	176	46	713
Hosie, John H., *et al.* (See Huson, Lewis C., assignor.)						
Hotchkiss, Frederick G., Brooklyn, N. Y. Paper box	396,570	Jan. 22	1933	498	46	399
Hotchkiss Ordnance Company. (See Benét, Laurence V., assignor.)						
Höttges, Emil. (See Heidmann, Höttges, and Egen.)						
Houck, William A. (See Rose, William G., assignor.)						
Hough, John D., *et al.* (See Wilson, George T., assignor.)						
Hough, John T., Chicago, Ill., assignor to National Safe Deposit and Vault Manufactnring Company, Pittsburg, Pa. Roof for vaults and other structures	396,040	Jan. 8	1132	{287 288}	46	232
House, James A., and C. H. Dimond, Bridgeport, Conn. Sewing-machine	399,900	Mar. 19	1802	{467 468}	46	1501
Houston, S. D., Jr. (See Hall, Lewis D., assignor.)						
Hovey, Francis T. Homer, N. Y. Adjustable angle-trowel	398,781	Feb. 26	2517	669	46	1097
Hovis, John T., Clintonville, Pa. Vehicle-spring	396,744	Jan. 29	2205	564	46	460
How, William F. (See Goodwin and How.)						
Howard, Abel T. (See Sickles, Gerard, Jr., assignor.)						
Howard, Charles A., assignor to A. G. North, Pontiac, Mich. Wagon-spring	396,694	Jan. 22	2115	542	46	435
Howard, Charles A., Pontiac, assignor to H. C. and C. C. Hodges, Detroit, Mich. Car-axle lubricator	399,899	Mar. 19	1670	{432 433}	46	1475
Howard, Clement W. (See Hunter, Ben W., assignor.)						
Howard, Frank B., Montreal, Quebec, Canada. Apparatus for manufacturing hollow ware from pulp	398,397	Feb. 26	1958	515	46	986
Howard, Hiram, *et al.* (See Parks, George W., assignor.)						
Howard, John M. (See Harrison and Howard.)						
Howard, Stephen C., *et al.* (See Parks, George W., assignor.)						
Howard, Thomas J., Highland, Kans. Gate	395,976	Jan. 8	1041	265	46	215
Howard, Tom. (See Fitton, John R., assignor.)						
Howe, Daniel K., Portland, Oreg. Cover for shipping-receipts	399,407	Mar. 12	942	244	46	1322
Howe, Eleanor E., Bridgeport, Conn. Body-brace	398,511	Feb. 26	2119	557	46	1018
Howe, Otis, Cambridgeport, Mass. Wire mattress	396,695	Jan. 22	2116	543	46	435
Howell, Charles B., Wilmington, N. C. Spring-bed or upholstered springs	397,234	Feb. 5	198	52	46	613
Howell, Henry W., Jr., Elizabeth, N. J. Car-brake	399,408	Mar. 12	943	244	46	1323
Howell, Samuel C., Newark, N. J. Japanning leather	397,803	Feb. 12	1070	285	46	789
Howell, William E., assignor of one-half to G. S. Marygold, Los Angeles, Cal. Shirt-wrist-band	397,920	Feb. 19	1228	328	46	838
Howell, William H., New York, N. Y. Cotton-chopper	397,804	Feb. 12	1071	285	46	789
Howenstine, David J., Canal Fulton, Ohio. Windmill	396,489	Jan. 22	1812	464	46	377
Howland, Ephraim, Pontiac, Mich. Steam-thrasher regulator	398,695	Mar. 5	120	32	46	1137
Hoyt, George E., San Francisco, Cal. Collar-stuffing machine	397,292	Feb. 5	282	73	46	630
Hoyt, James B., Troy, N. Y. Horse-boot	398,634	Mar. 5	32	11	46	1120
Hoyt, Joseph M., *et al.* (See Slocum, George S., assignor.)						
Hoyt, Richard H., assignor of one-half to H. B. Loomis, Buffalo, N. Y. Sawing-machine	399,900	Mar. 19	1672	{433 434}	46	1476
Hoyt, William G., *et al.* (See Slocum, George S., assignor.)						
Hubbard, George M., assignor to W. & E. T. Fitch, New Haven, Conn. Buckle-guard	395,904	Jan. 8	937	241	46	194
Hubbell, Herbert G., Havana, N. Y. Tool for splicing wire	396,819	Jan. 29	2310	592	46	482
Huber, Joseph L., Hamburg, Germany. Secondary battery	399,535	Mar. 12	1129	293	46	1356
Huckabay, George W., Garfield, La. Tire-fastener	398,398	Feb. 26	1959	515	46	987
Huckabay, George W., Garfield, La. Vehicle-brake	398,399	Feb. 26	1960	516	46	987
Huckabay, George W., Garfield, La. Mechanical movement	398,400	Feb. 26	1961	516	46	987
Huckabay, George W., Garfield, La. Cane-mill	398,401	Feb. 26	1964	516	46	987
Hudson, Frederick W., Leominster, assignor to W. S. Brown, Boston, Mass. Egg-beater	398,258	Feb. 19	1737	458	46	935
Hudson, James F., Cheyenne Wells, Colo. Device for cleaning wells	399,044	Mar. 5	354	95	46	1182
Hueffner, Henry A., Palmer, Ill. Bolting-reel	397,057	Jan. 29	2645	681	46	552
Huffman, Samuel, Matanzas, Kans. Corn-planter	396,490	Jan. 22	1813	465	46	378
Huggins, William, Bushnell, Mich. Scraper and roller	395,784	Jan. 8	743	190	46	157
Hughes, Charles, Matanzas, Cuba. Cane-mill	395,832	Jan. 8	825	214	46	173
Hughes, Frederick J., Watford, Ontario, Canada. Car-coupling	397,058	Jan. 29	2646	681	46	552
Hughes, George R., Savoy, Tex. Wire-stretcher	398,047	Feb. 19	1434	380	46	875
Hughes, Joseph. (See Venables and Hughes.)						
Huguet de Vars, Hilarion A. B., Paris, France. Electric spray-producing apparatus	398,327	Feb. 19	1847	487	46	957
Hulford, William J., assignor of two-thirds to D. F. Fitzgerald and E. R. Williams, Lawrence, Mass. Insulating jacket or covering	396,933	Jan. 29	2474	637	46	517
Hull, Erle S., Chicago, Ill. Hand-rest	399,266	Mar. 12	727	189	46	1281
Hull, Gurdon W. (See Atkinson and Hull.)						
Hull, Hubert H., Jersey City, N. J. Fuel-burner	398,729	Feb. 26	2451	649	46	1063
Hull, Selah A. (See Meeker, George E., assignor.)						
Hull, William S., Sheffield, Ala., and J. C. Anderson, Charleston, N. C. Electric railway switch and alarm	399,331	Mar. 12	822	{213 214}	46	1300

Hunter, John, Maple Bay, Minn. Railway-switch	396,873	Jan. 29	2383	611, 612	46	500
Hunter, Joseph L., Pittsburg, Pa. Feed-water heater	398,966	Mar. 5	231	64	46	1158
Hunter, Malcom, Long Island City, N. Y. Life-saving net	396,491	Jan. 22	1814	465	46	378
Hunter, Rudolph M., Philadelphia, Pa. Forming secondary-battery electrodes	397,235	Feb. 5	198	53	46	613
Hunter, Rudolph M., Philadelphia, Pa. Dynamo-electric machine	397,550	Feb. 12	677	177	46	714
Hunter, Rudolph M., Philadelphia, Pa. Apparatus for heating cars by electricity	397,857	Feb. 12	1139	304	46	803
Hunter, Rudolph M., Philadelphia, Pa. Current-collecting device for electric railways	398,402	Feb. 26	1963	516	46	987
Hunter, Rudolph M., Philadelphia, Pa. Conductor for electric railways	349,409	Mar. 12	944	245	46	1323
Hunter, Rudolph M., Philadelphia, Pa. Secondary battery	400,404	Mar. 26	2425	635	46	1629
Hunter, William G., Traver, Cal. Hay or grain unloader	397,551	Feb. 12	682	177	46	715
Huntington, Joseph D., Providence, R. I. Tool for turning and shaping emery-wheels	397,503	Feb. 12	608	157	46	701
Hurd, Edward P., Boston, Mass., assignor to McKay & Copeland Lasting Machine Company, Portland, Me. Nail-machine	399,410	Mar. 12	945	245	46	1323
Hurd, George A. (See Crandall, Jesse A., assignor.)						
Hurd, Hutson R., Cleveland, Ohio. Respirator for firemen	396,161	Jan. 15	1310	335	46	275
Hurdle, Rebecca, Washington, D. C. Dress-cutter's scale	395,566	Jan. 1	392	100	46	81
Hurford, Oliver P., Chicago, Ill. Screen for bolting flour	399,616	Mar. 12	1255	322	46	1382
Hurth, Michael, Poughkeepsie, N. Y. Machine for polishing stones	396,162	Jan. 15	1312	335, 336	46	275
Hurty, John N., Indianapolis, Ind. Manufacturing starch	395,977	Jan. 8	1042	265	46	215
Huson, Lewis C., Elmira, assignor to R. B. Ayres, Hammondsport, N. Y., J. H. Hosie, Scranton, Pa., and Huson Motor Company, (limited.) Rotary engine	398,512	Feb. 26	2120	557, 558	46	1018
Huson, Lewis C., Elmira, assignor to R. B. Ayres, Hammondsport, N. Y., J. H. Hosie, Scranton, Pa., and Huson Motor Company, (limited.) Rotary engine	398,782	Feb. 26	2518	669	46	1097
Huson Motor Company *et al.* (See Huson, Lewis C., assignor.)						
Husted, Peter V., New York, N. Y. Wire	398,259	Feb. 19	1739	458	46	935
Husted, Peter V., New York, N. Y. Barbed nail	398,260	Feb. 19	1739	458	46	935
Huston, Harrison, and E. J. Martin, Idaho Springs, Colo. Machine for operating rock-drills	396,745	Jan. 29	2206	564	46	460
Hutchins, George F., assignor to Knowles Loom Works, Worcester, Mass. Shedding mechanism, &c., for looms	397,858	Feb. 12	1141	305	46	804
Hutchins, George F., assignor to Knowles Loom Works, Worcester, Mass. Pattern mechanism for looms	398,328	Feb. 19	1848	487, 488	46	958
Hutchins, George F., assignor to Knowles Loom Works, Worcester, Mass. Shedding mechanism for looms	398,618	Feb. 26	2267	601	46	1017
Hutchinson, Alfred B., assignor to Glen Cove Machine Company, Green Point, Brooklyn, N. Y. Wood-planing machine	395,495	Jan. 1	279	72	46	59
Hutchinson, Alfred B., assignor to Glen Cove Machine Company, (limited,) Brooklyn, N. Y. Wood-planing machine	396,934	Jan. 29	2475	637	46	517
Hutchinson, Alfred B., and E. F. Autenrieth, assignors to Glen Cove Machine Company, (limited,) Brooklyn, N. Y. Wood-planing machine	398,048	Feb. 19	1435	380	46	875
Hutchinson, Christopher C. (See Johnson and Hutchinson.)						
Hutchinson, Fred J., *et al.* (See Barwick, William H., assignor.)						
Hutton, George H., Baltimore, Md. Thill for vehicles	399,537	Mar. 12	1138	294, 295	46	1359
Hutzel, Titus F., Ann Arbor, Mich. Water-front for stoves	398,783	Feb. 26	2520	670	46	1097
Huyck, Francis C., *et al.* (See McKie, William, assignor.)						
Hyatt, John W., Newark, N. J. Roller-bearing	398,329	Feb. 19	1849	488	46	958
Hyatt, William F., Brooklyn, N. Y. Safety-pin	399,667	Mar. 19	1331	341	46	1408
Hyde, Wesley M., Youngstown, Ohio, assignor of one-half to J. E. Johnston, Meade Center, Kans. Constructing wire fence	399,267	Mar. 12	728	189	46	1281
Hyland, Henry H., assignor of one-half to T. H. Phelps, Pittsburg, Pa. Injector for burning petroleum in furnaces	395,785	Jan. 8	744	190, 191	46	157
Hyland, Henry H., assignor of one-half to T. H. Phelps, Pittsburg, Pa. Petroleum-burner and steam-generator	395,786	Jan. 8	746	191, 192	46	157
Hyland, Joseph, Buffalo, assignor of one-half to E. P. Sullivan, Eagle Village, N. Y. Leaf-holder for books	399,411	Mar. 12	947	245	46	1323
Hyman, Anna C. (See Hyman, Theodore B., assignor.)						
Hyman, Theodore B., assignor to A. C. Hyman, Goldsborough, N. C. Mechanism for conveying and distributing lumber	395,978	Jan. 8	1045	265	46	216
Hyntzsch, Rudolf, Halberstadt, Prussia, Germany. Adjustable arm-support for book-keepers	399,993	Mar. 19	1808	469	46	1502
Ianke, Leopold, Louisville, Ky. Apparatus for converting cast-iron	397,365	Feb. 5	393	103	46	652
Iddings, Henry A., and J. P. Megeath, Omaha, Nebr. Door-knob attachment	396,571	Jan. 22	1935	498	46	400
Iddings, Warren, Warren, Ohio. Preserving and hardening wood	398,619	Feb. 26	2268	.....	46	1047
Ide, Albert L., Springfield, Ill. Engine-frame	396,209	Jan. 15	1388	355	46	289
Ide, Albert L., Chicago, Ill. Lubricating device for engines	397,293	Feb. 5	283	73	46	630
Ideal Rubber Company. (See Eggers, Anton C., assignor.)						
Ihnen, Harro, Jersey City, N. J. Fence	399,617	Mar. 12	1257	323	46	1382
Imschenetzky, Alexander, St. Petersburg, Russia. Galvanic battery	400,215	Mar. 26	2132	558, 559	46	1576
Ingersoll, Robert H., New York, N. Y. Key-ring	398,835	Mar. 5	33	11	46	1120
Ireland, James. (See Mooney and Ireland.)						
Iresen, Charles L., Boston, Mass. Belt-stretching machine	396,874	Jan. 29	2384	612	46	500
Iron Car Company. (See Goodfellow, James T., assignor.)						
Iron Clad Manufacturing Company. (See Diacho, William, assignor.)						
Isaacs, Edward A., assignor of three-fourths to J. C. Van Syckle and H. C. Tindall, Macon, Ga. Back-band hook	397,002	Jan. 29	2564	602	46	536
Ishe, Albert. (See Landis and Ishe.)						
Israel, Joseph C., New York, N. Y. Printer's brush	398,049	Feb. 19	1438	381	46	876
Izzard, Howard, F. A. Stanger, Glassborough, and T. C. Duffield, Woodbury, N. J. Glass tile	398,730	Feb. 26	2452	650	46	1084

			Spec.	Drg.	Vol.	Page.
Kleemann, Ludwig, Myslowitz, Prussia, Germany. Furnace for working zinc ores	399,905	Mar. 19	1810	{470 471}	46	1502
Klein, Marcus, Chicago, Ill. Apparatus for cutting hair	395,444	Jan. 1	202	52	46	43
Kleinsteuber, Oscar D. (See Paul and Kleinsteuber.)						
Kling, Isaac, Louisville, Ky. Car-coupling	396,878	Jan. 29	2393	614	46	502
Kling, Isaac, Louisville, Ky. Car-coupling	396,879	Jan. 29	2396	614	46	502
Klinglesmith, John F., St. Louis, Mo. Spring-gun	398,265	Feb. 19	1746	461	46	937
Klipstein, Frederick C., Leland, Wis. Sleigh	397,728	Feb. 12	961	256	46	767
Kloeckner, Daniel, *et al.* (See Waffen, John, assignor.)						
Knaak, Frank C. F. (See Abbot and Knaak.)						
Knapp, Albert M., Providence, R. I. Syringe	397,060	Jan. 29	2650	682	46	553
Knapp, Byron G., Sandy Hill, N. Y. Hitching-post	399,904	Mar. 19	1678	435	46	1477
Knapp, Joseph, Buffalo, N. Y. Velocipede	400,090	Mar. 26	1946	509	46	1537
Knapp, Philip N., and J. R. Britto, South Norwalk, Conn. Hat	395,335	Jan. 1	47	11	46	12
Knapp, William A. (See Scofield, Almaron J., assignor.)						
Knecht, Victor E. (See Barrath, Edward, assignor.)						
Knickerbocker Company. (See Mundy, John G., assignor.)						
Knifin, George G., Brooklyn, assignor to H. E. and H. Janes, New York, N. Y. Stove or range	398,515	Feb. 26	2124	559	46	1019
Knight, Arthur L. (See Schiffer and Knight.)						
Knight, Edwin L., Springfield, Mass. Water-closet valve	399,905	Mar. 19	1679	436	46	1477
Knight, Jefferson V. (See McLean, Arthur, assignor.)						
Knight, Walter H., New York, N. Y. Rack and gear for inclined railways	400,347	Mar. 26	2345	612	46	1614
Knipe, William A. (See Smith, George E., assignor.)						
Knoche, Johann E., San José, Cal. Pavement	398,055	Feb. 19	1447	383	46	878
Knode, Robert S., assignor of one-half to E. L. Siver, Fort Wayne, Ind. Atomizer	399,539	Mar. 12	1140	295	46	1360
Knorpp, Philipp, and G. A. Mayer, Stapleton, N. Y. Tin brilliant ornament	397,083	Jan. 29	2682	694	46	558
Knowles, Edward R., Brooklyn, N. Y. Electric switch or cut-out	396,880	Jan. 29	2397	615	46	502
Knowles, Edward R., Brooklyn, N. Y. Automatic electric cut-out	396,940	Jan. 29	2482	640	46	519
Knowles, Edward R., Brooklyn, N. Y. Secondary-battery plate	397,557	Feb. 12	692	180	46	717
Knowles, Edward R., Brooklyn, N. Y., assignor to Mutual Electric Manufacturing Company, of New York. Armature-winding for dynamo-electric machines	396,941	Jan. 29	2483	640	46	519
Knowles, Edward R., Brooklyn, N. Y., assignor to Mutual Electric Manufacturing Company, of New York. Commutator for dynamo-electric machines	396,942	Jan. 29	2484	640	46	520
Knowles, Edward R., Brooklyn, N. Y., assignor to Mutual Electric Manufacturing Company, of New York. Automatic switch for electric-arc lamps	397,729	Feb. 12	963	256	46	768
Knowles, Edward R., Brooklyn, assignor, by mesne assignments, to Mutual Electric Manufacturing Company, New York, N. Y. Secondary battery	399,052	Mar. 5	361	97	46	1183
Knowles, Ernest, Mossfield Mill, Bolton, county of Lancaster, England. Valve mechanism for automatically starting steam-pumps	395,908	Jan. 8	943	242	46	195
Knowles, Fred C. (See Magee and Knowles.)						
Knowles Loom Works. (See Hutchins, George F., assignor.)						
Knowles Loom Works. (See Wattie, William, assignor.)						
Knowlton, Dexter A. (See Knowlton, William A., assignor.)						
Knowlton, Ephraim H. B., assignor of three-fourths to A. C. Mellette, J. J. Owsley, Sr., and O. E. Dewey, Watertown, Dak. Ter. Car-coupling	398,056	Feb. 19	1448	383	46	878
Knowlton, William A., Rockford, Ill., assignor to D. A. Knowlton. Mowing-machine	395,981	Jan. 8	1049	{266 267}	46	216
Knox, John A., and T. J. Eberson, assignors to P. P. Sherry, Lynn, Mass. Button-hole finishing and staying machine	398,335	Feb. 19	1858	490	46	959
Knutzen, William, Donahue, Iowa. Combined clod-crusher and roller	395,787	Jan. 8	748	192	46	157
Koch, Julius J., St. Louis, Mo. Hydraulic brick-machine	397,730	Feb. 12	963	{256 257}	46	768
Koch, Walter E., Sharpsburg, Pa. Apparatus for casting steel pipes	396,747	Jan. 29	2209	565	46	461
Koch, William, New York, N. Y. Numbering-machine	398,624	Feb. 26	2274	603	46	1049
Koch, William, New York, N. Y. Cash indicator and recorder	398,625	Feb. 26	2277	{603 604}	46	1049
Koch, William, New York, N. Y. Stop device for adding and registering wheels	398,627	Feb. 26	2291	604	46	1051
Koch, William, New York, N. Y., and C. E. Hadley, Washington, D. C.; said Hadley assignor to said Koch. Cash indicator and register	398,626	Feb. 26	2283	{604 605}	46	1050
Koehler, Charles F., St. Louis, Mo. Apparatus for the pasteurization of beer	399,200	Mar. 5	625	162	46	1234
Koehler, Benjamin C., and D. Heer, Philadelphia, Pa. Coffin-handle	395,962	Jan. 8	1051	267	46	217
Koehn, Alfred, New York, N. Y. Adjustable standard for music-racks	398,408	Feb. 26	1976	519	46	989
Koenig, Michael, assignor to S. Zinn, New York, N. Y. Frame for pocket-books or other articles	397,868	Feb. 12	1145	306	46	805
Koepp, Ferdinand, and J. C. Gueth, Pittsburg, Pa. Carpet-stretcher and tack-driver	395,497	Jan. 1	282	72	46	60
Kohlberg, Benjamin F., *et al.* (See Anderson and Elias, assignors.)						
Kohler, Frederick E., Canton, Ohio. Tricycle	400,091	Mar. 26	1947	509	46	1538
Kohnert, Otto. (See Diamond and Kohnert.)						
Kolb, George F., Philadelphia, Pa. Cash indicator and register	395,570	Jan. 1	400	{102 103}	46	83
Kolb, George F., Philadelphia, Pa. Cash-indicator	400,406	Mar. 26	2427	{636 637}	46	1629
Kolb, Jonathan F., H. H. Allen, and C. F. St. Clair, Oceanside, Cal.; said Allen and St. Clair assignors to said Kolb. Buggy-bow support	396,211	Jan. 15	1392	356	46	290
Koller, Martin. (See Richard, William, assignor.)						
Kollofski, Bernhardt R. (See Borst, George, assignor.)						
Kookogey Electric Company. (See Kookogey, William P., assignor.)						
Kookogey, William P., Brooklyn, N. Y., assignor to Kookogey Electric Company. Preparing solution compounds for galvanic batteries	395,835	Jan. 8	829	.....	46	174
Kookogey, William P., Brooklyn, N. Y., assignor to Kookogey Electric Company. Apparatus for charging and discharging secondary batteries	395,836	Jan. 8	830	215	46	174
Kookogey, William P., Brooklyn, N. Y., assignor to Kookogey Electric Company. Preparing solution compounds for galvanic batteries	395,837	Jan. 8	834	.....	46	175
Kookogey, William P., Brooklyn, N. Y., assignor to Kookogey Electric Company. Electrical railway-signal	396,748	Jan. 29	2210	565	46	461
Kookogey, William P., Brooklyn, N. Y., assignor to Kookogey Electric Company. Railway-signal	396,749	Jan. 29	2212	566	46	462
Kookogey, William P., Brooklyn, N. Y., assignor to Kookogey Electric Company. Railway-signal	396,750	Jan. 29	2213	566	46	462
Kookogey, William P., Brooklyn, N. Y., assignor to Kookogey Electric Company. Mercury-holder for battery-zincs	398,737	Feb. 26	2460	652	46	1065
Koons, Charles W. (See Effinger, Deweese, Koons, and Metzger.)						
Koons, Joseph K., Montgomery, Pa. Lathe for turning bodies having elliptical cross-sections	395,838	Jan. 8	834	216	46	175

McCauley, James, Auburn Park, assignor to Abbott Buggy Company, Chicago, Ill. Fifth-wheel for vehicles	397,739	Feb. 12	978	260	46	771
McCausland, Albert. (See McCausland, James M., assignor.)						
McCausland, James M., assignor of one-fourth to A. McCausland, Pepperell, Mass. Machine for coating paper	399,151	Mar. 5	542	141	46	1219
McCleary, Carson L., Jerusalem, Ohio. Carpet-fastener	397,598	Feb. 12	766	200	46	731
McClintock, James M., McKenzie, Tenn. Horse hay-rake	399,765	Mar. 19	1471	379	46	1436
McClintock, John M., *et al.* (See Lindsay, William E., assignor.)						
McCloskey, John, assignor of one-half to C. F. Farwell, Boston, Mass. Expansion device	398,525	Feb. 26	2137	563, 564	46	1021
McCloskey, John, assignor of one-half to C. F. Farwell, Boston, Mass. Expansion device	398,526	Feb. 26	2138	564	46	1022
McCloskey, William T., Westport, Pa. Mill-pond waste-water gate	398,842	Mar. 5	40	13	46	1122
McCloud, Sidney, Chicago, Ill. Machine for reducing old rails	395,339	Jan. 1	50	12, 13	46	12
McClure, George W., *et al.* (See Massicks and Crooke, assignors.)						
McClure, Samuel, and C. F. Phillips, Sharon, Pa. Device for protecting furnaces or like structures	397,376	Feb. 5	405	107	46	654
McClure, Samuel C. (See Fisher, Marion O., assignor.)						
McCollum, John A., Riverside, Cal. Apparatus for the manufacture of gas	395,449	Jan. 1	209	54	46	45
McComish, John J., assignor of one-half to J. J. Shanahan, Providence, R. I. Stop-motion for looms	399,917	Mar. 19	1701	440, 441	46	1481
McConachie, William, Belleville, Dak. Ter. Automatic grain-measuring machine	400,100	Mar. 26	1959	513, 514	46	1540
McConnell, A. C., *et al.* (See Stump, Ira E., assignor.)						
McConnell, George T., *et al.* (See Stump, Ira E., assignor.)						
McConnon, Thomas J. (See Potter and McConnon.)						
McCool, William A., assignor of one-half to H. W. Hartman, Beaver Falls, Pa. Machine for straightening metal bars, tubes, &c	395,400	Jan. 1	138	35, 36	46	30
McCool, William A., assignor of one-half to H. W. Hartman, Beaver Falls, Pa. Drawing metals	400,238	Mar. 26	2168	508, 509	46	1582
McCord, Andrew J., Louisville, Ky., assignor of one-half to J. F. McGregor, Columbia, Tenn. Combined snap-hook and buckle	395,663	Jan. 1	556	139	46	112
McCormick, Charles W., Emporia, Kans. Cash-carrier apparatus	399,428	Mar. 12	966	251, 252	46	1328
McCormick Harvesting Machine Company. (See Baker, William R., assignor.)						
McCormick, Michael, and F. Fariah, assignors of one-third to M. Donnelley, Toronto, Ontario, Canada. Signaling device for railway-trains	398,067	Feb. 19	1466	387	46	882
McCoy, Andrew T., Boston, Mass., assignor to J. Anderson, New York, N. Y. Printing-telegraph	397,466	Feb. 5	552	145	46	683
McCoy, Dewitt C. Bushnell, Fla. Car-coupling	399,278	Mar. 12	742	193	46	1284
McCoy, Joseph, Baltimore, Md. Velocipede	397,015	Jan. 29	2582	667, 668	46	539
McCreary, Alfred T. (See McCreary, Nathan B. and A. T.)						
McCreary, Nathan B., Rockport, and A. T. McCreary, St. Joseph, Mo. Device for setting tires on wagon or other wheels	398,843	Mar. 5	41	13	46	1122
McCreery, Charles H. (See Caylor and McCreery.)						
McCulloch, James, Manchester, England. Rock-drill	398,637	Feb. 26	2303	609, 610, 611	46	1053
McCulloch, Thomas H., Omaha, Nebr. Purifier for water or other liquids	399,429	Mar. 12	969	252	46	1328
McDermaid, John, Rockford, Ill. Closure for churns	399,681	Mar. 19	1349	347	46	1411
McDonald, Alexander E., Brooklyn, N. Y. Hat-measure	398,340	Feb. 19	1868	492	46	961
McDonald, Fred C., New York, N. Y. Starting and draft mechanism for street-cars	397,740	Feb. 12	979	260	46	771
McDonald, Theodore R., assignor to G. W. Heartley, Northville, Mich. Hat-hanger	397,599	Feb. 12	767	201	46	731
McDougall, Alexander, Duluth, Minn. Transporting sand, &c	397,741	Feb. 12	981	260	46	772
McDowell, John J., Boston, Mass. Egg-beater	397,655	Feb. 12	861	225	46	748
McDowell, Magdalene H., Lexington, Ky. Fire-back plate	397,742	Feb. 12	982	261	46	772
McDowell, Jonas P., Foote, Iowa. Draft-equalizer	399,766	Mar. 19	1474	380	46	1437
McDuffee, Augustus, *et al.* (See Graf, Anton, assignor.)						
McElroy Car Heating Company. (See McElroy, James F., assignor.)						
McElroy, James F., Lansing, assignor to McElroy Car Heating Company, Detroit, Mich. System for heating cars	400,350	Mar. 26	2348	613	46	1615
McErlain, John J., assignor of one-half to F. A. Baker, South Bend, Ind. Split pulley	396,161	Jan. 15	1229	311	46	260
McEuen, Charles A., *et al.* (See Speake, Rufus H., assignor.)						
McEwan, James, Detroit, Mich. Coupling for parallel pipes	398,068	Feb. 19	1467	388	46	882
McEwen, Hugh R. (See Olds, Charles E., assignor.)						
McFeely, Ronald F., and H. V. Potter, Pittsburg, Pa. Electrical appliance for stopping and starting elevators	399,341	Mar. 12	834	217, 218	46	1302
McGimsey, Charles P., Arkadelphia, Ark., assignor of one-half to H. R. Estes, St. Louis, Mo. Joint for furniture	396,588	Jan. 22	1903	505	46	405
McGinnis, William B., Nevada, Mo. Stove	399,767	Mar. 19	1475	380	46	1437
McGinniss, Cornelius, Chicago, Ill. Smoke-consuming furnace	397,135	Feb. 5	46	10	46	587
McGrath, John, Danbury, Conn. Ice-boat	395,848	Jan. 8	851	220	46	179
McGrath, John, Laragh, county of Monaghan, and E. Manisty, Dundalk, county of Louth, Ireland. Apparatus for scutching flax, &c	396,171	Feb. 19	1610	427, 428	46	909

Mull, William H., Lawrence, Kans. Self-heating sad-iron	398,743	Feb. 26	2467	654	46	1087
Müller, Friedrich W., Jr., Berlin, Germany. Sewing-machine	397,996	Feb. 19	1340	357	46	858
Müller, Gustav A. F. (See Ehrlich and Müller.)						
Muller, Hanns, *et al.* (See Wicek, Wenzl, assignor.)						
Mullins, George G., Los Angeles, Cal., assignor to Mullins Silicated Iron and Steel Company, East St. Louis, Ill. Purifying iron. (Reissue)	10,988	Feb. 26	2553	.....	46	1106
Mullins Silicated Iron and Steel Company. (See Mullins, George G., assignor.) (Reissue.)						
Mundt, Wilhelm, Brooklyn, assignor of two-thirds to J. Habermann and R. Cohn, New York, N. Y. Braiding-machine	399,623	Mar. 12	1264	325	46	1383
Mundy, Charles H., *et al.* (See Patten, Jefferson, assignor.)						
Mundy, John G., assignor to Knickerbocker Company, Jackson, Mich. Dust-collector	398,788	Feb. 26	2528	671	46	1099
Munger, Robert S., Dallas, Tex. Saw-gin	396,706	Jan. 22	2129	545	46	437
Munsell, Lucien E. (See Griswold, Fred E., assignor.)						
Munson, Andrew M., Lee, Ill. Automatic stop for wire-barbing machines	395,712	Jan. 8	625	158, 159	46	135
Munson, John B., Scranton, Pa. Baking and roasting pan	397,869	Feb. 12	1152	308	46	806
Murdock, J. & J. (See Currier, George O., assignor.)						
Murphey, Frank P., assignor of one-half to W. D. Chamberlain, Decatur, Ill. Corn-planter	398,789	Feb. 26	2530	672, 673	46	1100
Murphy, Daniel H., Hartford, Conn. Work-stand	399,546	Mar. 12	1140	298	46	1361
Murphy, Frank J., and A. M. Rundle, Danbury, Conn. Machine for stiffening hats	396,829	Jan. 29	2322	595	46	485
Murphy, Hugh A., Elk City, Kans. Harrow	397,605	Feb. 12	773	207	46	735
Murphy, John, Brooklyn, N. Y. Hose-machine	399,547	Mar. 12	1150	298	46	1361
Murphy, William, St. John, New Brunswick, Canada. Canvas-stretcher for picture-frames	397,139	Feb. 5	50	11	46	587
Murray, A. Gordon, Cedar Rapids, Iowa. Sash-holder	396,830	Jan. 29	2327	595	46	487
Murray, Archibald B., and H. Harrison, San Rafael, Cal. Ventilating and warming railway-cars	397,092	Jan. 29	2694	696, 697	46	561
Murray, Charles W., Westborough, Mo. Car-brake	395,662	Jan. 1	555	139	46	112
Murray, Peter, Jr., Newark, N. J. Power-fan	399,669	Mar. 19	1358	349	46	1413
Murray, Robert E., *et al.* (See Anderson and Elias, assignors.)						
Murtha, Philip, Philadelphia, Pa. Shoe-maker's anvil	396,106	Jan. 15	1236	314	46	261
Musick, John U., and W. J. Andrews, St. Louis, Mo. Cooking-stove	398,790	Feb. 26	2531	673	46	1100
Musser, W. B., *et al.* (See Wundes, John H., assignor.)						
Mutimer, Frederick, assignor of one-half to Rockford Bolt Works, Rockford, Ill. Bolt-heading tool	398,342	Feb. 19	1871	492	46	961
Mutton, James, Frisco, Utah Ter. Car-coupling	396,888	Jan. 29	2409	618	46	505
Mutual Electric Manufacturing Company. (See Knowles, Edward R., assignor.)						
Myers, Henry C., New York, N. Y., assignor to United States Cigar Machinery Company, of New York. Cigar-bunch-wrapping machine	397,510	Feb. 12	619	159, 160	46	702
Myers, Jacob, Eureka, Cal. Guard for fish-nets	396,948	Jan 29	2490	642	46	521
Myers, John A. (See Brenner and Myers.)						
Myers, John A., Louisville, Ky. Hydraulic motor	400,411	Mar 26	2435	638, 639	46	1631
Myers, Samuel, assignor of two-thirds to E. Bolmer and E. W. Shue, Manheim, Pa. Car-coupling	396,047	Jan. 8	1144	290	46	234
Naber, Joseph, Jr., Collins, N. Y. Sprinkler	398,901	Mar. 5	198	35	46	1138
Nagel, Carl. (See Sattler and Nagel.)						
Nageldinger, John, New York, N. Y. Pressure-regulating valve	399,548	Mar. 12	1151	298	46	1362
Nagle, Augustus F., Chicago, Ill. Safety-gage	398,069	Feb. 19	1467	388	46	862
Nakashjian, Stephen T., Boston, Mass. Punch	395,342	Jan. 1	55	13	46	13
Nance, Turner H., Talladega, Ala. Machine for gumming and sharpening gin-saws	399,919	Mar. 19	1704	441	46	1482
Nase, John, Syracuse, N. Y. Buckle	397,562	Feb. 12	700	182	46	718
Nason, James H., Brooklyn, N. Y. Bottle-tilting device	395,504	Jan. 1	292	76	46	62
Nathan, Lewis, assignor to Cuba Marble Company, New York, N. Y. Manufacturing artificial marble	396,225	Jan. 15	1411	.....	46	294
Nation, Edmund C., Passaic, assignor to W. M. Johnson, Hackensack, N. J. Apparatus for concentrating acids	395,505	Jan. 1	293	76	46	62
National Heating Company. (See Abbot and Knaak, assignors.)						
National Lock Washer Company. (See Dodd, David, assignor.)						
National Safe Deposit and Vault Manufacturing Company. (See Hough, John T., assignor.)						
National Self Heating Sad Iron Company. (See Heidel, Gustavus, assignor.)						
National Tube Works Company. (See Paterson, Andrew, assignor.)						
National Water Supply Company. (See Molyneux, Barton S., assignor.)						
Naumburg, Simson J. (See Spielman, William, assignor.)						
Neavitt, Thomas J., Austin, Tex. Finishing compound for plastered walls	399,920	Mar. 19	1706	.....	46	1482
Nebergall, James W., assignor of one-half to C. G. Thomas, Prairie Creek, Ind. Railway-gate	399,624	Mar. 12	1265	325	46	1383
Neef, Hermann, Jefferson City, Mo. Stove-hood	399,430	Mar. 12	971	252	46	1329

O'Connor, Thomas F., New York, N. Y. Coin-operated blow-tester	395,578	Jan. 1	416	106	46	86
O'Hare, Hugh, assignor to J. F., Leech, Mount Pleasant, Iowa. Folding chair	400,357	Mar. 26	2359	616	46	1617
O'Kelly, James M., assignor of eleven-twentieths to G. D. Bayaud, New York, N. Y. Automatic vending apparatus	396,228	Jan. 15	1415	360	46	294
O'Mahony, Timothy, Felton, Cal. Lunch-heater	399,922	Mar. 19	1708	442	46	1483
O'Neil, John, New York, N. Y. Automatic telegraphy	399,154	Mar. 5	546	142, 143	46	1220
O'Neill, Charles Z., assignor to W. Chapman, New York, N. Y. Street-sweeping machine	395,627	Jan. 1	493	125	46	100
Oakes, Alonzo, assignor of one-half to A. R. Ellison, Taylor, Wis. Saw	398,792	Feb. 26	2533	674	46	1100
Oakley, John M., Brooklyn, N. Y. Reversing-gearing for washing-machines	400,246	Mar. 26	2183	573	46	1586
Oakman, Richard N., Jr., *et al.* (See Rowland, Alexander M., assignor.)						
Oaks, William A. C., assignor to Goodell Company, Antrim, N. H. Seed-sower	397,606	Feb. 12	785	207	46	735
Oaks, William A. C., assignor to Goodell Company, Antrim, N. H. Apple-parer and corer	397,871	Feb. 12	1154	309	46	807
Ochs, John T. (See Hayes and Ochs.)						
Ocobock, Malinda K., Maple Rapids, Mich. Wash-boiler	399,432	Mar. 12	972	253	46	1329
Odell, Benjamin C., Kingston, N. Y., assignor to Thompson, Perley & Waite, Baldwinsville, Mass. Convertible chair	399,069	Mar. 5	385	104	46	1188
Odell, Charles H., *et al.* (See Odell, Levi J., assignor.)						
Odell, Levi J., Beloit, assignor of three-fourths to J. E. Burton, Lake Geneva, Wis., and C. H. Odell, Rockford, Ill. Type-writing machine	399,205	Mar. 5	631	164	46	1236
Oelenheimer, Sigmund, New Orleans, La. Warp-dressing machine	398,647	Feb. 26	2319	615	46	1056
Oehler, K. (See Rudolph, Christian, assignor.)						
Oehler, K. (See Rudolph and Priebs, assignors.)						
Oerlein, Robert, New Orleans, La. Drum attachment for banjos	398,176	Feb. 19	1618	429	46	910
Ogle, Graham L. (See Cael and Ogle.)						
Ohio Rake Company *et al.* (See Denney, Samuel L., assignor.)						
Ohio Stoneware Company *et al.* (See Bennett, Franklin, assignor.)						
Ohl & Haefner. (See Haefner, Hugo, assignor.)						
Ohlson, John E., Rockford, Wash. Ter. Potato-planter	398,071	Feb. 19	1470	389	46	883
Okey, Joseph B., assignor of one-half to J. C. Worth, Indianapolis, Ind. Combined harrow and pulverizer	400,412	Mar. 26	2438	630	46	1631
Olds, Charles E., assignor of one-half to H. R. McEwen, Fairbury, Nebr. Windmill	400,004	Mar. 19	1822	473, 474	46	1504
Olinger, John J. (See Westphal, Friedrich F., assignor.)						
Olive, Richard H., Wayland, Mich. Bob-sleigh	397,747	Feb. 12	990	262	46	773
Oliver, David B., Allegheny, Pa. Roll	397,503	Feb. 12	701	182	46	719
Oliver, George T. (See Roberts, Henry, assignor.)						
Oliver, Joseph P., Oakland, Cal. Furnace	395,344	Jan. 1	58	15	46	14
Olsen, Engelbrecht, Walkerville, Mont. Ter. Signal-bell	397,245	Feb. 5	212	55	46	616
Olsen, Hans F., Stoughton, Wis. Machine for irrigating hills for plants	399,279	Mar. 12	743	193	46	1284
Olsen, Isak, Manitowoc, Wis. Farm-gate	395,579	Jan. 1	417	106	46	86
Olsen, Tinius, Philadelphia, Pa. Testing and recording machine	399,549	Mar. 12	1153	299	46	1302
Olsson, Joseph. (See Storey and Olsson.)						
Ormerod, Benjamin, and G. Haworth, assignors to G. and E. Ashworth, Blackburn, county of Lancaster, England. Bearing for pulleys or wheels	398,274	Feb. 19	1760	465	46	940
Orndorff, Thomas C., Worcester, Mass. Packing cartridges for transportation and distribution	399,923	Mar. 19	1709	442	46	1483
Orndorff, Thomas C., Worcester, Mass. Cartridge-belt	399,924	Mar. 19	1710	443	46	1483
Orr, James A., *et al.* (See Anderson and Elias, assignors.)						
Orr, Robert. (See Kent and Orr.)						
Osborn, Enoch L. S., assignor of two-thirds to D. M. Neuman, Waxahachie, Tex. Keyboard attachment for pianos	397,815	Feb. 12	1084	289	46	791
Osborn, Jane C., St. Louis, Mo. Ginning cotton	399,206	Mar. 5	634	164	46	1236
Osborn, Luke W., assignor to D. Robertson, I. D. Stevens, and L. Eberhart, Joliet, Ill. Corn harvester and husker	397,098	Feb. 19	1344	358, 359	46	659
Osborne, Owen, Philadelphia, Pa. Making stockings	398,532	Feb. 26	2145	506	46	1023
Osborne, Theodore B., Plainfield, N. J. Stand for Christmas-trees, &c	397,305	Feb. 5	302	78	46	634
Osburn, William H., Burrton, Kans. Driving device for horse-powers	399,280	Mar. 12	744	194	46	1284
Osgood, Elijah R., Columbus, Ohio. Tail-stock for lathes	398,564	Feb. 12	703	183	46	719
Osteman, Carl G., Boston, Mass. Surface-gage	398,109	Jan. 15	1238	314	46	261
Oster, Louis W., Cleveland, Ohio. Nursing-bottle	395,992	Jan. 8	1073	273	46	221
Ostrom, Freeland W., assignor to Wheeler & Wilson Manufacturing Company, Bridgeport, Conn. Clamp-operating mechanism for button-hole sewing-machines	398,344	Feb. 19	1873	493	46	961

Oswald, George. (See Shelly, William, assignor.)						
Overman, Albert H., Newton, assignor to Overman Wheel Company, Boston, Mass. Velocipede	398,533	Feb. 26	2146	566	46	1024
Overman Wheel Company. (See Overman, Albert H., assignor.)						
Overton, Thomas, Corpus Christi, Tex. Latch and lock combined	400,111	Mar. 26	1976	517	46	1543
Owen, Alva, Chicago, Ill. Truss	399,433	Mar. 12	973	253	46	1329
Owen, Herbert S., Washington, D. C. Bicycle	398,745	Feb. 26	2471	654	46	1068
Owens, William J., assignor to Sayre, Owens & Co., Utica, N. Y. Check-draft	395,917	Jan. 8	953	245	46	197
Owsley, John J., Sr., *et al.* (See Knowlton, Ephraim H. B., assignor.)						
Packard, James W., New York, N. Y. Revolving photometer-stand	396,951	Jan. 29	2493	643	46	522
Packard, James W., New York, N. Y. Milling-machine	396,952	Jan. 29	2494	643, 644	46	522
Packer, John F., assignor to D. Bradley Manufacturing Company, Chicago, Ill. Cultivator	396,364	Jan. 15	1614	413	46	330
Paddock, Gustavus A., Beaver Dam, Wis. Harrow	397,514	Feb. 12	627	162	46	705
Pagan, Emile J., Paris, France. Drag-anchor	396,229	Jan. 15	1416	361	46	295
Page, Albert A., assignor to Sargent & Company, New Haven, Conn. Transom-lifter	396,953	Jan. 29	2496	644	46	523
Page, Andrew J., Philadelphia, Pa. Combined goblet-holder and drip-cup attachment for refrigerators	400,358	Mar. 26	2360	616	46	1617
Page, Augustus U., and J. Bragg, Cleveland, Ohio. Oil-burner	396,049	Jan. 8	1146	291	46	235
Page, George F., Concord, N. H. Belting	400,005	Mar. 19	1824	474	46	1504
Page, George F., Concord, N. H. Machine-belting	400,006	Mar. 19	1825	474	46	1504
Paget, Leonard, assignor to Macracon Storage Battery Company, New York, N. Y. Preparing electrodes for secondary batteries	397,607	Feb. 12	796	207	46	735
Paget, Leonard, assignor to Macracon Storage Battery Company, New York, N. Y. Electrode for secondary batteries	397,608	Feb. 12	798	208	46	736
Paige, James H., Leadville, Colo. Lamp-extinguisher	397,931	Feb. 19	1244	332	46	841
Painter, M. L., *et al.* (See Michael, William G., assignor.)						
Paiste, Harry T., West Chester, Pa. Electric switch	399,550	Mar. 12	1157	300	46	1363
Palmenberg, Raymond P., New York, N. Y. Bracket	397,748	Feb. 12	991	262	46	773
Palmer Brothers. (See Palmer, William H., Jr., assignor.)						
Palmer, Cortlandt E., Rico, Colo. Apparatus for sampling ores	398,275	Feb. 19	1761	466	46	940
Palmer, Dolphus D., Waltham, Mass. Cannon-pinion for watches	395,754	Jan. 8	689	176	46	147
Palmer, Ellen M., *et al.* (See Palmer, Seymour C., assignor.)						
Palmer, H. N. (See Lobach, Eugene B., assignor.)						
Palmer, Harlan J., *et al.* (See Holley, Clarence E., assignor.)						
Palmer, Henry J., Brooklyn, N. Y. Electrical railway signaling apparatus	399,155	Mar. 5	552	143	46	1221
Palmer, James W., North Springfield, Mo. Wire gate	396,230	Jan. 15	1418	361	46	295
Palmer, John H., Rockaway, N. J. Car-starter	398,438	Feb. 26	2011	528	46	996
Palmer, Seymour C., assignor to E. M. Palmer and A. Solmans, South Norwalk, Conn. Hat-forming machine	399,551	Mar. 12	1158	300	46	1363
Palmer, Timothy G., Schultzville, N. Y. Point for switch-rails	397,306	Feb. 5	303	79	46	674
Palmer, William A., South Pittsburg, Tenn. Apparatus for molding pipes	396,506	Jan. 22	1833	470	46	382
Palmer, William H., Jr., Norwich, assignor to Palmer Brothers, Montville, Conn. Locking device for sewing machine heads	398,534	Feb. 26	2147	567	46	1024
Pancake, C. P., *et al.* (See Bowman, William H., assignor.)						
Paramore, Edward F., Oconto, Wis. Suspender-hook	399,775	Mar. 19	1486	383	46	1440
Paramore, Samuel L., assignor to Tewart Manufacturing Company, St. Louis, Mo. Washing-fluid	399,626	Mar. 12	1206	.....	46	1384
Pardee, William H., Columbia, Dak. Ter. Duplicating-tablet	398,072	Feb. 19	1471	389	46	883
Pardee, William H., Columbia, Dak. Ter. Temporary binder	398,073	Feb. 19	1472	389	46	883
Parent, Charles. (See Sawyer and Parent.)						
Parent, Charles, Boston, Mass. Water-drainer and pop safety-valve	399,070	Mar. 5	386	104	46	1188
Park, David E. (See Lash, Aiken, and Park.) (Reissue.)						
Park, John B. (See Finch and Park.)						
Parker, George T., Glasgow, Ky. Horse-detacher	399,434	Mar. 12	974	253	46	1329
Parker, George W., Terre Haute, Ind. Axle-lubricator for cars	399,627	Mar. 12	1267	326	46	1384
Parker, Joel C., Grand Rapids, Mich. Line-guide for fishing-rods	396,707	Jan. 22	2132	516	46	437
Parker, Lewis C., assignor of one-half to R. Simpson, Jr., Cincinnati, Ohio. Clothes-wringer	398,793	Feb. 26	2534	674	46	1101
Parkhurst, Augustus G., Minneapolis, Minn. Combined curb and gutter	398,074	Feb. 19	1473	389	46	883
Parkhurst, Edward B., Woburn, Mass. Wire-nail machine	397,022	Jan. 29	2597	670, 671	46	543
Parkison, Allen R., and J. Pullinger, assignors of one-third to J. M. McGrew, Monongahela City, Pa. Apparatus for treating middlings	395,580	Jan. 1	418	107	46	86
Parks, George W., Brooklyn, N. Y., assignor to H. and S. C. Howard, Providence, R. I. Pocket-box	396,110	Jan. 15	1239	315	46	262
Parlin & Orendorff Company. (See Parlin, William H., assignor.)						
Parlin, William H., assignor to Parlin & Orendorff Company, Canton, Ill. Cultivator	398,177	Feb. 19	1618	429, 430	46	911
Parmeter, Addison J., Frederick, Dak. Ter. Plow attachment	395,994	Jan. 8	1074	273	46	221
Parno, Emil W. (See Cole and Parno.)						
Parr, Henry A. (See Keller, Hugo, assignor.)						
Parr, Jacob, Irwin, Pa. Bob-sled	395,993	Jan. 8	1073	273	46	221
Parrott, Richard D. A., Arden, N. Y., assignor to L. Gifford, Jersey City, N. J. Apparatus for gathering mineral wool	396,050	Jan. 8	1147	291	46	235
Parry, David M., Indianapolis, Ind. Shaft-coupling for vehicles	396,231	Jan. 15	1419	361	46	296
Parry, David M., Indianapolis, Ind. Hub-boring machine	397,816	Feb. 12	1086	289	46	792
Parry, David M. and T. H., Indianapolis, Ind. Two-wheeled vehicle	395,506	Jan. 1	294	76	46	63
Parry, David M. and T. H., Indianapolis, Ind. Two-wheeled vehicle	398,178	Feb. 19	1621	430	46	911
Parry, David M. and T. H., Indianapolis, Ind. Vehicle-seat	398,179	Feb. 19	1622	430	46	911
Parry, David M. and T. H., Indianapolis, Ind. Spring-support for vehicles	398,180	Feb. 19	1623	430	46	912
Parry, Edward G., Ithaca, N. Y. Breech-loading fire-arm	395,849	Jan. 8	852	220	46	179
Parry, Thomas H. (See Parry, David M. and T. H.)						
Parsons, A. Ingram, deceased, St. Louis, Mo.; H. F. Parsons administrator, and assignor, by mesne assignments to Parsons Block, Switch and Frog Company, New York, N. Y. Automatic railway-switch	356,418	Jan. 22	1694	435	46	354
Parsons Block, Switch and Frog Company. (See Parsons, A. Ingram, assignor.)						
Parsons Block, Switch and Frog Company. (See Parsons, Henry F., assignor.)						
Parsons, Francis W., Philadelphia, Pa. Car-coupling	395,402	Jan. 1	142	36	46	31
Parsons, Frank, Russell Springs, Kans. Door-check	398,439	Feb. 26	2014	528	46	997
Parsons, H. F., administrator. (See Parsons, A. Ingram.)

Patten, Francis J., New York, N. Y. Dynamo-electric machine and motor	397,439	Feb. 5	509	134, 135	46	676
Patten, Francis J., assignor to J. M. Seymour, New York, N. Y. Multiplex telegraphy	395,508	Jan. 1	297	77	46	63
Patten, Francis J., assignor to J. M. Seymour, New York, N. Y. Multiplex telegraphy	395,509	Jan. 1	302	77	46	64
Patten, Francis J., assignor to J. M. Seymour, New York, N. Y. Multiplex telegraphy	395,510	Jan. 1	305	78	46	65
Patten, Francis J., assignor to J. M. Seymour, New York, N. Y. System of synchronizing electric motors	397,817	Feb. 12	1087	289, 290	46	792
Patten, Francis J., assignor to J. M. Seymour, New York, N. Y. System of synchronizing electric motors	398,794	Feb. 26	2535	674	46	1101
Patten, Jefferson, Green Point, assignor of part to C. K. Hamilton, Jr., Summit, I. A. Gard, Bergen Point, and C. H. Mundy, Metuchen, N. J. Hydrocarbon-burner	397,749	Feb. 12	991	263	46	774
Patten, Thomas W., Baltimore, Md. Nut-lock	398,585	Feb. 26	2149	567	46	1024
Patterson, Carlisle D., Girard, Kans. Feed-regulator	398,746	Feb. 26	2472	655	46	1068
Patterson, Clara E., New York, N. Y. Coin-controlled opera-glass	395,345	Jan. 1	59	15	46	14
Patterson, Clara E., New York, N. Y. Automatic picture-exhibitor	399,553	Mar. 12	1161	301	46	1364
Patterson, James W. (See Spiegel, William G., assignor.)						
Patterson, William E., Cologne, Minn. Sawing-machine	397,203	Feb. 5	155	41	46	606
Patterson, William R., assignor to Western Electric Company, Chicago, Ill. Telegraph-cable	398,441	Feb. 26	2016	529	46	997
Patterson, William R., assignor to Western Electric Company, Chicago, Ill. Telegraph-cable	398,442	Feb. 26	2017	529	46	998
Paul, Isaac F., *et al.* (See Lawrence, Victor V., assignor.)						
Paul, William C., and O. D. Kleiusteuber, assignors of one-third to T. K. Ewing, Milwaukee, Wis. Railway-signal	396,365	Jan. 15	1615	413, 414	46	331
Pawlowski, Jacob, Cincinnati, Ohio, assignor of one-half to A. Winter, West Covington, Ky. Holder for electric-arc lamps	395,755	Jan. 8	689	176	46	147
Payen, Clément, Philadelphia, Pa., assignor to Electric Storage Battery Company, Gloucester City, N. J. Furnace for heating metals	398,443	Feb. 26	2018	529, 530	46	998
Payne, Edwin W., Morrison, Ill. Wood-carrier	398,902	Mar. 5	129	35	46	1139
Payne, Henry B., Nottingham, England, assignor of one-half to A. G. Jennings & Sons, Brooklyn, N. Y. Straight-knitting machine	397,141	Feb. 5	54	13, 14	46	588
Payne, Henry B., and W. Campion, Radford, county of Nottingham, England; said Campion assignor, by mesne assignments, to A. G. Jennings & Sons, Brooklyn, N. Y. Warp-knitting machine	397,140	Feb. 5	51	12, 13	46	588
Payne, Henry B., and W. Campion, Nottingham, England; said Campion assignor, by mesne assignments, to A. G. Jennings & Sons, Brooklyn, N. Y. Circular-warp-knitting machine	397,142	Feb. 5	56	14	46	588
Payne, William J., London, assignor to J. E. and C. H. Bingham, Sheffield, England. Apparatus for withdrawing effervescing or gaseous liquids from corked receptacles	396,708	Jan. 22	2133	516	46	438
Paynter, John P., Pomona, Kans. Mining-drill and channel-cutter	395,716	Jan. 8	633	160	46	136
Payson, Edward. (See Smith, John W., assignor.)						
Pearce, Joseph A., assignor of one-half to M. B. Stewart, Grand Rapids, Mich. Cultivator	399,628	Mar. 12	1269	326	46	1384
Pearson, Aven, Washington, D. C. Cash-indicator	400,247	Mar. 26	2185	573, 574	46	1586
Pearson, George S., Waterbury, Conn. Drawer-pull	398,181	Feb. 19	1624	431	46	912
Pearson, Marshall H., and C. Bennion, Leicester, county of Leicester, England. Punching and eyeleting machine	396,890	Jan. 29	2411	619, 620	46	505
Pearson, William B., Jacksonville, Ill. Cover for writing-tablets	396,508	Jan. 22	1835	471	46	382
Pearson, William E., Sangus, assignor to N. H. Daniels, Boston, Mass. Steam-muffler	396,507	Jan. 22	1835	471	46	382
Peart, Adam, Corning, N. Y. Heat-radiator	399,776	Mar. 19	1457	384	46	1440
Pease, Robert R., Hartford, Conn. Woven-wire mat and scraper	399,554	Mar. 12	1163	301	46	1364
Pech, Gustavus, Storm Lake, Iowa. Well-boring machine	398,649	Feb. 26	2322	616	46	1057
Peck, Barton. (See Champion, William S., assignor.)						
Peck, Duncan W. (See Van Zandt, Jacob, assignor.)						
Peck, Eugene H., assignor to Meriden Bronze Company, Meriden, Conn. Drawer-pull	398,183	Feb. 19	1627	431	46	912
Peck, Eugene H., and A. H. Jones, assignors to Meriden Bronze Company, Meriden, Conn. Metal table	398,182	Feb. 19	1626	431	46	912
Peck, Horace B. (See Boyle, Homer L., assignor.)						
Peck, Joseph C., *et al.* (See Kelsey, Frank N., assignor.)						
Peck, Melinda. (See Adams, Phineas H., Jr., and O. T. X., assignors.)						
Peck, Orren B., Chicago, Ill., assignor to American Slag Furnace Company. Slag steam-generator	395,665	Jan. 1	559	139	46	112
Peck, Stow & Wilcox Company. (See Shepard, Amos, assignor.)						
Peck, Walter A., trustee. (See Bright, Richard A., assignor.)						
Pedersen, Johannes T., New York, N. Y. Secondary battery	398,075	Feb. 19	1473	390	46	884
Peel, James A., Springport, Ky. Vehicle-shaft support	398,076	Feb. 19	1475	390	46	884
Peet, Walter F., Philadelphia, Pa. Hair-pin	395,582	Jan. 1	424	107	46	87
Pelkey, Frank A. (See Berdrow and Pelkey.)						
Pellatt, William C., Brockley, county of Kent, England. Appliance for spacing or fanning out envelope-blanks or sheets of paper for gumming or bordering	396,594	Jan. 22	1972	507	46	406
Pelts, Joseph, Vincit, Mo. Tempering saws	400,248	Mar. 26	2187	574	46	1586
Pemberton & Sons, Thomas. (See Ayton and Hill, assignors.)						
Pendergast, Daniel. (See Pendergast, John and D.)						
Pendergast, John, Boston, and D. Pendergast, Merrimac, Mass. Cone or former for felt-hardening machines	399,072	Mar. 5	389	105	46	1189
Pendleton, Gurdon, Jr. (See Worthen and Pendleton.)						
Pendleton, William, deceased; H. A. Hodge, Jackson, Mich., administrator. Window-stop	400,403	Mar. 26	2434	635	46	1629

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Penfield, Charles R., Rochester, N. Y. Machine for sawing staves	396,763	Jan. 29	2229	571	46	465
Penney, Joseph, Grand Rapids, Mich. Folding bedstead	397,307	Feb. 5	304	79	46	634
Penney, Joseph, Grand Rapids, Mich. Folding bed	397,308	Feb. 5	306	80	46	634
Penney, William L., and T. Little, Pittsburg, Pa. Underground electric-wire conduit	399,343	Mar. 12	838	218	46	1303
Pennock, Lee J., assignor of two-thirds to E. A. Taylor and J. W. Eroe, Jamestown, N. Y. Spring-coiling machine	395,511	Jan. 1	310	78, 79	46	66
Penny, Sanford A., Rochester, N. Y. Lathe	398,077	Feb. 19	1475	390, 391	46	884
Pennybacker, Morgan, assignor of one-half to A. F. Kingsley, Washington, D.C. Nut-lock	398,795	Feb 26	2537	675	46	1101
Penoyer, Hiram, Western Saratoga, Ill. Bee-hive	399,281	Mar. 12	747	194	46	1285
Perkins, George H., Philadelphia, Pa. Distilling petroleum	399,073	Mar. 5	389	105	46	1189
Perkins, Loftus, Gray's Inn Road, county of Middlesex, England. Refrigerating and freezing apparatus	399,307	Mar. 5	634	164, 165, 166	46	1226
Perkins, William C., New Haven, Conn. Wire hinge	395,403	Jan. 1	143	36	46	31
Perot, Edward S., *et al.* (See Phippe, Edward H., assignor.)						
Perrigo, Oscar E. (See Whiteley, Bayley, and Perrigo.)						
Perry, Daniel W., Harrisburg, Pa. Guide for band and scroll saws	395,797	Jan. 8	772	200	46	161
Perry, Francis L., Brooklyn, N. Y. Vehicle-gear	397,932	Feb. 19	1245	332	46	841
Perry, Henry C., Coffeyville, Kans. Ironing-board	399,925	Mar. 19	1711	443	46	1483
Perry, James L., Watertown, assignor to Berlin Machine Works, Beloit, Wis. Polishing-cylinder	399,629	Mar. 12	1270	326	46	1324
Perry, Joseph R. (See Hopkins and Perry.)						
Perry, Marlow F., West Oneonta, N. Y. Road grader and ditcher	395,451	Jan. 1	212	54	46	45
Perry, Morgan B. (See Selser, Johnson, and Perry.)						
Perry, Thomas A., Abilene, Kans. Trough for watering stock	396,595	Jan. 22	1973	508	46	407
Perry, Thomas O., Tecumseh, Mich. Pneumatic water-elevator	398,184	Feb. 19	1628	431	46	912
Perry, Thomas O., Chicago, Ill. Automatic valve	400,249	Mar. 26	2188	574, 575	46	1586
Peter, John S., Lincoln, Nebr. Oil-can nozzle	396,891	Jan. 29	2415	620	46	506
Peters, Gershom M., Cincinnati, Ohio. Cartridge-loading machine	398,650	Feb 26	2322	616, 617, 618	46	1057
Peters, Gershom M., Cincinnati, Ohio. Feeding mechanism for cartridge loading machines	398,651	Feb 26	2322	619	46	1059
Petersen, Eduard A. C., Lake View, Ill. Baker's oven	400,250	Mar. 26	2192	575	46	1587
Petersen, Jens M., Clinton, Iowa. Machine for fitting the ends of band-saws	399,344	Mar. 12	839	219	46	1303
Peterson, Albon C., assignor of one-half to T. J. Brooks, Arcadia, La. Fence-post	398,078	Feb. 19	1478	391	46	885
Peterson, Alfred, St. Paul, Minn. Padlock	396,506	Jan. 22	1974	508	46	407
Peterson, Edward, *et al.* (See Skow, Matts, assignor.)						
Peterson, Silas T., and M. Reed, Whitman, Mass. Metallic shank for boots or shoes	395,628	Jan. 1	406	125	46	106
Petherick, Vernon, Brisbane, Queensland. Animal-shears	396,532	Jan. 29	2328	596	46	487
Petry, Nicholas, Rockport, Mo. Saw	398,079	Feb. 19	1478	391	46	885
Pettenkofer, Edward. (See Reiss and Pettenkofer.)						
Pfannkuche, Gustav, assignor to Brush Electric Company, Cleveland, Ohio. Regulation of alternate-current generators	396,422	Jan. 22	1704	437	46	356
Pfeifer, John, Philadelphia, Pa. Apparatus for scouring, cleansing, and polishing metal, &c.	395,583	Jan. 1	424	108	46	88
Pfeifer, John, Springfield, Ohio. Adding-machine	400,359	Mar. 26	2361	616	46	1617
Pfenning, Carl A., Barmen Rittershausen, Prussia, Germany. Button-machine	396,423	Jan. 22	1707	437	46	357
Pfenning, Carl A., Barmen Rittershausen, Prussia, Germany. Button-machine	396,424	Jan. 22	1709	438, 439	46	357
Pfenning, Carl A., Barmen Rittershausen, Prussia, Germany. Button-machine	396,425	Jan. 22	1711	439, 440	46	358
Pfenning, Carl A., Barmen Rittershausen, Prussia, Germany. Button-machine	396,426	Jan. 22	1712	440	46	358
Pfenning, Carl A., Barmen Rittershausen, Prussia, Germany. Button-machine	396,427	Jan. 22	1713	440	46	359
Pfingst, Louis. (See Bemis and Pfingst.)						
Pfingst, Louis, Pullman, assignor to G. M. Pullman, Chicago, Ill. Sash-holder	396,709	Jan. 22	2135	546	46	438
Pfingsten, Carl G., New York, N. Y. Pocket-book clasp	397,933	Feb. 19	1247	333	46	841
Pfister, Lewis, Martinsville, Ohio. Fence-making machine	398,796	Feb. 26	2538	675	46	1102
Pfueger, Ernest F., Akron, Ohio. Harness-pad	399,074	Mar. 5	391	105	46	1189
Phelps, Andrew J., Syracuse, N. Y. Metallic seal	397,384	Feb. 5	416	110	46	656
Phelps, Homer L., assignor of one-half to G. D. Miller, Athens, Pa. Car-brake	398,797	Feb. 26	2538	675	46	1102
Phelps, Thomas H. (See Hyland, Henry H., assignor.)						
Phelps, William S., San Francisco, Cal. Cable or electric street-railway	397,385	Feb. 5	417	110	46	656
Phenix, William, Chicago, Ill. Automatic switch for cable railways	397,610	Feb. 12	799	208	46	736
Phenix, William, Chicago, Ill. Tension appliance for traction cables	397,611	Feb. 12	801	208	46	736
Philbrick, Daniel, Amesbury, Mass., assignor to T. I. Marden, Rye, N. H. Detachable handle	400,300	Mar. 26	2364	617	46	1618
Philbrick, Frank B., assignor of one-half to F. B. Webber, Waterville, Me. Cylinder planer	397,946	Feb. 5	213	56	46	616
Phillips, Ferdinand, Philadelphia, Pa. Machine for fitting nuts on bolts	396,597	Jan. 22	1974	508	46	407
Phillips, Horace G. (See Clarke and Phillips.)						
Phillipi, Frank A., assignor of one-half to S. Lutz, Reading, Pa. Cigar-cutter	398,345	Feb. 19	1875	493	46	902
Phillips, Charles F. (See McClure and Phillips.)						
Phillips Economical Cable Grip Construction Company. (See Phillips, Elwood C., assignor.)						
Phillips, Elwood C., St. Louis, Mo., assignor to Phillips Economical Cable Grip Construction Company, Chicago, Ill. Grip for cable railways	399,075	Mar. 5	392	106	46	1189
Phillips, Francis V., assignor to Chicago Sash Pulley Company, Chicago, Ill. Mortising-machine	399,435	Mar. 12	975	254	46	1330
Phillips, William H., Jenkintown, Pa. Rail-bending tool	399,630	Mar. 12	1272	327	46	1325
Phinney, Nathan D., New Bedford, Mass. Goods-rack	397,750	Feb. 12	993	263	46	774
Phippe, Edward H., New Haven, Conn., assignor to E. S. Perot and J. P. McQuaide. Conduit for electric wires or cables	395,584	Jan. 1	425	108	46	88
Phippe, Henry G. (See Stiggins, Edward A., assignor.)						
Planko, Mendel, *et al.* (See Bukawietis, Kazimieras, assignor.)						
Picken, John. (See Atchison, George M., assignor.)						
Piel Brothers. (See Piel, Michael, assignor.)						
Piel, Michael, East New York, assignor to Piel Brothers, Brooklyn, N. Y. Absorber for refrigerating-machines	395,512	Jan. 1	313	79	46	66
Pierce, Andrew J., Racine, Wis. Steam-engine	398,444	Feb. 26	2019	530	46	998
Pierce, Andrew J., Racine, Wis. Oil-burner	398,536	Feb. 26	2150	567	46	1024
Pierce, Arthur M., Lyndhurst, N. J. Automaton	398,276	Feb. 19	1763	466	46	940
Pierce, Octavius, Chicago, Ill. Fire-extinguisher	395,756	Jan. 8	690	176	46	147
Pierce, Thomas A., and I. H. Wadleigh, East Greenwich, R. I. Brush-holder	398,537	Feb. 26	2151	567	46	1025
Pierce, William O., Sacramento, assignor of one-half to M. Mierson, Placerville, Cal. Gate	398,798	Feb. 26	2539	675, 676	46	1102

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Pietzka, Gottfried, Witkowitz, Moravia, Austria-Hungary. Rotary double-flame furnace	398,973	Mar. 5	839	66, 67	46	1160
Pipes, William W., and A. L. Kelly, Wheeling, W. Va. Tool for lathes and planers	396,764	Jan. 29	2231	571	46	466
Pitcairn, Robert, *et al.* (See Reese, Abram, assignor.)						
Pitcher, Henry A., Neillsville, Wis. Magazine-gun	397,143	Feb. 5	61	15	46	589
Pitman Manufacturing Company. (See Davis, Albert T. L., assignor.)						
Pitman Manufacturing Company. (See Davis and Stevens, assignors.)						
Plano Manufacturing Company. (See Hunt, George G., assignor.)						
Platt, James F., Sterling, Ill. Bob-sleigh	396,232	Jan. 15	1420	361	46	296
Plessy, Gabriel, Paris, France. Handle for opera-glasses	398,277	Feb. 19	1766	466, 467	46	941
Plom, Léopold, Retinne, and J. D'Andrimont, Liege, Belgium. Blasting	397,440	Feb. 5	516	13	46	677
Plom, Leopold, Retinne, and J. D'Andrimont, Liege, Belgium. Reamer for forming blast-holes	399,156	Mar. 5	554	143	46	1222
Plumley, George W. (See Graham, Charles T., assignor.)						
Poe, Alonzo M., Lakeport, Cal. Cough-mixture	395,346	Jan. 1	61		46	15
Poehlman, Henry E., San Francisco, Cal. Camera-adjuster	399,345	Mar. 12	840	219	46	1304
Pollard, Charles E., assignor of one-half to E. S. Stiles, Middletown, Conn. Machinist's blocking	399,926	Mar. 19	1712	443	46	1483
Pollard, Charles T., *et al.* (See Chapman, John R., assignor.)						
Pomeroy, Eltweed, Newark, N. J. Spreader and stopper for bottles	399,927	Mar. 19	1713	443	46	1484
Pool, Francis W., Norwich, Conn. Tricycle	398,892	Jan. 29	2416	620, 621	46	506
Poole, Edward L. (See Pope and Poole.)						
Poole, William H., Oxford, Iowa. Clock striking mechanism	396,598	Jan. 22	1976	508, 509	46	407
Poor, Charles E., and G. Martin, Fairbury, Nebr. Wash-boiler	400,007	Mar. 19	1698	475	46	1585
Poor, George H., assignor to American Brake Company, St. Louis, Mo. Valve for fluid-pressure brakes	396,171	Jan. 15	1327	340	46	278
Poore, Graydon, and W. C. Storey, London, county of Middlesex, England. Submarine vessel	399,683	Mar. 19	1363	351	46	1414
Pope, John L., Cleveland, Ohio. Automatic lock-joint for railway-rails	395,916	Jan. 8	954	245	46	197
Pope, Joseph H., assignor to American Heeling Machine Company, Brockton, Mass. Heel-nailing machine	399,631	Mar. 12	1273	327, 328	46	1325
Pope, Joseph H., Brockton, Mass., assignor to American Heeling Machine Company, of Maine. Heel-nailing machine	399,777	Mar. 19	1488	381	46	1440
Pope Manufacturing Company. (See Latta, Emmit G., assignor.)						
Pope, William R., and E. L. Poole, Baltimore, Md. Automatic photographic apparatus	396,498	Jan. 22	1714	440, 441	46	359
Porchers, Wilmot D. (See Sheppard, John L., assignor.)						
Porter, Edwards W., assignor to Detroit Patent Brush Company, Detroit, Mich. Brush-machine	396,954	Jan. 29	2498	644, 645	46	523
Porter, Frederick E., Baltimore, Md. Paper-bag machine	398,278	Feb. 19	1767	467	46	941
Porter, Joseph E. (See Price, Benjamin F., assignor.)						
Porter, Stephen, Boston, Mass., assignor, by mesne assignments, to Eagle Manufacturing Company, of Maine. Metallic brush	396,299	Jan. 15	1302	381	46	310
Porter, Thomas W., Chelsea, Mass. Vehicle-pole	397,934	Feb. 19	1248	333	46	841
Portmann, Henry G., assignor of one-half to W. W. Portmann, St. Louis, Mo. Spring-gear for children's carriages	395,585	Jan. 1	426	108	46	88
Portmann, William W. (See Portmann, Henry G., assignor.)						
Posse, Vito M., Paris, France. Advertising device	396,299	Jan. 15	1503	381	46	311
Post, Ezra L., New York, N. Y. Fish-hook extractor	400,112	Mar. 26	1977	517	46	1544
Potter, Arthur W., and T. J. McCormon, Wilkes-Barré, Pa. Desk attachment	396,665	Jan. 22	2071	532	46	427
Potter, Ephraim, Bowling Green, Ky. Fence	398,974	Mar. 5	242	67	46	1160
Potter, Henry V. (See McFeely and Potter.)						
Potter, Hobert B., Hillburn, N. Y. Interlocking switch and signal	395,452	Jan. 1	213	55	46	46
Potter, James C., Pawtucket, R. I. Evening mechanism for cotton-openers, &c	399,076	Mar. 5	394	106	46	1190
Potter, James C., Pawtucket, R. I. Evening mechanism for cotton-openers, &c	399,077	Mar. 5	396	107	46	1190
Potts, George, Indianapolis, Ind. Mold-sanding machine	397,247	Feb. 5	215	56	46	616
Potts, James F. (See Fischer, August, assignor.)						
Poulsson, Jared, Passaic, N. J. Tube scraper and cleaner	399,346	Mar. 12	841	219	46	1304
Poundstone, William E. (See Lanyon, Robert H., assignor.)						
Powel, Ricard L., Silver City, N. Mex. Ter. Car-coupling	396,509	Jan. 22	1837	471	46	383
Powell, Edward, Newtown, county of Montgomery, England. Apparatus for delivering goods in exchange for coin	398,279	Feb. 19	1769	468	46	942
Powell, James, Cincinnati, Ohio. Device for preventing the loosening of nuts	397,935	Feb. 19	1250	333	46	842
Powell, Maurice M., Kerrtown, Pa. Machine for finishing bottles	398,280	Feb. 19	1772	468	46	942
Power, Augustus D., assignor of one-half to E. A. Stouffer, Akron, Ohio. Gas-trap for tuyeres and conducting-pipes	396,765	Jan. 29	2233	572	46	466
Powers, Adelbert G., Billsborough, N. Y. Cultivator	396,533	Jan. 29	2330	507	46	457
Powers, Daniel E., assignor of one-half to G. W. Fuller, New York, N. Y. Rotary steam-engine	397,516	Feb. 12	629	163, 164	46	705
Powers, David J., Chicago, Ill. Sash-fastener	395,513	Jan. 1	314	80	46	66
Powers, David J., Chicago, Ill., assignor to Union Wire Mattress Company, of Illinois. Upright or folding bed	398,747	Feb. 26	2473	655	46	1088
Powers, Edward B., assignor to Reed & Barton, Taunton, Mass. Blow-pipe	395,453	Jan. 1	216	55	46	46
Powers, Michael L., assignor to P. O. Keefe, Miller's Falls, Mass. Machinery for grinding and polishing the handles of cutlery	399,908	Mar. 5	638	166	46	1237
Powers & Walker Casket Company. (See Walker, Joseph H., assignor.)						
Poyton, Josiah, assignor to C. R. Vincent, New York, N. Y. Machine for making weather-strips	398,346	Feb. 19	1876	493, 494	46	902
Prahar, Louis B., Brooklyn, N. Y. Album-clasp	395,454	Jan. 1	219	56	46	47
Prahar, Louis B., Brooklyn, N. Y. Fastening for pocket-book, purse, or satchel frames	397,248	Feb. 5	216	57	46	617
Prall, Joseph W., assignor of three-fourths to W. G. Downie, Pomeroy, Ohio. Lock-cap cleatless roofing	397,693	Jan. 29	2086	607	46	561
Prater, William A., Paw Paw, Mich. Fence-post	395,995	Jan. 8	1075	274	46	221
Pratt & Cady Company. (See Pratt, Rufus N., assignor.)						
Pratt & Cady Company. (See Seaver, Frank W., assignor.)						
Pratt, Charles A., Toledo, Ohio. Door-check	396,429	Jan. 22	1717	441	46	359
Pratt, Clara B. (See Pratt, Samuel B. and C. B.)						
Pratt, Philip W. (See White, Frank, assignor.)						
Pratt, Ronello F., Boston, Mass. Pop safety-valve	398,445	Feb. 26	2020	530	46	998
Pratt, Ronello F., Revere, and C. D. Wainwright, Medford, Mass., assignors to Wainwright Manufacturing Company, Portland, Me. Feed-water heater	395,347	Jan. 1	62	15	46	15
Pratt, Rufus N., assignor to Pratt & Cady Company, Hartford, Conn. Valve	397,751	Feb. 12	993	264	46	774

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Drg.	Vol.	Page.

Shaver, George F., assignor to Shaver Corporation, New York, N. Y. Telephone-line cable	399,635	Mar. 12	1283	329	46	1386
Shaw, Frank, New York, N. Y. Galvanic battery	400,126	Mar. 26	1998	523	46	1548
Shaw & Geary. (See Geary, John, assignor.)						
Shaw, Hiram M., Genoa, N. Y. Potato-digger	398,545	Feb. 26	2162	571	46	1027
Shaw, James E., Bishopville, S. C., assignor of one-half to L. McKinnon, Linchwood, N. C. Hand seed-planter	399,938	Mar. 19	1730	447	46	1487
Shaw, John, Sr., Bayonne, N. J. Drainage-trap	399,442	Mar. 12	984	256	46	1331
Shaw, John H., Chicago, Ill. Book-binder's press-board	399,573	Mar. 12	1190	308	46	1369
Shaw, Joseph W., Shelburne Falls, Mass. Box-fastener	398,981	Mar. 5	255	70	46	1163
Shaw, William A., Brooklyn, assignor to Electrical Accumulator Company, New York, N. Y. Secondary battery	397,443	Feb. 5	519	136	46	677
Shawhan, Jabez F., assignor of one-half to J. W. Carpenter, Dayton, Ohio. Headlight	396,241	Jan. 15	1434	365	46	298
Shawhan, Jabez F., assignor of one-half to J. W. Carpenter, Dayton, Ohio. Electric lighting and heating cars	396,836	Jan. 29	2335	598	46	488
Shay, William, Ansonia, Conn. Combination shaving utensil	397,028	Jan. 29	2607	673	46	545
Shea, Daniel E., Rochester, N. Y. Railway-switch	395,407	Jan. 1	147	37, 38	46	31
Shearer, Herbert A., assignor to L. G. Wetmore, Rochester, N. Y. Newspaper-file	399,704	Mar. 19	1382	356	46	1419
Shears, Albert L., assignor to himself and W. S. Turk, St. Louis, Mo. Boat	395,458	Jan. 1	224	57	46	48
Shedd, Charles F., Fairfield, Nebr. Combined stall and stock-handling apparatus	397,306	Feb. 5	161	42, 43	46	606
Shellaberger, Edward F., Beaver Falls, Pa. Wire fabric	396,771	Jan. 29	2243	574	46	468
Shellaberger, Edward F., Beaver Falls, Pa. Fence	399,939	Mar. 19	1731	447	46	1487
Shelly, William, assignor to himself and G. Oswald, Chicago, Ill. Machine for drawing spokes	400,127	Mar. 26	1999	523	46	1549
Shepard, Amos, Plainsville, assignor to Peck, Stow & Wilcox Company, Southington, Conn. Meat-cutter	399,790	Mar. 19	1510	391	46	1445
Shepard, William P. (See Butler, Henry A., assignor.)						
Shepardson, Byron W. (See Low, Garrett W., assignor.)						
Shepherd, Charles H., New York, N. Y. Gate-valve	400,128	Mar. 26	2000	524	46	1549
Shepherd, Thomas W., assignor to E. W. Upton, H. G. Rice, Peabody, and H. Torrey, Hanover, Mass. Holder for thermometers or other indicators	398,804	Feb. 26	2547	678	46	1104
Shepley, Granville T., Townsend, Mass. Drive-saw	398,350	Feb. 19	1882	496	46	964
Sheppard, John L., assignor of one-half to W. D. Porchers, Charleston, S. C. Milling rice	397,944	Feb. 19	1261	336	46	843
Sherburne, Charles W. (See Coghlan, John, assignor.)						
Sheridan, Frank, Rockford, Minn. Draft-equalizer	396,617	Jan. 22	2007	516	46	414
Sheridan, John S., Columbia, Dak. Ter. Seed-drill	398,459	Feb. 26	2040	535	46	1002
Sheriff, Joseph M., Mercer, Pa. Fence	396,299	Jan. 15	1518	384	46	313
Sherman, Caroline M., executrix. (See Sherman, Edwin F.)						
Sherman, Edwin F., deceased, Springfield, Mass.; C. M. Sherman executrix. Harrow	396,374	Jan. 15	1626	417	46	332
Sherman, James A., Buffalo, N. Y. Cast chilled reamer	399,349	Mar. 12	857	222	46	1306
Sherry, P. P. (See Knox and Eberson, assignors.)						
Shields, Henry C., Troy, N. Y. Apparatus for the manufacture of gas	399,087	Mar. 5	410	111	46	1192
Shields, John, Jersey City, N. J. Boring-tool	395,459	Jan. 1	225	57	46	49
Shinn, John, Philadelphia, Pa. Manufacture of heavy guns, shafts, &c	397,029	Jan. 29	2608	673	46	545
Shipman's Sons, Asa L. (See Bourne, Theodore F., assignor.)						
Shippee, Charles W., *et al.* (See Trowbridge, Augustus S., assignor.)						
Shockey, Robert V., Hastings, Nebr. Shoulder-brace	396,837	Jan. 29	2337	598	46	489
Shoemaker, Joseph E., Durango, Colo. Roping attachment for trunks, &c	398,546	Feb. 26	2163	571	46	1027
Shoeninger, Adolph. (See Unzicker, Otto, assignor.)						
Short, Sidney H., Columbus, Ohio. Electric-railway trolley and support	396,618	Jan. 22	2008	517	46	414
Short, Sidney H., Columbus, Ohio. Insulating-support for electric conductors	398,661	Feb. 26	2141	622	46	1061
Short, Sidney H., Columbus, Ohio. Electric railway	398,662	Feb. 26	2342	622	46	1061
Short, Sidney H., Columbus, Ohio. Switch mechanism for electric railways	398,663	Feb. 26	2344	622	46	1062
Showalter, Wasson C., assignor of one-half to J. H. Reed, Lancaster, Wis. Mechanical motion	396,003	Jan. 8	1089	277	46	324
Shreffler, Samuel, Jr., Joliet, Ill. Track for door-hangers	396,772	Jan. 29	2244	574	46	468
Shriver, Frank W., *et al.* (See Ford, Charles S., Sr., assignor.)						
Shriver, James, *et al.* (See Leahy, Martin J., assignor.)						
Shriver, T. Herbert, *et al.* (See Leahy, Martin J., assignor.)						
Shue, Ephraim W., *et al.* (See Myers, Samuel, assignor.)						
Shultz, Charles H. (See Voltz and Shultz.)						
Shultz, John A. J., assignor to B. C. Alvord, St. Louis, Mo. Belt-pulley	399,636	Mar. 12	1283	329	46	1386
Shuman, Andrew D., Toledo, Ohio. Can	396,515	Jan. 22	1848	474	46	384
Shunk, Thomas W., Bucyrus, Ohio. Plow	396,434	Jan. 22	1723	443	46	361
Shurtleff, Asahel M., assignor to Codman & Shurtleff, Boston, Mass. Atomizer	397,315	Feb. 5	315	82, 83	46	637
Sibley, Guy C., *et al.* (See Trabue, William, assignor.)						
Siccardi, Giovanni B., New York, N. Y. Car brake and starter	400,129	Mar. 26	2001	524	46	1549
Sickels, Gerard, Jr., assignor of one-half to A. T. Howard, Brooklyn, N. Y. Machine for making envelopes or similar receptacles	398,284	Feb. 19	1777	470, 471	46	944
Sidnell, William E., Norwalk, Ohio. Stone-planing machine	399,705	Mar. 19	1383	356, 357	46	1419
Siebrecht, John. (See Feld and Siebrecht.)						
Sieghold, Christian, Salinas, Cal. Oil-feed for lamps	395,460	Jan. 1	226	57	46	49

Siemens Brothers & Company. (See Lauckert, Edward F. H. H., assignor.)						
Siemens, Frederick, Dresden, Saxony, Germany. Gas-lamp	399,289	Mar. 12	757	197	46	1287
Siemens, Frederick, Dresden, Saxony, Germany. Regenerative gas-burner	399,290	Mar. 12	758	197	46	1287
Siemens & Halske. (See Hoffmann, Carl, assignor.)						
Siemens & Halske. (See Siemens, Werner, assignor.)						
Siemens & Halske. (See Siemens, Wilhelm, assignor.)						
Siemens, Werner, assignor to Siemens & Halske, Berlin, Germany. Hydraulic press for covering electrical conductors with soft metal	399,291	Mar. 12	759	197	46	1288
Siemens, Wilhelm, assignor to Siemens & Halske, Berlin, Germany. Electrical measuring and controlling apparatus	399,292	Mar. 12	761	198	46	1288
Sievert, Louis, St. Louis, Mo. Button	397,030	Jan. 29	2610	674	46	545
Sigwalt, John, Jr., Chicago, Ill. Printing-stamp	399,089	Mar. 5	414	112	46	1193
Silas, Ferdinand, Vienna, Austria-Hungary. Luminous oil projectile	397,031	Jan. 29	2611	674	46	545
Silver, Homer M. (See Fowler, Joinville F., assignor.)						
Silvey, William L., Lima, Ohio. Arc lamp	398,906	Mar. 5	134	37	46	1140
Silvey, William L., Lima, Ohio. Electric-arc lamp	398,907	Mar. 5	136	37	46	1140
Silvey, William L., Lima, Ohio. Dynamo-electric machine	399,088	Mar. 5	413	111, 112	46	1193
Silvey, William L., Cincinnati, Ohio. Dynamo-electric machine	400,130	Mar. 26	2002	524	46	1549
Sime, Alexander, and W. M. Moore, Emmetsburg, Iowa. Gate-latch	398,351	Feb. 19	1883	496	46	964
Simon, Jacob P., Grigsby's Bluff, Tex. Fire-escape	396,242	Jan. 15	1436	365	46	298
Simon, Robert, Weehawken, N. J. Knife-sharpener for double-pile-fabric looms	399,293	Mar. 12	765	199	46	1289
Simon, Simon B., New York, N. Y. Combined match-box and cane	397,663	Feb. 12	872	229	46	751
Simpkin, William, Richmond, Va. Piston	396,004	Jan. 8	1089	277	46	224
Simpson, Anson D., Troy, N. Y. Three-throw split switch	399,090	Mar. 5	415	112	46	1193
Simpson, David J., Pittsburg, assignor of one-half to G. C. Corken and H. Marshall, Allegheny County, Pa. Electric coupling for hose-pipes	396,176	Jan. 15	1334	343	46	280
Simpson, James H., assignor to Carnegie, Phipps & Co., (limited,) Pittsburg, Pa. Car-coupling	397,473	Feb. 5	560	146	46	685
Simpson, Josiah M., assignor to W. Deering & Company, Chicago, Ill. Die-carrying head for bolt-threading machines	397,664	Feb. 12	873	229	46	751
Simpson, Robert, Jr. (See Parker, Lewis C., assignor.)						
Singer Manufacturing Company of New Jersey. (See Griest, John M., assignor.)						
Sirieix, Léon, San Francisco, Cal., assignor to Sirieix Mariners Compass Company. Ship's compass. (Reissue)	10,991	Mar. 26	2452	642	46	1634
Sirieix Mariners Compass Company. (See Sirieix, Léon, assignor.) (Reissue.)						
Sise, Horace F., New York, N. Y., assignor to Barnes Manufacturing Company, New Haven, Conn. Padlock	396,960	Jan. 29	2509	647	46	525
Sisson, Henry H., New York, N. Y. Dental disk-holder	399,350	Mar. 12	r58	222	46	1306
Sisum, William H. H., Brooklyn, N. Y. Pipe-coupling	399,351	Mar. 12	859	222	46	1307
Sisum, William H. H., Brooklyn, N. Y. Stock-car	399,574	Mar. 12	1191	308	46	1369
Sisung, James, Newport, Mich. Gate	395,360	Jan. 1	81	21	46	19
Siver, Emmett L. (See Knode, Robert S., assignor.)						
Sjöberg, Rudolf, Stockholm, Sweden, assignor to R. Ericsson, New Britain, Conn. Blasting compound	397,095	Jan. 29	2608	.....	46	502
Skandia Plow Company. (See Hendricks, Simeon B., assignor.)						
Skeels, Charles, Brooklyn, N. Y. Whisk-broom	399,575	Mar. 12	1192	308	46	1370
Skinner, Halcyon, and E. Tymeson, assignors to A. Smith & Sons Carpet Company, Yonkers, N. Y. Loom for weaving chenille, &c	400,260	Mar. 26	2302	578, 579, 580	46	1588
Skow, Matts, assignor of two-thirds to L. C. Enewold and E. Peterson, Omaha, Nebr. Harrow	397,145	Feb. 5	67	16	46	501
Slade, William H., *et al.* (See Bending, William P., assignor.)						
Slater, Henry B., Detroit, Mich. Extracting zinc from ores containing precious metals	399,706	Mar. 19	1385	.....	46	1419
Slauson, William G., Middletown, N. Y. Stereotype-plate holder	398,852	Mar. 5	52	15	46	1124
Slazenger, Albert E. L., London, England. Pad for convenience in handling and picking up coins	399,940	Mar. 19	1733	447	46	1487
Sleeper, Charles W., Island Pond, Vt. Carrying-wheel	398,664	Feb. 26	2347	623	46	1062
Sleeper, Charles W., Island Pond, Vt. Device for feeding and cutting solder	398,665	Feb. 26	2347	623	46	1062
Sleeper, J. A., *et al.* (See Williams, John H., assignor.)						
Sleeper, J. C., *et al.* (See Williams, John H., assignor.)						
Sleutz, Albertice O., Canton, Ohio. Counter-stool for stores	397,615	Feb. 12	803	209	46	737
Sletcher, Frederick, San Francisco, Cal. Concentrator	399,791	Mar. 19	1511	391	46	1445
Sloan, James D., Rushville, Ind. Hose-coupling	396,435	Jan. 22	1725	444	46	361
Slocum, George S., Newport, R. I., assignor to J. M. and W. G. Hoyt and C. Healey, Lynn, Mass. Bottle-washer	399,576	Mar. 12	1193	308, 309	46	1370
Smades, Hiram N., Little Rock, Ark. Baling press	397,303	Feb. 5	426	113	46	658
Small, Dexter M., Providence, R. I. Device for applying heat to the body	400,261	Mar. 26	2300	580	46	1589
Small, Herbert M., Baldwinsville, Mass. Hammock	400,131	Mar. 26	2004	525	46	1550
Small, Thomas, Philadelphia, Pa. Steam-actuated valve	395,503	Jan. 1	440	112	46	90
Smalley, William W., Bound Brook, N. J. Journal-bearing	398,547	Feb. 26	2164	571	46	1027
Smallwood, George T., Washington, D. C. Ink-eraser	395,504	Jan. 1	442	112	46	91
Smead, Isaac D., Toledo, Ohio. Furnace and grate therefor	399,294	Mar. 12	767	199	46	1289
Smedes, Levi K., New York, N. Y. Embalming-board	397,394	Feb. 5	428	114	46	630
Smillie, Robert T., Newark, N. J. Burglar-alarm	395,519	Jan. 1	321	81	46	68
Smith, A. Hyatt, *et al.* (See Smith, Maurice, assignor.) (Reissue.)						
Smith, Abia B., Pittsburg, Pa. Swath-board for mowing and reaping machines	398,853	Mar. 5	54	16	46	1124
Smith, Anthony P., Newark, N. J. Apparatus for tapping and connecting mains	396,177	Jan. 15	1337	343	46	280
Smith, B. F. (See Baily, Percy H., assignor.)						
Smith, Charles H., Beaumont, Kans. Spring-motor	396,243	Jan. 15	1436	365	46	298
Smith, Charles W., Brooklyn, N. Y. Pan for ice-boxes	396,619	Jan. 22	2009	517	46	415
Smith, Daniel G., assignor to R. L. Brown, Pocatello, Idaho Ter. Electric railway-signal	395,667	Jan. 1	561	140	46	113
Smith, Daniel W., assignor of one-half to J. C. Addington, St. Louis, Mo. Steam-generator	399,165	Mar. 5	573	147, 148	46	1225
Smith, Edward E., New York, N. Y. Ash-sifter for stoves	396,178	Jan. 15	1339	344	46	280
Smith, Eugene C., assignor of one-half to C. C. Scudder, St. Louis, Mo. Speed-indicator	397,305	Feb. 5	429	114	46	630
Smith, F. Rollin, Bennington, Vt. Mop-wringer	396,436	Jan. 22	1727	444	46	361
Smith, Frederic, Halifax, county of York, England. Wire-drawing machine	398,982	Mar. 5	256	70	46	1163
Smith, Fredrick H., and J. W. Wright, assignors of one-third to S. E. Stranathan, Kansas City, Mo. Petroleum-burner	398,352	Feb. 19	1884	496	46	964
Smith, Friend W., Jr., Bridgeport, Conn. Apparatus for manufacturing seamless dress-shields	399,637	Mar. 12	1284	329, 330	46	1386
Smith, George C., Chicago, Ill. Conducting-pipe	400,262	Mar. 26	2210	580	46	1589
Smith, George E., assignor of one-half to W. A. Knipe, Haverhill, Mass. Last	395,668	Jan. 1	563	140	46	113

Wilson, Charles H., Columbus, Ohio, assignor to Western Electric Company, Chicago, Ill. Lightning-arrester	399,305	Mar. 12	787	204	46	1293
Wilson, Charles R., Bear Wallow, Ky. Horse-detacher	400,156	Mar. 26	2047	536	46	1558
Wilson, David Y., Gum Tree, assignor of one-half to W. B. Haslett, Parkesburg, Pa. Railway-car	395,412	Jan. 1	152	39	46	32
Wilson, David Y., Gum Tree, assignor of one-half to A. P. Reid, Parkesburg, Pa. Car-coupling	396,447	Jan. 22	1740	447	46	364
Wilson, Fred, New York, N. Y. Theatrical appliance	397,678	Feb. 12	894	236	46	755
Wilson, George T., assignor of two-thirds to J. D. Hough and M. H. Bronson, Lowville, N. Y. Thill-coupling	398,922	Mar. 5	158	41	46	1143
Wilson, Henry R., assignor of one-half to C. F. Bedell, Brooklyn, N. Y. Cutting attachment for check-books	399,930	Mar. 19	1759	454	46	1492
Wilson, Horace M., Cambridge, Mass. Coin-operated perfuming apparatus	397,574	Feb. 12	718	186	46	721
Wilson, James G., New York, N. Y. Hanger for Venetian blinds	398,484	Feb. 26	2011	547	46	1010
Wilson, John C., assignor to J. T. Waring, Yonkers, N. Y. Machine for pouncing hats	400,282	Mar. 26	2239	587	46	1595
Wilson, Robert J., Pittsburg, Pa. System of and apparatus for heating cars	399,592	Mar. 12	1221	314	46	1374
Wilson, Robert M. (See Riley, Harvey C., assignor.)						
Wilson, William T., Marshfield, Oreg. Saw	398,302	Feb. 19	1800	478	46	950
Winchell, James F., assignor to Foos Manufacturing Company, Springfield, Ohio. Crushing and grinding mill	395,413	Jan. 1	153	39, 40	46	32
Winchell, James F., assignor to Foos Manufacturing Company, Springfield, Ohio. Feed-regulator for grinding-mills	396,058	Jan. 8	1159	294	46	237
Winchell, James F., assignor to Foos Manufacturing Company, Springfield, Ohio. Crushing and grinding mill	396,448	Jan. 22	1741	447, 448	46	364
Winchell, James F., assignor to Foos Manufacturing Company, Springfield, Ohio. Feed-regulating mechanism	397,045	Jan. 29	2027	677, 678	46	548
Winder, Richard B. (See Browne, Walker G., assignor.)						
Windisch, John H., Oak Harbor, Ohio. Refrigerator	399,307	Mar. 12	791	205	46	1293
Winfield, John Q., and B. H. Strickler, Broadway, Va. Car-heater	395,470	Jan. 1	240	61, 62	46	52
Wing, Francis J. (See Marty, John M., assignor.)						
Wing, Lingan C., Boston, Mass., assignor to Union Button Sewing Machine Company, of Massachusetts. Button-sewing machine	395,372	Jan. 1	96	25	46	21
Wing, Lingan C., assignor to Union Button Sewing Machine Company, Boston, Mass. Needle for sewing-machines	397,619	Feb. 12	809	210	46	738
Winheim, Gustav, Carlyle, Ill., assignor to A. Q. Ross, Cincinnati, Ohio. Roll-paper holder and cutter	398,762	Feb. 26	2492	660	46	1092
Winslow, George E., Waltham, Mass. Apparatus for indicating and recording changes at a distant point	395,862	Jan. 8	871	225	46	183
Winter, Andrew. (See Pawlowski, Jacob, assignor.)						
Winter, Frederick, Allegheny, Pa. Rendering	399,810	Mar. 19	1548	400	46	1451
Winter, John B., Louisville, Ky. Stove for heating sad-irons	399,719	Mar. 19	1403	361	46	1423
Winter, Otto A., Buxtehude, Prussia, Germany. Machine for cutting wood into chips	399,107	Mar. 5	440	120	46	1198
Winters, Frank, and H. A. Bingham, Orillia, Ontario, Canada. Liquid-measuring device	397,452	Feb. 5	536	141	46	680
Wirt, Paul E., Bloomsburg, Pa. Fountain-pen	399,306	Mar. 12	788	204	46	1293
Wise Brothers. (See Crain, William O., assignor.)						
Wiseman & Co. *et al.* (See King, Corydon C., assignor.)						
Wiseman, Phillip S., Springfield, Ohio. Pipe-coupling for railway-cars	396,908	Jan. 29	2432	626, 627	46	510
Wiser, Henry P., Buffalo, N. Y. Buckle	400,379	Mar. 26	2289	625	46	1623
Wishart, James M., Marion, Kans. Sad-iron-heating apparatus	399,960	Mar. 19	1760	455	46	1493
Wissler, Jacob S., Canton, Ohio. Fodder-cutter	396,794	Jan. 29	2276	582	46	475
Withington, Charles B., Janesville, Wis. Grain-binder	399,108	Mar. 5	441	120, 121, 122	46	1198
Witmer, John A., Wakarusa, Ind. Vehicle-spring	396,317	Jan. 15	1539	388	46	317
Wleck, Wenzl, assignor of two-thirds to H. Müller and M. Kelz, Gratz, Austria-Hungary. Mail box and pouch	400,026	Mar. 19	1850	481	46	1509
Wohlfahrt, Adolf. (See Gebrke and Wohlfahrt.)						
Wolbach, Michael. (See Wolfsohn, Otto, assignor.)						
Wolcott, Clayton, Hartford, Conn. Mat	397,453	Feb. 5	537	141	46	681
Wolcott, John W. (See Freese and Wolcott.)						
Wolf, Henry L. R., Dayton, Ohio. Oyster-bucket	396,131	Jan. 15	1264	323	46	267
Wolf, William H., *et al.* (See Noble, William, assignor.)						
Wolfe, Allen I., Newbury, Ind. Rail-chair	400,027	Mar. 19	1856	481	46	1510
Wolfe, Harvey R., assignor to J. R. Bascom and Brennan & Co. South Western Agricultural Works, Louisville, Ky. Saw-mill dog	395,373	Jan. 1	99	26	46	22
Wolfe, Harvey R., assignor of one-half to J. R. Bascom, Louisville, Ky. Water-motor	396,318	Jan. 15	1540	389	46	317
Wolff, George S., Philadelphia, Pa. Swab for liquid blacking	396,790	Jan. 29	2267	580	46	473
Wolff, Ludwig, assignor to L. Wolff Manufacturing Company, Chicago, Ill. Thimble for coupling lead and cast-iron pipes	399,720	Mar. 19	1404	361	46	1423
Wolff Manufacturing Company, L. (See Clifford, John, assignor.)						
Wolff Manufacturing Company, L. (See Wolff, Ludwig, assignor.)						
Wolfsohn, Otto, assignor of one-half to M. Wolbach, New York, N. Y. Machine for piling textile fabrics	396,780	Jan. 22	2132	551	46	442
Wolstenholme, Thomas, Camden, N. J. Dyeing-machine	397,481	Feb. 5	571	148	46	686
Wood, Alvilnus B., Ann Arbor, Mich. Tent	399,640	Mar. 12	1289	331	46	1388
Wood, Edgar J., Brooklyn, N. Y. Apparatus for handling and distributing granular or lumpy substances	397,679	Feb. 12	895	236, 237	46	755
Wood, Frank L. (See Van Valkenburg and Wood.)						
Wood, Harry C., New Brighton, Pa. Glass-cutting machine	398,565	Feb. 26	2190	577	46	1032
Wood, Henry A. W. (See Hetherington, Frederick A., assignor.)						
Wood, James J., Brooklyn, N. Y. Hanger-board for arc lamps	398,870	Mar. 5	79	22	46	1130
Wood, Marshall, assignor to himself and A. M. Miller, Alderson, W. Va. Apparatus for heating railway passenger-cars	397,212	Feb. 5	170	45, 46	46	608
Wood, Montraville M., assignor of one-half to Erie County Light Company, Erie, Pa. Electric-lamp hanger	397,953	Feb. 19	1273	340	46	846
Wood, Walter D., Pittsburg, Pa. Manufacturing planished sheet-iron	395,605	Jan. 1	453	.....	46	93
Woodbridge, James E., assignor to Pratt & Whitney Company, Hartford, Conn. Screw-cutting die	399,367	Mar. 12	880	229	46	1310
Woodin, Edwin B., *et al.* (See Ransom, Ezra, assignor.)						
Woodring, William H., and C. S. Gilbert, Kansas City, Mo. Electric alarm-signal for cables	400,028	Mar. 19	1856	482	46	1510
Woodruff, Edmund W., Washington, D. C. Wash-stand	399,461	Mar. 12	1011	264, 265	46	1237

Alphabetical list of patentees, January to March, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr'g	Vol.	Page.
Woodruff, Oliver D., Southington, Conn. Tubular lantern	395,863	Jan. 8	876	225	46	183
Woodruff, Oliver D., Southington, Conn. Lantern	395,864	Jan. 8	879	225	46	184
Woods, Granville T., Cincinnati, Ohio. Automatic safety cut-out for electric circuits	395,533	Jan. 1	338	85	46	71
Woods, Lewis P., Blairsville, Pa. Grate	395,606	Jan. 1	455	116	46	93
Woods Machine Company, S. A. (See Thomas, John R., assignor.)						
Woods Machine Company, S. A. (See Woods and Thomas, assignors.)						
Woods, Solomon A., Boston, Mass. Wood-planing machine	398,362	Feb. 19	1905	500, 501, 502	46	968
Woods, Solomon A., and J. R. Thomas, Boston, Mass., assignors to S. A. Woods Machine Company, of Massachusetts. Planing-machine	397,575	Feb. 12	721	186, 187	46	722
Woodward, Edward C., assignor of two-thirds to E. C. Wright and H. F. Woodward, Brockton, Mass. Last	398,923	Mar. 5	159	41	46	1143
Woodward Electrical Company. (See Cameron, Henry F. D., assignor.)						
Woodward, Horace F., *et al.* (See Woodward, Edward C., assignor.)						
Woodworth, Orson H., Columbia City, Ind. Filter-pump	397,263	Feb. 5	238	62	46	621
Woolcott, John H., Cincinnati, Ohio. Roller reduction-mill	395,534	Jan. 1	340	86, 87	46	72
Wooley, Charles D., Walden, N. Y. Auxiliary steering device for vessels	396,186	Jan. 15	1352	346	46	283
Woolley, Leonidas G., Grand Rapids, Mich. Treadle	398,363	Feb. 19	1910	503	46	969

Wooster, George H., New York, N. Y. Material for the treatment of walls	397,529	Feb. 12	646	.....	46	709
Wootten, John E., Reading, Pa. Atomizer	396,449	Jan. 22	1743	448	46	364
Worrall, George, Chicago, Ill. Combined latch and lock	398,016	Feb. 19	1398	357	46	867
Worrall, Harvey, Topeka, Kans. Harmonic damper for pianos	398,924	Mar. 5	159	42	46	1143
Worsley, Samuel L., Taunton, Mass., assignor to Brown & Sharpe Manufacturing Company, Providence, R. I. Stop-motion for lathes	398,871	Mar. 5	82	23	46	1130
Worswick, William W., Cleveland, Ohio. Journal-box	399,721	Mar. 19	1406	362	46	1423
Worth, John D. (See Worth, William O. and J. D.)						
Worth, Joseph C. (See Okey, Joseph B., assignor.)						
Worth, William O. and J. D., Cedar Rapids, Iowa. Steam-engine	399,593	Mar. 12	1222	315	46	1375
Worthen, William C., and G. Pendleton, Jr., assignors of one-third to J. D. Walworth, Boston, Mass. Wrench	397,954	Feb. 19	1274	340	46	846
Worthen, William C., and G. Pendleton, Jr., assignors to themselves and J. D. Walworth, Boston, Mass. Wrench	400,380	Mar. 26	2389	625	46	1623
Worthington, David L., Toledo, Ohio. Clothes-drier	398,811	Feb. 26	2552	679	46	1106
Worthington, Thomas P., Southshore, Blackpool, county of Lancaster, England. Sewer-ventilator	396,187	Jan. 15	1352	347	46	283
Wright, Berton L., assignor of two-thirds to S. A. Burns, Bridgeport, Conn. Car-brake	400,029	Mar. 19	1858	462	46	1511
Wright, Edward, Worcester, assignor to Davis & Furber Machine Company, North Andover, Mass. Top roll for spinning-machines	395,938	Jan. 8	983	252	46	204
Wright, Ellery C., *et al.* (See Woodward, Edward C., assignor.)						
Wright, Henry H., Paola, Kans. Hat-mark	397,768	Feb. 12	1017	271	46	779
Wright, John, Hoosick Falls, N. Y. Whisk-broom	399,308	Mar. 12	792	205	46	1293
Wright, John H., Bridgeport, Conn. Street-car brake	395,414	Jan. 1	155	40	46	33
Wright, John W. (See Smith and Wright.)						
Wright, Luther S., assignor of one-half to D. McLachlan, Groton, N. Y. Coffee or tea pot	397,883	Feb. 12	1171	313	46	811
Wright, William, Plymouth, county of Devon, England. Whip-socket	395,374	Jan. 1	101	26	46	22
Wright, William H. S., Kansas City, Mo. Electric cut-out	398,566	Feb. 26	2192	578	46	1052
Wright, William J., Cooperstown, Pa. Stave jointing and planing machine	398,993	Mar. 5	275	75, 76, 77	46	1167
Wright, William R., Port Huron, Mich. Drill-head	397,769	Feb. 12	1018	271	46	779
Wright, William W., Willink, N. Y. Chimney cap and protector	399,594	Mar. 12	1225	315	46	1375
Writing Machine Manufacturing Company. (See Felbel and Steiger, assignors.)						
Writing Machine Manufacturing Company. (See Yost, George W. N., assignor.)						
Writing Machine Manufacturing Company. (See Yost and Merritt, assignors.)						
Wuerpel, Morris, St. Louis, Mo. Balanced valve	397,825	Feb. 12	1099	294	46	795
Wuerpel, Morris, St. Louis, Mo. Pneumatic switch for railways	398,364	Feb. 19	1911	503	46	970
Willhecke, Henry V., San Francisco, Cal. Wire splicer and cutter	395,642	Jan. 1	518	130	46	104
Wulff, Henry. (See Wallis, William J., assignor.)						
Wundes, John H., assignor to E. F. Boman and W. B. Musser, Lancaster, Pa. Tool-handle	399,641	Mar. 12	1291	331	46	1388
Wyatt, Robert L. (See Nolley and Wyatt.)						
Wyckoff, Edwin, Camden, N. J. Marker, furrower, and coverer	399,309	Mar. 12	793	205	46	1293
Wyckoff, Frank T., Williamsport, Pa. Auger-bit	399,595	Mar. 12	1226	315	46	1375
Wyckoff, Seamans & Benedict. (See Webb, George B., assignor.)						
Wyeth, David G., Newark, Ohio. Sleigh-runner for wheeled vehicles	400,381	Mar. 26	2390	625, 626	46	1623
Wylie, Richard, Napa, Cal. Combined reel and sprinkler	400,030	Mar. 19	1860	482, 483	46	1511
Wyman, Horace, assignor to Crompton Loom Works, Worcester, Mass. Take-up mechanism for narrow-ware looms	398,365	Feb. 19	1912	503, 504	46	970
Wyman, Horace, assignor to Crompton Loom Works, Worcester, Mass. Stopping mechanism for looms	400,382	Mar. 26	2393	626	46	1623
Wynkoop, Jehiel F., Brooklyn, N. Y., assignor of one-half to A. I. Wilcox, Bradford, Pa. Table-knife for green corn	399,109	Mar. 5	448	122	46	1199
Wynkoop, Mary T., Utica, N. Y. Rubber boot	400,421	Mar. 26	2451	642	46	1634
Xander, George A., Hamburg, and J. G. Xander, Reading, Pa. Sewing	399,310	Mar. 12	794	205	46	1294
Xander, John G. (See Xander, George A. and J. G.)						
Yaggy, Levi W., assignor to Western Publishing House, Chicago, Ill. Anatomical chart	396,381	Jan. 15	1636	420	46	334
Yagle & Co., William. (See White, Fernando, assignor.)						
Yale, Charles O., Rome, N. Y. Sulky	395,375	Jan. 1	102	26	46	23
Yale & Towne Manufacturing Company. (See Taylor, Warren H., assignor.)						
Yale & Towne Manufacturing Company. (See Weston, Thomas A., assignor.)						
Yarrick, John, and E. Meister, Philadelphia, Pa. Brake for cars	396,132	Jan. 15	1265	324	46	267
Yarrington, John D., Lexington, and H. D. Shanklin, Clark County, Ky., assignors to said John D. Yarrington. Railway-signal	397,884	Feb. 12	1172	314	46	811
Yeager, James F. (See Runkle, Tully, assignor.)						
Yeoman, Edward, Chicago, Ill. Spring bed-bottom	397,324	Feb. 5	334	87	46	640
Yingst, Cyrus, Annville, Pa. Hand-propelled vehicle	399,110	Mar. 5	448	122, 123	46	1199
Yost, George W. N., assignor to Writing Machine Manufacturing Company, New York, N. Y. Type-writing machine	400,384	Mar. 26	2396	626, 627	46	1624
Yost, George W. N., New York, N. Y., and C. E. Merritt, Springfield, Mass., assignors to Writing Machine Manufacturing Company, New York, N. Y. Type-writing machine	400,383	Mar. 26	2394	626	46	1624

Bag-holder	B. F. Ellis	397,346	Feb. 5	365	96	46	647
Bag-holder	T. W. Harrison	396,561	Jan. 22	1917	495	46	396
Bag-lock	L. B. Cutler	396,029	Jan. 8	1120	284	46	229
Bag-lock	J. Hammesfahr	400,334	Mar. 26	2320	607	46	1610
Bags. Mouth-piece for	G. W. Dean	400,104	Mar. 26	2099	550	46	1570
Bags or receptacles. Mouth-piece for	W. H. Taylor	398,093	Feb. 19	1493	395	46	898
Bagasse-furnace	W. W. Sutcliffe	400,016	Mar. 19	1839	477 / 478	46	1507
Baking and roasting pan	J. B. Munson	397,869	Feb. 12	1152	308	46	806
Bale-tie twister	C. Franco	396,651	Jan. 22	2053	527	46	421
Baling-press	E. Beadle	399,472	Mar. 12	1028	271	46	1341
Baling-press	J. K. Bywaters	398,312	Feb. 19	1523	401	46	953
Baling-press	D. L. Hanney	396,481	Jan. 22	1500	461	46	375
Baling-press	W. Hillman and J. F. Ripple	397,917	Feb. 19	1225	327 / 328	46	838
Baling-press	W. S. Livengood	396,096	Jan. 15	1221	309	46	258
Baling-press	W. S. Livengood	396,097	Jan. 15	1223	309 / 310	46	258
Baling-press	T. Runkle	395,718	Jan. 8	636	161	46	137

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Baling-press	H. N. Smades	397,393	Feb. 5	426	113	46	658
Baling-press. Power	W. W. Seely	399,568	Mar. 12	1181	306	46	1368
Balling machine. Twine-	I. P. Miner	399,339	Mar. 12	831	217	46	1302
Balloon	C. A. Künzel	399,271	Mar. 12	732	190	46	1292
Ballot-box	C. M. Taylor	399,911	Mar. 5	140	38	46	1141
Balls. Machine for winding	H. Harwood	397,362	Feb. 5	384	101	46	651
Band-cutter and feeder	C. C. King and A. D. Trimble	398,407	Feb. 26	1974	518 / 519	46	989
Band-cutter and feeder	H. A. Underwood	398,197	Feb. 19	1650	436	46	916
Band-cutting fork	A. Rodman	396,431	Jan. 22	1719	442	46	360
Bandage. Water-	G. P. Herndon	396,208	Jan. 15	1367	355	46	289
Banjos. Drum attachment for	R. Oerlein	398,176	Feb. 19	1618	429	46	910
Bar: *See* Fire-bar. Presser-bar. Mowing-machine cutter-bar. Railway splice-bar.							
Bar and beer-cooler	J. F. Kausler	395,331	Jan. 1	40	10	46	11
Bars. Machine for changing the angle of the flanges of Z and angle	W. E. Highfield	399,896	Mar. 19	1667	431 / 432	46	1475
Barbed nail	P. V. Husted	398,260	Feb. 19	1739	458	46	935
Barber's chair	E. Melchior	396,639	Feb. 26	2306	611	46	1054
Bark from timber. Machine for removing	N. H. Dolsen	397,114	Feb. 5	12	3	46	581
Barrel	I. J. W. Adams	397,325	Feb. 5	335	87	46	641
Barrel-cover	J. P. Harp	398,153	Feb. 19	1583	420	46	904
Barrel-head	J. A. Campbell	399,494	Mar. 12	1062	277	46	1346
Barrel-hoops. Retaining device for	C. Verniaud	397,100	Jan. 29	2706	699 / 700	46	563
Barrel-stand	C. C. Schreiber	396,372	Jan. 15	1623	415	46	332
Barrel-washing machine	H. E. Klamt	400,346	Mar. 26	2343	611 / 612	46	1613
Barrels. Apparatus for sizing	T. Roberts	396,370	Jan. 15	1621	415	46	332
Barrels. Scuttle for	J. B. Eatman	399,657	Mar. 19	1316	337	46	1405
Barrow. Double-deck	W. H. Hall	397,358	Feb. 5	379	100	46	649
Base-ball bat	C. N. Morris	400,354	Mar. 26	2356	614	46	1616
Base-ball winding and rolling machine	B. B. Newell	397,303	Feb. 5	300	77	46	633
Basins and baths. Secret supply, waste, and overflow for	W. H. Newell	399,691	Mar. 19	1361	350	46	1413
Basket-cover	T. W. Lankford	395,708	Jan. 8	620	156	46	134
Basket or carrier	I. J. W. Adams	399 811	Mar. 19	1549	400	46	1451
Bath: *See* Blotter-bath. Portable bath. Oil-bath. Shower-bath.							
Bath-tub	C. H. Moore	398,644	Feb. 26	2313	613	46	1055
Bath-tub. Folding	H. Saleh	400,119	Mar. 26	1990	521	46	1547
Bath-tubs. Basin-rack for	L. D. Ruth	398,349	Feb. 19	1661	495	46	963
Bathing apparatus	E. W. Kiffe Ben	398,514	Feb. 26	2122	558 / 559	46	1018
Bathing-machine. Electrical	J. W. James	398,731	Feb. 26	2452	650	46	1084
Batteries. Apparatus for charging and discharging secondary	W. P. Kookogey	395,836	Jan. 8	830	215	46	174
Batteries. Element for thermo-electric	M. Meitern	398,272	Feb. 19	1757	464	46	939
Batteries. Preparing solution compounds for galvanic	W. P. Kookogey	395,835	Jan. 8	829	.....	46	174
Batteries. Preparing solution compounds for galvanic	W. P. Kookogey	395,837	Jan. 8	834	.....	46	175
Batteries. Protecting the negative plates of electrical	F. J. Clamer and J. G. Hendrickson	397,469	Feb. 12	598	153	46	698
Battery: *See* Electric battery. Medical battery. Electrical battery. Secondary battery. Galvanic battery. Voltaic battery.							
Battery charging. Secondary-	C. F. Brush	395,377	Jan. 1	104	27	46	23
Battery charging. Secondary-	C. F. Brush	395,378	Jan. 1	106	28	46	24
Battery charging. Secondary-	C. F. Brush	395,379	Jan. 1	109	28	46	25
Battery charging. Secondary-	C. F. Brush	396,681	Jan. 22	2092	538	46	431
Battery charging. Secondary-	E. R. Knowles	397,557	Feb. 12	992	180	46	717
Battery plate. Secondary-	C. D. P. Gibson	397,706	Feb. 12	1061	283	46	787
Battery plate. Storage-	W. P. Kookogey	398,737	Feb. 26	2460	652	46	1065
Battery-zincs. Mercury-holder for	J. Kennedy	395,569	Jan. 1	396	101 / 102	46	82
Beams. Machine for cutting flanged	T. R. Ferrell	399,662	Mar. 19	1325	339	46	1406
Bearing. Anti-friction	A. W. Terry	396,968	Jan. 29	2522	651	46	528
Bearing. Anti-friction	B. Ormerod and G. Haworth	398,274	Feb. 19	1760	465	46	940
Bearing for pulleys or wheels	R. W. Hent	399,615	Mar. 12	1250	322	46	1380
Bearing. Roller-	J. W. Hyatt	398,329	Feb. 19	1649	488	46	958
Bearing. Roller-	J. Norton, Jr	400,110	Mar. 26	1975	517	46	1543
Beating-engine	J. B. Jones	398,334	Feb. 19	1657	489 / 490	46	959
Bed-bottom. Spring	E. Yeoman	397,324	Feb. 5	334	87	46	640
Bed-bottom. Spring	E. J. Foster	399,234	Mar. 12	708	185	46	1278
Bed. Cot-	L. C. Butterfield	399,832	Mar. 19	1585	410	46	1458
Bed. Folding	T. J. Christy	397,779	Feb. 12	1034	276	46	782
Bed. Folding	J. Penney	397,308	Feb. 5	306	80	46	634
Bed. Folding	M. Samuels	398,656	Feb. 26	2333	610	46	1060
Bed. Invalid-	W. Saunders	396,607	Jan. 22	1909	512	46	410
Bed or bedstead. Folding	L. W. Welch	397,766	Feb. 12	1015	270	46	778
Bed or upholstered springs. Spring-	C. B. Howell	397,234	Feb. 5	198	52	46	612
Bed-pan. Rubber	A. C. Eggers	399,508	Mar. 12	1069	284	46	1350
Bed. Spring-	E. H. Caylor and C. H. McCreery	396,806	Jan. 29	2295	587	46	479
Bed. Spring-	D. H. Gail	399,257	Mar. 12	713	186	46	1279
Bed. Spring-	F. M. Jeffery	399,902	Mar. 19	1675	434	46	1477
Bed. Upright or folding	D. J. Powers	398,747	Feb. 26	2473	655	46	1068
Bedstead. Folding	W. J. Griebel	397,163	Feb. 5	129	35	46	601
Bedstead. Folding	J. Penney	397,307	Feb. 5	304	79	46	634
Bedstead-tie	M. Fernan	397,708	Feb. 12	931	247	46	762
Bedsteads. Crib attachment for	V. Fitz	399,660	Mar. 19	1323	330	46	1406
Bee-hive	J. Beeson and J. H. Hirschfeld	396,724	Jan. 29	2160	554	46	452

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No	Date.	Monthly volume.		Official Gazette.	
				Spec.	Drs.	Vol.	Page.
Bee-hive	F. M. Clement	399,742	Mar. 19	1435	369	46	1429
Bee-hive	J. I. Foot	398,387	Feb. 26	1948	512	46	984
Bee-hive	H. Penoyer	399,281	Mar. 12	747	194	46	1285
Beer. Apparatus for the pasteurization of	C. F. Koehler	399,200	Mar. 5	025	162	46	1234
Beer-kegs. Ice-box for holding	C. C. Rumpf	396,341	Jan. 15	1575	399	46	323
Beer or ale. Manufacturing	A. W. Billings	398,374	Feb. 26	1930	508	46	981
Bell-alarm. Pneumatic	C. R. Sawyer and C. Parent	396,608	Jan. 22	1990	512 513	46	410
Bell-cord attachment	G. A. La Fever	395,839	Jan. 8	F36	216	46	175
Bell. Door	W. H. Fauber	396,903	Jan. 29	2554	660	46	534
Bell. Gong	W. E. Sparks and H. J. Landolt	398,285	Feb. 19	1784	472	46	944
Bell. Signal	E. Olsen	397,345	Feb. 5	212	55	46	616
Belt conveyer and tripper	J. Macdonald	396,500	Jan. 22	1827	469	46	381
Belt. Conveying	D. Brennan, Jr	396,136	Jan. 15	1270	325 326	46	268
Belt. Electric	S. De Baun	398,133	Feb. 19	1556	412	46	899
Belt-fastener	W. G. Avery	399,992	Mar. 19	1762	455	46	1493
Belt-fastener	H. Blake	396,528	Jan. 22	1964	478	46	387
Belt-fastener	E. L. Budlong	399,489	Mar. 12	1058	276	46	1345
Belt-fastener	J. Snow	398,857	Mar. 5	59	17	46	1125
Belt holder and shifter	U. H. W. Schenck	395,591	Jan. 1	434	110 111	46	89
Belt-shifting mechanism	J. J. Daley	399,501	Mar. 12	1071	279 280	46	1347
Belt-stretching machine	C. L. Ireson	396,874	Jan. 29	2384	612	46	500
Belt-tightener	J. A. Wigal	398,361	Feb. 19	1904	500	46	968
Belts. Battery for electric	W. G. Johnson	397,806	Feb. 12	1073	286	46	789
Belts. Hinge-joint for electric	N. Warrell	399,954	Mar. 19	1753	453	46	1491
Belts. Lace-hole protector for driving	G. W. Southwick	397,252	Feb. 5	221	58	46	618
Belting	G. F. Page	400,005	Mar. 19	1824	474	46	1504
Belting. Machine	G. F. Page	400,006	Mar. 19	1825	474	46	1504
Belting. Manufacture of wire	T. Midgley	398,424	Feb. 26	1999	525	46	994
Belting. Manufacture of wire	T. Midgley	398,431	Feb. 26	2005	526	46	995
Belting. Wire	T. Midgley	398,423	Feb. 26	1998	524	46	994
Belting. Wire	T. Midgley	398,427	Feb. 26	2002	525	46	995
Belting. Wire	T. Midgley	398,429	Feb. 26	2004	526	46	995
Bevel-gage	M. O. Godding	395,433	Jan. 1	182	48	46	39
Beverage. Aerated tonic	W. B. Starbird	396,440	Jan. 22	1734	.....	46	363
Bicycle	L. F. Carstensen	398,228	Feb. 19	1691	447	46	925
Bicycle	T. O'Brien	399,774	Mar. 19	1485	383	46	1439
Bicycle	H. S. Owen	398,745	Feb. 26	2471	654	46	1068
Bicycle	A. G. Rose	399,285	Mar. 12	753	195	46	1287
Bicycle	E. Thuemler	398,195	Feb. 19	1646	435	46	915
Bicycle	G. T. Warwick	399,454	Mar. 12	997	260 261	46	1334
Bicycle. Safety	G. T. Warwick	399,455	Mar. 12	1000	261	46	1335
Bicycles. Foot-rest for	H. Walter	396,182	Jan. 15	1346	345	46	282
Bicycles from a single blank. Forming backbones and rear forks of	G. T. Warwick	397,405	Feb. 5	450	120	46	664
Bicycles. Luggage-carrier for	H. S. Credlebaugh	398,945	Mar. 5	194	52	46	1151
Bier	J. W. Finch and J. B. Park	398,776	Feb. 26	2510	667	46	1096
Bill of fare. Changeable	D. E. Terrill	396,716	Jan. 22	2146	549	46	441
Billiard-cue handles, &c. Machine for ornamenting	A. F. Hjort	395,494	Jan. 1	277	71	46	58
Billiard-scoring board	R. N. Montgomery	397,019	Jan. 29	2568	669	46	541
Billiard-table rail and cushion	C. G. Brockway	400,032	Mar. 19	1863	483	46	1512
Billiard-table rail and cushion	C. G. Brockway	400,044	Mar. 26	1884	490	46	1524
Billiard-tables. Device for leveling	H. C. Berry	399,126	Mar. 5	490	131	46	1209
Bin: *See* Flour-bin. Grocer's bin. Flour and meal bin.							
Binder	T. F. Bourne	396,980	Jan. 29	2536	655	46	530

Brick-kiln	B. F. Shakespeare and S. J. Rose	397,665	Feb. 12	875	230	46	751
Brick-kiln	J. Taber	396,966	Jan. 29	2516	649, 650	46	527
Brick-machine	J. J. Brewis	395,871	Jan. 8	890	228, 229	46	186
Brick-machine	C. and E. Doerfler	398,134	Feb. 19	1558	412	46	899
Brick-machine	J. Morhard	397,604	Feb. 12	790	206	46	734
Brick-machine	R. F. Robison	399,698	Mar. 19	1371	353, 354	46	1416
Brick-machine	W. Weeber	395,765	Jan. 8	703	180, 181	46	150
Brick-machine attachment	P. G. Benson	398,213	Mar. 5	2	1	46	1115
Brick-machine. Hydraulic	J. J. Koch	397,730	Feb. 12	963	256, 257	46	768
Brick. Making	G. Sattler, Sr., and C. Nagel	395,590	Jan. 1	434	.....	46	89
Brick-mold	A. McLean	399,064	Mar. 5	378	102	46	1187
Brick or tile machines. Cutting-table for	E. M. Freese and J. W. Wolcott	400,399	Mar. 26	2418	633, 634	46	1628
Brick-press	J. H. Steele	397,666	Feb. 12	878	230	46	752
Bridge gate. Draw-	O. Moen	396,662	Jan. 22	2068	530, 531	46	425
Bridge. Swing-	M. A. Redding	399,347	Mar. 12	842	220	46	1304
Bridge. Trussed suspension-	G. M. Wildin	399,105	Mar. 5	437	118, 119	46	1197
Bridges. Automatic gate for swing-	H. Marcheter	395,752	Jan. 8	686	175	46	146
Bridges. Automatic safety-gate for draw-	F. Marohn	397,867	Feb. 12	1150	308	46	806
Bridges, rails, &c. Apparatus for indicating the flexion of	O. Leuner	399,676	Mar. 19	1344	345	46	1410
Bridle-bit	S. Fisher	398,319	Feb. 19	1635	434	46	955
Bridle-bit. Safety	L. P. Britt	397,273	Feb. 5	254	66	46	634
Broiler. Meat-	A. Caller	398,493	Feb. 26	2090	551	46	1013
Broom-corn. Utilizing waste	S. M. Youngjohn	397,482	Feb. 5	572	148	46	687
Broom-holder	S. B. Minnich	398,432	Feb. 26	2006	527	46	996
Broom-maker's thimble	D. W. Albert	398,812	Mar. 5	1	1	46	1115
Broom-rack	W. C. Jones	397,723	Feb. 12	953	252	46	786
Brush	H. W. Hasey	398,043	Feb. 19	1428	378	46	874
Brush and comb. Combined hair	W. J. Scott	397,614	Feb. 12	803	200	46	737
Brush and sponge holder. Fountain	S. Thompson	397,670	Feb. 12	882	231	46	753
Brush attachment. Paint-	J. B. Flautt	398,244	Feb. 19	1718	453	46	931
Brush. Cylindrical	G. S. Gladding	397,076	Jan. 29	2673	691	46	556
Brush. Fountain-	J. Stevens	397,946	Feb. 19	1264	337	46	844
Brush. Hatter's	W. A. Faber	396,812	Jan. 29	2302	589	46	481
Brush-holder	G. E. Meeker	398,173	Feb. 19	1612	428	46	900
Brush-holder	T. A. Pierce and I. H. Wadleigh	398,537	Feb. 26	2151	567	46	1025
Brush-machine	E. W. Porter	396,954	Jan. 29	2498	644, 645	46	522
Brush. Metallic	S. Porter	396,289	Jan. 15	1502	381	46	310
Brush. Printer's	J. C. Israel	398,049	Feb. 19	1438	381	46	876
Brush. Tooth-	W. H. Smith	396,898	Jan. 29	2425	623	46	508
Brushes. Attachment for flesh or bath	W. J. Turkington	398,292	Feb. 19	1795	474	46	947
Bucket for storing and burning trash	W. H. Harris and W. H. Ryer	397,790	Feb. 12	1085	284	46	788
Bucket. Oyster-	H. L. R. Wolf	396,131	Jan. 15	1264	333	46	267
Buckets. Closure for	J. C. Reed	396,601	Jan. 22	1980	509	46	408
Buckle	C. D. Cheesman	396,966	Jan. 15	1464	373	46	364
Buckle	G. P. Cole	398,028	Feb. 19	1408	371	46	870
Buckle	L. L. Conker	395,742	Jan. 8	672	172	46	144
Buckle	H. A. Hartsboru	397,717	Feb. 12	944	251	46	744
Buckle	H. E. Measimer	397,811	Feb. 12	1080	287	46	790
Buckle	J. Nase	397,562	Feb. 12	760	192	46	718
Buckle	S. C. Tucker	400,018	Mar. 19	1643	478	46	1608
Buckle	H. P. Wiser	400,379	Mar. 26	2389	625	46	1623
Buckle-guard	G. M. Hubbard	395,904	Jan. 8	937	241	46	194
Buckle. Harness-	I. E. Bennett	398,372	Feb. 26	1928	507	46	981
Buckle. Suspender-	J. England	397,634	Feb. 12	929	246	46	742
Buckle. Suspender-	L. Steinberger	400,137	Mar. 26	2012	527	46	1551
Bulling-machines. Belt-tightener for	J. G. Blount	395,732	Jan. 8	659	169	46	142
Buggy-boot	C. A. Beblen	400,040	Mar. 26	1877	489	46	1594
Buggy-boot	P. Bosche	397,578	Feb. 12	732	189	46	754
Buggy-bow support	J. F. Kolb, H. H. Allen, and C. F. St. Clair.	396,811	Jan. 15	1392	356	46	290
Buildings. Construction of	J. E. Rankin	399,778	Mar. 19	1489	384	46	1449
Bulletin-board and broom-holder. Combined	M. W. Mahar	397,465	Feb. 5	551	144	46	633

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Bung	M. Schwemberger and A. Groeschel	399,086	Mar. 5	409	110	46	1192
Bung. Automatic stop-valve	L. F. Smith	396,961	Jan. 29	2510	647	46	525
Bungs, tap-holes of casks, &c. Stopper for	H. L. Gates	397,795	Feb. 12	1060	282	46	787
Burglar-alarm	W. J. Ackerman	396,458	Jan. 22	1749	449	46	365
Burglar-alarm	G. B. Lehy	396,701	Jan. 22	2125	544	46	426
Burglar-alarm	A. C. Robbins	396,667	Jan. 22	2074	533	46	427
Burglar-alarm	R. T. Smillie	395,519	Jan. 1	331	81	46	68
Burglar-alarm	L. A. McCarthy	398,420	Feb. 26	1995	524	46	993
Burglar-alarm. Electric	J. Y. McKinney	400,239	Mar. 26	2169	569	46	1563
Burglar-alarms. Door-spring connection for electric	J. Geary	398,144	Feb. 19	1570	415	46	901
Burglar and fire alarm	C. C. Henderson	398,254	Feb. 19	1731	456	46	934
Burial apparatus	G. L. Gebring	397,283	Feb. 5	267	69, 70	46	627
Burial-case	J. H. Walker	399,851	Mar. 19	1750	451	46	1491
Burner: *See* Fuel-burner. Lamp-burner. Gas-burner. Oil-burner. Gas-regulating burner. Petroleum-burner. Refuse-burner. Hydrocarbon-burner. Vapor-burner.							
Burner	R. P. Ambler	396,798	Jan. 29	2282	584	46	476
Burner	R. B. Carsley	397,630	Feb. 12	823	215	46	741
Burner	J. Gibbons	396,505	Feb. 26	2110	555	46	1016
Burner	J. Lewis	397,653	Feb. 12	858	224	46	748
Burner for liquid hydrocarbons and vapors thereof	W. T. Kellogg	397,595	Feb. 12	764	{199, 200}	46	730
Burners. Shade for	J. and W. J. Stratton	397,668	Feb. 12	880	231	46	752
Burnishing-machine	G. B. Kelley	399,649	Mar. 19	1334	342	46	1408
Bustle	V. H. Buschmann	396,025	Jan. 8	1115	283	46	298
Bustle	L. T. Ridgley	400,115	Mar. 26	1964	520	46	1545
Bustle	C. R. Tufts	398,474	Feb. 26	2063	542	46	1007
Bustle	C. W. Werts	400,149	Mar. 26	2036	532	46	1556
Bustle	H. C. Williams	395,469	Jan. 1	239	61	46	59
Butter-cutter	H. M. Cain	398,879	Mar. 5	94	26	46	1131
Butter-fat from milk. Extracting	C. A. Johansson	399,618	Mar. 12	1258	323	46	1382
Butter-making. Oil process in	B. Kansble	400,219	Mar. 26	2138	{560, 561}	46	1577
Butter-tub	L. K. Tewksbury	396,969	Jan. 29	2523	651	46	508
Butter-tub-cover fastener	E. W. Maxson	398,524	Feb. 26	2136	563	46	1021
Button	D. P. Fitzgerald	397,350	Feb. 5	368	97	46	648
Button	G. Heidmann, E. Höttges, and C. Egen.	400,337	Mar. 26	2324	607	46	1610
Button	J. McNerney	397,508	Feb. 12	617	159	46	702
Button	L. Sievert	397,030	Jan. 29	2610	674	46	545
Button	T. W. F. Smitten	400,132	Mar. 26	2005	525	46	1550
Button	T. Watson	396,445	Jan. 22	1738	446	46	363
Button and ornament paster	M. Moose	400,353	Mar. 26	2355	614	46	1616
Button. Cuff or collar	G. S. Tiffany	398,096	Feb. 19	1497	396	46	888
Button-fastener	G. H. Fox	395,745	Jan. 8	676	173	46	145
Button-hole cutter	E. Nowill	397,438	Feb. 5	508	133	46	676
Button-hole finishing and staying machine	J. A. Knox and T. J. Eberson	398,335	Feb. 19	1858	490	46	959
Button-hole strip	H. W. Lyon	400,408	Mar. 26	2432	637	46	1630
Button-hole stripe. Making	H. W. Lyon	399,061	Mar. 5	375	101	46	1186
Button-machine	J. N. Gotendorf, Jr	396,081	Jan. 15	1196	{303, 304}	46	253
Button-machine	C. A. Pfenning	396,423	Jan. 22	1707	437	46	357
Button-machine	C. A. Pfenning	396,424	Jan. 22	1709	{438, 439}	46	357
Button-machine	C. A. Pfenning	396,425	Jan. 22	1711	{439, 440}	46	358
Button-machine	C. A. Pfenning	396,426	Jan. 22	1712	440	46	358
Button-machine	C. A. Pfenning	396,427	Jan. 22	1713	440	46	359
Button or stud	H. F. Hambruch	395,973	Jan. 8	1033	264	46	214
Button-setting implement	F. H. Richards	397,388	Feb. 5	421	111	46	657
Button-setting implement	F. H. Richards	397,471	Feb. 5	558	146	46	685
Button-strip for garments	H. W. Lyon	399,338	Mar. 12	830	217	46	1302
Button-stripe. Making	J. Stone	395,522	Jan. 1	325	82	46	68
Buttons to fabrics. Attaching shank	W. E. Bennett	397,960	Feb. 19	1284	342	46	848
Cabinet. Merchandise	S. C. Adler	395,939	Jan. 8	984	253	46	204
Cable-conduit curve	W. Haddock	399,037	Mar. 5	343	92, 93	46	1180
Cable-grip	W. Haddock	399,034	Mar. 5	336	90, 91	46	1178
Cable-grip	F. Schelp, Jr.	397,755	Feb. 12	996	{264, 265}	46	774
Cable or railway crossing	F. C. Weir	398,206	Feb. 19	1459	438	46	918
Cable roads. Tube or tunnel protector for	H. F. Ascheck	400,034	Mar. 26	1966	485	46	1521
Cable system. Traction	M. F. Bradley	395,809	Jan. 8	794	207	46	166
Cable tramway	W. N. Colam	395,424	Jan. 1	170	45	46	36
Cable tramway	W. N. Colam	395,425	Jan. 1	171	45	46	37
Cable-tramway gripper	W. N. Colam	395,422	Jan. 1	167	43, 44	46	35
Cable tramways. Pulley-carrier for	W. N. Colam	395,423	Jan. 1	169	44, 45	46	36
Cable. Wire	H. Leschen	395,963	Jan. 8	1051	267	46	217
Cables. Electric alarm-signal for	W. H. Woodring and C. S. Gilbert	400,028	Mar. 19	1856	482	46	1510
Cables. Tension appliance for traction	W. Phenix	397,611	Feb. 12	801	208	46	736
Caddy. Combined spice	R. Crommer	398,389	Feb. 26	1942	{510, 511}	46	963
Cake, biscuit, and doughnut cutter	W. H. Eaton	398,139	Feb. 19	1564	414	46	900
Calcining rock	G. E. Carleton	399,496	Mar. 12	1065	278	46	1346
Calcining stone, &c. Kiln for	G. E. Carleton	399,495	Mar. 12	1063	277	46	1346
Calculating-machine	J. Vermehren	398,360	Feb. 19	1902	499	46	968
Calculating-machine. Coin-operated	F. W. Brooks	399,129	Mar. 5	494	{132, 133}	46	1210
Calendar	W. J. Elsom	395,385	Jan. 1	129	30, 31	46	26
Calendar	E. S. May	395,709	Jan. 8	621	157	46	134

Calendar. Perpetual	T. A. McKee	398,172	Feb. 19	1612	428	46	909

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Calipers and dividers	T. Green	396,479	Jan. 22	1794	460	46	374
Calipers or gage. Inside	J. A. Blair	396,064	Jan. 15	1168	296	46	248
Camera: *See* Photographic camera.							
Camera-adjuster	H. E. Poehlman	399,345	Mar. 12	840	219	46	1304
Camera-carrying case and plate-changing box	J. H. Johnson	396,573	Jan. 22	1936	499	46	400
Camera-shutter	W. Shakespeare, Jr., and G. W. Low	398,960	Mar. 5	253	70	46	1162
Can: *See* Ash or garbage can. Milk-can.							
Can	A. D. Shuman	396,515	Jan. 22	1848	474	46	384
Can-fastener	C. Keeler and H. Lewis	397,555	Feb. 12	690	179	46	716
Can filling and packing apparatus	S. L. Gregg	399,884	Mar. 19	1653	427	46	1471
Can-filling machine	B. F. Thomas	396,717	Jan. 22	2147	{549, 550}	46	441
Can forming and soldering machine	F. M. Leavitt and E. Norton	395,788	Jan. 8	749	{192, 193, 194}	46	157
Can forming and soldering machine	E. Norton	395,795	Jan. 8	766	{198, 199, 200}	46	160
Can-jacket	W. Zinsser, Jr.	397,163	Feb. 5	96	25	46	596
Can nozzle. Oil	J. S. Peter	396,891	Jan. 29	2415	620	46	506
Can-opener	J. H. Fisher	399,222	Mar. 12	707	184	46	1278
Can-opener	T. H. Gilham	396,555	Jan. 22	1906	492	46	394
Can or similar vessel	J. K. Cleary	398,234	Feb. 12	1704	450	46	928
Cans. Mechanical lid-shutter for	B. Wesselmann	399,714	Mar. 19	1397	359	46	1422
Candle-holder for Christmas-trees	C. Reinhardt	395,514	Jan. 1	315	80	46	66
Candle-molding machine	L. Homan	397,918	Feb. 19	1226	328	46	838
Candlestick	J. W. Hiney	398,395	Feb. 26	1956	515	46	986
Candy-mold	S. E. Ball	398,368	Feb. 26	1920	505	46	979
Cane	W. M. Carpenter	396,027	Jan. 15	1117	284	46	229
Cane-mill	G. W. Huckabay	398,401	Feb. 19	1963	516	46	967
Cane-mill	C. Hughes	395,832	Jan. 8	825	214	46	173
Car-brake	H. W. Howell, Jr.	399,408	Mar. 12	943	244	46	1323
Car-brake	G. O. Kane	396,876	Jan. 29	2391	613	46	501
Car-brake	C. Mayer	399,764	Mar. 19	1470	379	46	1436
Car-brake	C. W. Murray	395,662	Jan. 1	555	139	46	112
Car-brake	H. L. Phelps	398,797	Feb. 26	2538	675	46	1102
Car-brake	B. L. Wright	400,039	Mar. 19	1858	482	46	1511
Car-brake	J. Yarrick and E. Meister	396,132	Jan. 15	1265	324	46	267
Car brake and starter	G. B. Siccardi	400,129	Mar. 26	2001	524	46	1549
Car brake and starter	J. B. Swaim	395,461	Jan. 1	227	58	46	49
Car brake and starter	P. Weilbach	397,765	Feb. 12	1012	{269, 270}	46	778
Car brake. Street	J. H. Wright	395,414	Jan. 1	155	40	46	33
Car brake. Street-railway	W. B. Clark	399,740	Mar. 19	1431	368	46	1428
Car brakes and couplings. Mechanism for operating	H. H. Sessions	396,614	Jan. 22	2001	{515, 516}	46	413
Car-brakes. Pipe-coupling for	W. M. Darrow	398,033	Feb. 19	1415	374	46	872
Car-brakes. Slack-adjuster for	C. C. Higham	398,257	Feb. 19	1736	457	46	935
Car-coupling	D. C. Bassett	397,412	Feb. 5	466	123	46	688
Car-coupling	J. M. Bouck	398,123	Feb. 19	1541	409	46	896
Car-coupling	H. Braley	395,733	Jan. 8	660	168	46	142
Car-coupling	S. Byrne	398,026	Feb. 19	1404	370	46	809
Car-coupling	J. D. Cael and G. L. Ogle	396,919	Jan. 29	2451	630	46	513
Car-coupling	T. C. Chappell	398,702	Feb. 26	2400	637	46	1074
Car-coupling	A. Coble and J. H. Mounts	396,268	Jan. 15	1467	373	46	305
Car-coupling	E. N. Colwell	397,277	Feb. 5	260	67	46	625
Car-coupling	H. V. Conway	400,306	Mar. 26	2275	595	46	1601
Car-coupling	G. Cushen	396,687	Jan. 22	2103	540	46	433
Car-coupling	G. W. Decker	399,316	Mar. 12	802	207	46	1295
Car-coupling	R. H. Dowling	396,032	Jan. 8	1123	285	46	230
Car-coupling	I. C. Doyal	398,500	Feb. 26	2100	554	46	1014
Car-coupling	E. P. Eastwick, Jr	395,817	Jan. 8	804	210	46	168
Car-coupling	R. L. Evans	400,068	Mar. 26	1916	499	46	1531
Car-coupling	J. W. Forest and S. H. Scott	396,201	Jan. 15	1371	351	46	287
Car-coupling	J. Frey	395,776	Jan. 8	717	185	46	153
Car-coupling	S. B. Fyler	395,823	Jan. 8	811	211	46	170
Car-coupling	S. T. Grimmett	395,437	Jan. 1	187	49	46	40
Car-coupling	S. F. Heath and H. A. Thayer	395,391	Jan. 1	128	32	46	28
Car-coupling	A. Heron	399,532	Mar. 12	1123	292	46	1357
Car-coupling	J. A. Hinson	398,324	Feb. 19	1843	486	46	957
Car-coupling	F. J. Hughes	397,058	Jan. 29	2646	681	46	552
Car-coupling	F. Johnson	399,333	Mar. 12	826	215	46	1301
Car-coupling	S D. King	395,750	Jan. 8	683	{174, 175}	46	146
Car-coupling	I. Kling	396,878	Jan. 29	2393	614	46	502
Car-coupling	I. Kling	396,879	Jan. 29	2396	614	46	502
Car-coupling	E. H. B. Knowlton	398,056	Feb. 19	1448	383	46	878
Car-coupling	J. B. Maas	396,943	Jan. 29	2485	641	46	520
Car-coupling	H. H. Mansfield	397,375	Feb. 5	404	107	46	654
Car-coupling	J. N. Martin and W. H. Harris	398,523	Feb. 26	2135	563	46	1021
Car-coupling	D. C. McCoy	399,278	Mar. 12	742	193	46	1284
Car-coupling	A. McLean	397,600	Feb. 12	768	201	46	731
Car-coupling	T. O. McMurtray	398,844	Mar. 5	42	13	46	1122
Car-coupling	W. Metcalf	397,017	Jan. 29	2585	668	46	540
Car-coupling	S. P. Mickey	397,137	Feb. 5	48	11	46	587
Car-coupling	G. N. Moats	395,988	Jan. 8	1064	269	46	219
Car-coupling	G. Mock	397,018	Jan. 29	2587	668	46	541
Car-coupling	J. Mutton	396,888	Jan. 29	2409	618	46	505
Car-coupling	S. Myers	396,047	Jan. 8	1144	290	46	234

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume		Official Gazette.	
				Spec.	Dr'g.	Vol.	Page.
Car-coupling	F. W. Parsons	395,402	Jan. 1	142	36	46	31
Car-coupling	T. W. Paterson	398,440	Feb. 26	2015	529	46	997
Car-coupling	R. L. Powel	396,509	Jan. 22	1837	471	46	383
Car-coupling	J. C. Ruch and R. Brouse	396,237	Jan. 15	1427	363	46	297
Car-coupling	C. A. Schroyer	398,086	Feb. 19	1485	393	46	886
Car-coupling	J. H. Simpson	397,473	Feb. 5	560	146	46	685
Car-coupling	H. Sommerfeld	395,361	Jan. 1	83	22	46	19
Car-coupling	W. C. Watson	397,673	Feb. 12	866	233	46	754
Car-coupling	W. C. Watson	397,674	Feb. 12	867	233	46	754
Car-coupling	D. Wellington	395,369	Jan. 1	92	24	46	21
Car-coupling	O. Wells	397,675	Feb. 12	889	234, 235	46	754
Car-coupling	D. Y. Wilson	396,447	Jan. 22	1740	447	46	364
Car-coupling link	F. F. Boyce	396,726	Jan. 29	2163	555	46	452
Car-door	H. Alsop	395,805	Jan. 8	787	204	46	164
Car-door	E. B. Searles	395,457	Jan. 1	223	57	46	48
Car-door	C. Trier	396,903	Jan. 29	2431	625	46	509
Car-door	E. H. Whitaker	397,332	Feb. 5	332	86	46	640
Car door. Freight-	J. Haish	398,147	Feb. 19	1575	417	46	902
Car door. Railway-	J. McLean	399,152	Mar. 5	544	141	46	1220
Car-driving mechanism. Street-	F. E. Canda	396,140	Jan. 15	1276	327	46	269
Car. Dumping-	C. C. King	398,262	Feb. 19	1742	459	46	936
Car. Dumping-	H. W. Smith	399,092	Mar. 5	419	113, 114	46	1194
Car. Electric-	W. L. Everit	397,420	Feb. 5	489	126	46	671
Car-floor	Z. T. Earle	398,138	Feb. 19	1363	414	46	900
Car for carrying sugar-cane	H. R. Albrecht	397,886	Feb. 19	1177	315	46	829
Car-heater	F. Raprecht and F. G. Bates	399,633	Mar. 12	1280	398	46	1386
Car-heater	E. P. Sartell	396,000	Jan. 8	1089	275	46	223
Car-heater	J. Q. Winfield and B. H. Strickler	395,470	Jan. 1	240	61, 62	46	52
Car-heater	J. Zimmerman	396,639	Jan. 22	2037	523	46	420
Car heater. Domestic or railway-	W. P. Bending	398,573	Feb. 26	2200	580	46	1034
Car heater. Railway-	W. Barnett	398,816	Mar. 5	8	2	46	1115
Car heater. Railway-	W. Burnett	398,878	Mar. 5	92	26	46	1131
Car-heater. Safety-	M. M. Bumpus	400,393	Mar. 26	2410	631	46	1626
Car-heating apparatus	H. R. Towne	398,472	Feb. 26	2056	540, 541, 542	46	1006
Car-heating apparatus. Railway-	H. R. Towne	397,159	Feb. 5	76	19	46	593
Car-heating apparatus. Railway-	F. M. Wilder	397,161	Feb. 5	88	22	46	595
Car-heating apparatus. Railway passenger-	M. Wood	397,212	Feb. 5	170	45, 46	46	608
Car-heating apparatus. Street-	L. K. Curlett	397,808	Feb. 19	1196	320	46	832
Car lock. Freight-	J. Haish	400,077	Mar. 26	1930	504	46	1534
Car-motor	T. W. Heermans	398,723	Feb. 26	2443	647	46	1082
Car motor. Railway-	I. Robbins	398,449	Feb. 26	2025	531, 532	46	999
Car motor. Railway-	E. E. Sentman	399,572	Mar. 12	1189	307	46	1369
Car motor. Street-	B. R. Moore and C. D. Montanye	397,658	Feb. 12	866	227	46	749
Car-mover	C. L. Barnhart	396,190	Jan. 15	1356	348	46	284
Car-mover	J. P. Halpin	397,911	Feb. 19	1218	325	46	836
Car platforms. Die for forging the followers of extensible railway-	J. Reilley and C. Bergman	399,930	Mar. 19	1718	444	46	1485
Car. Railway-	J. A. Brill	398,222	Feb. 19	1680	444, 445	46	923
Car. Railway-	W. L. Covel	398,029	Feb. 19	1409	372	46	870
Car. Railway-	W. E. Elliott	397,902	Feb. 19	1203	322, 323	46	834
Car. Railway-	G. P. Warren	395,860	Jan. 8	869	224	46	182
Car. Railway-	D. Y. Wilson	395,412	Jan. 1	152	39	46	32
Car seat and indicator. Adjustable-	O. E. Michaud	400,241	Mar. 26	2173	570	46	1583
Car seat. Railway-	E. Enequist	400,066	Mar. 26	1914	498, 499	46	1530
Car-starter	W. P. Akers and J. C. Lindsey, Jr.	397,327	Feb. 5	337	88, 89	46	641
Car-starter	M. E. Farnham	400,199	Mar. 26	2105	552	46	1571
Car-starter	A. Jeenel	395,656	Jan. 1	545	137	46	110
Car-starter	J. H. Palmer	398,434	Feb. 26	2011	528	46	996
Car-starter	N. V. Viele	397,158	Feb. 5	84	21	46	594
Car. Steam hand-	T. Morrissey and J. Doyle	400,409	Mar. 26	2433	637, 638	46	1631
Car-step	G. M. Belton	395,687	Jan. 8	595	149	46	129
Car-step. Extensible-	H. A. Merritt	395,660	Jan. 1	552	138	46	111
Car-step. Extension-	J. W. Graham	395,825	Jan. 8	814	212	46	171
Car. Stock-	E. U. Benedict	399,231	Mar. 19	1568	406	46	1455
Car. Stock-	J. F. Elder	399,605	Mar. 12	1240	319	46	1379
Car. Stock-	G. Hackney	395,323	Jan. 1	27	7	46	8
Car. Stock-	A. C. Mather	396,100	Jan. 15	1227	310, 311	46	259
Car. Stock-	J. Montgomery	397,199	Feb. 5	150	40	46	605
Car. Stock-	W. H. H. Sisum	399,574	Mar. 12	1191	308	46	1369
Car. Street-	W. G. Ellis	398,594	Feb. 26	2235	591	46	1040
Car. Street-	E. E. and W. S. Taylor	397,947	Feb. 19	1266	337, 338	46	844
Car-unloader	H. M. Barnhart	397,165	Feb. 5	90	26	46	596
Car-ventilator. Automatic-	W. G. Creamer	398,882	Mar. 5	97	27	46	1132
Car-wheel	R. N. Allen	396,721	Jan. 29	2153	553	46	451
Car-wheel	J. W. Cooper	400,307	Mar. 26	2276	595	46	1601
Car-wheel	I. Hegeland	398,325	Feb. 19	1444	496	46	957
Car-wheel	S. B. Jerome	395,568	Jan. 1	395	101	46	82
Car-wheel	W. H. Melaney	397,927	Feb. 19	1236	331	46	840
Car-wheel	J. M. Norris	398,437	Feb. 26	2010	529	46	996
Car-wheel and bearing	J. S. Williams	397,677	Feb. 12	893	235	46	754
Car-wheel tires. Fastening device for-	J. Kennedy	400,089	Mar. 26	1944	508	46	1537
Car-wheels. Device for lubricating-	S. M. Briggs	397,168	Feb. 5	104	27	46	597

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume		Official Gazette.	
				Spec.	Dr'g.	Vol.	Page.
Car-window	F. R. Mallory	396,585	Jan. 22	1950	505	46	404
Cars. Apparatus for heating railway-	G. H. Benjamin	398,487	Feb. 26	2084	549	46	1011
Cars. Apparatus for heating railway-	P. H. Shannon	396,615	Jan. 22	2003	516	46	413
Cars. Automatic air-supply for propelling	J. T. Clark	400,302	Mar. 26	2273	594	46	1601
Cars. Automatic device for dumping coal-	C. S. Farrer	398,598	Feb. 26	2240	593	46	1041
Cars by electricity. Apparatus for heating-	R. M. Hunter	397,857	Feb. 12	1139	304	46	803
Cars. Chain conveyer for unloading	J. M. Dodge	396,197	Jan. 15	1363	350	46	285
Cars. Closet for railway-	F. A. Kennard and H. W. Cory	397,005	Jan. 29	2569	664	46	537
Cars. Device for unloading	J. L. Bryant	400,049	Mar. 26	1889	490, 491	46	1525
Cars. Draw-bar for railway-	S. C. and C. C. Fisher	398,716	Feb. 26	2430	644	46	1060
Cars. Driving mechanism for-	F. J. Weis	398,307	Feb. 19	1659	439	46	918
Cars. Driving mechanism for-	F. J. Weis	398,308	Feb. 19	1660	439	46	919
Cars. Driving mechanism for-	F. J. Weis	398,309	Feb. 19	1661	439	46	919
Cars. Electric lighting and heating	J. F. Shawhan	396,836	Jan. 29	2335	598	46	488
Cars. End-sill for railway-	J. T. Goodfellow	400,329	Mar. 26	2314	606	46	1600
Cars. Hose-pipe coupling for railway-	D. Hennessy	397,645	Feb. 12	842	219, 220	46	745
Cars. Means for heating railway-	B. F. Taylor	396,715	Jan. 22	2144	548, 549	46	440
Cars. Means for mounting the grip on cable-railway-	C. E. Ebnborn	398,590	Feb. 26	2230	589	46	1039
Cars. Pipe-coupling for railway-	P. S. Wiseman	396,908	Jan. 29	2438	626, 627	46	510
Cars. Platform-door for	J. Haish	395,324	Jan. 1	29	7	46	8
Cars. Roof-connection for railway-	J. F. Cole and E. W. Parno	400,305	Mar. 26	2274	595	46	1601
Cars. Safety-brake for cable	C. Bullock	395,736	Jan. 8	665	170	46	143
Cars. Sand-box for railway-	W. H. Clark	396,352	Jan. 15	1588	402	46	326
Cars. Side bearing for railway-	J. J. Mann	400,236	Mar. 26	2165	568	46	1582
Cars. Spring-buffer for railway-	C. A. Schroyer	397,312	Feb. 5	310	81	46	635
Cars. Stake-pocket for platform-	C. H. Dunham	400,306	Mar. 26	2416	632	46	1628
Cars. Starting and draft mechanism for street-	F. C. McDonald	397,740	Feb. 12	979	260	46	771
Cars. Steam-fitting for railway-	L. D. Jobes	398,020	Feb. 26	2269	601	46	1047
Cars. Switching or transferring	J. Armil and R. M. Sebree	399,815	Mar. 19	1557	403	46	1452
Cars. System for heating	J. F. McElroy	400,350	Mar. 26	2348	613	46	1615
Cars. System of and apparatus for heating	R. J. Wilson	399,592	Mar. 12	1221	314	46	1374
Cars. Ventilating and warming railway-	A. B. Murray and H. Harrison	397,092	Jan. 29	2694	696, 697	46	561
Cars. Water-closet for	L. Lattan and H. Tripp	398,516	Feb. 26	2125	559	46	1019
Carburetor	R. A. Bury and R. M. Bidelman	398,225	Feb. 19	1656	446	46	904
Carburetor	H. J. Dykes	395,616	Jan. 1	472	120	46	96
Carcasses. Device for spreading	G. P. Schmidt	399,933	Mar. 19	1723	445	46	1485
Card-clothing. Foundation of	S. Roberts	397,441	Feb. 5	517	136	46	677
Card-clothing on grinding-machines. Device for holding	G. O. Currier	398,497	Feb. 26	2097	553	46	1014
Card-clothing to flat-bars. Apparatus for attaching-	G. and E. Ashworth	397,267	Feb. 5	242	63	46	622
Card for buttons or studs	C. G. Bloomer	399,924	Mar. 19	1573	407	46	1456
Card-grinding machine	S. A. Prescott	399,694	Mar. 19	1366	350, 351, 352	46	1415
Card-wire at intervals. Apparatus for flattening-	G. and E. Ashworth	398,212	Feb. 19	1665	440, 441, 442, 443	46	919
Cards. Machine for lacing Jacquard	W. P. Uhlinger	397,763	Feb. 12	1008	267, 268	46	777
Carding-engine cylinders. Means for driving	G. and E. Ashworth	397,268	Feb. 5	244	64	46	623
Carding-engine flats. Apparatus for controlling the grinding of	J. M. Hethbrington	399,533	Mar. 12	1125	292	46	1357
Carding-engine flats. Apparatus for truing bars for	G. and E. Ashworth	398,018	Feb. 19	1394	368	46	867
Carding-engines. Apparatus for grinding the cards of	J. Sykes	398,806	Feb. 26	2548	678	46	1105
Carding-engines. Device for securing card-clothing to the flats of	G. and E. Ashworth	397,265	Feb. 5	240	62	46	622
Carding-engines. Doffer-comb head for	G. and E. Ashworth	397,266	Feb. 5	241	63	46	622
Carding-engines. Driving apparatus for	E. and S. Tweedale and C. Mills	397,981	Feb. 12	1169	313	46	810
Carding-engines. Stripping mechanism for	G. and E. Ashworth	398,019	Feb. 19	1396	369	46	868
Carding-machine for making mottled rovings	J. Robb	395,632	Jan. 1	508	128	46	102
Carpet-beating machinery	W. H. Hankinson	396,997	Jan. 29	2558	661	46	534
Carpet-fastener	J. E. Caldwell	398,492	Feb. 26	2089	550	46	1012
Carpet-fastener	T. D. Hammond	399,038	Mar. 5	345	93	46	1180
Carpet-fastener	C. L. McCleary	397,508	Feb. 12	766	200	46	731
Carpet-fastener	C. H. Cole	400,193	Mar. 26	2098	549	46	1569
Carpet-lining	E. C. Ellwood	398,318	Feb. 19	1833	484	46	955
Carpet-stretcher	B. Holden	395,903	Jan. 8	935	240	46	194
Carpet-stretcher	T. E. Meggs	395,341	Jan. 1	54	13	46	13
Carpet-stretcher	F. Koepp and J. C. Gueth	395,497	Jan. 1	282	72	46	60
Carpet-stretcher and tack-driver	H. L. Scofield	396,611	Jan. 22	1997	514	46	412
Carpet-stretcher and tack-driver	A. F. Lamb	395,445	Jan. 1	204	53	46	43
Carpet stretcher and tacker	W. J. Drew	395,960	Jan. 8	1017	260	46	210
Carpet-sweeper	W. J. Drew	399,136	Mar. 5	515	134, 135	46	1214
Carpet-sweeper	H. A. Gore	395,654	Jan. 1	544	136	46	109
Carpet-sweeper	H. W. Ra Tou and H. A. Gore	397,904	Feb. 5	156	42	46	606
Carpet-sweeper	P. H. Wiedersum	397,102	Jan. 29	2709	700, 701	46	564
Carpets, curtains, &c. Protector for	J. A. Crane	396,327	Jan. 15	1355	393	46	319
Carriage. Baby-	W. H. and H. N. Dunn	399,399	Mar. 12	916	238	46	1317
Carriage canopy. Child's	A. G. Snell	398,667	Feb. 26	2249	623	46	1063
Carriage-curtain fastener	S. P. Scott	399,934	Mar. 19	1724	445	46	1486
Carriage-jack, wrench, and bit-stock. Combined	F. K. Hickok and R. M. Lambie	397,499	Feb. 12	603	156	46	700
Carriage seat and body	H. S. Fairbanks	398,567	Feb. 26	2239	592	46	1041
Carriage-spring	B. M. Soule	400,134	Mar. 26	2008	525, 526	46	1550
Carriage-tufts. Machine for making	L. P. Warner	399,225	Mar. 5	662	173	46	1241
Carriages. Fan attachment for baby-	E. C. Van Nouhuys and K. C. Downes	399,585	Mar. 12	1210	312	46	1372
Carriages. Spring-gear for children's	H. G. Portmann	395,585	Jan. 1	496	108	46	98

Clutch mechanism	C. A. King	397,238	Feb. 5	302	53	46	614
Clutch mechanism for winding-drums	J. A. Dyblie and E. L. Heidenreich	398,502	Feb. 26	2104	554	46	1015
Clutch mechanism. Pawl-and-ratchet	J. W. Hobson	397,802	Feb. 12	1069	285	46	789
Coal-drilling machine	C. O. Summer and J. J. Pullen	398,289	Feb. 19	1790	473	46	946
Coal-elevator	J. Chase	399,835	Mar. 19	1588	411, 412	46	1459
Coal-hod	E. Barrath	396,974	Jan. 29	2593	652	46	529
Coal-hod	E. Barrath	396,975	Jan. 29	2593	653	46	529
Coal-hod	E. Barrath	397,047	Jan. 29	2630	678	46	549
Coal-hod	G. Laube	398,410	Feb. 26	1977	519	46	990
Coal. Machine for cutting	T. and R. W. Bower and J. Blackburn	399,495	Mar. 12	1049	274	46	1344
Coaster. Circular	J. Duncan	396,472	Jan. 22	1786	458	46	372
Coat and vest. Combined	S. E. Reinhard	399,436	Mar. 12	977	254	46	1330
Cobalt matte from cobalt ores. Producing	W. Brandreth	399,009	Mar. 5	307	.....	46	1173
Cock	G. A. Barth	398,117	Feb. 19	1534	406, 407	46	895
Cock. Gas	W. C. Homan	398,616	Feb. 26	2264	601	46	1047
Cock. Pressure-regulating stop	E. Rueff	399,565	Mar. 12	1178	305	46	1367
Cock. Stop	E. E. and L. C. Beauvalet	397,332	Feb. 5	347	91	46	643
Cockeye	J. B. Altman	395,767	Jan. 8	706	181	46	150
Cocoanut compound	L. Schepp	398,082	Feb. 19	1481	.....	46	886
Cocoanut compound	L. Schepp	398,083	Feb. 19	1482	.....	46	886
Cocoanut. Preserving	W. P. Clotworthy	400,303	Mar. 26	2273	.....	46	1601
Cocoon. Apparatus for reeling silk from the	E. W. Serrell, Jr	399,037	Mar. 19	1728	446, 447	46	1486
Cocoons. Apparatus for separating waste floss from	E. W. Serrell, Jr	399,936	Mar. 19	1727	446	46	1486
Coffee. Apparatus for preparing liquid	C. Wagner	399,603	Mar. 19	1538	397	46	1449
Coffee-mill	E. H. and C. Morgan	399,686	Mar. 19	1354	348	46	1412
Coffee or tea pot	L. S. Wright	397,883	Feb. 12	1171	313	46	811
Coffee-pot	E. B. Lobach	399,998	Mar. 19	1614	472	46	1503
Coffee-pot	E. T. Newlin	399,491	Mar. 12	972	253	46	1329
Coffer-dam for vessels	G. Clarke	398,232	Feb. 19	1700	449	46	937
Coffin	A. Weckmiller	400,022	Mar. 19	1648	430	46	1509
Coffin-handle	B. C. Koehler and D. Heer	395,982	Jan. 8	1051	267	46	217

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Coin-adjuster	G. McLoughlin	399,065	Mar. 5	390	102, 103	46	1187
Coin-operated device. Automatic	B. S. Molyneux	399,643	Mar. 19	1393	338	46	1389
Coin-package	G. L. Castner	400,052	Mar. 26	1693	402	46	1526
Coins. Pad for convenience in handling and picking up	A. E. L. Slazenger	399,940	Mar. 19	1732	447	46	1487
Coke-oven	M. Sandford	399,634	Mar. 12	1981	329	46	1386
Coke-oven front	E. H. Bradley	397,107	Feb. 5	3	1	46	579
Coking-furnace	G. A. Clark	399,378	Mar. 12	901	234	46	1314
Coking-furnace	G. A. Clark	399,379	Mar. 12	902	234	46	1314
Collar. Apparel	E. R. Crofut	396,685	Jan. 22	2101	539	46	432
Collar. Garment	C. F. Henning	397,289	Feb. 5	278	72	46	629
Collar. Horse	R. Brownson	397,066	Jan. 29	2657	684	46	554
Collar. Horse	W. Crable	399,841	Mar. 19	1594	413	46	1460
Collar pad. Horse	S. B. Raw	395,404	Jan. 1	144	37	46	31
Collar-stuffing machine	G. E. Hoyt	397,292	Feb. 5	282	73	46	630
Coloring-matter. Formation of purple	A. Kern	396,574	Jan. 22	1937	.....	46	400
Coloring-matter. Production of	F. Bender	396,527	Jan. 22	1863	.....	46	367
Coloring-matter. Yellow	D. A. Moon	396,294	Jan. 15	1508	.....	46	311
Colter	R. A. Moore	400,106	Mar. 26	1909	516	46	1542
Colter-clamp	T. F. Rowland	397,138	Feb. 5	49	11	46	587
Column. Iron	F. Meeker	396,451	Feb. 26	2027	532	46	909
Column. Plate-metal	F. Meeker and H. F. Edwards	397,668	Feb. 12	1152	308	46	806
Column. Plate-metal		399,202	Mar. 5	627	163	46	1235
Comb: *See* Curry-comb.							
Comb	H. G. Guild	399,032	Mar. 5	333	80	46	1178
Combination-hook	L. Kent	395,704	Jan. 8	617	155	46	133
Combination-lock	H. C. Brown, Jr.	397,893	Feb. 19	1188	319	46	831
Compass. Ship's	L. Sirieix. (Reissue)	10,991	Mar. 26	2452	642	46	1634
Composing-stick	F. J. Ludington and H. C. Leland	399,911	Mar. 19	1663	438, 439	46	1480
Composition for making articles of commerce and art	F. S. Randall	397,612	Feb. 12	802	.....	46	736
Compound cabinet-engine	E. W. Hamlin	399,524	Mar. 12	1113	289, 290	46	1355
Compress	M. V. Wagner	398,199	Feb. 19	1653	437	46	917
Concentrator	J. A. Johnson	400,216	Mar. 26	2134	559	46	1576
Concentrator	F. Sletcher	399,791	Mar. 19	1511	391	46	1445
Condenser. Ejector	N. W. Wheeler	399,715	Mar. 19	1397	360	46	1422
Condenser for charcoal-kilns	J. Friedrich	399,255	Mar. 12	710	185	46	1278
Condensing apparatus	J. F. Chase	396,539	Jan. 22	1877	483	46	389
Conducting-pipe	G. C. Smith	400,202	Mar. 26	2210	580	46	1589
Conductor-support	D. Stenssy	397,036	Jan. 29	2618	675	46	546
Conductor-support	D. Stenssy	397,037	Jan. 29	2619	675	46	547
Conductors. Adjustable crossing and switch for overhead	C. J. Van Depoele	396,313	Jan. 15	1533	387	46	316
Conductors. Device for fastening	W. P. Zimmerman	396,677	Jan. 22	2087	537	46	430
Conduit. Electric	H. A. Chase	400,300	Mar. 26	2267	593	46	1600
Conduits. Constructing underground	W. C. Cranmer and S. W. Arnold	400,308	Mar. 26	2277	596	46	1602
Confectioners' use. Lace for	J. R. Stout	397,446	Feb. 5	526	126	46	678
Confessional. Folding	J. J. Dunn	399,388	Mar. 12	915	237	46	1317
Connecting-rod	C. H. Willcox	398,761	Feb. 26	2491	660	46	1092
Contact and switch. Overhead	C. J. Van Depoele	397,451	Feb. 5	533	140	46	680
Converter	F. W. Gordon	395,434	Jan. 1	183	48	46	39
Convertible chair	B. C. Odell	399,069	Mar. 5	385	104	46	1186
Conveyer. Chain	J. M. Dodge	395,983	Jan. 8	906	238	46	189
Conveyer. Stone or ore	P. W. Gates	397,849	Feb. 12	1130	302	46	802
Conveying apparatus	J. C. Martin	399,150	Mar. 5	537	140, 141	46	1219
Conveying grain, ice, coal, &c. Device for	T. McBride and E. Fisher	399,063	Mar. 5	377	102	46	1187
Cooker. Steam	W. E Beveridge	397,687	Feb. 12	907	240	46	757
Cooking apparatus. Steam	W. H. Filer	397,709	Feb. 12	931	247	46	762
Cooking utensil	J. H. Fredericks	397,847	Feb. 12	1128	302	46	801
Cooler: *See* Water-cooler.							
Coop. Folding poultry	M. T. Maloy	398,338	Feb. 19	1863	491	46	960
Copies of writings. Apparatus for obtaining duplicate	C. A. Thompson	398,664	Mar. 5	71	20	46	1136
Copies of writings, &c. Making duplicate	C. A. Thompson	398,675	Feb. 26	2364	628	46	1066
Copy holder and register	J. C. A. Dean	399,503	Mar. 12	1074	280	46	1349
Copying device. Press	H. Thum	398,758	Feb. 26	2486	659	46	1091
Copying press. Letter	C. A. Thompson	399,593	Mar. 12	1208	312	46	1373
Cords and tying strips of sheet metal. Tool or instrument for cutting	G. Hiller	397,290	Feb. 5	279	72	46	629
Cork-cutting machine	H. S. Larsen	396,882	Jan. 29	2399	615, 616	46	503
Cork-extractor	G. Edwards	395,618	Jan. 1	475	121	46	97
Corking and wiring corks to bottles	S. Wile and H. La Casse	399,303	Mar. 12	783	203	46	1292
Corkscrew	L. S. McWhorter	396,286	Jan. 15	1406	379	46	309
Corn-cob holder	F. B. Fetherstonhaugh	395,698	Jan. 8	610	154	46	132
Corn-cutter	G. W. Gibson	396,152	Jan. 15	1293	331	46	272
Corn. Machine for hulling green	J. Ritty	395,997	Jan. 8	1077	274	46	222
Corn-sheller	J. H. Gilman	396,146	Feb. 19	1572	416, 417	46	902
Corn-sheller	D. Snelling	396,375	Jan. 15	1628	417	46	333
Corn-sheller and wash-board. Combined	J. M. Stukes and O. P. Reid	396,902	Jan. 29	2430	624	46	509
Corn-shocking machine	Z. W. Smith	398,463	Feb. 26	2044	536	46	1003
Corner-shield	H. White	396,126	Jan. 15	1259	321	46	266
Corpses. Preserving	J. G. Meyers	397,379	Feb. 5	412	109	46	655
Corset-busk	O. Bannler	398,569	Feb. 26	2196	579	46	1033
Corset-clasp	M. W. Henius	396,484	Jan. 22	1805	463	46	376
Corset-fastening	W. M. Ducker	398,636	Feb. 19	1418	375	46	872
Corset-fastening	W. M. Ducker	398,136	Feb. 19	1560	413	46	909
Corset-stay	R. Theller	397,401	Feb. 5	447	119	46	663

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Corset-waist	C. W. Higby	397,801	Feb. 12	1067	284, 285	46	789
Corsets. Manufacture of ornamental	L. Kraus	395,707	Jan. 8	619	156	46	133
Cosmetic cream	N. K. Gentry	395,894	Jan. 8	814	.....	46	171
Cot. Folding	C. T. Segar	399,935	Mar. 19	1726	446	46	1486
Cotton-chopper	W. H. Howell	397,804	Feb. 12	1071	295	46	799
Cotton-chopper	W. E. Lindsay	398,416	Feb. 26	1987	522	46	992
Cotton-chopper	W. E. Lindsay	398,417	Feb. 26	1989	523	46	992
Cotton chopper, scraper, and harrow	J. M. P. Lyon	397,133	Feb. 5	43	10	46	596
Cotton-compress	G. Taylor	395,857	Jan. 8	864	223	46	181
Cotton. Ginning	J. C. Osborn	399,206	Mar. 5	634	164	46	1236
Cotton-gins. Brush for	R. F. Spangenberg	395,362	Jan. 1	84	22	46	19
Cotton. Machine for opening, cleaning, and ginning seed	J. R. Montague	400,002	Mar. 19	1819	472, 473	46	1503
Cotton-openers, &c. Evening mechanism for	J. C. Potter	399,076	Mar. 5	394	106	46	1190
Cotton-openers, &c. Evening mechanism for	J. C. Potter	399,077	Mar. 5	396	107	46	1190
Cotton-picker	J. W. Wallis	397,209	Feb. 5	165	44, 45	46	607
Cotton-presses. Tramper attachment for	A. Schkade	399,441	Mar. 12	982	256	46	1331
Cotton-stalk crusher	J. Lester	398,413	Feb. 26	1981	520, 521	46	991
Cough-mixture	A. M. Poe	395,346	Jan. 1	61	.....	46	15
Counter	E. T. Harris	396,815	Jan. 29	2305	590	46	481
Countersink	A. Leitelt	397,483	Feb. 5	573	148	46	687
Countersink and drill	A. Morisseau	396,663	Jan. 22	2070	531	46	426
Coupling: *See* Car-coupling. Electric-circuit coupling. Hame and tug coupling. Hose-coupling. Pipe-coupling. Shaft-coupling. Thill-coupling. Wagon-perch-crotch coupling. Wire-coupling.							
Coupling-link	B. Morton	395,794	Jan. 8	765	198	46	160
Cover-fastener	G. Staib	397,207	Feb. 5	164	43	46	607
Cover-fastener for vessels	J. H. Cassidy	399,834	Mar. 19	1587	411	46	1459
Covering	W. M. Suhr	397,822	Feb. 12	1096	293	46	794
Crank-case door	R. Bagaley and F. M. Rites	397,062	Jan. 29	2651	682	46	553
Crank for machinery	W. H. Kaye	397,367	Feb. 5	395	104	46	652
Crate	A. T. Linderman	396,165	Jan. 15	1317	337	46	276
Crate. Folding	W. H. Cadwell	397,894	Feb. 19	1191	319	46	832
Crate. Folding or knockdown	A. D. Hobbie	398,727	Feb. 26	2448	648, 649	46	1083
Cream extractor. Sample	B. Kanable	397,004	Jan. 29	2568	664	46	537
Crimping-machine	A. A. Abbott	398,567	Feb. 26	2194	578	46	1032
Crock-press	F. Bennett	399,178	Mar. 5	588	151	46	1228
Crock-rims. Machine for making	H. E. Merrill	398,640	Feb. 26	2307	612	46	1054
Crusher: *See* Clod-crusher. Cotton-stalk crusher. Ore-crusher. Rock-crusher.							
Crushing and grinding mill	J. F. Winchell	395,413	Jan. 1	153	39, 40	46	32
Crushing and grinding mill	J. F. Winchell	396,448	Jan. 22	1741	447, 448	46	364
Cuff-fastener	H. C. Frank	397,119	Feb. 5	20	5	46	583
Cuff-holder	G. R. G. Jones	400,344	Mar. 26	2340	411	46	1613
Cuff-holder	S. V. Thomas	400,144	Mar. 26	2022	529	46	1553
Culinary apparatus	A. O. Schuckman	400,255	Mar. 26	2196	577	46	1587
Culinary vessel	F. J. Torrance	397,098	Jan. 29	2704	699	46	563
Cultivator	C. E. Atkinson	397,484	Feb. 12	581	151	46	697
Cultivator	R. H. Avery	400,388	Mar. 26	2400	628	46	1625
Cultivator	L. B. Berrien	400,389	Mar. 26	2402	629	46	1625
Cultivator	W. F. Berry	396,853	Jan. 29	2356	604	46	493
Cultivator	J. C. Bird	395,475	Jan. 1	249	65	46	53
Cultivator	W. A. Dutton and C. J. Meek	397,842	Feb. 12	1122	300	46	800
Cultivator	W. H. Fuller	397,075	Jan. 29	2672	691	46	556
Cultivator	C. H. Gage	399,959	Mar. 5	214	59	46	1155
Cultivator	J. G. Gaither	399,868	Mar. 19	1629	422	46	1467
Cultivator	F. E. Griswold	396,041	Feb. 19	1426	377	46	874
Cultivator	J. B. Himes	397,185	Feb. 5	132	36	46	602
Cultivator	F. B. Jones	395,329	Jan. 1	39	10	46	10
Cultivator	E. Landes	399,757	Mar. 19	1460	376	46	1434
Cultivator	A. Lewis	399,910	Mar. 19	1669	433	46	1479
Cultivator	J. F. Packer	396,364	Jan. 15	1614	413	46	330
Cultivator	W. H. Parlin	398,177	Feb. 19	1618	429, 430	46	911
Cultivator	J. A. Pearce	399,628	Mar. 12	1269	326	46	1384
Cultivator	A. G. Powers	396,833	Jan. 29	2330	597	46	487
Cultivator	W. B. Roberts	398,654	Feb. 26	2331	619, 620	46	1060
Cultivator	J. R. Romine	396,712	Jan. 22	2140	547	46	439
Cultivator	E. H. Spencer	397,253	Feb. 5	221	58	46	618
Cultivator	A. C. and J. D. Tower	399,296	Mar. 12	770	200	46	1290
Cultivator	J. G. Trump	396,927	Jan. 22	2020	519	46	417
Cultivator	W. Waring	398,678	Feb. 26	2369	609	46	1067
Cultivator	T. S. Warner	397,404	Feb. 5	449	120	46	664
Cultivator	T. E. Carter	397,632	Feb. 12	826	216	46	741
Cultivator and harrow	E. D. Carter	398,701	Feb. 26	2398	637	46	1073
Cultivator and planter. Combined	H. H. Taylor	396,441	Jan. 22	1735	445	46	363
Cultivator and pulverizer	B. Wagner	397,403	Feb. 5	449	120	46	664
Cultivator attachment	H. M. Rose	396,895	Jan. 29	2420	622	46	507
Cultivator. Disk	J. W. Brown	396,805	Jan. 29	2294	587	46	478
Cultivator for listed corn	K. Voigt	399,800	Mar. 12	779	202	46	1292
Cultivator. Hand	H. C. Hart	396,277	Jan. 15	1480	375	46	306
Cultivator-shovel. Adjustable	J. C. Bird	397,962	Feb. 19	1286	343	46	848
Cultivator-tooth	C. Rebmann	395,567	Jan. 1	429	109	46	86

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Cultivator. Wheel	E. R. Conklin	396,468	Jan. 22	1779	455, 456	46	371
Cultivator. Wheel	W. Waring and J. C. Bird	398,677	Feb. 26	2367	620	46	1067
Cultivators. Spring-tooth for	H. Gale	395,562	Jan. 1	388	98	46	80
Cup: *See* Oil-cup.							
Cupboard. Knockdown	S. V. Merriman	398,422	Feb. 26	1997	524	46	994
Curb and gutter. Combined	A. G. Parkhurst	398,074	Feb. 19	1473	389	46	863
Curd-mill	R. H. Casewell	398,280	Mar. 5	95	26	46	1122
Current-motor	E. Sackow	397,097	Jan. 29	2700	698	46	562
Currents. Regulating and motive device for alternating	E. Thomson	397,616	Feb. 12	805	210	46	737
Curry-comb	W. R. Davis	398,290	Mar. 5	13	4	46	1116
Curry-comb	H. McPherson	397,936	Feb. 19	1235	331	46	840
Curry-comb	W. Rauseweiler	398,001	Feb. 19	1357	360	46	861
Curry-comb	J. Emmert	399,857	Mar. 19	1617	418	46	1464
Curtain attachment	J. Steinhagen	398,859	Mar. 5	61	17	46	1126
Curtain-fixture	D. D. Nolley and R. L. Wyatt	399,773	Mar. 19	1484	383	46	1439
Curtain-holder	C. W. Lawrence	400,348	Mar. 26	2246	612	46	1614
Curtain-pole ring	J. Day	397,419	Feb. 5	479	125	46	670
Curtain-ring	A. Sweetland	399,448	Mar. 12	991	258	46	1333
Curtain-roller	E. Hartung	397,361	Feb. 5	383	101	46	650
Cut-off and governor	C. Fox	399,191	Mar. 5	611	159	46	1232
Cut-off and reversing-gear for engines	E. Cawthorne	397,416	Feb. 5	473	124	46	669
Cut-off for cistern-pipes. Automatic	J. F. Allen	395,376	Jan. 1	103	27	46	23
Cut-off governor	D. W. Roland	395,998	Jan. 8	1060	275	46	222
Cut-off. Rain-water	F. R. Kaldenberg	396,091	Jan. 15	1217	308	46	257
Cutlery-handle							
Cutter: *See* Band-cutter. Butter-cutter. Button-hole cutter. Cake, biscuit, and doughnut cutter. Cigar-cutter. Corn-cutter. Feed-cutter. Fodder-cutter. Glass-cutter. Meat-cutter. Paper-cutter. Root-cutter. Sod-cutter. Stalk-cutter. Strawberry-vine cutter. Wall-paper cutter. Weed-cutter.							
Cutter-head	C. Sullivan	400,371	Mar. 26	2374	621	46	1620
Cutter-head	J. P. Thurman	396,626	Jan. 22	2020	519	46	417
Cutting apparatus. Endless	A. Clark, R. A. and C. Ashley	397,294	Feb. 5	184	49	46	611
Cutting device. Electrically-operated	R. Thayer	395,524	Jan. 1	327	83	46	69
Cutting-tools of a rotary head. Means for imparting a radial movement to the	P. A. Whitney	398,481	Feb. 26	2077	546	46	1010
Cylinder engine. Multiple	C. C. Abbe	396,451	Jan. 22	1747	448, 449	46	365
Dam. Movable	A. M. Scott	398,068	Feb. 19	1487	393, 394	46	886
Dampening-machine	J. M. Johnston	398,333	Feb. 19	1656	489	46	950
Damper. Automatic	G. H. Crowell	395,382	Jan. 1	115	29	46	26
Danger-signal. Automatic	J. Hahn	397,546	Feb. 12	672	175	46	713
Decorating surfaces	T. Robinson	396,116	Jan. 15	1246	.....	46	263
Decoy	S. Curlin	395,612	Jan. 1	462	117	46	95
Delineator	D. K. Wade	395,724	Jan. 8	645	165	46	139
Dental articulator	R. S. Hayes	396,566	Jan. 22	1927	496	46	398
Dental chair	Z. B. Moorman	396,828	Jan. 29	2321	594, 595	46	485
Dental disk-holder	H. H. Siesen	399,350	Mar. 12	858	228	46	1306
Dental engine	J. S. Campbell	397,169	Feb. 5	106	27	46	597
Dental engine	J. H. Kidder	397,556	Feb. 12	690	179, 180	46	716
Dental engine	I. G. Lock	397,990	Feb. 19	1332	355	46	856
Dental plates by electro-deposition. Making	J. G. Ward	397,320	Feb. 5	331	86	46	640
Dental plunger	J. D. Wilkens	395,604	Jan. 1	452	116	46	93
Dental rubber	G. Walker	395,600	Jan. 1	447	114	46	92
Dental tool. Combination	J. J. R. Patrick	399,071	Mar. 5	388	104	46	1169
Dental tooth-regulating screw	E. H. Angle	399,177	Mar. 5	596	150, 151	46	1228
Dentist's lathe	N. W. Holt	399,406	Mar. 12	941	243	46	1322
Denture. Artificial	G. Walker	395,601	Jan. 1	448	114	46	92
Desk	H. L. Thompson	398,095	Feb. 19	1495	396	46	866
Desk and seat. School	G. Hamel	400,078	Mar. 26	1931	504	46	1534
Desk and type-writer cabinet. Combined	C. N. Leonard	400,233	Mar. 26	2161	567	46	1581
Desk attachment	A. W. Potter and T. J. McConnon	396,665	Jan. 22	2071	532	46	427
Desk. Lap	H. A. Starkey	398,669	Feb. 26	2354	624	46	1064
Desk or secretary. Writing	F. Hammond	398,391	Feb. 26	1952	513	46	985
Desk. School	W. Lippincott	399,272	Mar. 12	734	191	46	1282
Detachable handle	D. Philbrick	400,360	Mar. 26	2364	617	46	1618
Dial. Time-piece	M. V. B. Ethridge	395,696	Jan. 8	607	153	46	131
Diamonds in cutting-tools. Securing	H. Keller	398,053	Feb. 19	1444	392	46	877
Die: *See* Hammer or like die. Heel-cutting die. Horizontally-divided die. Screw-cutting die.							
Die machine. Rolling	W. H. Johnson	396,361	Jan. 15	1610	412	46	330
Die-stock	A. W. Bartholomew	395,696	Jan. 8	593	149	46	129
Digger: *See* Potato-digger.							
Dining-table. Rotary	D. Johnson	396,089	Jan. 15	1214	307	46	257
Direct-acting engine	G. A. Barth	397,166	Feb. 5	99	26	46	596
Direct-acting engine	G. A. Barth	397,959	Feb. 19	1282	342	46	848
Direct-acting engine	G., F. R., G. H., H. O., and C. S. Jones	399,753	Mar. 19	1452	369	46	1462
Dish. Covered	I. Holsmark	395,393	Jan. 1	130	33	46	29
Dish-drainer	W. Butts	397,533	Feb. 12	649	170	46	709
Dish-washer	W. D. Miller	399,426	Mar. 12	964	251	46	1327

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Dish-washer	S. Wilks	398,760	Feb. 26	2489	660	46	1091
Dish washer and drainer	U. B. Smith	396,516	Jan. 22	1849	474	46	384
Dishes, &c. Machine for washing	G. W. B. Crees	397,783	Feb. 12	1044	278, 279	46	784
Display-frames. Rest for	R. Faries	398,886	Mar. 5	101	28	46	1133
Distilling petroleum	G. H. Perkins	399,073	Mar. 5	389	105	46	1189
Ditching and grading machine	D. D. Kuhlman	398,786	Feb. 26	2524	670, 671	46	1098
Ditching-machine	U. Blickensderfer	396,391	Jan. 22	1652	425	46	346
Ditching machine. Tile-	R. E. Nevin	397,997	Feb. 19	1342	358	46	858
Divider-shoe	C. W. Love	397,809	Feb. 12	1077	287	46	790
Dividing-engine	J. B. Faucette	398,504	Feb. 26	2107	555	46	1015
Dock. Floating dry-	C. Brown and T. Biddlecombe	398,223	Feb. 19	1683	445	46	924
Dolls and busts. Manufacturing	J. Kubelka	397,463	Feb. 5	549	144	46	683
Door-check	O. T. Baker	398,763	Feb. 26	2493	660	46	1092
Door-check	F. A. Hoover	396,488	Jan. 22	1810	464	46	377
Door-check	J. J. Krom	395,751	Jan. 8	685	175	46	146
Door-check	J. Maish	396,219	Jan. 15	1404	358	46	293
Door-check	B. A. Mitchell, Jr	397,380	Feb. 5	412	109	46	655
Door-check	F. Parsons	398,439	Feb. 26	2014	528	46	997
Door-check	C. A. Pratt	396,429	Jan. 22	1717	441	46	359
Door-check	C. R. King	397,726	Feb. 12	958	255	46	767
Door-check and alarm. Combination	R. Adams	397,326	Feb. 5	336	88	46	641
Door-check. Pneumatic	P. Scheer and J. G. States	398,978	Mar. 5	250	69	46	1162
Door handle. Sliding-	R. Clarke	395,693	Jan. 8	604	152	46	131
Door-hanger	L. Terry	396,346	Jan. 15	1580	409	46	324
Door-hanger	G. Weickum	400,278	Mar. 26	2233	585	46	1593
Door-hanger	S. Shreffler, Jr	396,772	Jan. 22	2244	574	46	468
Door-hangers. Track for	C. B. Beers	396,723	Jan. 22	2158	554	46	451
Door-lock. Electrically-operated	G. J. Ferguson	395,319	Jan. 1	19	5, 6	46	6
Door-lock. Recording	S. Toffler	397,402	Feb. 5	448	119	46	663
Door-mat	C. F. Hemenway	397,498	Feb. 12	600	155, 156	46	699
Door opening and closing device	E. Y. Moore	397,560	Feb. 12	698	181	46	718
Door. Shielded sliding	E. Bender and E. Stevens	400,041	Mar. 26	1878	489	46	1524
Door-spring	J. H. Davis	395,383	Jan. 1	116	29	46	26
Door-spring	P. E. Ayton and S. Hill	398,996	Mar. 5	282	78	46	1169
Door spring and check	J. L. Hall	398,611	Feb. 26	2256	599	46	1045
Doors, &c. Means for fastening movable bars or bolts in	G. H. Maetzel	396,584	Jan. 22	1957	504	46	404
Doors. Strengthening and locking appliance for	W. J. Owens	395,917	Jan. 8	953	245	46	197
Draft. Check-	A. G. Brown	395,674	Jan. 8	896	230	46	187
Draft-equalizer	J. R. Davis	397,343	Feb. 5	363	95	46	647
Draft-equalizer	J. P. McDowell	399,766	Mar. 19	1474	380	46	1437
Draft-equalizer	E. Sebenck	396,609	Jan. 22	1995	513	46	411
Draft-equalizer	F. Sheridan	396,617	Jan. 22	2007	516	46	414
Draft-equalizer	J. W. Gamble	399,982	Mar. 19	1789	464	46	1498
Draft-evener	M. Schneider	399,065	Mar. 5	448	110	46	1192
Draft-regulating device for stoves or furnaces	G. E. Dixon	397,173	Feb. 5	110	28	46	598
Draft-regulator. Automatic	S. Hoadley	397,500	Feb. 12	604	156	46	700
Drafting-instrument	J. R. Goodman	396,960	Mar. 5	216	59, 60	46	1155
Drag and harrow	J. Shaw, Sr	399,443	Mar. 12	984	256	46	1331
Drainage-trap	G. Bower	395,419	Jan. 1	164	42	46	35
Drawer. Furniture-	D. C. Clapp	399,598	Mar. 12	1230	317	46	1376
Drawer. Furniture-	W. Horrocks	399,752	Mar. 19	1451	373	46	1432
Drawer-guide	C. L. Dayton	398,238	Feb. 19	1709	451	46	929
Drawer-pull	G. S. Pearson	398,181	Feb. 19	1694	431	46	912
Drawer-pull	E. H. Peck	398,183	Feb. 19	1697	431	46	912
Drawer-pull	E. C. Roberts	397,567	Feb. 12	708	183	46	720
Drawer. Tilting	D. K. Wade	398,965	Mar. 5	73	20	46	1128
Drawing apparatus	C. Sperry	397,147	Feb. 5	69	17	46	591
Drawing-board and mechanical ruler. Rotatable	T. C. Henley	397,427	Feb. 5	491	128, 129	46	673
Drawing board or table	M. C. Chambers	398,220	Feb. 19	1693	448	46	926
Drawing-press	J. Edwards	399,251	Mar. 12	703	183, 184	46	1277
Dredging-machine	M. Herron	397,985	Feb. 19	1327	354	46	855
Dredging-machines. Chute for	N. B. Cushing	396,921	Jan. 29	2454	631, 632	46	513
Dredging-scoop	F. W. Brown	399,181	Mar. 5	592	152	46	1228
Dress-form	F. W. Brown	400,297	Mar. 26	2361	591, 592	46	1598
Dress-form	W. A. Johnson	397,986	Feb. 19	1328	354	46	856
Dress-form. Inflatable	A. M. Gelwicks	399,322	Mar. 12	811	210	46	1297
Dress-shields. Apparatus for manufacturing seamless	F. W. Smith, Jr	399,637	Mar. 12	1284	329, 330	46	1386
Dress-supporting steel	M. E. Whalen	396,184	Jan. 15	1349	346	46	283
Drier: *See* Brick-drier. Clothes-drier. Fruit-drier.							
Drier	A. J. Hatch	396,562	Jan. 22	1919	495	46	397
Drill: *See* Mining-drill. Radial drill. Rail-drill. Ratchet-drill. Rock-drill. Seed-drill.							
Drill	E. L. Frantz	399,142	Mar. 5	526	137	46	1216
Drill-head	W. R. Wright	397,769	Feb. 12	1018	271	46	779
Drills. Adjusting and supporting device for	G. E. Foster	396,866	Jan. 29	2372	608	46	497
Drilling and centering tool	J. E. Ketchem	395,833	Jan. 8	826	214	46	173
Drilling-machine	W. P. Dallett	397,701	Feb. 12	923	244	46	760
Drilling-machine	F. Schoff	397,311	Feb. 5	308	81	46	635
Drilling-machine	C. M. Woolworth	396,018	Jan. 8	1106	289	46	227
Drilling-machine. Multiple	R. Hammond	398,962	Mar. 5	222	61, 62	46	1156

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Drilling-machines. Automatic feed-stopping device for	W. Lodge and C. Davis	396,499	Jan. 22	1826	469	46	381
Drilling-machines. Feed attachment for	M. Schwärsler	395,592	Jan. 1	437	111	46	90
Drinking-fountain and show-stand	C. Ehrhardt	398,591	Feb. 26	2231	589	46	1040
Driving mechanism for machinery. Variable	E. F. Autenrieth	395,471	Jan. 1	243	62, 63	46	53
Driving mechanism. Frictional	H. Parsons	395,507	Jan. 1	296	76	46	63
Drum or radiator. Heating	N. H. Barnes	398,115	Feb. 19	1532	406	46	894
Drums. Snare-strainer for	E. E. Fry	399,396	Mar. 12	994	240	46	1319
Dumb-waiters. Mechanism for operating	G. M. Emerick	397,228	Feb. 5	190	50	46	612
Duplicating manuscripts, &c. Apparatus for	C. A. Thompson	398,471	Feb. 26	2054	540	46	1005
Dust-collector	E. Bretney	397,048	Jan. 29	2631	678	46	549
Dust-collector	E. Bretney	400,391	Mar. 26	2407	630	46	1626
Dust-collector	A. Gessl	399,984	Mar. 19	1783	465	46	1499
Dust-collector	J. G. Mundy	398,788	Feb. 26	2588	671	46	1099
Dust-collector	T. Watson	399,713	Mar. 19	1395	359	46	1422
Dust-collector	J. H. Weeks	395,801	Jan. 8	779	202	46	162
Dust-collector	R. F. Bailey	398,997	Mar. 5	283	78	46	1169
Dust-pan	P. A. Spicer	396,669	Jan. 22	2075	533	46	427
Dust-pan	P. A. Spicer	396,669	Jan. 22	2076	533	46	428
Dye	S. M. Neville	396,417	Jan. 22	1693	.....	46	354
Dye. Making a brown	J. Strasburger	399,581	Mar. 12	1206	.....	46	1372
Dye. Making a yellow	J. Walter	398,990	Mar. 5	273	.....	46	1167
Dye-stuff. Orange azo	C. Rudolph and B. Prieba	395,634	Jan. 1	511	.....	46	102
Dye-stuff. Tetrazo	C. Rudolph	396,293	Jan. 15	1507	.....	46	311
Dye-stuffs or coloring-matters. Manufacture of	F. Bayer	395,474	Jan. 1	248	.....	46	53
Dye-stuffs. Printing of indoline	G. Grün	396,692	Jan. 29	2112	.....	46	434
Dyeing-machine	T. Wolstenholme	397,491	Feb. 5	571	148	46	686
Dyke	H. C. Weeke	396,446	Jan. 22	1739	447	46	363
Dynamite	J. Waffen	396,559	Feb. 26	2182	.....	46	1030
Dynamite. Preparing	G. E. F. Grüne	397,285	Feb. 5	373	.....	46	628
Dynamo	R. L. Cohen	397,340	Feb. 5	359	94	46	646
Dyname-machine	G. L. Du Laney	399,320	Mar. 12	808	209	46	1297
Dynamo-stations. Switch-stand for	R. E. Stewart	400,139	Mar. 26	2014	527	46	1551
Dynamos and motors. Coupling of	O. P. Loomis	396,581	Jan. 22	1953	504	46	403
Dynamos. Coupling	O. P. Loomis	396,580	Jan. 22	1951	503	46	403
Dynamos. Regulation of	E. W. Rice, Jr	397,613	Feb. 12	802	209	46	737
Ear-jewel	G. W. Washburn	396,788	Jan. 29	2263	578	46	472
Ear-protector	R. Cohn	397,583	Feb. 12	739	192	46	725
Ear-ring	L. F. Brooks	398,126	Feb. 19	1545	410	46	897
Ear-ring	L. Krug	397,433	Feb. 5	502	132	46	675
Ear-ring or other jewelry	A. Luthy	398,787	Feb. 26	2586	671	46	1099
Earth. Apparatus for raising and moving	H. A. Carson	399,970	Mar. 19	1773	459	46	1495
Easel	C. Marks	396,362	Jan. 15	1612	412	46	330
Easel and attachable rest. Artist's	J. A. Johnson	396,658	Jan. 22	2062	529	46	425
Eaves-trough hanger	W. Stine	398,468	Feb. 26	2050	539	46	1004
Eccentric. Reversible	W. W. Lockwood	400,095	Mar. 26	1951	510	46	1538
Edge-setting machine	J. E. Drake	398,863	Mar. 5	98	27	46	1132
Edge-trimmer for grass borders	C. Everding	397,843	Feb. 12	1123	300	46	800
Edger. Gang-	H. C. Robb	399,931	Mar. 19	1730	444, 445	46	1485
Effervescing or gaseous liquids from corked receptacles. Apparatus for withdrawing	W. J. Payne	396,708	Jan. 22	2133	546	46	436
Egg-beater	F. W. Hudson	398,258	Feb. 19	1737	458	46	935
Egg-beater	J. J. McDowell	397,655	Feb. 12	861	225	46	748
Egg-count register	A. F. Harrison	400,082	Mar. 26	1937	506	46	1536
Egg-crate	M. F. Smith and T. L. Firestone	399,215	Mar. 5	649	169	46	1239
Egg or cake beater	R. S. Charles	397,731	Feb. 12	1106	296	46	797
Egg-poacher	W. H. Littleton	399,422	Mar. 12	980	250	46	1336
Egg-tester	N. Court	398,236	Feb. 19	1707	450	46	929
Ejector and injector. Combined	P. P. Hogue	400,342	Mar. 26	2337	610	46	1612
Elastic composition	J. Hunter	395,304	Jan. 1	131	.....	46	49
Elastic strap	L. Stein	400,266	Mar. 26	2217	581	46	1590
Electric battery	C. F. Heinrichs	396,670	Jan. 29	2379	610	46	499
Electric battery	C. F. Heinrichs	396,671	Jan. 29	2381	611	46	499
Electric battery	E. A. Sperry	397,945	Feb. 19	1262	336	46	844
Electric battery	W. A. Conner	395,546	Jan. 1	356	91	46	74
Electric cable	J. J. Carty	399,377	Mar. 12	898	234	46	1313
Electric circuit	S. C. C. Currie	398,769	Feb. 26	2500	663, 664	46	1094
Electric-circuit coupler	A. C. Griggs	399,326	Mar. 12	815	211	46	1298
Electric-circuit coupling	L. E. Leconitre	399,057	Mar. 5	368	99	46	1185
Electric-circuit interrupter	W. B. Harvey	399,400	Mar. 12	932	242	46	1321
Electric-circuit protector	C. C. Stirling	398,288	Feb. 19	1789	472, 473	46	946
Electric circuits. Automatic ground-detector for	O. P. Loomis	396,582	Jan. 22	1954	504	46	404
Electric circuits. Automatic safety cut-out for	G. T. Woods	395,533	Jan. 1	338	85	46	71
Electric circuits. Safety device for use in	A. C. Cockburn	395,421	Jan. 1	166	42	46	35
Electric communicating system	A. G. Holcombe	397,364	Feb. 5	388	102, 103	46	651
Electric conductor	A. A. Brooks	399,926	Mar. 19	1574	408	46	1456
Electric conductors. Insulator-support for	L. Daft	396,196	Jan. 15	1362	349	46	285
Electric conductors. Support for aerial	H. H. Cutler	395,814	Jan. 8	800	209	46	167
Electric converter	L. Gutmann	397,461	Feb. 5	546	143	46	682
Electric converter	L. Gutmann	397,910	Feb. 19	1217	325	46	836
Electric-current indicator	W. A. Carey	397,966	Feb. 19	1292	345	46	849
Electric-current regulator	J. W. Balet	396,926	Mar. 5	161	42, 43, 44	46	1144
Electric-current regulator	J. W. Balet	398,927	Mar. 5	170	44	46	1145
Electric currents. Equaliser for	S. Bergmann	398,121	Feb. 19	1538	408	46	896
Electric cut-out	W. H. S. Wright	398,566	Feb. 26	2192	578	46	1032
Electric cut-out. Automatic	E. R. Knowles	396,940	Jan. 29	2482	640	46	519
Electric cut-out device	J. C. Chamberlain	396,920	Jan. 29	2452	630	46	513
Electric discharge device	R. Belfield. (Reissue)	10,966	Feb. 19	1915	504	46	970

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Electric distributing system. Detecting grounds in an	E. M. Bentley	400,181	Mar. 26	2082	544, 545	46	1566
Electric distribution by storage-batteries	S. C. C. Currie	400,395	Mar. 26	2413	632	46	1627
Electric-generator brush	R. Eickemeyer	397,492	Feb. 12	501	153	46	698
Electric generator. Magneto-	N. B. Ginochio	400,327	Mar. 26	2311	604	46	1608
Electric generators and motors. Prevention of sparking in	D. Higham	399,402	Mar. 12	936	242	46	1321
Electric generators. Combination of	E. W. Rice, Jr.	396,602	Jan. 22	1981	516	46	408
Electric light and other electrical devices. Switch and cut-out for	O. S. Bussmann	397,109	Feb. 5	5	2	46	580
Electric-light carbon	H. S. Rheiner	397,754	Feb. 12	996	.....	46	774
Electric-light support	B. Schardt and G. Jones	399,756	Mar. 19	1506	389	46	1444
Electric lights. Sign for	E. A. Dubéy	395,317	Jan. 1	16	5	46	6
Electric-lighting system	J. A. Galvin	397,800	Feb. 19	1209	324	46	835
Electric-lighting system	W. L. Horne	400,214	Mar. 26	2131	558	46	1576
Electric-lighting systems. Regulator for incandescent	M. J. Wightman	395,936	Jan. 8	979	251, 252	46	202
Electric machine and motor. Dynamo-	F. J. Patten	397,439	Feb. 5	509	134, 135	46	676
Electric machine. Dynamo-	J. W. Balet	399,646	Mar. 19	1301	334	46	1402
Electric machine. Dynamo-	I. T. Dyer	396,355	Jan. 15	1591	403	46	326
Electric machine. Dynamo-	P. Grant	396,867	Jan. 29	2373	610	46	498
Electric machine. Dynamo-	D. Higham	399,403	Mar. 12	938	242	46	1321
Electric machine. Dynamo-	D. Higham	399,404	Mar. 12	938	243	46	1322
Electric machine. Dynamo-	R. M. Hunter	397,550	Feb. 12	677	177	46	714
Electric machine. Dynamo-	J. F. Kelly	395,622	Jan. 1	480	123	46	98
Electric machine. Dynamo-	J. F. Kester	397,007	Jan. 29	2572	665	46	537
Electric machine. Dynamo-	J. H. Robertson	399,213	Mar. 5	645	169	46	1238
Electric machine. Dynamo-	W. L. Silvey	399,088	Mar. 5	413	111, 112	46	1193
Electric machine. Dynamo-	W. L. Silvey	400,130	Mar. 26	2002	524	46	1549
Electric machine. Dynamo-	E. Thomson	399,800	Mar. 19	1529	395, 396	46	1447
Electric-machine regulator	A. J. Holt	396,932	Jan. 29	2472	637	46	517
Electric-machine regulator. Dynamo-	J. F. Kester	397,006	Jan. 29	2570	664	46	537
Electric-machine regulator. Dynamo-	J. F. Kester	399,147	Mar. 5	532	139	46	1217
Electric-machine regulator. Dynamo-	E. A. Sperry	398,668	Feb. 26	2350	624	46	1063
Electric machines and electric motors. Commutator for dynamo-	B. Heywood	399,329	Mar. 12	819	213	46	1299
Electric machines and electric motors. Prevention of sparking in dynamo-	D. Higham	399,401	Mar. 12	935	242	46	1321
Electric machines. Commutator for dynamo-	E. R. Knowles	396,942	Jan. 29	2484	640	46	520
Electric machines. Synchronizing device for dynamo-	C. Hoffmann	396,066	Jan. 15	1210	306	46	256
Electric machinery. Unipolar dynamo-	R. Eickemeyer	396,149	Jan. 15	1286	330	46	272
Electric meter	H. H. Cutler	397,538	Feb. 12	657	172	46	711
Electric meter	M. J. R. Jacquemier	396,403	Jan. 22	1673	429, 430, 431	46	350
Electric meter	E. F. H. H. Lauckert	399,336	Mar. 12	829	216	46	1301
Electric motor	E. H. Davis and R. Westervelt	400,311	Mar. 26	2281	597	46	1603
Electric motor	J. F. Denison	397,702	Feb. 12	924	244, 245	46	761
Electric motor	O. Lugo	399,059	Mar. 5	370	100	46	1185
Electric motor. Alternate-current	O. B. Shallenberger	398,457	Feb. 26	2037	535	46	1001
Electric motor. Alternate-current	O. B. Shallenberger	398,458	Feb. 26	2039	535	46	1002
Electric-motor regulator	R. S. Dobbie	400,315	Mar. 26	2288	599	46	1604
Electric-motor switch	A. H. Eddy	399,507	Mar. 12	1088	262, 263	46	1350
Electric motors. Automatic switch for	G. H. Whittingham	396,791	Jan. 29	2268	580	46	473
Electric motors. Commutator-brush carrier for	C. J. Van Depoele	396,314	Jan. 15	1535	387	46	316
Electric motors. Device for controlling	H. H. Blades	396,725	Jan. 29	2102	554	46	452
Electric motors. Friction-gear for	C. J. Van Depoele	399,950	Mar. 19	1745	450, 451	46	1490
Electric motors. Friction-gear for	C. J. Van Depoele	400,274	Mar. 26	2225	584	46	1592
Electric motors. Regulating-switch for	H. H. Blades	397,773	Feb. 12	1026	274	46	781
Electric motors. System of synchronizing	F. J. Patten	397,817	Feb. 12	1087	289, 290	46	792
Electric motors. System of synchronizing	F. J. Patten	398,794	Feb. 26	2535	674	46	1101
Electric regulator	F. C. Wagner	399,224	Mar. 5	660	172	46	1241
Electric switch	A. E. Andrews	397,826	Feb. 12	1100	294	46	795
Electric switch	L. W. Dillon	399,135	Mar. 5	512	134	46	1214
Electric switch	W. S. Hill	398,510	Feb. 26	2118	557	46	1017
Electric switch	H. T. Paiste	399,550	Mar. 12	1157	300	46	1363
Electric switch	F. A. Weller and A. F. Rietzel	398,566	Feb. 26	2183	575	46	1050
Electric switch	F. A. Weller and A. F. Rietzel	398,561	Feb. 26	2185	575	46	1051
Electric switch	E. R. Knowles	396,880	Jan. 29	2397	615	46	502
Electric switch or cut-out	J. Lynch	396,407	Jan. 22	1682	432	46	352
Electric-wire conduit	W. B. Mack	397,300	Feb. 5	297	76	46	633
Electric-wire conduit	W. L. Penney and T. Little	399,343	Mar. 12	838	218	46	1303
Electric wires or cables. Conduit for	E. H. Phipps	395,584	Jan. 1	425	108	46	88
Electric wires. Underground system of	H. B. Cobb	396,543	Jan. 22	1681	434	46	390
Electrical battery	W. Burnley	397,965	Feb. 19	1200	344	46	849
Electrical body-wear	J. V. Long	396,212	Jan. 15	1303	356	46	290
Electrical circuits. Connection of	W. W. Griscom and H. N. Wiedner	397,424	Feb. 5	485	127	46	672
Electrical circuits. Safety device for	W. J. Hammer	397,715	Feb. 12	941	250	46	764
Electrical circuits. Wiring-block for	O. P. Loomis	396,579	Jan. 22	1949	503	46	403
Electrical conductors. Junction-box for	W. M. Callender	397,221	Feb. 5	180	48	46	610
Electrical conductors. Junction-box for. System of	T. H. Hicks	399,534	Mar. 12	1127	292	46	1357
Electrical distribution by secondary batteries	F. King	399,755	Mar. 19	1454	375, 376	46	1433
Electrical distribution. Regulation for systems of	L. B. Stillwell	399,219	Mar. 5	655	171	46	1240
Electrical distribution. Regulator for systems of	L. B. Stillwell	399,218	Mar. 5	652	170	46	1239
Electrical distribution. System of	E. N. Dickerson, Jr	396,549	Jan. 22	1900	490	46	393
Electrical distribution. System of	E. W. Rice, Jr., and A. L. Rohrer	396,603	Jan. 22	1984	510	46	409

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Electrical distribution. System of	G. Westinghouse, Jr.	399,639	Mar. 12	1288	331	46	1388
Electrical instruments. Protector for	J. E. Crandall	397,418	Feb. 5	477	125	46	670
Electrical-machinery regulator	G. H. Condict	399,549	Mar. 12	1231	318	46	1376
Electrical switch	P. H. Brange	395,609	Jan. 1	458	117	46	94
Electrical switch	E. A. Sperry	396,439	Jan. 22	1732	445	46	362
Electrical treatment. Couch for applying	J. B. Schmals and J. B. Faulkner	399,024	Mar. 5	408	110	46	1192
Electro-dynamic machine	C. Coerper	396,269	Jan. 15	1468	373	46	305
Electro-magnetic transmitter	J. T. Williams	396,792	Jan. 29	2370	580, 581	46	474
Electrode for secondary batteries	E. M. Lang	398,409	Feb. 26	1977	.....	46	999
Electrode for secondary batteries	L. Paget	397,608	Feb. 12	798	208	46	736
Electrode. Secondary-battery	A. V. Meserole	399,274	Mar. 12	736	191	46	1283
Electrode. Therapeutical	L. T. Stanley	397,474	Feb. 5	561	147	46	695
Electrodes for secondary batteries. Preparing	L. Paget	397,607	Feb. 12	796	207	46	735
Electrodes. Forming secondary-battery	R. M. Hunter	397,235	Feb. 5	198	53	46	613
Electrodes. Insulating-support for secondary-battery	H. F. D. Cameron	395,311	Jan. 1	9	3	46	4
Electrotype or stereotype plates. Manufacture of	J. Dale	395,488	Jan. 1	260	69	46	57
Elevating and discharging apparatus	C. A. Morris	395,502	Jan. 1	289	75	46	61
Elevator: *See* Coal-elevator. Water-elevator. Hydraulic elevator. Water or liquid elevator. Rotary elevator.							
Elevator	W. B. Cabot and R. M. Bradley	398,699	Feb. 26	2395	636	46	1073
Elevator	M. Hanford	397,912	Feb. 19	1218	326	46	836
Elevator	W. E. Nickerson	397,746	Feb. 12	989	262	46	773
Elevator attachment	C. J. Lata	397,065	Jan. 29	2684	694, 695	46	559
Elevator-guard	O. C. Hayward	396,159	Jan. 15	1308	335	46	274
Elevator-indicator	J. M. Arnold	398,685	Feb. 26	2378	631	46	1069
Elevator-lubricator	H. O. Hooper	398,728	Feb. 26	2450	649	46	1083
Elevator safety attachment	P. B. Sullivan	396,965	Jan. 29	2515	648	46	526
Elevator safety attachment	W. E. Nickerson	398,972	Mar. 5	220	66	46	1160
Elevator speed-regulator	W. E. Nickerson	399,068	Mar. 5	384	103	46	1188
Elevators. Electrical appliance for stopping and starting	R. F. McFeely and H. V. Potter	399,341	Mar. 12	834	217, 218	46	1302
Elevators. Fluid speed-regulator for	W. E. Nickerson	396,107	Jan. 15	1237	314	46	261
Elevators. Fluid speed-regulator for	W. E. Nickerson	396,880	Jan. 29	2410	618	46	505
Elevators. Fluid speed-regulator for	W. E. Nickerson	396,949	Jan. 29	2491	642	46	521
Elevators. Fluid speed-regulator for	W. E. Nickerson	396,950	Jan. 29	2492	643	46	522
Elevators, &c. Grip device for	W. E. Nickerson	397,382	Feb. 5	414	109	46	656
Embalming-board	L. K. Smedes	397,384	Feb. 5	428	114	46	659
Embossing and ornamenting plastered walls and other surfaces.	A. Haberstroh	397,654	Jan. 29	2643	.....	46	551
Embossing canvas for decorating walls or other surfaces.	W. S. Morton	395,915	Jan. 8	951	245	46	197
Embossing plastic material. Making rolls for	H. McHugh	396,589	Jan. 22	1964	506	46	405
Embroidering-machine	E. Cornely	395,549	Jan. 1	360	92	46	75
Embroidery-frame	G. W. Cory	396,073	Jan. 15	1184	300	46	251
Emery-wheels. Tool for turning and shaping	J. D. Huntington	397,503	Feb. 12	608	157	46	701
Enameling bobbins, &c	L. Stone and A. O. Austin	398,670	Feb. 26	2356	625	46	1064
End-gate	W. H. Creed	398,237	Feb. 19	1707	451	46	729
End-gate	I. Cruzan	399,946	Mar. 12	697	181	46	1276
End-gate	F. S. Sears	395,852	Jan. 8	856	221	46	180
End-gate. Wagon	S. T. Elgin	397,789	Feb. 12	1051	280, 281	46	786
End-gate. Wagon	E. A. Waltz	400,022	Mar. 19	1847	480	46	1508
Engine: *See* Ammonia-vapor engine. Petroleum-engine. Pressure-engine. Beating-engine. Pulp-engine. Compound cabinet-engine. Pumping-engine. River-power engine. Dental engine. Road-engine. Direct-acting engine. Rotary engine. Dividing-engine. Steam-engine. Gas-engine. Steam or pneumatic engine. Hydraulic engine. Vibrating engine. Hydrocarbon-engine.							
Engine	J. A. Secor	398,456	Feb. 26	2033	534	46	1001
Engine-bed castings. Machine for finishing	G. H. Corliss	396,987	Jan. 29	2544	657	46	532
Engine cross-head. Steam-	J. J. Tonkin	397,318	Feb. 5	3[illegible]	85	46	639
Engine for marine propulsion	J. A. Secor	398,659	Feb. 26	2336	621	46	1060
Engine-frame	A. L. Ide	396,209	Jan. 15	1388	355	46	289
Engine indicators. Device for operating steam-	R. M. Beck	398,686	Feb. 26	2379	631, 632	46	1069
Engine-lubricating device	A. L. Ide	397,293	Feb. 5	283	73	46	630
Engine lubricator. Steam-	W. H. Craig	397,972	Feb. 19	1298	347	46	851
Engine regulator. Compound-	C. T. Main	397,507	Feb. 12	614	158, 159	46	702
Engine-shafts. Electric signal for	J. C. Ricketson	399,163	Mar. 5	569	146	46	1224
Engines. Attachment for compressed-air	A. Sauer	395,456	Jan. 1	221	56	46	47
Engines. Automatic pressure-regulator for the receivers of compound	J. T. Henthorn	395,828	Jan. 8	818	212, 213	46	178
Engines. Distributing motive fluid in compound	H. H. Westinghouse and F. M. Rites	395,935	Jan. 8	976	251	46	202
Engines. Stop mechanism for steam-	H. L. Carrier	398,314	Feb. 19	1928	483	46	954
Engines. Working hydrocarbureted-air	W. D. and S. Priestman	397,517	Feb. 12	631	164	46	706
Engraving machine. Wood-	W. W. Krutsch	398,336	Feb. 19	1860	491	46	959
Envelope	J. J. Cogan and E. A. Said	398,768	Feb. 26	2499	663	46	1094
Envelope and letter-sheet. Combined	C. L. Church	396,985	Jan. 29	2543	657	46	532
Envelope-blanks or sheets of paper for gumming or bordering. Appliance for spacing or fanning out	W. C. Pellatt	396,594	Jan. 22	1972	507	46	406
Envelope-machines. Gum-box for	F. H. Richards	396,711	Jan. 22	2139	547	46	439
Envelope machines. Gumming device for	A. Johnson	397,796	Feb. 12	1063	263	46	788

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Envelope-opener	J. Bird	397,333	Feb. 5	348	91	46	644
Envelopes or similar receptacles. Machine for making	G. Sickels, Jr	398,384	Feb. 19	1777	470, 471	46	944
Equalizer. Four-horse	A. C. Wilson	399,718	Mar. 19	1403	361	46	1423
Eraser. Ink	G. T. Smallwood	395,594	Jan. 1	442	112	46	91
Evaporating apparatus	M. Ams	399,311	Mar. 12	795	206	46	1294
Evaporating-pan	J. M. Duncan	396,331	Jan. 15	1561	395	46	321
Evaporator	H. Hill	397,916	Feb. 19	1223	327	46	837
Excavator	G. J. Stafford	395,854	Jan. 8	859	222	46	180
Excavator. Hydraulic	W. P. Rice	396,112	Jan. 15	1240	315, 316	46	202
Exercising apparatus	R. Reach	397,386	Feb. 5	418	111	46	657
Exercising apparatus	R. Reach	399,632	Mar. 12	1279	328	46	1385
Exercising apparatus	W. Sachs	399,699	Mar. 19	1374	354	46	1417
Exercising-machine	G. Gaertner	397,352	Feb 5	370	97	46	648
Exercising-machine	J. A. Kemmler	396,938	Jan. 29	2480	639	46	519
Exhaust. Regenerating	A. Sauer	396,713	Jan. 22	2142	548	46	439
Exhibiting or advertising device	E. Fletcher	398,602	Feb. 26	2244	594	46	1042
Expansion device	J. McCloskey	398,525	Feb. 26	2137	563, 564	46	1021
Expansion device	J. McCloskey	398,526	Feb. 26	2138	564	46	1022
Explosive charge. High-	J. W. Graydon	399,878	Mar. 19	1645	425	46	1470
Explosive charge. High-	J. W. Graydon	399,883	Mar. 19	1653	427	46	1472
Explosive energy to mechanical power. Machine or engine for the application of	G. C. Gillespie	396,739	Jan. 29	2192	561	46	458
Extractor: *See* Cork-extractor. Cream-extractor. Fish-hook extractor. Fruit-juice extractor. Grease-extractor. Pen-extractor. Stump-extractor.							
Eye-shade	T. H. Harrison	399,892	Mar. 19	1664	430	46	1474
Eyes. Machine for forming interlocking	R. Faries	397,175	Feb. 5	112	29, 30	46	598
Eyeglass-holder	H. J. Dale	396,144	Jan. 15	1281	328	46	271
Eyeglass-polisher	E. E. Thorpe	399,450	Mar. 12	993	259	46	1334
Eyeglasses	H. Borsch	396,264	Jan. 15	1462	372	46	304
Eyeglasses. Electro-magnetic attachment for	F. Fear	397,790	Feb. 12	1053	281	46	786
Eyeglasses to head-apparel. Means for attaching	W. H. Brownlow and J. S. Warner	395,611	Jan. 8	797	208	46	167
Eyelet	R. Brass	395,479	Jan. 1	254	66	46	54
Eyeleting-machine	H. S. Lytle	397,597	Feb. 12	766	200	46	730
Fabric: *See* Figured fabric. Fringe fabric. Knit fabric. Stiffening fabric. Wire fabric.							
Fabrics. Apparatus for brushing up designs on	C. H. Behnisch	397,064	Jan. 29	2654	683, 684	46	553
Fabrics. Machine for making compound	G. A. Fullerton	398,320	Feb. 19	1835	484	46	955
Fabrics. Ornamenting	M. L. Hiller	399,497	Mar. 19	1669	432	46	1475
Fan. Automatic	F. T. Busby and A. H. Snyder	398,311	Feb. 19	1822	481	46	953
Fan. Dining-table	D. J. Gregory	398,250	Feb. 19	1725	455	46	932
Fan. Folding	F. Sternheimer	398,092	Feb. 19	1492	395	46	887
Fan. Fortune-telling	W. McWillie	395,340	Jan. 1	53	13	46	13
Fan. Power	P. Murray, Jr	399,689	Mar. 19	1358	349	46	1413
Fan. Rotary	R. Godeffroy	395,620	Jan. 1	477	121, 122	46	97
Fare-box	T. L. Beaman	399,820	Mar. 19	1563	405, 406	46	1454
Fare box and register	G. G. Wagner	396,786	Jan. 29	2258	577	46	471
Fare-register	J. W. Meaker	397,601	Feb. 12	769	301, 302, 303	46	731
Fare-register	J. W. Meaker	397,602	Feb. 12	780	303, 304	46	733
Fare-register	J. W. Meaker	397,603	Feb. 12	786	304, 305, 306	46	734
Farm-gate	G. N. Ball	398,908	Mar. 5	285	78	46	1169
Farm-gate	I. Olsen	395,579	Jan. 1	417	108	46	86
Fastener	A. L. Colton	398,619	Mar. 5	13	3	46	1116
Faucet	C. O. Maddox	397,374	Feb. 5	403	106	46	654
Faucet. Bottle	F. Stefany	397,667	Feb. 12	879	231	46	752
Faucet. Measuring	R. M. and F. D. Green	397,854	Feb. 12	1136	304	46	903
Faucet. Measuring	E. S. Reed	400,251	Mar. 26	2193	576	46	1587
Feathers for dusters. Machine for preparing	J. J. Sands	398,850	Mar. 5	50	15	46	1123
Feathers. Ornamenting	O. Schenrer and A. Forest	395,358	Jan. 1	79	20, 21	46	18
Feed-cutter	E. W. Rose	400,117	Mar. 26	1967	520	46	1546
Feed-regulating mechanism	J. F. Winchell	397,045	Jan. 29	2627	677, 678	46	548
Feed-regulator	J. Dawson	399,187	Mar. 5	600	155, 156	46	1230
Feed-regulator	C. D. Patterson	398,746	Feb. 26	2472	655	46	1068
Feed-trough	A. C. Getten	399,258	Mar. 12	716	186	46	1279
Feed-trough	C. F. Harder	400,669	Mar. 26	1653	505	46	1535
Feed-trough	W. Hawkins	396,563	Jan. 22	1922	496	46	397
Feed-trough	M. V. B. Stevenson	395,855	Jan. 8	862	222	46	181
Feed-trough and hay-rack. Combined	C. E. Hanna	397,497	Feb. 12	599	155	46	699
Feed-water heater	J. L. Hunter	396,966	Mar. 5	231	64	46	1158
Feed-water heater	J. Kirkaldy	398,263	Feb. 19	1744	459, 460	46	936
Feed-water heater	E. J. Moore	398,645	Feb. 26	2314	613	46	1056
Feed-water heater	W. Noble	397,870	Feb. 12	1153	308	46	806
Feed-water heater	R. F. Pratt and C. D. Wainwright	395,347	Jan. 1	62	15	46	15
Feed-water heater and purifier	C. E. Ferreira	400,319	Mar. 26	2295	600, 601	46	1606
Feed-water heater and purifier	W. Webster	396,971	Jan. 29	2525	652	46	528

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Feed-water purifier	A. Heberer	395,779	Jan. 8	722	186	46	154
Feed-water purifier	F. V. Medynski	397,810	Feb. 12	1079	287	46	790
Feed-water purifier and heater	W. H. Smith	398,656	Mar. 5	58	16	46	1125
Feed-water regulator	J. P. Cushing	397,974	Feb. 19	1302	348	46	851
Feeding and watering poultry. Device for	M. French	395,490	Jan. 1	272	70	46	57
Feeding or other machines. Endless apron for	W. C. Bramwell	396,532	Jan. 22	1469	480	46	388
Fellies. Machine for the manufacture of	J. W. Dana	397,400	Feb. 19	1198	321	46	833
Felt-hardening machines. Cone or former for	J. and D. Pendergast	399,672	Mar. 5	389	105	46	1189
Fence	W. E. Arnett and G. M. Price	397,956	Feb. 19	1277	341	46	847
Fence	H. W. Barber	399,648	Mar. 19	1306	335	46	1403
Fence	W. W. Campbell	399,833	Mar. 19	1586	411	46	1458
Fence	J. B. Cleaveland	397,110	Feb. 5	7	2	46	580
Fence	B. Doud	396,735	Jan. 29	2187	560	46	457
Fence	C. F. Fowler	397,905	Feb. 19	1208	323	46	835
Fence	H. Ihnen	399,617	Mar. 12	1257	323	46	1382
Fence	J. C. Kemp	397,370	Feb. 5	397	105	46	653
Fence	R. B. McMullen	395,500	Jan. 1	286	74	46	60
Fence	J. P. Monnett	397,994	Feb. 19	1338	357	46	857
Fence	E. Potter	398,974	Mar. 5	242	67	46	1160
Fence	E. F. Shellsberger	399,930	Mar. 19	1731	447	46	1487
Fence	J. M. Sheriff	396,299	Jan. 15	1518	384	46	313
Fence	D. Warner	396,249	Jan. 15	1443	367	46	309
Fence	E. A. Wells	400,377	Mar. 26	2367	624	46	1622
Fence	W. M. Hyde	399,267	Mar. 12	728	189	46	1281
Fence. Constructing wire	A. Cowan	395,770	Jan. 8	708	182	46	151
Fence. Flood	F. A. Wiebrock	395,678	Jan. 1	577	145	46	117
Fence for intercepting insects	H. G. Cady	398,226	Feb. 19	1688	446	46	924
Fence-machine	G. J. Cline	398,377	Feb. 26	1934	509	46	981
Fence-machine	M. C. Henley	396,279	Jan. 15	1482	376	46	307
Fence-machine	G. W. Johnson	399,412	Mar. 12	948	245, 246	46	1324
Fence-machine	F. and M. Nicolai	397,814	Feb. 12	1063	289	46	791
Fence-machine	R. E. Rex	398,281	Feb. 19	1773	469	46	943
Fence-machine	J. Sornson	398,690	Feb. 19	1489	394	46	887
Fence machine. Picket	E. Ransom	395,586	Jan. 1	428	108, 109	46	88
Fence machine. Slat-and-wire	H. Snyder, H. Staples, and M. Barr	395,853	Jan. 8	858	222	46	180
Fence-making machine	W. A. Hawley	399,040	Mar. 5	347	93	46	1180
Fence-making machine	L. Pfister	398,796	Feb. 26	2538	675	46	1102
Fence-making machine	C. L. Stulting	400,369	Mar. 26	2372	620	46	1620
Fence. Portable	P. M. Miehler	397,511	Feb. 12	622	160	46	703
Fence-post	F. and W. J. Brogan	395,541	Jan. 1	349	89	46	73
Fence-post	W. H. Brown	398,698	Feb. 26	2394	636	46	1073
Fence-post	T. Dailey	399,021	Mar. 5	322	87	46	1176
Fence-post	A. C. Peterson	398,078	Feb. 19	1478	391	46	885
Fence-post	W. A. Prater	395,995	Jan. 8	1075	274	46	221
Fence-post	W. D. Stillman	395,800	Jan. 8	778	202	46	162
Fence-post	J. M. Terrell and C. Garver	397,039	Jan. 29	2080	676	46	547
Fence-post	J. G. Schiller	398,460	Feb. 26	2041	535	46	1002
Fence. Wire	W. Gent	395,802	Jan. 8	930	236	46	191
Fence-wire barbs. Forming	W. S. Barker	396,973	Jan. 29	2327	652	46	529
Fence-wire. Device for twisting	O. B. Sharp and I. J. Reed	395,359	Jan. 1	80	21	46	19
Fence-wire-laying machine	A. L. Thompson	395,525	Jan. 1	328	83	46	69
Fence-wire tightener and fastener	A. Baldwin and J. Clement	398,215	Feb. 19	1670	442	46	920
Fence-wire-winding machine	G. D. Coiner	399,383	Mar. 12	909	236	46	1315
Fences. Tension device for use in making	E. Hawes	400,663	Mar. 26	1938	506	46	1536
Fencing	L. W. Freeman	395,890	Jan. 8	916	235	46	190
Fencing. Machine for making wire	H. Rimmer	399,662	Mar. 5	403	109	46	1191
Ferric carbide. Purifying	R. L. Gottschald	396,637	Jan. 8	1128	287	46	231
Ferrules. Making	H. Endemann	396,274	Jan. 15	1475	.....	46	306
Fertilizer	P. Hogan	397,256	Jan. 29	2645	.....	46	552
Fertilizer-distributer	C. Greavee	399,399	Mar. 12	930	241	46	1320
Fertilizer-distributer	N. B. Spradley	400,136	Mar. 26	2010	526	46	1551
Fertilizer. Implement for dropping	B. Butler	396,351	Jan. 15	1568	402	46	326
Fertilizer. Phosphatic	W. J. Williams	395,539	Jan. 1	337	.....	46	71
Fiber from pine-needles. Making	W. Latimer	397,940	Feb. 5	204	54	46	614
Fiber or sliver. Machine for forming balls of	W. B. Lee	399,909	Mar. 19	1680	437	46	1479
Fiber ware. Treating	H. Carmichael	395,951	Jan. 8	1000	.....	46	207
Fibers. Machine for cleaning vegetable	T. Villamor	399,802	Mar. 19	1536	397	46	1448
Fibers or yarns. Treating	W. J. Williams	397,409	Feb. 5	456	.....	46	665
Fibrous plants. Machine for decorticating	R. H. Collyer	397,536	Feb. 12	653	171	46	710
Fibrous substances. Disintegrating	S. S. Boyce	396,981	Jan. 29	2538	.....	46	531
Fifth-wheel	W. T. Cheatham	396,265	Jan. 15	1461	378	46	304
Fifth-wheel	S. B. Cox and J. W. Anderson	396,810	Jan. 29	2299	588	46	490
Fifth-wheel	J. M. Girand	396,476	Jan. 22	1791	459	46	374
Fifth-wheel	J. M. Williams	398,669	Mar. 5	79	22	46	1129
Fifth-wheel. Vehicle	J. McCauley	397,730	Feb. 12	978	260	46	771
Fifth-wheel. Vehicle	H. W. Moore	398,434	Feb. 26	2008	527	46	996
Figured fabric	T. Taylor and J. Warburton	395,402	Jan. 1	229	58, 59	46	50
File-binder	M. F. Berry	398,574	Feb. 26	2202	580, 581	46	1634
File-box	M. E. Clinton	395,312	Jan. 1	10	3	46	4
File envelope. Stub	J. W. Cruikshank	396,074	Jan. 15	1184	300	46	251
File. Newspaper	H. A. Shearer	399,704	Mar. 19	1382	356	46	1419
File. Paper	M. E. Dayton	398,316	Feb. 19	1831	483	46	955
File. Paper	A. P. St. John	396,841	Jan. 29	2241	569	46	490
File. Record or other	F. J. Hosford	396,068	Jan. 15	1213	307	46	257
Filter	H. W. Grelle	399,031	Mar. 5	331	89	46	1178
Filter	H. Haefner	399,260	Mar. 12	719	187	46	1280
Filter	L. W. Mesingo and L. Stiers	396,227	Jan. 15	1496	390	46	309
Filter	A. Wilbur	399,957	Mar. 19	1756	454	46	1491
Filter and apparatus for automatically cleaning the same	G. H. Moore	395,625	Jan. 1	484	123, 124	46	98
Filter and cut-off. Water	W. C. Bayless and J. C. Nichols	398,218	Feb. 19	1675	443	46	922

Alphabetical list of inventions, January to March, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Filter-beds. Apparatus for accelerating the passage of liquids through	W. D. Bohm	400,185	Mar. 26	2067	546	46	1567
Filter. Bib-	N. Beauregard	396,799	Jan. 29	2224	584	46	476
Filter. Water-	J. Grant	399,875	Mar. 19	1642	424	46	1469
Filtering and filling liquids under pressure. Apparatus for	O. Zwietusch	398,109	Feb. 19	1515	402	46	892
Filtering apparatus	H. Gehrke and A. Wohlfahrt	399,983	Mar. 19	1700	464	46	1498
